

Statewide Common Assessments (TIAI and Dispositions)

Understanding the Results

Statewide Common Assessments, including the Teacher Intern Assessment Instrument (TIAI) and Dispositions, provide evidence of candidate performance at program completion. MUW's results are compared to statewide EPP averages to contextualize performance. Across reporting cycles, MUW candidates consistently perform at or above statewide averages in Dispositions, while TIAI results are generally comparable, with some variability due to smaller sample sizes. The scale range is from 0 to 3, with 3 being the highest.

Data Trends

Across the three reporting years, Dispositions scores remain consistently strong, indicating stable candidate professionalism and readiness. TIAI scores show minor fluctuations, particularly in smaller alternate route cohorts, where limited sample sizes lead to greater variability. Traditional route results are more stable and consistently aligned with or slightly above statewide averages.

How MUW Uses the Results

MUW uses these data as part of its Quality Assurance System to monitor candidate performance, identify trends, and inform program improvements. Results are reviewed alongside other key assessments and stakeholder feedback to ensure alignment with program expectations and state standards. Areas of strength are reinforced through coursework and clinical experiences, while identified gaps guide targeted supports and faculty discussions.

Overall Takeaways

Overall, MUW candidates demonstrate strong professional dispositions and consistent instructional performance relative to statewide peers. While small cohort sizes may impact year-to-year variability, especially in alternate route data, the overall pattern reflects stable program quality and ongoing use of data to support continuous improvement.
