## Chapter 12 Registration

<b>Registration Procedures</b> . . . . .	<b>12-9</b>
Registration Tables to be Updated Each Semester. . . . .	12-9
Concurrent Curricula Processing . . . . .	12-10
Mass Entry Processing . . . . .	12-10
Study Path Processing . . . . .	12-10
Mainline Edit Registration. . . . .	12-11
Overview . . . . .	12-11
Registration Access Control Table (SFRRACL). . . . .	12-11
Registration Temporary Table (SFTREGS) . . . . .	12-11
Registration Processing. . . . .	12-12
GTVSDAX Rule . . . . .	12-12
Common Procedures . . . . .	12-13
Registration Error Messages . . . . .	12-15
Enrollment Count Scripts . . . . .	12-19
Create Term Controls . . . . .	12-20
Set Up Registration Hours . . . . .	12-20
Define Registration Statuses for Student and Course . . . . .	12-22
Student Registration Status and Course Registration Status . . . . .	12-23
Define Codes . . . . .	12-23
Define Rules . . . . .	12-24
Flags on STVRSTS . . . . .	12-24
Student Levels Versus Course Levels in Registration . . . . .	12-25
Registration Course Error Flags . . . . .	12-25
Build Tuition and Fees . . . . .	12-26
Special Part-of-Term Processing . . . . .	12-26
Assess Additional Fees . . . . .	12-27
Assess Tuition and Fees . . . . .	12-28
Registration Fee Assessment Processing . . . . .	12-28
Overview . . . . .	12-28
Define Charges Based on Course Registration Records . . . . .	12-30
Assessment Methods . . . . .	12-30
Reporting, Viewing, Auditing, Trouble Shooting, and Purging Fee Assessment . . . . .	12-31

Course Catalog . . . . .	12-32
Class Schedule . . . . .	12-32
Term Control . . . . .	12-33
Registration and Enrollment Status . . . . .	12-34
Manually Updating Existing Registration Status Codes . . . . .	12-35
Storing Related Values and Options . . . . .	12-36
Setting Up Non-Refundable Fees . . . . .	12-37
Maximum Limits . . . . .	12-37
Registration Fee Assessment Rules . . . . .	12-37
Copying Rules to New Term. . . . .	12-39
Audit History. . . . .	12-39
Fee Assessment Audit History Records from Batch . . . . .	12-40
Per Credit, Flat, and Flat Plus Per Credit (Overload) Processing. . . . .	12-40
Fee Assessment Using the Assess by Course Indicator . . . . .	12-49
Track by CRN . . . . .	12-52
Definition and Use of Registration in SFAFMAX . . . . .	12-53
Use of View Students Classes and Charges on SFAREGF. . . . .	12-54
Fee Assessment Processing Steps - Refunding by Course. . . . .	12-54
Using Optional Swapping Processing with Refunding by Course. . . . .	12-57
Swapping and Section Fees Examples . . . . .	12-60
Swapping and Non-Refundable Fees Example . . . . .	12-61
Refunding By Registration Enrollment Status. . . . .	12-61
How Fee Assessment Processes Refunds by Enrollment Status. . . . .	12-62
Refunding by Total . . . . .	12-63
Using Optional Swapping Processing with Refund by Total. . . . .	12-66
Refunding Using Combined Flat and Overload Rules . . . . .	12-68
Refunding and Variable Credit Hours . . . . .	12-76
Registration Activity Processing Order . . . . .	12-79
Drop/Delete Processing. . . . .	12-84
Batch Fee Assessment - Creating the First Audit History Records . . . . .	12-88
Banner Views Used in Fee Assessment . . . . .	12-88
Fee Assessment Report (SFRFEES) . . . . .	12-90
Fee Assessment Script Set . . . . .	12-90
Using the Purge Process . . . . .	12-96
Updating Records with Incorrect Assessments . . . . .	12-96
Registration Fee Assessment and Open Learning Courses . . . . .	12-97
Refunding Rule Setup. . . . .	12-97
Examples of Simple Section Level Fee Assessment . . . . .	12-98
Examples of Simple Section Level Refunding . . . . .	12-99
Examples of Section Level Refunding for Traditional Type Courses . . . . .	12-101
Extension Fee Processing . . . . .	12-102
Extension Refunding Processing . . . . .	12-103
Examples of Individual Extension Refunding . . . . .	12-105
Examples of Extension Refunding for Dropped/Withdrawn Course. . . . .	12-106
Registration Fee Assessment and Study Paths . . . . .	12-107
Set up Study Paths with Fee Assessment . . . . .	12-107

Registration Fee Assessment Combined Fee Assessment Process . . . . .	12-108
Fee Assessment Functionality . . . . .	12-108
Tuition and Fee Refunding Functionality . . . . .	12-108
Register Students . . . . .	12-111
Open Learning Registration. . . . .	12-112
Set Up Open Learning Rules . . . . .	12-113
Register for an Open Learning Course . . . . .	12-115
Create an Extension for an Open Learning Course. . . . .	12-116
Drop or Withdraw from an Open Learning Course . . . . .	12-117
Drop or Withdraw from an Extension . . . . .	12-117
Using Usage Cutoffs . . . . .	12-118
Processing Examples . . . . .	12-119
Report and Update Scripts . . . . .	12-122
Enrollment Verification Processing . . . . .	12-123
Selection of Concurrent Curricula Enrollment Verification Data. . . . .	12-124
Execution of Curriculum Conversions. . . . .	12-125
Time Status and Enrollment Verification . . . . .	12-125
SSN/SIN/TIN, ID, and Birth Date Format Masks . . . . .	12-126
Self-Service Request and Payment Options . . . . .	12-128
Enrollment Verifications Submissions in Banner Self-Service . . . . .	12-129
Schedule/Invoice/Statement Options . . . . .	12-130
Printing of Bills . . . . .	12-131
Printing of Student Schedule . . . . .	12-133
Produce Student's Schedule . . . . .	12-135
Unsatisfied Links . . . . .	12-135
Produce Student's Bill. . . . .	12-135
View Student's Registration. . . . .	12-135
Produce Course Request Edit . . . . .	12-136
Produce Course Request Update. . . . .	12-136
Produce Class Roster. . . . .	12-136
Produce Headcount. . . . .	12-136
View Class Roster/Enter Grades . . . . .	12-136
Last Date of Attendance . . . . .	12-137
Handle Student's Registered, Not Paid . . . . .	12-137
Process Canceled Classes . . . . .	12-138
Waitlisting . . . . .	12-138
Reserved Seating & Waitlist Processing . . . . .	12-140
Automated Waitlisting. . . . .	12-140
Processing . . . . .	12-141
Configure Waitlist Processing. . . . .	12-142
Processing Order . . . . .	12-144
Waitlist Registration Verification Checking . . . . .	12-145

Registration Verification Checking . . . . .	12-147
Manage Waitlist Priorities . . . . .	12-148
Reorder Waitlist Priorities . . . . .	12-148
Review Student Waitlist Status and Priority . . . . .	12-149
Reserved Seats Overflow . . . . .	12-150
Capacity Verification. . . . .	12-150
Notify Students of Available Seats . . . . .	12-151
Modify Available Seats . . . . .	12-152

# 12 Registration

## Registration Procedures

### Registration Tables to be Updated Each Semester

The following list is of validation and control forms that need to be updated each semester before registration can occur.

Validation Table/ Control/Rules Form	Information Required for Update
STVTERM	Need start and end dates for the semester. Also helpful to have housing and financial aid dates.
SSAEXCL	Determine holidays and vacation periods.
SOATERM	<ul style="list-style-type: none"><li>• Determine starting course reference number.</li><li>• Set the <b>Permit (Registration)</b> flag to checked.</li><li>• Enter the registration readmit term—the last semester a student must have attended in order to register.</li><li>• Need start and end dates, number of weeks, and census dates for each part of term.</li><li>• Set registration errors.</li></ul>
SFAMHRS	For each student level, enter the minimum and maximum hours for which a student can register.
SFAESTS	For each enrollment status (as determined on STVESTS), enter the status start and end dates. <b>Note:</b> EL (Eligible to Register) must refer to the start of advance registration, not the first day of classes.

Validation Table/ Control/Rules Form	Information Required for Update
SFARSTS	For each part of term (as determined on SOATERM), enter the course status (as determined on STVRSTS), the effected by student enrollment status, and the start and end dates.  <b>Note:</b> Any code that can be used during advance registration needs advance registration start dates.
SOACTRM	For each student type (as determined on STVSTYP), enter terms which constitute consecutive enrollment.

## Concurrent Curricula Processing

Concurrent curricula processing allows an institution to record and use multiple curricula for a person who is moved through the student cycle. This functionality is used by the Recruiting, Admissions, General Student, Registration, and Academic History modules.

Please refer to “Appendix C - Concurrent Curricula Processing” for detailed information on using concurrent curricula in Banner® Student.

## Mass Entry Processing

Mass entry processing is used with Admissions, General Student, Registration, Academic History graduation, and athletic compliance processing. Mass entry forms are used to search on data, perform updates, and then display the results. Search and update criteria are user-defined and include student and curriculum elements where appropriate. The selected students can be reviewed and their updates processed immediately, or the updates can be held for later processing in job submission using a batch process. An audit form is used to view processing results for the mass entry forms.

Please refer to “Appendix D - Mass Entry Processing” for detailed information on using mass entry in Banner Student.

## Study Path Processing

Study path processing is used with the Admissions, General Student, Registration, and Academic History modules. Study paths provide a means by which a learner can associate specific course registration records to learner curriculum records during registration. The study path records allow the institution to track separate student status codes and academic standings (along with various other data) based on the student's curriculum. Likewise, a study path term enrollment record permits the tracking of enrollment eligibility that is separate from a student's overall enrollment status. The grade roll uses study paths to keep courses with an associated study path within the degree sequence created for that study path.

Please refer to “Appendix E - Study Path Processing” for detailed information on using study paths in Banner Student.

## Mainline Edit Registration

### Overview

The following registration functionality works consistently: processing multiple registration records for a person for the same term, processing enrollment counts, and using common program procedures for registration processing in Banner baseline, Banner self-service, and Banner Voice Response.

When you begin registration processing, you are logged into the Registration Access Control Table (SFRRACL). If another current entry exists in that table for ID and term, you will be denied access.

Registration records are recorded in the Registration Temporary Table (SFTREGS), and when all errors are corrected, the registration is saved to the Student Course Registration Repeating Table (SFRSTCR). Enrollment counts are updated only when the registration is finalized and saved to SFRSTCR. If you shut down registration before the final save process, the registration record will not be recorded, and the enrollment counts will not be updated.

All edits on registration are located in or called from common procedures in SFKEDIT.

#### **Warning**

It is necessary to truncate and reorganize the SFRRACL and SFTREGS tables as part of regular database maintenance performed when registration is not available. ■

### Registration Access Control Table (SFRRACL)

This table is used to control simultaneous access to registration records for the same person. Please see the *Registration Processing* section for more information.

### Registration Temporary Table (SFTREGS)

The SFTREGS table is used as a workpad for registration processing. Once all issues/errors have been addressed and the registration record has been finalized, the temporary table entries are moved to SFRSTCR, and all enrollment counts are updated. If the registration record is never finalized, the counts are not updated, and the person is not enrolled in the requested courses.

#### **Note**

Records are not automatically deleted from SFTREGS. It is expected that they will be deleted during normal database maintenance such as when the table is truncated and reorganized. ■

Entries are created in SFRSTCA that reflect the changes to the registration record on the workpad.

## Registration Processing

### Starting Registration

When you begin processing a student's registration, a function is called to check registration access activity. If another active registration session is found for the ID and term, a value of *FALSE* is returned, and you will receive the message *Another registration session is in progress for this ID and TERM. Please try again later.* If an expired access record exists, it is updated by the function with the current user's information, and registration is allowed to continue.

The length of time that a registration session remains active is determined by the number of minutes entered in the **External Code** field in the GTVSDAX rule for **Internal Code** value of *REGACCTIME*.

### Saving Registration

When you save the registration record, a function is called to determine whether the current user is still in control of the registration session. The function checks the access table to determine whether another registration session has been initiated against the same ID and term, which may happen if the first user's registration session remains idle for a period longer than the time out limit. If the registration access is no longer valid for the first user, you will receive the message *Another registration session intervened for this ID and TERM while your session was idle. Please try again later.* when you try to perform any registration-related activity. The registration session will be rolled back, and any changes not previously saved will be lost.

### Ending Registration

When you are finished with the registration process, a function is executed to inactivate the access record.

## GTVSDAX Rule

The rule for the **Internal Code** of *REGACCTIME* and the **Group (Code)** of *REGISTRATION* is used to control the length of time left to enter registration data for a student after the last activity has occurred. The rule on GTVSDAX is delivered by SunGard® Higher Education in a script.

<b>External Code</b>	<b>Internal Code</b>	<b>Internal Code Sequence Number</b>	<b>Internal Code Group</b>	<b>Description</b>	<b>Activity Date</b>
UPDATEME	REGACCTIME	1	REGISTRATION	Reg Access Time Out	Sysdate

The GTVSDAX entry for Registration Access Time Out must contain a numeric value that represents the number of minutes a session may remain idle before the session is considered to be timed out. The delivered value is *UPDATEME*, which must be modified at your institution. Change this value to a numeric value, for example, *15* for 15 minutes. If no value is entered, the default time of 60 minutes will be used.

When the session times out, it is not terminated. Another user is now permitted to initiate a registration session for the same ID and term. In this instance, the second user is then in control of the student's registration records. The message *Another registration session intervened for this ID and TERM while your session was idle. Please try again later.* will be displayed when the original user resumes work on the student's registration records, and a Rollback will take place.

If a registration session is idle and then is timed out, and no other registration sessions are initiated for the same ID and term, the user's time limit will be reset to the GTVSDAX limit when they next perform a task against the registration records.

It is necessary to use registration access control in this way, due to the use of the workpad and the fact that no changes are saved to SFRSTCR until all errors have been resolved.

An example of how access control works would be:

A student begins telephone registration using Banner Voice Response. An administrator attempts to initiate a separate baseline registration for the same ID and term on SFAREGS. The administrator will be locked out of the student's record until the student has concluded their telephone registration.

## Common Procedures

Common procedures are used for registration edits for Banner baseline, Banner self-service, and Banner Voice Response telephone processing.

### **sfkedit.sql, Packaged Procedures for Registration Edits and Base-Table Updates/Insert**

All edit processing is performed from the *sfkedit.sql* package and uses the *p\_pre\_edit* and *p\_group\_edits* procedures.

The *p\_pre\_edit* procedure is executed before the registration records are saved. When an error is found, the course is flagged with a fatal error and is not included in the final processing when the record is saved. Edits are performed on a single course, in the order shown below. The following elements are checked:

- approval code restrictions
- level restrictions
- college restrictions

- degree restrictions
- program restrictions
- major restrictions
- campus restrictions
- class restrictions
- repeat restriction
- capacity

The `p_group_edits` procedure checks all courses in SFTREGS in the order shown below.

- duplicate courses
- time conflicts
- prerequisites
- corequisites
- links
- max hours

All errors are written to the `SFTREGS_MESSAGE` and `SFTREGS_ERROR_FLAG` fields. When all the errors are resolved, registration records are processed by the `p_update_regs` procedure as follows:

1. Capacity is rechecked.
2. Section hours are updated.
3. Changes are transferred from SFTREGS to SFTSTCR, where records are inserted or updated.
4. Time status records are inserted.
5. SFBETRM is updated.

The following procedures are also used with `sfkedit.sql`:

- `sfkfunc.sql`, Registration Functions and Procedures
- `sfkmods.sql`, Registration Insert, Update, and Delete Procedures
- `sskfunc.sql`, Registration Section Functions and Procedures
- `sskmods.sql`, Registration Section Insert, Update, and Delete
- `ssksels.sql`, Registration Section Query Procedures

## Registration Error Messages

Registration error messages reside in a rules table that can be modified at your institution. Messages are identified by type, based on a message codes that correspond to each message text value.

Registration error message processing allows you to:

- Identify the message type code, and therefore determine the kind of processing error.
- Derive the message text from the SFRRMSG table using the `sb_registration_msg` API.
- Insert/update a new message type code and text to the relevant registration table.
- Allow for the extra length of the new message text for any related variables.

The Registration Error Messages Form (SFARMSG) is used to maintain registration error messages by type. Messages can be customized by your institution. Messages that are system required cannot be changed, except to modify the customized (local) message text.

The Student Course Registration Audit Form (SFASTCA) and the Student Course Registration Form (SFAREGS) display the message code and text from SFARMSG. The Registration Admin Messages Report (SFRRGAM) also displays the message code and text from SFARMSG.

The Registration Error Message Rules Table (SFRRMSG) is used to store the message code, sequence number, message text, and locally created message text. It ties the message type to the error message and allows for predefined variables to be moved around within or removed from the message. You can create your own version of the actual message text for an existing message type on a system-required row. The message text will default to the baseline version, but can be changed by creating a corresponding user version. The user version text must contain the associated variables (%X%). System-required rows cannot be deleted.

The delivered seed data for SFRRMSG ties the code and sequence number to the message.

Code	Seq No	Message	Value	Req	Date
CLOS	1	Closed Section %1%	NULL	Y	Banner Sys Date
WAIT	1	Closed - %1% Waitlisted %2%	NULL	Y	Banner Sys Date
WAIT	2	Open - %1% Waitlisted	NULL	Y	Banner Sys Date
WAIT	3	Open - %1% Crosslist Waitlisted	NULL	Y	Banner Sys Date
WAIF	1	Closed - Waitlist Full %1%	NULL	Y	Banner Sys Date

PIPE	1	PIPE	NULL	Y	Banner Sys Date
VARH	1	Range - %1% %2% %3%	NULL	Y	Banner Sys Date
MEXC	1	Mutual Exclusion with %1% %2%	NULL	Y	Banner Sys Date

 **Note**

\*\* SAPR code errors are handled differently than all other messages on SFARMSG. A special approval error will always result in the display of the special approval description from the STVSAPR\_DESC column. While a custom message can be created on SFARMSG, it will never be used. ■

The following placeholders have been enabled for the baseline seed data messages.

Code	Seq No	Message	Column
CLOS	1	% 1%	SSBXLST_XLST_GROUP
WAIT	1	% 1%	SSBSECT_WAIT_COUNT
		% 2%	SSBXLST_XLST_GROUP
WAIT	2	% 1%	SSBSECT_WAIT_COUNT
WAIT	3	% 1%	SSBSECT_WAIT_COUNT (Crosslist total)
WAIF	1	% 1%	SSBXLST_XLST_GROUP
RESC	1	% 1%	SSBXLST_XLST_GROUP
RESV	1	% 1%	SSRRESV_WAIT_COUNT
		% 2%	SSBXLST_XLST_GROUP
RESV	2	% 1%	SSRRESV_WAIT_COUNT
RESF	1	% 1%	SSBXLST_XLST_GROUP
REPT	1	% 1%	SCBCRSE_NUMBER_OF_UNITS
REPH	2	% 1%	SCBCRSE_MAX_RPT_UNITS
DUPL	1	% 1%	SSBSECT_CRN
DUPL	2	% 1%	SSBSECT_CRN
DUPL	3	% 1%	SSBSECT_CRN
CORQ	1	% 1%	SSBSECT_SUBJ_CODE
		% 2%	SSBSECT_CRSE_NUMB
		% 3%	SSRCORQ_CRN_CORQ
LINK	1	% 1%	SSBSECT_SCHD_CODE
TIME	1	% 1%	SSBSECT_CRN
MIDG	1	% 1%	SFRSTCR_GRDE_CODE_MID
FING	1	% 1%	SFRSTCR_GRDE_CODE
DELT	1	% 1%	SYSDATE
MEXC	1	% 1%	SCRMEXC_SUBJ_CODE SCRMEXC_SUBJ_CODE_MEXC
		% 2%	SCRMEXC_CRSE_NUMB SCRMEXC_CRSE_NUMB_MEXC

 **Note**

The primary key includes the \_RMSG\_CDE and \_RMSG\_SEQNO columns. A conversion script converts any Not Null SFRSTCR/SFRSTCA/SFTRGAM message rows, populating the corresponding \_RMSG\_CDE columns as appropriate. ■

The following message records are used with Banner Flexible Registration.

Code	Seq No	Message	Value	Req	Date
HOLD	1	You have Holds which will prevent registration.	NULL	Y	Banner Sys Date
HOLD	2	You have no Holds which will prevent registration.	NULL	Y	Banner Sys Date
TICT	1	You have no Registration Time Ticket. Please contact the registration administrator.	NULL	Y	Banner Sys Date
TICT	2	You may register during the following times.	NULL	Y	Banner Sys Date
TICT	3	You may register at any time.	NULL	Y	Banner Sys Date
TICT	4	You may not register at this time.	NULL	Y	Banner Sys Date
SSTS	1	Student Status is Undetermined.	NULL	Y	Banner Sys Date
SSTS	2	Your Student Status permits registration.	NULL	Y	Banner Sys Date
SSTS	3	Your Student Status prevents registration.	NULL	Y	Banner Sys Date
RADM	1	You require re-admission prior to registration.	NULL	Y	Banner Sys Date
RADM	2	You do not require re-admission prior to registration.	NULL	Y	Banner Sys Date
ACST	1	Your Academic Standing permits registration.	NULL	Y	Banner Sys Date
ACST	2	Your Academic Standing is %01% which prevents registration.	NULL	Y	Banner Sys Date
ACST	3	Your Academic Standing is %01% which permits registration.	NULL	Y	Banner Sys Date
ACST	4	Your Academic Standing is %01%.	NULL	Y	Banner Sys Date
ACST	5	Your Progress Evaluation Standing is %01%.	NULL	Y	Banner Sys Date
ACST	6	Your Combined Academic Standing is %01% which prevents registration.	NULL	Y	Banner Sys Date
ACST	7	Your Combined Academic Standing is %01% which permits registration.	NULL	Y	Banner Sys Date
DROP	1	Class cannot be dropped! Discounts exist.	NULL	Y	Banner Sys Date
FLEX	1	An exception has occurred.	NULL	Y	Banner Sys Date

## Enrollment Count Scripts

The following scripts can be used to report and correct enrollment counts that may be out of balance.

### Note

It is recommended that SFRSTCA records be purged whenever possible, to improve performance of the Census Count scripts. SFRSTCA records may be purged after all processing has been closed out for a term and there is absolutely no chance that registration adjustments will have to be made or that fee assessment will have to be run against that term. ■

### Warning

If fee assessment is run after SFRSTCA records have been purged for that term, results are unpredictable. ■

Script	Description
<code>srchkcountover.sql</code>	Identifies sections where enrollment counts, waitlist counts, and cross-list counts exceed maximum limits.
<code>srchkenrlcount.sql</code>	Identifies sections with incorrect enrollment counts. The first query compares SFRSTCR counts to SSBSECT counts. The second query checks SSBSECT for rows where the number of seats available is incorrect.
<code>srchkresvcount.sql</code>	Identifies sections with incorrect reserved counts by comparing SSRRESV counts with SFRSTCR counts. It also reports reserved records where the values for seats available or waitlisted seats available are incorrect.
<code>srchktotalcrhrs.sql</code>	Identifies sections with incorrect total credit hours by comparing the sum of SFRSTCR values with SSBSECT values.
<code>srchkwaitcount.sql</code>	Identifies sections with incorrect waitlist counts by comparing SFRSTCR counts with SSBSECT counts.
<code>srchkxlstcount.sql</code>	Identifies cross-listed groups with incorrect enrollment counts by comparing SSBXLST counts with SSBSECT counts.
<code>supenrlcount.sql</code>	Corrects enrollment counts in SSBSECT based on counts from SFRSTCR.
<code>supresvcount.sql</code>	Updates incorrect reserved counts in SSRRESV based on counts from SFRSTCR for the reserved key.

Script	Description
suptotalcrhrs.sql	Corrects total credit hours in SSBSECT based on the sum of the credit hours in SFRSTCR.
supwaitcount.sql	Corrects waitlist counts in SSBSECT based on counts from SFRSTCR.
supx1stcount.sql	Corrects cross-listed counts in SSBXLST based on enrollment counts in SSBSECT.

## Create Term Controls

The first step in the registration process is to create the attributes specific to a registration term. These attributes include the registration error radio group switches on the Term Control Form (SOATERM) which determine the type of error checking to be done at registration (time conflict, prerequisites, repeat limit, repeat hours, test score, campus, etc.) for student and section options. This form is also used to control online fee assessment during registration, whether refund by total is to be used in fee assessment, and whether courses are to be tracked by CRN. Grade book controls and Web process controls can be set up as needed.

## Set Up Registration Hours

The Registration Minimum Maximum Hours Form (SFAMHRS) is used to set up the rules for the minimum and maximum hour checking performed for registration. Minimum and maximum registration hours can be restricted by the following curriculum and student data elements: campus, college, degree, program, field of study type, field of study code, department, curricula, admission type, minimum hours, student type, student attribute, cohort, residence, sport, visa, and class. This allows you to build flexible registration hours rules and track academic requirements for colleges and programs that use different registration hour restrictions.

Maximum hours can be increased on SFAREGS, and minimum hours can be decreased on SFAREGS. The source of the hours rule is also displayed on SFAREGS. The source determines if the minimum or maximum hours value can be updated using the Update 'USER' Source New Value parameter on SHRSTD. This parameter can be set to override minimum and maximum hours or not override minimum and maximum hours, when the existing source for the hours from SFAMHRS is *USER*.

SOATERM uses minimum and maximum hours error checking in the Student Options items. Minimum and maximum hours can also be added for academic standing codes (STVASTD) and combined academic standing codes (STVCAST). When the **Active Indicator** checkbox on STVSPST is checked for a sports status code, that code will be considered by the rules for minimum and maximum hours checking.

Minimum hours functionality prevents students from dropping below their institutionally defined minimum number of registration hours, once that minimum limit has been reached. For example, this prevents a student from dropping below full-time status. Students can make changes to their schedules until they reach the minimum hours limit. Once that limit has been reached, they can still make changes, as long as they stay within the minimum to maximum hours range.

Minimum and maximum hours rules for students are calculated based on the rules met from SFAMHRS, as well as rules for academic standing and combined academic standing. If no rule is met, minimum hours will be set to *0.000*, and maximum hours will be set to *999999.999*. If multiple SFAMHRS rules are met by a student, Banner will compare all rules and select the highest number of minimum hours and the lowest number of maximum hours.

**Example:**

A student meets two rules. Rule one has a minimum of 3 hours and a maximum of 12 hours. Rule two has a minimum of 6 hours and a maximum of 99 hours. The values returned for the student will be a minimum of 6 hours and a maximum of 12 hours, because this will be the most restrictive rule.

Where multiple rules are met and the minimum hours on the most restrictive minimum rule are greater than the maximum hours on the most restrictive maximum rule, the student's minimum and maximum hours will be populated with the same value that is equal to the maximum hours.

**Example:**

Rule one has a minimum of 12 hours and a maximum of 18 hours. Rule two has a minimum of 3 hours and a maximum of 10 hours. The values returned for the student would be a minimum of 12 hours and a maximum of 10 hours. In this case, the student's minimum and maximum hours are set to the same value as the maximum of 10.

Minimum and maximum hours rules from academic standing and progress evaluation take precedence over minimum and maximum hours rules on SFAMHRS.

**Example:**

A student pre-registers and meets a SFAMHRS rule for a minimum of 6 hours and a maximum of 99 hours. Later on, that student is put on academic probation where the minimum hours rule is 9 hours and the maximum hours rule met is 15 hours, due to the probation status. Since changes in academic standing and progress evaluation supersede the rules on SFAMHRS, the minimum and maximum hours will be replaced with a minimum of 9 hours and a maximum of 15 hours, if the user requests this when the Calculate Academic Standing Report (SHRASTD) is run.

The **Source** field on SFAREGS displays the source of the minimum and maximum hours. Sources are: *USER*, *ASTD*, *CAST*, and *MHRS*. The only way a source of *USER* can be

overridden is to use the Update 'USER' Source New Value parameter on SHRASTD. This parameter can be set to *Y* to override minimum and maximum hours, or *N* to not override minimum and maximum hours when the existing source for the hours from SFAMHRS is *USER*. During registration, minimum hours checking does not allow any updates to registration, if all updates cannot be performed.

**Example:**

A student has 12.000 minimum hours on SFAREGS and on the Add/Drop page in Banner Student Self-Service. The student pre-registers for 12 hours. The student later elects to drop two, three credit courses and add a new three credit course. This results in the total credit hours dropping to 9, which is below the student's minimum.

Registration will not process any of the add/drop requests and produces a message that the request will result in less than the minimum number of hours. The student can then decide if he/she really wants to add one course and drop another, or leave the schedule as it is.

Minimum hours checking will occur only after a student has successfully completed registration for courses that meet the minimum hours restriction. (That is, minimum hours checking will not occur during the student's initial registration session or during any subsequent registration sessions, until the minimum number of hours has been attained and saved to SFRSTCR table.)

 **Note**

Registration maximum hours rules and registration processing will continue to work as they did prior to Release 8.0. After the upgrade to Banner Student 8.0, all the curriculum fields will be set to NULL, with the exception of the **Curricula** pulldown field. This field will be set to *Primary* on existing rules to accommodate prior registration maximum hours rules that only checked the primary curriculum. ■

## Define Registration Statuses for Student and Course

The Student Registration Status Form (SFAESTS) provides the rules associated with user defined Student Statuses for the registration term. This form allows the user to control, by date ranges, the actions that may be taken on a student at registration and the refund percentages associated with the action. For example: student eligible to register, or student withdrawn.

The Course Registration Status Form (SFARSTS) provides the rules associated with the user defined Course Statuses for the registration term. This form allows the user to control, by date ranges, the actions that may be taken on the courses a student is registering for and the refund percentages associated with the actions. For example: an add course, a drop course at 100% refund, a withdraw course at 80% refund with a "W" grade.

# Student Registration Status and Course Registration Status

## Define Codes

### STVESTS - Enrollment Status Code Validation Form

### STVRSTS - Course Registration Status Code Validation Form

---

#### *Student In A Term May Be:*

- eligible to register
- withdrawn
- canceled
- dismissed

#### *Should This Status:*

- affect headcount for term
- override (affect) course status \*
- prevent registration

#### *Student In A Course May Be:*

- registered
- dropped/added
- withdrawn
- canceled

#### *Should This Status:*

- be keyed by a user
- affect enrollment figures
- be assessed charges
- be graded in academic history
- be assigned as automatic grade

\*In the case where a student status should affect/override a course status, the following must apply:

- **Affect Course** is checked on STVESTS.
- Same status must appear on STVRSTS.
- **Allowed To Enter** is unchecked on STVRSTS.
- **Affected By Student Status** for the system-required value of *RE* is checked on SFARSTS.

## Define Rules

### SFAESTS - Student Registration Status Form

Define valid student registration statuses which are valid during a term, the dates and refunds associated with each status.

*EL* - Eligible to register, Required Value

- status start and end dates
- status/refunds with start /end dates

### SFARSTS - Course Registration Status Form

Define valid course registration statuses which are valid during a term (and within parts of a term), the dates and refunds associated with each status.

*RE* - Registered, Required Value

- part of term
- status/start and end dates
- effect by student status
- status/refunds with start/end dates

*DD* - Drop/Delete, Required Value

## Flags on STVRSTS

You should not change the settings of the flags on STVRSTS after registration records have been completed. These flags are critical to many Banner Student processes, and they must be set correctly before registration begins. However, if a data entry error occurs, and the flags are discovered to be set incorrectly, the following must be done in order for enrollment counts to remain accurate:

1. When you discover an incorrect setting on STVRSTS, *do not* change the flags. Leave all the flags set as they were when registration commenced.
2. Run an SQL script to report all students and/or CRNs that have the "bad" RSTS (registration status) code for the term.
3. Access SFAREGS, and set all those courses that were found to *DD*. (This *must* be done via SFAREGS, so that enrollment counts are processed correctly. *Do not* use an SQL script to make these changes.)
4. After all the affected courses have been changed to *DD*, reset the flags on STVRSTS.
5. Reapply the changed RSTS code on SFAREGS for all the affected courses. (This *must* be done via SFAREGS, not using an SQL script.)
6. You must access SFAREGS, and change the *DD* back to the original code that was just fixed on STVRSTS. (This *must* be done using SFAREGS, not using an SQL script).

## Student Levels Versus Course Levels in Registration

The student level is stored in the general student record on the General Student Form (SGASTDN), and the course levels are stored on the Student Course Registration Form (SFAREGS). When a student registers for a course or a section of a course, registration looks at the Schedule module to see if the section is offered at the student level. If it is, the student level is defaulted to the course.

If multiple levels are valid for the course, the student level defaults to the course. If the student level is not included in the list of valid values, the message *ERROR Invalid Code, Press LIST key for valid codes* will be displayed. You should then override the defaulting level with a valid level from the list. If only one level is valid for the course, and it is different from the student level, the valid course level will be defaulted, no error message will display, and no message will indicate that the course level does not match the student level.

## Registration Course Error Flags

The following values may be displayed in the **(Course Registration) Error** field of the Registration Section Query Form (SFQSECM). These values are automatically generated by the system if the student's course meets the criteria as specified by each value.

 **Note**

These values may not be entered in SFQSECM by the user. ■

Value	Description
<i>L</i>	Course status is designated as a waitlist status.
<i>D</i>	Course has been dropped.
<i>O</i>	Override was used in registration of this course.
<i>W</i>	Warning error. (This value never remains in the database permanently; it is used as a part of temporary processing when warning errors are detected that require online user intervention. Once the warning error is fixed, the <i>W</i> goes away.)
<i>F</i>	Fatal error. (This value <i>never</i> remains in the database permanently; it is used as a part of temporary processing when fatal errors are detected that require online user intervention. Once the fatal error is fixed, the <i>F</i> goes away.)

## Build Tuition and Fees

The institution's tuition and fee policy is built for a registration term using the Registration Fee Assessment Rules Form (SFARGFE). This form allows your institution to define the rules to be used in the registration fee assessment algorithm.

- The rules provide you with the ability to assess fees based on student criteria of campus, residency, level, college, major, class, rate, department, student attribute, student type, degree code, admit term, residency, program, and/or course criteria of part of term, grade mode, schedule type, and instructional method.
- Rules can be further limited by range of billing hours for the minimum and maximum charges for the rule, original registration dates, and flat hour ranges.
- In addition, the rules or charging can be grouped by course level, course campus, course attribute, study path, or study path with course attribute using all of the above criteria.

### Special Part-of-Term Processing

If part-of-term is entered on the Course Registration Status Form (SFARSTS) for either student, course, or campus processing, special logic is used. When a student is registered in courses that exist in more than one part-of-term, the registration fee assessment process looks for a registration fee assessment rule on the Registration Fee Assessment Rules Form (SFARGFE) that has a part of term code of “C” (combined). The registration fee assessment process will combine the billing hours from courses in all parts of term and will use that total with the “C” part of term rule. If no “C” rule exists, no part-of-term rules will be assessed, but non-part-of-term rules will still be assessed.

If the student is registered in courses in only one part-of-term, the rule for that part-of-term is used for the registration fee assessment.

#### *Example:*

Detail Code	Per Credit	Part-of-Term	Billing Hours	Rule
SSF-Student Svc. Fee	15.00	1	1—99	Rule #1
SSF-Student Svc. Fee	15.00	2	1—99	Rule #2
SSF-Student Svc. Fee	25.00	C	1—99	Rule #3

If a student is registered for:

3 billing hours in part of term 1

Assessment = 3 hours x \$15 = \$45 (Rule #1 is used)

If a student is registered for:

3 billing hours for part of term 2

Assessment = 3 hours x \$15 = \$45 (Rule #2 is used)

If a student is registered for:

3 billing hours for part of term 1

*and*

3 billing hours for part of term 2

Assessment = 6 hours x \$25 = \$150 (Rule #3 is used)

The Registration Additional Fees Control Form (SFAAFEE) is used to establish the fee codes and amounts for which a student may be assessed, on an individual basis.

The Registration Fees Min/Max Charge Control Form (SFAFMAX) is used to set up minimum and maximum amounts that can be assessed by detail code for the registration fee assessment process.

Please refer to the information on assess by course processing in the “Fee Assessment Using the Assess by Course Indicator” section of the “Registration Fee Assessment Processing” procedures for an explanation of and examples for additional use of part-of-term.

## Assess Additional Fees

The Registration Additional Fees Form (SFAEFEE) is used to enter additional charges for a student to be calculated in the registration fee assessment process. The only fees that may be assessed here are fees that are set up on the Registration Additional Fees Control Form (SFAAFEE).

Additional fees can be assessed online only by accessing the Registration Additional Fees Form (SFAEFEE) from the Student Course Registration Form (SFAREGS). (Select the Change Optional Registration Fees item from the Options Menu on SFAREGS.) The **Registration Fee Assessment On-line** box on the Term Control Form (SOATERM) must be checked. When the user returns to the Student Course Registration Form (SFAREGS) after processing additional fees, processing fees online in SFAREGS will include the assessment of additional fees.

Additional charges entered on the Registration Additional Fees Form (SFAEFEE) are assessed by the fee assessment process, which is launched from Registration or from the batch registration fee assessment process. Additional fees for a student are not assessed from SFAEFEE.

## Assess Tuition and Fees

If your institution chooses not to assess fees online for each individual student, your institution may run the Registration Fee Assessment Process (SFRFASC). This may be done after pre-registration time when the fee structure for the new term is set. This process has the options of assessing all students for a term or assessing only those who did not have an assessment done online. All charges assessed are immediately posted to the student's account in the Accounts Receivable module.

When any change is made to the Student Information window of SFAREGS that affects registration fee assessment, a batch registration fee assessment record is written. This will be used by the Registration Fee Assessment Process (SFRFASC) to correctly assess the student.

## Registration Fee Assessment Processing

### Overview

The Registration Fee Assessment process is used to assess fees for traditional or open learning registration records. It can also be used for registration records with study paths. An audit history is available so you can see how charges have been derived. You can copy registration fee assessment rules to new terms, and you can assess fees using per credit hour (using course liable billing hours), flat fee, and flat plus overload rules. When using fee assessment at the section level, you can use per billing hour, per credit hour, flat fee, and per duration unit rules.

#### Note

The registration fee assessment rules currently in use at your institution will continue to work for fee assessment processing. However, your rules can be updated as new terms are opened at your institution. ■

Fee assessment rules can be used to assess a student based on all curriculum elements and any curriculum type including primary and secondary curriculum, as well as student information such as residency, student attribute, student rate, student type, cohort, class, and visa type. Fee assessment rules that existed prior to Banner Student Release 8.0 can still be used and do not need to be re-evaluated. Those rules only consider the primary curriculum in processing assessments. The **Curricula** field will be set to *Primary* to accommodate these rules.

The additional curriculum fields are set to NULL with the following exception. If the **Major** field (now the **Field of Study Code** field) was populated prior to the upgrade to Release 8.0, the following will occur with regard to those rules:

- The **Field of Study Type** will be set to *MAJOR*.
- The **Field of Study Code** will be set to the code from STVMAJR that was used for the fee assessment rule.

- The **Curricula** field will be set to *Primary*.

The fee assessment process accommodates section level rules defined for open learning courses. User-defined codes are applied in the Registration Fee Assessment Rules Form (SFARGFE) to assess fees for open learning courses based on the schedule type and instructional method.

The following conditions apply when using fee assessment with open learning registration:

- Open learning sections are identified by the following characteristics: no part-of-term, an instructional method, registration from/to dates, student start from/to dates, duration units, and number of units.

Section level status codes, extension rules (if registration extensions are permitted), and refunding rules must be defined to process the registration of students into open learning courses. This data defaults from the information established in the Open Learning Rules Form (SOAORUL) when a new section is created.

The registration from and to dates will reflect the most appropriate registration dates as per SOAORUL, based on course and/or section characteristics. These rules are accessible via the Schedule Processing Rules Form (SSARULE).

- When registration takes place, charges are placed on the student's account based on section fees defined in the Section Detail Information Form (SSADETL) and/or fee rules established in the Registration Fee Assessment Rules Form (SFARGFE).

The **Track by CRN** indicator on in the Term Control Form (SOATERM) is used to add the CRN number to all fee assessment transactions on the student's accounts receivable records. The **Assess by Course** indicator on SFARGFE does the same in the refunding process (if the **Track by CRN** and **Assess by Course** indicators have been checked at the section level). This capability facilitates the tracking of fees to an individual registration record.

A study path sequence number will only be associated with a section fee charge when the **Section Fees by Study Path** indicator is checked on SOATERM.

- As an alternative to defaulting fees from the course level, registration fees can be defined in the Section Fee Assessment Control Form (SSADFEE) and will populate the section fees (SSRFEEES table) based on course and/or section characteristics. This is a set-up process only and will not physically write the new records to the table until a new section has been created.

When new sections are created, the fee rules defined here will default automatically. If the updating of existing sections with no existing fee rules is required, a batch process (SSPMFEE) is available to examine the set-up information and apply the fee rules to the appropriate sections.

- If fee assessment rules are required in addition to section level fees, they should be constructed in the Registration Fee Assessment Rules Form (SFARGFE) as in traditional fee assessment.

 **Note**

These charges will be assessed using the billing hours from SFAREGS as in the traditional registration fee assessment calculations. ■

- If your institution does not wish to use the section fees method for assessment, rules that incorporate open learning courses must be added to the Registration Fee Assessment Rules Form (SFARGFE). The data elements in the registration fee assessment rules provide the ability to assess by instructional method and schedule type.

## Define Charges Based on Course Registration Records

Charges can be defined in three ways:

### 1. Section Fees

You can establish and apply rules assigned to individual courses using the course fees information (in the Fee Code window of SCADETL) or the sections fees information (in the Section Fees window of SSADETL).

### 2. Registration Fee Assessment Rules

You can establish and apply rules on SFARGFE based on curriculum elements, student characteristics, course campus, course level, course attributes, study path, or study path with course attribute for pre-billing or regular billing rules.

### 3. Registration Additional Fees

You can manually add optional fees using SFAEFEE. This form can be accessed from the \*REGISTRATION menu or from SFAREGS during registration using the Charge Optional Registration Fees item in the Options Menu.

## Assessment Methods

Once you have built your rules and students have been enrolled, the charges can be applied immediately to a student's account using online assessment or through job submission.

You can run assessment five ways:

1. Online through SFAREGS Banner Student baseline registration.
2. Online through Banner Student Self-Service registration.
3. Online through Banner Voice Response telephone registration.

4. Online through TSASPAY in the Accounts Receivable module in Banner Student.
5. Online through job submission for a term using SFRFASC:
  - for a single ID,
  - for a population selection.
  - for batch collector records created in registration, or
  - for batch enrollment status.

## Reporting, Viewing, Auditing, Trouble Shooting, and Purging Fee Assessment

You can review charges that have been placed on a student's account in a variety of ways.

1. Use the Student Course/Fee Assessment Query Form (SFAREGF).

Review the data that is displayed in the Term Registration Summary block and the Mock Fee Assessment window for the student for the term.

2. View student account detail on the Account Detail Review Form (TSAAREV).

You can access this form from the \*TSTUDENT menu or using the Review Account Detail item in the Options Menu on SFAREGS or on SFAFAUD.

3. View student account detail on the Student Account Detail Form (TSADETL).

You can access this form from the \*TSTUDENT menu or using the Student Account Detail item in the Options Menu on SFAFAUD.

4. Use the Registration Fee Assessment Audit History Form (SFAFAUD).

The main window displays all the items that have been entered into the audit table to calculate the student's charges. Items that have been used to create a TBRACCD record display the associated transaction number from that table. The Audit Detail Information window displays the details for the audit record.

5. Run the Registration Fee Assessment Process (SFRFASC).

Run this process to: print accounting records, print audit information, print both accounting records and audit information, view audit records before updating student accounts, and sort in name or ID order.

6. Run the Fee Assessment Report (SFRFEES).

Run this report to assist in trouble shooting and debugging fee assessment processing. The report is used by the ActionLine to obtain contact data, (along with additional delivered SQL\*Plus scripts, which are discussed in the "Fee Assessment Script" section).

## 7. Run the Purge Fee Assessment Audit Process (SFPFAUD).

Run this process to purge audit history records from the database or range of dates for transactions, for a specific term, or for an ID. You can retain only the last assessment records, print summary or detail information, and run the process in audit or update mode.

## Course Catalog

To assure that fee assessment processing will access all the rules and information needed to calculate charges correctly, set-up is required in the Catalog module.

The following information from the Basic Course Information Form (SCACRSE) and the Course Detail Information Form (SCAETL) is pulled into the Schedule module and is used in fee assessment:

- billing hours
- credit hours (for section fees only)
- tuition waiver
- course levels
- grade mode
- schedule type
- instructional method
- course degree attributes
- fee codes
- duration type (for section fees only)
- duration units (for section fees only)

## Class Schedule

To assure that fee assessment processing will access all the rules and information needed to calculate charges correctly, set-up is required in the Class Schedule module.

The following information from the Schedule Form (SSASECT) and the Schedule Detail Form (SSAETL) is pulled into the Registration module and is used in fee assessment:

- course campus
- schedule type
- instructional method
- part-of-term (These dates default from SOATERM.)

- tuition/fee waiver
- billing hours (These default from the course but may be changed as sections are created.)
- sections fees
- degree program attributes
- duration type
- duration units

## Term Control

To assure that fee assessment processing will access all the rules and information needed to calculate charges correctly, set-up is required in the Registration module.

The following fields in the Registration Fee Assessment section of the Term Control Form (SOATERM) are used in fee assessment:

- **On-line Fee Assessment** - When this box is checked, fee assessment will run in baseline when registration records are saved and in self-service when students use the View Fee Assessment link.
- **Track by CRN** - When this box is checked, courses with assigned section fees and tuition and fee waiver flags set will have the CRN for that section recorded in accounting records when assessment takes place.
- **Refund by Total** - Check this box to use refund calculations that are processed by special refund by total calculations and registration refunding by total rules in SFARFND.
- **Allow Swapping** - Check this box to turn on hours swapping on a term-by-term basis in registration fee assessment.
- **Reverse Non-Tuition/Fee Charges** - Check this box to allow registration fee assessment to reverse non-tuition or non-fee charges for detail codes with a category code other than *TUI* or *FEE*.
- **Effective Date** - Enter the date you want charges to become effective in accounts receivable, when using post-dated fees for a future date.
- **Original Charge Cutoff Date** - This is the last date on which charges can be considered as original for purposes of Banner Financial Aid.
- **Section Fees by Study Path** - Check this box to control whether the study path sequence number for the CRN (for the section fees) will be posted to the charge on TBRACCD.

## Registration and Enrollment Status

### Course Registration Status Code Validation Form (STVRSTS)

The **Count in Assessment** and **Withdrawal Indicator** fields on STVRSTS need to be set up for use in fee assessment.

The **Count in Assessment** indicator is used for any course with a registration status which should have an impact on fee assessment. When this indicator is checked, the billing hours for the course with this registration status code will be considered in fee assessment. Uncheck this indicator if the billing hours for the course with this registration status code are not to be considered in fee assessment.

The **Withdrawal Indicator** is used for any course with a registration status that should be considered as a dropped course and for which a refund or penalty should be calculated. When this indicator is checked, the billing hours for the course with this registration status code will be considered in fee assessment, and the refund rules will be applied that are in effect for the date the code was assigned to the course. This is the only way a course can be considered as a dropped course and be processed by refund calculations in fee assessment.

The billing hours are adjusted based on the defined refund information (from either SFARSTS or SFARFND), if applicable, to calculate the student's liable hours for the course that has been dropped. If no refund period is defined, and no refund information is found for the dropped course, the student is 100% liable for the course. The course is considered an enrolled or registered course when the **Withdrawal Indicator** is unchecked. When the **Withdrawal Indicator** is unchecked and the **Count in Assessment** checkbox is checked, the student is automatically considered 100% liable for the charge for the course.

### Course Registration Status Form (SFARSTS)

The information in the Course Registration Status Refund Rules block on SFARSTS is considered when the **Refund by Total** checkbox is unchecked on SOATERM. If the student has dropped a course, fee assessment checks the registration status code, the part-of-term code on the course, and the date it was applied to the student's course on the SFRRFCR record. If that date falls within a range that has a refund period associated with a detail code that has a category of TUI or FEE, the liability for the student's assessment will be processed according to the refund percentages associated with that code on SFARSTS. The **Count in Assessment** checkbox must be checked for the registration status code.

### Enrollment Status Code Validation Form (STVESTS)

The **Withdrawal Indicator** on STVESTS needs to be set up for use in fee assessment. This indicator is used to define an enrollment status code as a drop for refund calculation. Check this indicator so fee assessment will use the enrollment status code as a refund status code. The refund percentages and date ranges in the rules on SFAESTS are used for

refunding. Uncheck this indicator so the student is seen as enrolled for this enrollment status code.

## Enrollment Status Controls Form (SFAESTS)

When the **Withdrawal Indicator** is checked for an enrollment status code on STVESTS, fee assessment checks the enrollment status code and the date it was applied to the student's enrollment against the SFBRFST record for refund information. If the student's enrollment change date falls within a range that has a refund percent associated with a detail code that has a category of TUI or FEE, assessment will calculate the percentage of the refund according to the refund percentages associated with that code.

If the enrollment code and the course enrollment status code are changed to a withdrawal type, the enrollment refund will always take precedence, and refunding will be based on the enrollment withdrawal rules. If no enrollment withdrawal percentages exist for the enrollment status code or the enrollment date, the course withdrawal refund rules will be used from SFARSTS or SFARFND.

Assessments that occur after the student's enrollment has been changed to a withdrawal type will not reflect any course liability, and tuition will not be assessed. The student's assessment will remain the same as it was for the previous assessment. Any mock assessment that is performed will not include course liability and tuition assessment, because none will be available.

## Manually Updating Existing Registration Status Codes

You can overwrite/update an existing registration status code (a non-dropped code) with the same value. If an existing course has the same registration status code (a non-dropped code) retyped over the existing code, no change in assessment should occur. If a course is changed from a lesser registration status to full registration status, any refund penalties or liability assessed need to be reversed. The SFRSTCR\_ASSESS\_ACTIVITY\_DATE column on the SFRSTCR table is used to monitor this.

The SFRSTCR table captures a fee assessment activity date to determine if a course needs to be processed in the next assessment. If flat charge refunding is in effect for the assessment, as it is the only method of refunding that determines and processes registration changes that have occurred since the last assessment, and a user types over an existing code, reassessment should not occur for the section. The date in the SFRSTCR\_ASSESS\_ACTIVITY\_DATE column is used to determine which registration records need to be selected for assessment.

As part of the registration processing, if the registration record is newly added or has had a change in its registration status, the SFRSTCR\_ASSESS\_ACTIVITY\_DATE field will be updated with the current date and time, so the fee assessment process will know that this record needs to be processed. The SFRSTCR record only will be selected for flat charge refund processing, if the SFRSTCR\_ASSESS\_ACTIVITY\_DATE is greater than the SFBETRM\_ASSESSMENT\_DATE, which is the date when the student was last assessed. On

those records that do not need to be processed, the `SFRSTCR_ASSESS_ACTIVITY_DATE` field will not be updated.

 **Note**

Institutions not using assessment flat charge rule definitions and flat charge refunding will not be impacted by this processing. ■

- If both the original course registration status code (`STVRSTS`) and the new course registration status code are for a non-dropped course (i.e., the course is being added), and the original add was already assessed, then the `SFRSTCR_ACTIVITY_DATE` field is always updated, but the `SFRSTCR_ASSESS_ACTIVITY_DATE` field is not updated, since the course is not newly added and does not need to be assessed.
- If either the original course registration status code (`STVRSTS`) or the new course registration status code are for a dropped course, which is defined as the `STVRSTS_WITHDRAW_IND` is set to `Y`, then the following criteria checking is performed.
  - If the new course registration status code and the original course registration status code are equal (the `SFTREGS_RSTS_CODE` field value equals the original `SFRSTCR_RSTS_CODE` field value), registration processing checks to see if the date on the new course registration status code (`SFTREGS_RSTS_DATE`) is different from the date on the original record (`SFRSTCR_RSTS_DATE`). If they are different, then the student has made a change and may qualify for a different refund. This record needs to be re-evaluated, and therefore the `SFRSTCR_ACTIVITY_DATE` and the `SFRSTCR_ASSESS_ACTIVITY_DATE` must be updated, so next assessment picks up the change.
  - If the new course registration status code is for a dropped course and the original course registration status code is for an added course, the `SFRSTCR_ACTIVITY_DATE` and the `SFRSTCR_ASSESS_ACTIVITY_DATE` must be updated, so that the next assessment processes the drop.

## Storing Related Values and Options

Fee assessment options and controls for a term are stored in the Fee Assessment section of the main window on `SOATERM`.

- Use the **On-Line Fee Assessment (Indicator)** to turn on online registration fee assessment for the term.
- Use the **Track by CRN (Indicator)** to turn on tracking of charges by CRN for registration fee assessment.
- Use the **Refund by Total (Indicator)** to turn on refund by total processing in registration fee assessment.
- Use the **Allow Swapping (Indicator)** to turn on hours swapping in registration fee assessment.

- Use the **Reverse Non-Tuition/Fee Charges (Indicator)** to allow registration fee assessment to reverse non-tuition or non-fee charges for detail codes with a category code other than *TUI* or *FEE*.
- Use the **Effective Date** field to designate the date you want charges to become effective in accounts receivable, when using post-dated fees for a future date.
- Use the **Original Charge Cutoff Date** field to designate the date through which all assessments are considered original charges on all student accounting transactions.
- Use the **Section Fees by Study Path (Indicator)** to control whether study path data is stored with a charge, when the charge is generated from section fees.

## Setting Up Non-Refundable Fees

When a student no longer qualified for a charge to a detail code having a category code other than *TUI* or *FEE*, the non-refundable charges were traditionally reversed. Some institutions prefer that only *TUI* and *FEE* charges qualify for the reversal. There is an option to reverse or not reverse charges to detail codes having a category code other than *TUI* or *FEE*.

Use the **Reverse Non-Tuition/Fee Charges (Indicator)** on *SOATERM* to allow registration fee assessment to reverse non-tuition or non-fee charges for detail codes with a category code other than *TUI* or *FEE*.

When the indicator is not checked (set to *N*), charges to detail codes having a category code other than *TUI* or *FEE* *will not* be reversed during fee assessment. For institutions that wish to use the reversal, the indicator should be checked (set to *Y*).

### Note

When the checkbox is not checked, assessment will default to not reversing charges to detail codes with a category code other than *TUI* and *FEE*. ■

## Maximum Limits

Use the Registration Fees Min/Max Charge Control Form (*SFAFMAX*) to set upper limits for the amount a student can be charged overall for a specific detail code for a term. This does not include processing using Track by CRN. A course that has the **Tuition Waiver (Indicator)** set on *SCACRSE* in a term that is using Track by CRN will not count toward the maximum allowed for a detail code for the term. Please refer to the topic *Definition and Use of Registration in SFAFMAX* later in this section for more information.

## Registration Fee Assessment Rules

Use the Registration Fee Assessment Rules Form (*SFARGFE*) to build your rules for fee assessment processing. Please refer to the online help for more information on *SFARGFE*.

On SFARGFE you can do the following in the Key Block:

- Use the pulldown list in the **Rule Type** field to select valid rule type values such as *ATTR*, *CAMPUS*, *LEVEL*, *STUDENT*, *STUDYPATH*, or *STUDYPATH\_ATTR*.
- Use the **Entry Type** field to build rules for pre-billing and regular billing. Use the pulldown list to select *PREBILL* or *REGULAR* as the value.
- Use the **Copy Rules to New Term** button to copy existing rules to a new term. This button opens a window where you can enter the rule information and then select the **Process Rule Copy** button to insert the copied rules into a new term and save the changes.
- Use the **Set Copy Indicator** checkbox to set the **Copy (Indicator)** for each rule on SFARGFE to checked (copy) or unchecked (do not copy).
- Use the **Process Copy Indicator Setting** button to default each **Copy (Indicator)** in the form for that rule type to the setting chosen (checked or unchecked) by the **Set Copy Indicator** checkbox.

On SFARGFE you can do the following in the Registration Charges and Fees block.

- Use the **Sequence Number** field to view the one-up number that is automatically assigned to each rule within the term code and rule type when the rule is created and saved. In the Registration Fee Assessment Audit History Form (SFAFAUD), you can identify exactly which rule was used to process that assessment by referring to the sequence number and then viewing the registration fee assessment rules for that term and rule type.
- Use the **Course Campus**, **Course Level**, and **Course Attribute** fields only when you are working with the applicable rules (*CAMPUS*, *LEVEL*, *ATTR*), as they have associated data entry restrictions. The **Course Attribute** field *must* be used with the *STUDYPATH\_ATTR* rule.
- Use the other fields in the block to build rules to your specifications.

Use the Student Curriculum Rules block, the Registration Criteria block, and the Student/Course Rules block to maintain information used in fee assessment processing. The data displayed in these blocks is dependent on the rule selected in the Registration Charges and Fees block.

Use the **Assess by Course** checkbox in the Student/Course Rules block to apply charges to a specific CRN when rules exist based upon part-of-term, grade mode, instructional method, and schedule type.

The following occurs in the Student Curriculum block when either the *STUDYPATH* or *STUDYPATH\_ATTR* rule type is selected in the Key Block.

- The **Residence** and **Session** fields are displayed.
- The **Curricula** field is hidden. You cannot enter the curriculum priority.

- The Student Curriculum tab label changes to read Study Path.
- The Student Curriculum Rules block label changes to read Study Path Rules.

When the rule types for *STUDENT*, *CAMPUS*, *ATTR*, or *LEVEL* are selected, the **Curricula** field is displayed, and the **Residence** and **Session** fields are hidden. The tab label reads Student Curriculum, and the block label reads Student Curriculum Rules.

When the *STUDYPATH* rule type is used, you must enter at least one curriculum value in the Study Path Rules block before a rule can be saved.

When the *STUDYPATH\_ATTR* rule type is used, you must enter at least one curriculum value in the Study Path Rules block, as well as a course attribute in the Registration Charges and Fees block before a rule can be saved.

## Copying Rules to New Term

Use the Copy Fee Assessment Rules To A New Term window on SFARGFE to copy rules by term and the associated data to a new term. This window is accessed from the Key Block using the **Copy Rules to New Term** button.

You may also select rules to copy by using the rule data elements. For example, you may copy one department's rules at a time or copy only those rules for non-resident students before copying rules for resident students. Use the data elements to restrict the rules to be copied. Only rules with the **Set Copy Indicator** checked will be copied to the new term. (When entering data elements to restrict rule copying, the rule uses an AND condition between the data elements you select.) Rules may be copied back to previous terms or forward to future terms. Detail codes that are inactive in TSADETC will not be copied in this process.

## Audit History

Use the Registration Fee Assessment Audit History Form (SFAFAUD) to assist in fee assessment processing and to view the history of assessments by ID and term. Use the data on the form to understand how the charge was calculated by the fee assessment process.

The Detail block displays the term code, activity date, time of the assessment, the SFARGFE rule sequence number, detail code, detail category code, TBRACCD transaction number, and the amount of the charge. You can view expanded detail on the audit record using Next Block or the Options Menu.

The Detail Audit Information window displays the pertinent information from SFARGFE and the fee assessment process to explain how the charge was derived. The window separates assessments into per credit, flat, and overload and allows you to see the billing hours used, as well as the overload starting hours, overload hours, and the per credit charges applied. The audit history also stores the CRN for both Track by CRN processing and for assess by course processing. When you are assessing by course or tracking by

CRN, the audit detail record displays the source of the refunding information, as well as the registration status code or the enrollment status code used to calculate the refund.

Charges applied as a result of assessments from the section fees portion of the Section Detail Form (SSADETL) and from additional fees are displayed in the **Note** field in the window. If minimum or maximum restrictions from the registration fee assessment rules or from SFAFMAX have affected the assessment, this is also displayed as notes information.

## Fee Assessment Audit History Records from Batch

The fee assessment process run from job submission (SFRFASC) provides output options to print either the entries that are made to the audit history table, the student accounting record (TBRACCD) update only, or both audit and student accounting record information.

Output is distinguished between fee assessment audit history records under the subheading of *Audit* and student accounting records (TBRACCD) under the subheading of *Accounting*.

Here is a sample of the output for a student in which charges have been back-dated in the Student Course Registration Form (SFAREGS). The audit information records the actual date of assessment, and the student accounting records display the effective date the charges were posted to TBRACCD. This represents the option to print both audit and student accounting information for the current assessment.

550000030	Student, Sample			
	Audit:			
	3	T101	Tuition Charge	400.00 20-NOV-2002
	1	TA	Tuition Rules by Level	40.00 20-NOV-2002
	2	TF	Non-Resident Tuition	240.00 20-NOV-2002
			Net Assessment:	680.00
	Accounting:			
	3	T101	Tuition Charge	400.00 20-NOV-2002
	1	TA	Tuition Rules by Level	40.00 01-OCT-2002
	2	TF	Non-Resident Tuition	240.00 01-OCT-2002
			Net Change:	680.00

## Per Credit, Flat, and Flat Plus Per Credit (Overload) Processing

Rules for fee assessment processing are defined in one of three ways:

- Per credit charging rules (uses billing hours)
- Flat charging rules
- Overload charging rules

Rules that have already been defined for previous terms will calculate the appropriate fees. When the audit history detail records are created for a previous term, fee assessment will

place all charges in the **Per Hour Charge** field, since this was the only method used to create charges in the previous versions of registration fee assessment.

Flat charging rules must be developed for institutions using plateau refunding. The flat and overload charging elements can be used to set up new rules for a term. Understanding this processing allows you to build rules that will provide more useful information from the registration fee assessment audit history records. Users can more readily see how a charge was derived in fee assessment.

The best way to demonstrate the differences in set-up and when it is necessary to update an institution's rules to use these new data elements is to provide several examples.

## Per Credit

Per credit processing functions as follows. You enter the per credit amount and use the minimum and maximum ranges to control the limits. The fee assessment audit history shows the per credit amount for the rule and the billing hours used to calculate the charge. If the minimum or maximum was invoked to limit the charge, that information is displayed in the notes. An example of the use of per credit charges and the results in the audit history is provided in the scenarios that follow.

## Flat and Flat Plus Per Credit (Overload) Processing

Flat plus per credit charges will be referred to as overload charges from here on.

For overload processing, the **Liable Billing Hours From** and **(Liable Billing Hours) To** fields are used to define how a student qualifies for or *enters* the rule. Other fields are also additionally used to define flat rules and overload rules.

The **Flat Charge Hours Range From** field is used to define the minimum credits for the flat charge. The **(Flat Charge Hours Range) To** field defines the point at which the flat rule charge is no longer in effect, and the **Flat Charge Amount** field defines the actual amount to be applied to the student's assessment.

The **Course Overload Start Hours** field determines the liable billing hours the student must have to begin assessing a per credit calculation over the flat charge. Therefore, a single rule can be used to set up the flat and overload charges. Conversely, single rules for per credit and flat processing can be broken out into two rules to allow for easier identification of how charges were derived using the audit history detail.

### Note

These fields must be used when plateau refunding is needed at your institution. ■

Flat fee processing uses a flat hours range and a defined flat fee amount to generate flat fee charges. This works with the assessment process to identify the starting point for the flat rule. The from flat hours is referred to during the plateau refund process.

Expanded decimal places are not required to calculate correct refunds when dropping into and out of flat charge ranges. The course overload start hours is referred to when overload rules are in effect. Any credits over a particular range are charged a per credit rate plus the flat charge. For example, you may have a rule that says: Charge \$1000.00 to any student with 12 or more credits and an additional \$100.00 per credit to students who have more than 15 credits. You do not need to use a negative rule to back out the difference between the flat and per credit over flat amounts. A detailed example is provided in the scenarios that follow.

## Per Credit Charging

Previously, per credit charging was the only way fee assessment was able to calculate charges. Per credit charging was used to create both flat and flat plus per credit charges by manipulating the use of the minimum and maximum charge values in SFARGFE. This method will continue to calculate the correct results. Please review the following example.

### Scenario 1: Flat Charges versus Per Credit with a Maximum Charge

#### Old Rule Set-Up Charges

1. Any undergraduate student who is registered in 1-11.99 credits (billing hours) is charged \$80.00 per credit.
2. Any undergraduate student who registers in more than 12 credits is charged a flat fee of \$1000.00.

$$12 \times 80.00 \text{ per credit} = \$960.00$$

Therefore, these charging rules mean that full-time students pay a \$40.00 premium for going to full-time status, which allows them a higher range of hours for the same flat charge.

A single rule such as the following can be created:

Seq	Detl	Per Credit	Min	Max	Lvl	From Liable Billing Hrs	To Liable Billing Hrs	From Flat Hrs	To Flat Hrs	Flat Chrg	Course Overload Start Hrs
1	T101	\$80.00	\$80.00	\$1000.00	UG	1.00	99.00				New Data Elements on SFARGFE

This rule creates the correct charges and refunds for students in fee assessment processing. The results in SFAFAUD will show what fee assessment has done to calculate the charge. All charges are recorded as per credit charges in the audit table.

As a result, the audit history records for every student who is charged using a rule such as the one above will display the per credit calculation in the **Per Hour Charge** field in the Detail Audit Information window of SFAFAUD. The total per credit calculation and the

number of liable hours used to derive the charge are displayed in those data fields. If the student exceeds the \$1,000.00 limit, the total calculation is displayed, but the **Note** field explains that the per credit calculation exceeded the rule maximum. Fee Assessment actually calculates the per credit charge and then invokes the maximum charge defined for the rule.

A student who registered for 21 credits in a term in which the above rule is defined, would have the information in the **Note** field in the Detail Audit Information window of SFFAUD explaining that the per credit calculation of:

21 liable billing hours X 80.00 per hour = \$1680.00, which exceeds the rule maximum of \$1,000.00

(by displaying in the **Note** field)

*1680 > rule max of 1000, reset to max*

Fee assessment rules and processing allow the user to move the \$1,000.00 flat rate into the **Flat Fee Charge** field, indicating that the charge was not derived just as a maximum that was invoked on a per credit rule, but that it was in fact a flat charge. Please see the next example.

#### **Alternative Rule Set-Up for Flat Charging**

Using the same example as above, a new rule can be established.

As an alternative to fee assessment performing the work to calculate per credit charges, when in fact the user really is creating a flat charge, use the set of flat charging elements in SFARGFE. The charge posted to the accounting records in TBRACCD will be the same using this set-up, however what is displayed to the user in the Audit Detail Information window will differ.

To accomplish this you can break the above rule into two separate rules using the fields on SFARGFE for flat and overload charging.

Seq	Detl	Per Credit	Min	Max	Lvl	From Liable Billing Hrs	To Liable Billing Hrs	From Flat Hrs	To Flat Hrs	Flat Chrg	Course Overload Start Hrs
1	T101	\$80.00	\$80.00	\$959.20	UG	1.00	11.99				
2	T101	\$0.00	\$0.00	\$9999.99	UG	12.00	99.00	12.00	99.00	\$1000.00	

A student who is registered in 21.00 credits receives a \$1,000.00 charge. This time, the flat charge of \$1,000 displays in the **Flat Fee Charge** field in the Audit Detail Information window. The range of credits that apply to the flat rule are also displayed in the **Rule Flat Hour Range** fields as 12.00 - 99.00. Fee assessment does not multiply the student's

billing hours by the per credit charge and then invoke the maximum limit. There is no information in the **Note** field in this case.

The new rules on SFARGFE in the Registration Charges and Fees block will be displayed as follows:

- The value for the **Flat Charge Hours Range From** is 12.00.
- The value for the **(Flat Charge Hours Range) To** is 99.00.
- The value for the **Flat Charge Amount** is \$1000.00.

Fee assessment will calculate refunds when a student drops below the from flat hours range. Please refer to the topic “Refunding Using Combined Flat and Overload Rules (Plateau Refunds)” later in this section.

### ***Scenario 2: Overload Charging***

An “overload” situation may exist when:

- The institution decides that the flat charge applies to a specific range of credits (billing hours), and there is a maximum number of hours allowed for that flat charge.
- If a student exceeds the maximum hours allowed for the flat charge, the institution charges per credit for the difference between the maximum allowed for the flat range and the actual number of credits for which the student is registered.

SFARGFE uses a **Course Overload Start Hours** field to determine when that overload charge should begin. Please review the following example.

Any undergraduate student who is registered in 1-11.99 credits is charged \$100.00 per credit.

When an undergraduate student reaches 12.00 credits, a flat fee of \$1000.00 is applied. (In this case, the institution provides an incentive to register as a full-time student.) The flat fee applies to all students registered in 12 or more credits, but if the student registers in more than 15 credits, the institution begins charging an additional \$100.00 for each credit in excess of that 15 credit maximum.

### ***Non-Refund by Total and Multiple Flat Rules***

Fee assessment processing can assess a student for multiple flat rates, as well as non-flat or per credit type rates concurrently.

*Example Rules:*

The student qualifies for the following rules on SFARGFE.

Rule	Detail Code	Rule Type	Flat From	Flat To	Amount
1	T100	STUDENT	12	99	1200 flat
2	T200	STUDENT	7	10	1000 flat
3	C100	STUDENT	0.01 (Credit From)	50 (Credit To)	100 per credit hour

Step 1: The student initially registers for 13 credit hours and is assessed.

Detail Code	Amount	Liability Hours	Student Liability Hours
T100	1200	13	13
C100	1300	13	13

Step 2: The student drops 6 credit hours in a 60% refund period and is assessed.

Detail Code	Amount	Liability Hours	Student Liability Hours
T100	1200	The flat liability is calculated at 9 hours, which is below the flat range.	
T200	1000	9.4	9.4
C100	360	9.4	9.4

The following rules are used for processing multiple flat rules with per credit hours rules.

1. When the student qualifies for multiple rules that exist across multiple rule types (such as *STUDENT* and *ATTR*, or *STUDENT* and *CAMPUS*, or *CAMPUS* and *LEVEL*), the student liable rule hours on all non-student rules will be based on a per-credit and non-flat calculation.
2. The student drops out of a flat rule, and no other rule exists to pick up where the flat rule ends. (The student is assessed a flat fee with a range of 12 - 99 hours, drops hours in a range from 0 - 11.99, and no other rules exist below 12 hours). When the student adds credit hours back into their rule, the previous flat liability will be lost, and the new liability will include only new credit hours.

*Example Rule:*

The student qualifies for the following rule on SFARGFE.

Rule	Detail Code	Rule Type	Flat From	Flat To	Amount
1	T100	STUDENT	12	99	1200 flat

Step 1: The student initially registers for 13 credit hours and is assessed.

Detail Code	Amount	Liability Hours	Student Liability Hours
T100	1200	13	13

Step 2: The student drops 3 credit hours in a 60% refund period and is assessed.

Detail Code	Amount	Liability Hours	Student Liability Hours
T100	1200	The flat liability is calculated at 10.8 hours, which is out of the flat range.	

Step 3: The student adds another 6 credit hours and is assessed.

Detail Code	Amount	Liability Hours	Student Liability Hours
T100	1200	16	16

The previous flat liability of .8 hours is lost, and the starting liability for the flat fee will start over.

- The rules that will reuse the liability hours calculated for a flat fee are flat rules with the same from and to flat hours within the same rule type and value. This is any non-flat rule in which the flat “from hours” minus the non-flat rule credit “to hours” is greater than zero but less than one.

For example, the flat rule has a flat range of 12 - 99. The rule that is not for a flat fee and with a credit hour range of 0 - 11.99, will use the liability hours calculated for the flat fee. If the non-flat rule has a credit hour range of 0 - 10.99, the flat liability will not be used, but the liability calculated as a per credit hour will be used.

*Example Rules:*

The student qualifies for the following rules on SFARGFE.

Rule	Detail Code	Rule Type	Flat From	Flat To	Amount
1	T100	STUDENT	12	99	1200 flat
2	T200	STUDENT	7	10	1000 flat
3	C100	STUDENT	0.01 (Credit From)	11.99 (Credit To)	100 per credit hour

Step 1: The student initially registers for 13 credit hours and is charged.

Detail Code	Amount	Liability Hours	Student Liability Hours
T100	1200	13	13

Step 2: The student drops 6 credit hours in a 60% refund period and is charged.

Detail Code	Amount	Liability Hours	Student Liability Hours
T100	1200	The flat liability is calculated at 9 hours.	
T200	1000	9.4	9.4
C100	900	9	9

C100 picks up the liability calculated for the T100 flat fee, because it is within one credit hour range.

4. If a non-flat rule falls in the 1 credit hour range for multiple flat rules, it will always be treated as a per credit hour, and none of the flat liabilities will be used for the rule.

*Example Rules:*

The student qualifies for the following rules on SFARGFE.

Rule	Detail Code	Rule Type	Flat From	Flat To	Amount
1	T100	STUDENT	12	99	1200 flat
2	T200	STUDENT	12	15	1000 flat
3	C100	STUDENT	0.01 (Credit From)	11.99 (Credit To)	100 per credit hour

Step 1: The student initially registers for 13 credit hours and is charged.

Detail Code	Amount	Liability Hours	Student Liability Hours
T100	1200	13	13
T200	1000	13	13

Step 2: The student drops 6 credit hours in a 60% refund period and is charged.

Detail Code	Amount	Liability Hours	Student Liability Hours
T100	1200	The flat liability is calculated at 9 hours.	
T200	1000	The flat liability is calculated at 9 hours.	
C100	940	9.4	9.4

**Multiple Flat Rules GTVSDAX Rule**

 **Warning**

If you have multiple flat rules with the same from (start) dates but with different to (end) dates, you need to read the following, or your results may be different than expected. ■

A GTVSDAX rule is used to define the minimum flat to hours for conversion to a value of 9999 for processing consistency. The GTVSDAX rule for the **(Internal) Code** of *FLATTOMAX* and the **Group (Code)** of *FEERULES* is used to define the minimum flat to hours that will be converted to 9999. For example, if your rules are 12-99, 12-99.99, and 12-999, set the **External Code** to 99 so that all rules greater than or equal to 99 will be converted to 9999.

Script `sinsgtvsdax1.sql` is used to insert this record into GTVSDAX.

External Code	Internal Code	Internal Code Sequence Number	Internal Code Group	Description	Activity Date
99	FLATTOMAX	1	FEERULES	Max RGFE flat to hours	Sysdate

The `supsfrrflat.sql` script is used to correct all flat to hours values for a term in SFRRGFE and SFRFAUD. This script is run from SQL\*Plus. It finds all flat hour ranges for a term, prompts the user for new flat to hour values, and then updates the values. The SFKFEES and SFKFEE1 packages replace the SFRRGFE\_TO\_FLAT\_HRS value and the SFRFAUD\_RGFE\_TO\_FLAT\_HRS value with 9999 for a term, when that value is greater than or equal to the GTVSDAX value for the FLATTOMAX rule.

### Old Rule Set-Up for Overload Charges

The former rule set-up required four lines of rules. One line of rules was set up using a negative charge to compensate for the per credit limitations of old fee assessment processing. These rules will continue to calculate the correct assessment.

The \* indicates fields that have been added to SFARGFE.

The \*\* indicates fields that have been removed from SFARGFE.

Seq	Detl	Per Credit	Min	Max	Plat	Plat Hrs	Lvl	From Liable Bill Hrs	To Liable Bill Hrs	Frm Flat Hrs	To Flat Hrs	Flat Chrg	Crse Overload Start Hrs
*					**	**				*	*	*	*
1	T101	\$100.00	\$100.00	\$1199.00	Y	12	UG	1.00	11.99				
2	T101	\$100.00	\$1000.00	\$1000.00	Y	12	UG	12.00	99.00				
3	T101	\$100.00	\$0.00	\$9999.00	Y	12	UG	15.00	99.00				
4	T101	\$0.00	-\$1500.00	-\$1500.00	Y	12	UG	15.00	99.00				

The work done by fee assessment when a student with 19 credits registers and is assessed for these rules is:

Determine the student's liable hours = 19, and therefore rules 2, 3 and 4 apply.

Rule 2 charge = 19 X 100.00 per credit = \$1900.00, but the maximum allowed for the rule is \$1,000.00; therefore the Rule 2 charge = \$1,000.00.

Rule 3 charge = 19 X 100.00 per credit = \$1900.00.

Rule 4 charge = 19 X 0 per credit = 0, and the minimum charge = - \$1500.00.

The total of Rules 2, 3, and 4 = (\$1,000.00 + \$1900.00) - \$1500.00 = \$1,400.00.

### **Alternative Rule Set-Up for Overload Charges**

Seq	Detl	Per Credit	Min	Max	Lvl	From Liable Billing Hrs	To Liable Billing Hrs	From Flat Hrs	To Flat Hrs	Flat Chrg	Course Overload Start Hrs
1	T101	\$100.00	\$100.00	\$1199.00	UG	1.00	11.99				
2	T101	\$100.00	\$0.00	\$9999.99	UG	12.00	99.00	12.00	99.00	\$1000.00	15.00

The \$100.00 per credit charge will be used when the student reaches the course overload start hours (in this case 15.00 hours).

Only students who are liable for 12.00 or more billing hours use this rule (sequence number 2). Once it is determined that the student has more than 12.00 liable billing hours, fee assessment then looks to see if the liable billing hours are also greater than or equal to 15.00, the value of the course overload start hours. If that is the case, as with a student who has 19 credits, fee assessment performs this calculation:

Flat Charge + (Billing Liable hours – Course Overload Start Hours) X Per Credit Charge

A student with 19 credits will be charged:

$1000.00 + (19 \text{ Liable Billing Hours} - 15 \text{ Course Overload Start Hours for the rule}) \times 100.00 = 1000 + (4 \text{ Overload Hours} \times 100.00) = \$1400.00$

The Detail Audit Information window on SFFAUD displays the flat charge amount and the overload charge amount based on the rule above for a student who registers in 19.00 hours. Based on the overload start hours of 15.00, the flat fee charge of \$1000.000 is still in effect and is displayed in the **Flat Fee Charge** field. The hours used for the overload calculation (4.00) are displayed in the **Overload Hours** field, and the \$100.00 per credit charge that applies to the overload hours displays in the **At** field with the calculated charge displayed to the right.

### **Fee Assessment Using the Assess by Course Indicator**

Fee assessment processing can assess a course with certain course-specific data elements. These data elements that apply to assess by course are part-of-term, grade mode, instructional method, and schedule type. The **Assess by Course (Indicator)** allows fee assessment to return to the grouped courses (whether by student, level, campus, or course attribute) and check for CRNs that satisfy a rule with a specified part-of-term, grade

mode, instructional method, and schedule type. Rules can also be assessed using C (combined parts-of-term).

## Using Assess By Course With Part-of-Term Processing

When a rule is specified as being assessed by course, fee assessment processes the student's registered courses in two steps for the available rule groupings in SFARGFE (student characteristics, course level, course campus, and course attribute).

1. The order of processing within groups is determined.
  - 1.1. Course hours for that rule grouping are summed.
  - 1.2. While the total hours are being summed, part-of-term is tracked for that group. If more than one part-of-term is found, C (combined) becomes the part-of-term for the group. If the part-of-term for the group is not greater than one, the code remains set to that unique part-of-term.
2. The group hours are totalled.
  - 2.1. The rule evaluation is called.
  - 2.2. The part-of-term code determined in step 1 during the totalling process is used. If found to be C, fee assessment will use the rule that is specified as C for the part-of-term.
  - 2.3. Only rules *not* marked *assess by course* will be considered in this step.
3. Assess by course processing begins.
  - 3.1. Each course is processed within the course grouping.
  - 3.2. The rule evaluation is called for each course within the grouping.
  - 3.3. Only courses marked *assess by course* will be considered.
  - 3.4. The part-of-term code used in the rule will be the part-of-term code (or grade mode) attached to the course being processed.
  - 3.5. The hours used for the rule for that specific part-of-term will be the hours for the course.

## Examples of Part-of-Term Processing

Here are some examples of part-of-term processing.

### **Example 1 - Ken Jones**

For this example, assess by course is turned *off* in all rules. The rule type is *Charge By Student Characteristics*. SFARGFE is set up as follows:

Part-of-Term	C	T102 @ 10.00 pc
Part-of-Term	2	T103 @ 100.00 pc
Part-of-Term	blank	T101 @ 125.00 pc

Ken Jones is registered in two courses:

CRN 1	4 credits defined as Part-of-Term 1
CRN 2	2 credits defined as Part-of-Term 2

The total credits for grouping by student are six (6). The SFARGFE rules for both *C* and *Blank* apply to this student's registration.

The calculation would be:

$$\begin{aligned}
 &(6 \times 10.00) \text{ for Part-of-Term } C = T102 \\
 &+ (6 \times 125.00) \text{ for Part-of-Term } Blank \\
 &= 810.00
 \end{aligned}$$

The rule for Part-of-Term 2 does not use T103 for processing, because assess by course is turned off.

The student's accounting entries (TBRACCD) would be:

1	T101	Tuition Charge	750.00	
2	T102	Undergraduate Tuition	60.00	
		Net Change		810.00

### **Example 2 - Ken Samuels**

For this example, assess by course is turned *on* in one rule. The rule type is *Charge By Student Characteristics*. SFARGFE is set up as follows:

Part-of-Term	C	T102 @ 10.00 pc	<b>Assess by Course</b> is <i>N</i>
Part-of-Term	2	T103 @ 100.00 pc	<b>Assess by Course</b> is <i>Y</i>
Part-of-Term	blank	T101 @ 125.00 pc	<b>Assess by Course</b> is <i>N</i>

Ken Samuels is registered in two courses:

CRN 1	4 credits defined as Part-of-Term 1
CRN 2	2 credits defined as Part-of-Term 2

The total credits for the grouping by student are six (6). **Assess by Course** is checked for the rule with the detail code of T103. Therefore the SFARGFE rules for both *C* and *Blank*

apply, and Part-of-Term 2 will apply to this student for the hours within Part-of-Term 2. The credits to assess by course equal two (2).

The calculation would be:

$$\begin{aligned} &(6 \times 10.00) \text{ for Part-of-Term } C = T102 \\ &+ (6 \times 125.00) \text{ for Part-of-Term } Blank = T101 \\ &+ (2 \times 100.00) \text{ for Part-of-Term 2, assess by course} = T103 \\ &= 1010.00 \end{aligned}$$

The student's accounting entries (TBRACCD) would be:

1	T101	Tuition Charge	750.00	
2	T102	Undergraduate Tuition	60.00	
3	T103	Tuition Charge	200.00	
		Net Change		1010.00

If the above students were to drop courses during a 100% refund period or using a drop code that is not counted in assessment, and the remaining CRN(s) exist in a single part-of-term, fee assessment assesses the student as though they are in a single part-of-term. Fee assessment sees the change from multiple parts-of-term to a single part-of-term and use the correct rules for the student.

## Track by CRN

Track by CRN processing works as follows. The CRN is stored in the audit history record (SFAFAUD), and section fee information is retained in the notes of the audit history record. The CRN can be viewed on TSADETL. You can navigate to TSADETL from SFAFAUD to see the CRN in Accounts Receivable. This is enabled in SOATERM using the **Track by CRN** checkbox. Track by CRN also allows institutions to realize or total the revenue generated from students registering for specific CRNs.

### Note

The view `SFVTFAN` and the report produced by the script `sfrtfan.sql` are also part of this fee assessment processing. ■

The Student Course/Fee Assessment Query Form (SFAREGF) provides fee assessment detail in the Mock Fee Assessment window and also displays the CRN for any courses with section fees when the **Track by CRN** checkbox is checked in SOATERM. The mock assessment takes place for the current saved registration record when you view these charges with the SFAFMAX minimum/maximum applied or without the SFAFMAX minimum/maximum applied using the Options Menu.

## Definition and Use of Registration in SFAFMAX

The Registration Fees Min/Max Charge Control Form (SFAFMAX) allows institutions to define minimum and maximum charges for a given detail code for a given term. When a minimum/maximum range is established for a detail code for a term, fee assessment refers to the rules built for the term in this form and imposes the minimum or maximum as defined for the grouped detail code charges.

When tracking by CRN is *not* used, and study path charging is *not* used, the assessment charges determined for the student for the term are grouped by detail code. Prior to the creation of the accounting record, the SFRFMAX table is checked to see if a defined minimum/maximum exists for the detail code and term. If an SFRFMAX record is defined for the detail code and term being processed, the total generated charge (the aggregate charge) for the detail code is evaluated to see if it falls within the minimum/maximum charge range that is defined for that detail code in SFAFMAX. If the aggregate charge is outside of the minimum/maximum charge range, the aggregate charge is adjusted, and the adjustment amount is recorded in the Registration Fee Assessment Audit History Form (SFAFAUD).

The audit history record that is created brings the determined liability for the student into agreement with the amount the student was charged in accounting. The audit history and the student's account charges will agree. This processing can be seen in the **Note** field in the Detail Audit Information window on SFAFAUD.

In registration fee assessment, the SFRFMAX table is consistently checked prior to the creation of accounting records in TBRACCD. This is true regardless of whether the **Tracking by CRN** checkbox is turned on (checked) or off (unchecked) in Term Control Form (SOATERM).

When tracking by CRN *is* used for a term, the scope of the registration minimum/maximum rules changes.

1. Each course-specific charge will be evaluated against the defined minimum/maximum charge range for the term and detail code as defined in SFAFMAX.
2. As part of registration fee assessment processing when using tracking by CRN, the determined charges are grouped by detail code and CRN. The generated charges will include recording the CRN in the student's accounting record if the charge is for a particular course, i.e., a section fee or a charge determined by a registration fee assessment rule (from SFARGFE) where the **Assess by Course (Indicator)** is checked (SFRRGFE\_ASSESS\_BY\_COURSE\_IND is Y).
3. Prior to creating the accounting record in TBRACCD for the course-specific charge, the SFRFMAX table is checked to determine if a defined minimum/maximum charge range exists for the term and detail code. If the generated course-specific charge is outside of the minimum/maximum range as defined in SFRFMAX, the generated charge is adjusted, and the adjustment amount is recorded in registration fee assessment audit history (SFRFAUD).

When study path assessment *is* used for a term, the scope of the registration minimum/maximum rules changes.

1. Each detail code and study path charge will be evaluated against the defined minimum/maximum charge range for the term and detail code as defined in SFAFMAX.
2. As part of registration fee assessment processing when using the *STUDYPATH* or *STUDYPATH\_ATTR* rules, the charges are grouped by detail code and study path. The generated charges include recording the study path in the student's accounting record.
3. Prior to creating the accounting record in TBRACCD for the study path charge, the SFRFMAX table is checked to determine if a defined minimum/maximum charge range exists for the term and detail code. If the generated study path charge is outside of the minimum/maximum range as defined in SFRFMAX, the generated charge is adjusted, and the adjustment amount is recorded in registration fee assessment audit history (SFRFAUD).

Minimum/maximum rules are not used if all courses have been dropped at 100%. In addition, if all the rules (created on SFARGFE or SSADETL) are deleted for a detail code and a corresponding minimum/maximum charge range, the minimum/maximum rules are not used in the reassessment.

## Use of View Students Classes and Charges on SFAREGF

The Student Course/Fee Assessment Query Form (SFAREGF) performs a mock fee assessment when the you select Fee Assessment Without Min/Max Applied or Fee Assessment With Min/Max Applied from the Options Menu.

Fee assessment detail in the Mock Fee Assessment window displays the CRN for any courses with section fees when the **Track by CRN** checkbox is checked in SOATERM, along with the detail code and charge calculated based on the student's current saved registration record. You may view these charges with the SFAFMAX minimum/maximum applied or without the SFAFMAX minimum/maximum applied.

## Fee Assessment Processing Steps - Refunding by Course

The fee assessment process always works with the student's liability at the specific time that the process is run. Comparisons to previous assessments for accurate charging, refunding, and reversals are aided in certain processing by the use of the audit history table. It is critical to create the first set of audit history records.

Fee assessment does the following during processing:

1. Determines the liable amount by detail code.

Fee assessment looks at registration status information for the course and determines what the student is liable for in terms of billing hours, using the **Liable Billing Hours From** and **To** fields on SFARGFE.

For example, a student is registered in 12 hours.

CRN	Hours	Status
CRN 001	4	RE
CRN 002	2	RE
CRN 003	3	RE
CRN 004	3	RE

The fee assessment rule the student qualifies for is:

Detail Code	Amount	Field	Value
T101	\$10.00 per credit	Minimum	0.00
		Maximum	1,000.00
		From Liable Hours	1.00
		To Liable Hours	99.00

- The registration status code used is RE (Registered).
- On STVRSTS the following settings are used. The **Count in Enrollment (Indicator)** is checked. The **Count in Assessment (Indicator)** is checked. The **Withdrawal Indicator** is *not* checked.
- In SFARSTS, there are no refund periods associated with the RE status.
- Fee assessment uses the per credit charge and the RE status, because it does not mean a drop (**Withdrawal Indicator** is not checked), and no refund percentages apply. Therefore liability for each CRN is interpreted as 100%. (For the calculation, the liability multiplier is 1.0.)

The calculation used is (liable hours X liability multiplier) X charge per the rule qualification.

CRN	Calculation
CRN 001	(4.00 X 1.0) X 10.00
CRN 002	(2.00 X 1.0) X 10.00
CRN 003	(3.00 X 1.0) X 10.00
CRN 004	(3.00 X 1.0) X 10.00

The total charge will be \$120.00 for the detail code (T101) associated with this rule.

If this scenario is modified by performing a drop of one CRN, there is a different result.

- The registration status code for CRN 001 is changed to DC (Drop Course).
- On STVRSTS the following settings are used. The **Count in Assessment (Indicator)** is checked. The **Withdrawal Indicator** is checked.
- When setting up registration status controls on SFARSTS, DC is defined with a refund percentage of 90% for category codes of TUI.
- A 90% refund means 10% liability to fee assessment, thus the multiplier changes from 1.00 to .10.

This is how fee assessment calculates the new assessment:

<b>CRN</b>	<b>Calculation</b>
CRN 001	$(4.00 \times .10) \times 10.00 = 4.00$
CRN 002	$(2.00 \times 1.0) \times 10.00 = 20.00$
CRN 003	$(3.00 \times 1.0) \times 10.00 = 30.00$
CRN 004	$(3.00 \times 1.0) \times 10.00 = 30.00$

The total new assessment will be \$84.00 for the detail code (T101) associated with this rule.

Step 2 explains what is done in the student's accounting record as a result of this registration change from the first assessment.

2. Compares the current assessment to the current student accounting records using currency amounts and the last set of charges for the student.
  - 2.1. Compares the liable amount to what is in the student accounting records for the detail code and term. (In the example above, this is T101 for \$120.00.)
  - 2.2. Posts the difference (the charge or refund) if the current assessment liable amount is different than what is in the student accounting records (for non-refund by total processing).

In the above instance, \$120.00 (which exists in TBRACCD for detail code T101 for the term) is compared to \$84.00 for the same detail code for the current assessment. The difference is \$36.00. A charge of - \$36.00 is posted to detail code T101 for the student for the term in the TBRACCD (student accounting) record.

3. Reverses any detail codes or amounts that are no longer applicable.
  - 3.1. Consults the previous student accounting records for detail codes and amounts that are not applicable in the current assessment and reverses these amounts.

If a student no longer qualifies for a rule because of a change either to the student's general student data or to the student's course registration records, fee assessment reverses the amount charged to that detail code. For instance, if a detail code and rule are used to charge a \$75.00 parking fee to a non-resident student, and the student changes from non-resident status to resident status, when fee assessment is run again, the parking fee is reversed.

Refunding by course is used when the **Refund by Total** checkbox is *unchecked* for the term in the Term Control Form (SOATERM). For refunding by course processing, the above explanation of processing is a basic description of what is done when a per credit rule has been used. Since there are options to process rules in three ways (per credit, flat, and overload), the following steps describe in more detail what occurs:

1. The student's previous accounting record is always consulted.
2. The method used to create the charge is determined. If there was a flat charge or an overload charge, refunding will account for that (without the use of plateau hours and plateau indicators), because flat hours are stored in the audit history record and are itemized there.
  - 2.1. The audit trail itemizes the currency amounts for per credit, flat fee, and plus per credit, checking for overload charges.

Please refer to the topic *Refunding Using Combined Flat and Overload Rules (Plateau Refunds)* later in this section for further information about plateau refunds.

3. Refunding then looks at the charge for that course and processes the refund according to the rules established on SFARSTS or SFAESTS. Refunding using enrollment status is discussed in the "Refunding By Registration Enrollment Status" section.

## Using Optional Swapping Processing with Refunding by Course

Users have the ability to use optional swapping processing with refund by course refund processing. Swapping can be defined as the exchange (dropping and adding) of billing hours within the same day with no additional liability. Swapping occurs across billing hours and not by the individual course. An institution can choose to invoke this functionally or use the established processing with liability for dropped hours. Use the **Allow Swapping (Indicator)** on the Term Control Form (SOATERM) to turn on swapping on a term-by-term basis if desired.

### **Note**

Open learning courses are not considered in the swapping algorithm, as they carry their own refund method.

Section fees are not considered in the swapping algorithm as they are assessed for each course individually and do not consider the total billing hour liability. ■

## Refund by Course Processing and Examples

If a student drops and adds course billing hours on the same day during a refund by course refund period, assessment will only determine liability on the difference of the excess of dropped billing hours. This will allow an implicit 100% refund on the liable billing hours calculated for the offsetting drop. This may occur with any combination of hours.

For example, the Total Billing Hours Dropped - Total Billing Hours Added = Net Billing Hours Dropped.

If an intermediate assessment has occurred between the drop and add activity, fee assessment will post an adjusting entry for the difference for the appropriate detail codes to the student's account.

Here are eight examples that illustrate this.

### **Example 1:**

A student drops a three hour course and adds a three hour course in the same day.

A student drops three hours and adds three hours on the same day. The resulting hours are the same; therefore, no liability is associated with the dropped hours.

(Drops - Adds = Net)  $(3-3=0)$

Considered swapping for three hours. The student has no liability for the dropped billing hours.

### **Example 2:**

A student drops a three hour course and adds a two hour course and a one hour course in the same day.

A student drops three hours and adds a two hour course and a one hour course on the same day. The resulting hours are the same; therefore, no liability is associated with the dropped hours.

(Drops - Adds = Net)  $(3-(2+1)=0)$

Considered swapping for three hours. The student has no liability for the dropped billing hours.

### **Example 3:**

A student drops two, two hour courses and adds a four hour course on the same day.

A student drops two, two hour courses and adds a four-hour course on the same day. The resulting hours are the same; therefore, no liability is associated with the dropped hours.

$$(\text{Drops} - \text{Adds} = \text{Net}) ((2+2)-4=0)$$

Considered swapping for four hours. The student has no liability for the dropped billing hours.

**Example 4:**

A student drops a three hour course and adds a three hour course and a two hour course on the same day.

A student drops a three hour course and adds a three hour course and a two hour course on the same day. The resulting hours for the drop can be offset with a portion of the added hours; therefore, no liability is associated with the dropped hours.

$$(\text{Drops} - \text{Adds} = \text{Net}) (3-(3+2)=-2)$$

Considered swapping for three hours. The student has no liability for the dropped billing hours.

**Example 5:**

A student drops a three hour course and adds two, two hour courses on the same day.

A student drops three hours and adds two, two hour courses on the same day. The resulting hours for the drop can be offset with a portion of the added hours; therefore, no liability is associated with the dropped hours.

$$(\text{Drops} - \text{Adds} = \text{Net}) (3-(2+2)=-1)$$

Considered swapping for three hours. The student has no liability for the dropped billing hours.

**Example 6:**

A student drops a three hour course and adds a four hour course on the same day.

A student drops three hours and adds a four hour course on the same day. The resulting hours for the drop can be offset with a portion of the added hours; therefore, no liability is associated with the dropped hours.

$$(\text{Drops} - \text{Adds} = \text{Net}) (3-4=-1)$$

Considered swapping for three hours. The student has no liability for the dropped billing hours.

**Example 7:**

A student drops a four hour course and adds a two hour course in the same day.

A student drops four hours and adds a two hour course on the same day. A portion of the resulting hours for the drop can be offset with the added hours; therefore, a penalty is assessed for only the hour dropped in excess of the added hours for the day.

(Drops - Adds = Net) (4-2=2)

Considered swapping for two hours. The student has liability for two of the four dropped billing hours.

**Example 8:**

A student adds two, three hour courses and later drops one of the courses on the same day.

A student adds two, three hour courses and later drops one of the courses on the same day. The resulting hours for the drop can be offset with a portion of the added hours; therefore, no liability is associated with the dropped hours. A 100% implicit refund exists for three hours. The end result is that the student will be charged for only three of the hours added that day.

(Drops - Adds = Net) (3-6=-3)

Considered swapping for three hours. The student has no liability for the dropped billing hours.

## Swapping and Section Fees Examples

Section fees are not considered as part of swapping processing. If section fees are attached to a course that later is used for swapping, the section fee liability remains.

**Example 1:**

A student drops a three hour course that has a flat section fee attached during a 60% refund period and adds a three hour course in the same day.

A student drops a three hour course that has a flat section fee attached during a 60% refund period and adds a three hour course in the same day. The resulting hours are the same; therefore, no liability is associated with the dropped hours for the fee rules, but the section fee has a 40% liability.

**Example 2:**

A student drops a three hour course that has a per billing hour section fee attached during a 60% refund period and adds a three hour course in the same day.

A student drops a three hour course that has a per billing hour section fee attached during a 60% refund period and adds a three hour course in the same day. The

resulting hours are the same; therefore, no liability is associated with the dropped hours for the fee rules, but the section fee has a 40% liability.

## Swapping and Non-Refundable Fees Example

Non-refundable fees are not considered during swapping processing. If non-refundable fees are charged based on a student's liable hours, these fees are not reversed when subsequent swapping occurs.

### **Example:**

A student registers for a course during a 60% refund period and a non-refundable fee rule is assessed. The student later drops a course on the same day. The resulting hours are the same; therefore, no liability is associated with the dropped hours for the fee rules, but the student is still liable for the non-refundable fee.

## Refunding By Registration Enrollment Status

Your institution may use enrollment status codes to determine refunds by establishing the refund periods in the Enrollment Status Control Form (SFAESTS). To be sure that refunding by enrollment status will calculate a percentage refund when the enrollment status code is used, check the **Withdrawal Indicator** on the Enrollment Status Code Validation Form (STVESTS) to designate that the enrollment status code is to be processed as a drop by fee assessment.

Please be aware that if valid refund periods and percentages exist on both SFAESTS and SFARSTS, and the institution changes the registration status codes to match the enrollment status codes (either manually or using the effect by enrollment status process), the fee assessment process will apply the refunds twice, once for the enrollment status and then again for the registration status.

The fee assessment code process is consistent with refunding using registration status codes, therefore the **Refundable (Indicator)** on TSADETC is not used when refunding is being processed. (Institutions have used detail codes with detail categories other than TUI or FEE in SFARGFE rules to prevent refunding of charges.) This functionality is consistent in the two methods of refunding.

### **Note**

The **Refundable (Indicator)** is used in the Location Management/Housing fee assessment process, where you cannot add detail codes other than HOU, MEA, and PHO. ■

The Enrollment Status Control Form (SFAESTS) allows you to determine a refund based upon the total flat charge assessed and with the total current liable hours based on the enrollment status code entered in the student's registration record on SFAREGS for the term.

## Minimum/Maximum Rules Functionality

Minimum/maximum rules function consistently with previous releases of fee assessment processing when refunding by enrollment status is used.

1. Minimum and maximum charges defined in the Registration Fees Min/Max Charge Control Form (SFAFMAX) are *not honored* when refunding is processed using refund by enrollment status.
2. Registration fee assessment rules minimum/maximum definitions for a rule are *not honored* when refunding is processed using refund by enrollment status.
3. The minimum/maximum functions control refunding when refunding uses registration status codes.

## How Fee Assessment Processes Refunds by Enrollment Status

Any registration status codes that the institution wishes to be updated by a changed enrollment status code must be set up accordingly using the controls available in the Enrollment Status Code Validation Form (STVESTS) and the Course Registration Status Form (SFARSTS).

Prior to the registration fee assessment processing of the CRNs, the student's enrollment status will be evaluated to see if the student is withdrawing from enrollment. This is determined by whether the enrollment status code (SFBETRM\_ESTS\_CODE) for the student has the **Withdrawal Indicator** checked (STVESTS\_WD\_IND is *Y*) on STVESTS.

If the enrollment status code used has the **Withdrawal Indicator** checked, the process will check for a valid date range and refund rule in the Enrollment Status Control Form (SFAESTS). The SFBRSTS table houses the code, date range, and refund percent. The process uses the values in the SFBETRM\_ESTS\_CODE and SFBETRM\_ESTS\_DATE fields for the student.

If no refund rule is found in SFAESTS, assessment will continue by processing the registration records using conventional course refunding based on registration status codes. Refunds are calculated by applying the refund percentage to what is currently owed by the student for detail codes in their account that have a category of either TUI or FEE.

### **Note**

As discussed above, you must be careful when establishing the refund date ranges in both SFAESTS and SFARSTS. Any registration record processed in one of these forms has the potential to have a course refund applied, as well as an enrollment status refund. You must establish your date ranges carefully to be sure that the rules on the two forms do not overlap. ■

## Refunding by Total

Refunding by total works as follows:

- The **Refund by Total** checkbox *must* be checked on the Term Control Form (SOATERM).
- The Registration Fee Assessment Refund by Total Rules Form (SFARFND) *must* have rules entered for the term.
- When a detail code is specified in SFARFND, the penalty will always go to that detail code. An institution that wants to define the clearing account to be used for the penalty posting may wish to set up separate detail codes using special GL entries for the penalty charges. If a detail code is not specified, the penalty will post to the detail code of the original charge.
- It is strongly recommended that institutions using refunding by total plan to migrate to this fee assessment process at the start of a new term of assessments rather than in the middle of a term. Please see the examples that follow.
- Set-up for registration rules in SFARSTS is not required for refunding by total processing to work properly. Refund by total consults the SFARFND table for refund periods. It is *not* necessary to define a refund status code as being 100% or 0% refundable in SFARSTS to make the refund by total process function correctly.

### Special Migration Considerations For Institutions Using Refunding By Total

Institutions using refunding by total must perform the migration processing using SFRFASC after installing the fee assessment code. *All assessments must be current prior to performing the migration processing.*

When performing the migration processing, your institution must specify the correct refund by total refund date that would apply for the term being processed. This is accomplished using the Refund by Total Refund Date parameter in SFRFASC. Migration to the fee assessment code should occur only after it has been determined that there are no outstanding refunds to be processed.

### Calculation Differences For Refunding by Total Refunds

Refunding by total is different from refunding by course in that fee assessment assumes the student is either 100% liable or 0% liable for the hours in the registration record, (depending upon whether the registration status code is defined in STVRSTS as able to be used for a course withdrawal or not). If the registration status code is defined in STVRSTS with the **Count in Assessment (Indicator)** and the **Withdrawal Indicator** checked, the student is not liable for those hours at all when refunding by total is applied. Instead, SFARFND calculates a *penalty charge* based upon the refund status code and date and adds that charge to the student's accounting record.

Fee assessment differences using the example provided above would appear as follows with two prerequisites:

1. The **Refund by Total (Indicator)** must be checked on SOATERM.
2. The Registration Fee Assessment Refund by Total Rules Form (SFARFND) must have refund periods and percentages established.

For this example, the scenario is as follows:

- SFARFND has a 90% refund period established.
- The registration status code of DC (Drop Course) has the **Withdrawal Indicator** and the **Count in Assessment (Indicator)** checked on STVRSTS.

The student is registered in 12 hours.

CRN	Hours	Status
CRN 001	4	RE
CRN 002	2	RE
CRN 003	3	RE
CRN 004	3	RE

The fee assessment rule the student qualifies for is based on a per credit rule:

Detail Code	Amount
T101	\$10.00 per credit

- The registration status code used is RE (Registered).
- On STVRSTS the following settings are used. The **Count in Enrollment (Indicator)** is checked. The **Count in Assessment (Indicator)** is checked. The **Withdrawal Indicator** is *not* checked.
- Fee assessment uses the per credit charge and the RE status, because it does not mean a drop (**Withdrawal Indicator** is not checked), and no refund percentages apply. Therefore, liability for each CRN is interpreted as 100%. (For the calculation, the liability multiplier is 1.0.)

The student's charge equals (liable hours X liability multiplier) X charge per the rule qualification.

<b>CRN</b>	<b>Calculation</b>
CRN 001	$(4.00 \times 1.0) \times 10.00$
CRN 002	$(2.00 \times 1.0) \times 10.00$
CRN 003	$(3.00 \times 1.0) \times 10.00$
CRN 004	$(3.00 \times 1.0) \times 10.00$

The total charge will be \$120.00 for the detail code (T101) associated with this rule.

If this scenario is modified by performing a drop of one CRN, there is a different result.

- The registration status code for CRN 001 is changed to DC (Drop Course).
- On STVRSTS, the following settings are used. The **Count in Assessment (Indicator)** is checked. The **Withdrawal Indicator** is checked.
- On SFARFND there is a 90% refund using the detail code TRFD for category codes of TUI that are in effect for the date of the drop.

<b>CRN</b>	<b>Calculation</b>
CRN 001	$(4.00 \times 0.0) \times 10.00 = 0.00$
CRN 002	$(2.00 \times 1.0) \times 10.00 = 20.00$
CRN 003	$(3.00 \times 1.0) \times 10.00 = 30.0$
CRN 004	$(3.00 \times 1.0) \times 10.00 = 30.00$

Notice that since refunding by total is being used, the refund multiplier becomes 0 for the dropped course. The total new assessment would be \$80.00 for the detail code (T101) associated with this rule.

Fee assessment then performs the following checks and calculations for refunding by total:

- The previous assessment charge for detail code T101 is \$120.00.
- The new assessment charge for detail code T101 is \$80.00.
- The difference between the two assessments is \$40.00.
- The refund percentage period is 90%.
- This translates to a penalty charge of 10% (or a multiplier of .1) for the penalty calculation.
- The 10% penalty is applied to the difference between the first assessment and the new assessment, which equals  $\$40.00 \times .1 = \$4.00$  penalty.

The accounting transactions in the student's accounting record (TBRACCD) would be as follows:

Detail Code	Amount	Assessment Date
T101	120.00	First assessment date
T101	- 40.00	New assessment date
TRFD (penalty)	4.00	New assessment date

The student's total charges after the drop are \$84.00. If the student had paid in full for the original assessment of \$120.00, they would be eligible for a credit of \$36.00.

The important thing to note in refunding by total processing is that a penalty charge is assessed on the student's account, rather than assessing a new charge based upon liability hours for the registration status codes on the student's record and posting a difference. That penalty is based upon the difference between the currency amount charged to the student in the new assessment and the currency amount in the previous student accounting record for the detail code and term. In refunding by total, fee assessment interprets all liability on the student's hours as either 100% liable or 0% liable to determine the new assessment. It then calculates the new charges after the dropped courses, finds the difference from the last recorded student accounting for that detail code and term, and assesses the penalty based upon the rules defined in SFARFND.

## Using Optional Swapping Processing with Refund by Total

You can use optional swapping processing with refund by total refund processing. Swapping can be defined as the exchange of billing hours within a defined penalty period with no incurred penalty. Swapping occurs across billing hours and not by the individual course. The swapped hours liability is stored in SFRFAUD to determine the difference in the refund based on the swapped penalty hours, so as to correctly adjust the penalty. An institution can choose to invoke this functionally or use the established processing with liability for dropped hours. Use the **Allow Swapping (Indicator)** on the Term Control Form (SOATERM) to turn on swapping on a term-by-term basis if desired.

### Note

Open learning courses are not considered in the swapping algorithm, as they carry their own refund method.

Section fees are not considered in the swapping algorithm as they are assessed for each course individually and do not consider the total billing hour liability. ■

## Refund by Total Processing and Examples

When entering additional registration records, drops and adds which take place during the same penalty period are considered to offset each other. The system looks at the assessments from the beginning of the penalty period and compares them to the assessments from the end of the penalty period, to determine the difference in order to

assess the percentage penalty. The student is only assessed a penalty if the hours dropped are greater than the hours added during that period. Otherwise, no penalty is assessed. If any assessment occurs in the interim, and a penalty was assessed, that penalty should be reversed. (Drops less adds is equal to net hours for penalty.)

If an intermediate assessment has occurred between the drop and add activity, fee assessment will post an adjusting entry for the difference for the appropriate detail codes to the student's account.

## Examples

Here are four examples that illustrate this.

*Example 1:* A student drops and adds equal hours in the same penalty period.

If a student adds three hours on day two of the penalty period, and three hours are dropped on day six of the penalty period, then the resulting hours are the same as at the beginning of the penalty period. Therefore, no penalty is assessed.

(Drops - Adds = Net) (3-3=0)

*Example 2:* A student drops more hours than are added in the same penalty period.

If a student adds three hours on day two of the penalty period, and four hours are dropped on day six of the penalty period, then the resulting dropped hours are greater than the added hours, and the student will be assessed a penalty on the net greater of one hour.

(Drops - Adds = Net) (4-3=1)

*Example 3:* A student drops less hours than are added in the same penalty period.

If a student adds four hours on day two of the penalty period, and three hours are dropped on day six of the penalty period, then the resulting dropped hours are less than the added hours, and the student will be assessed no penalty, as the net is negative.

(Drops - Adds = Net) (3-4=-1)

*Example 4:* A student drops more hours than are added in the same penalty period with an assessment between drops and adds.

A student drops three hours on day two of the penalty period, assessment occurs, and the student is penalized for the dropped hours. Fee assessment posts a credit and penalty for the drop to the student's account. Then on day six of the same penalty period, the student adds two hours. The resulting dropped hours are greater than the added hours, and the student will be assessed a penalty on the net greater of only one hour.

(Drops - Adds = Net) (3-2=1)

Fee assessment will make the adjustment, reverse the penalty, and post the new penalty for the appropriate detail codes to the student's account.

## Refunding Using Combined Flat and Overload Rules

The process corrects errors in the rules used when students drop registration hours into and out of per credit, flat rate ranges, and overload rules.

Fee assessment determines which rules to use when a student changes their liable hours into or out of a flat range, per credit range, or overload rules by using the **Flat Charge Hours Range From** field and the **Course Overload Start Hours** field. The **Flat Charge Hours Range From** field functions as the starting point to determine the change in liable hours for the student when dropping from a flat range into a per credit range.

### Note

If you currently use plateau hours to manage your refunds, you must migrate the correct starting point for your flat hours range into the **Flat Charge Hours Range From** field.

SunGard Higher Education is providing a script to determine the from flat hours using the rules you had established for plateau charging at your institution. You do not need an extended decimal range to create an accurate refund in these situations, so the use of plateau hours is not required. ■

A base number of liable hours must be used to use to determine the dropped hours that will then determine the new qualifying rule in SFARGFE, instead of using plateau hours.

When converting to this version of fee assessment, rules for previous terms should be adjusted by moving the plateau hours to the **Flat Charge Hours Range From** field. The extended decimal places that were required in the **Plateau Hours** field are not required in the **Flat Charge Hours Range From** field. If the flat range began with 12.00 hours, then 12.00 hours should be entered into the **Flat Charge Hours Range From** field for the flat rule.

For example, if you adjusted your plateau hours to 12.0574 to correct for calculation errors in the old processing, but your from credit hours for the rule were 12.00, you would enter 12.00 in the **Flat Charge Hours Range From** field.

The hours in the **Flat Charge Hours Range From** field will also be the same as the hours in the **Liable Billing Hours From** field on any rule where a flat charge has been defined. Since the plateau information no longer exists, these rules *must* be identified, and the **Flat Charge Hours Range From** field *must* be populated to be sure refunding will work correctly.

Fee Assessment must subtract the current liable hours from the **Flat Charge Hours Range From** field to yield the resulting dropped hours, then the refund percentage is applied. Once the refund percentage is applied to the dropped hours, and the adjusted

dropped hours are added to the current hours, fee assessment determines the correct rule to be used to set the student's new financial liability.

When processing the course registration records for a student, fee assessment must determine whether the student has dropped the course and whether the drop occurred during a defined refund period on Registration Status Control Form (SFARSTS). When a drop is processed for a student's registration, the previous assessment is consulted by referring to the registration audit history records to see if rule qualification occurred based on flat hour requirements having been met for that last assessment.

If a flat hour rule was met in the previous assessment, the starting point for the flat hours (or the from flat hours) for the previous qualified rule is stored for use in the current assessment process. These from flat hours become the benchmark hours to be used in determining whether the dropped course causes the student to fall below the flat hour range qualified for in the previous assessment. The checking of the previous assessment for flat hour rule qualification is done for each rule type that is used as part of fee assessment i.e., charge by student characteristics, course level, course campus, and course attribute.

If the drop *does not* cause the student to fall below the flat hour range met in the previous assessment, no change in assessment will be realized. The student's liable course hours will still be within the flat hour range, and therefore the student is considered unchanged in terms of their registration fee assessment. If the drop *does* cause the student to fall below the flat hour range met in the previous assessment, fee assessment moves on to the next phase of processing.

The approach for determining the student's liability is slightly different here than in a conventional assessment. Rather than determine the liability by factoring in the percent refund for the registration status code(s) up front, the processing first refers back to the last assessment and determines the total number of non-dropped hours. Since this information is needed for further processing, a record is written to the audit history table that holds this information. That row is displayed with a 0.00 charge in SFAFAUD and is informational only.

For each registration record processed for the student that involves a drop or withdrawal, the number of dropped hours are deducted from the total *non-dropped hours* determined from the last assessment. For this processing, fee assessment refers to the dropped hours, rather than the liable hours used in other fee assessment processes.

The dropped hours are deducted from the total non-dropped hours from the last assessment, because the process needs to identify whether the student has fallen below the starting point for flat hour range from the last assessment. After determining what will now be referred to as the student's *enrollment liable hours*, these hours are compared to the starting point for the flat hour range from the last assessment. If the enrollment liable hours are not less than the starting hours for the flat hour range, there is no change in assessment. If the enrollment liable hours are less, the rule evaluation is called using the enrollment liable hours to determine what rule the student now qualifies for. Please refer to examples of these calculations which follow.

Here is a sample of registration activity for a student who registered for courses and performed a series of drops across multiple refund periods. In this example, assessment was not run until all the dropping activity had been completed for the term.

The student registered in 22 hours of courses on the first day of registration. Based on the rules shown below, the student was assessed the flat charge of \$5,000.00, and this was posted to the student's account records with the detail code of FLAT. The from flat hours for the first assessment for this rule is 12.00. This information is stored in the fee assessment audit history record for this student for the term. The student then elected to drop several courses at different points in the registration period on the dates shown below.

CRN	Registration Status Code	Hours	Refund % defined for RSTS code/date	Liability % based on refund rule	Date of activity
1001	RE	4	0	100	15-DEC-02
1002	DC	4	75	25	18-JAN-03
1003	DC	4	75	25	18-JAN-03
1005	DC	3	10	90	23-JAN-03
1006	DC	4	10	90	23-JAN-03
1004	DC	3	0	100	15-FEB-03

The following refund periods and % refunds are in effect for the registration status of DC (Drop Course):

From Date	To Date	Refund %	Liability %	Multiplication Factor
01-JAN-03	15-JAN-03	90	10	.10
16-JAN-03	22-JAN-03	25	75	.25
23-JAN-03	29-JAN-03	10	90	.90

The following registration fee assessment rules are used for this example:

From Liable Hrs	To Liable Hrs	Detail Code	Per Credit Charge	From Flat Hrs	To Flat Hrs	Flat Charge Amount
1.00	6.99	T1	450.00			
7.00	11.99	T2	420.00			
12.00	99.99	FLAT	0.00	12.00	30.00	5,000.00

Fee assessment then processes the student's record to determine the charges.

1. The from flat hours from last assessment are determined to be 12.
2. The total non-dropped hours from previous assessment are determined to be 22. (These total non-dropped hours will be referred to as starting hours as the discussion of processing continues.)

3. Registration records are processed in order of status date.
  - If the **Withdrawal Indicator** for the registration status code in STVRSTS is *not* checked, the student is 100% liable for all the registration hours.
  - If the **Withdrawal Indicator** for the registration status code in STVRSTS *is* checked, the dropped hours are deducted from the starting hours to determine a new total hours. (These total hours will be referred to as enrolled hours for the remainder of the processing.)

This is done to determine when the student's enrolled hours fall below the from flat hours from the previous assessment. When the enrolled hours fall below the from flat hours for the rule, the student no longer qualifies for the flat hour rule.

4. Liability processing takes place. Fee assessment systematically processes the courses and determines the liability % for the hours to be processed.

Each CRN is listed below in the order that fee assessment performs the processing, which is in ascending order by date of the transactions.

CRN	Registration Status Code	Hours	Refund % defined for RSTS code/date	Liability % based on refund rule	Date of activity
1001	RE	4	0	100	15-DEC-02

**4.1.** CRN 1001 is processed.

The **Withdrawal Indicator** for the registration status code in STVRSTS is *not* checked, so all 4 hours have 100% liability.

4 hours \* 1 = 4 liable hours. (Liability is expressed in decimal form, so 1 equals 100%.)

Add 4 to the total liable hours.

The total liable hours equal 4. (This is stored for later use.)

The next registration/refund interim period and corresponding CRNs are processed.

CRN	Registration Status Code	Hours	Refund % defined for RSTS code/date	Liability % based on refund rule	Date of activity
1002	DC	4	75	25	18-JAN-03
1003	DC	4	75	25	18-JAN-03

**4.2.** CRN 1002 is processed.

The **Withdrawal Indicator** for the registration status code in STVRSTS is checked, so *dropped hour processing* is performed.

*Dropped Hour Processing*

Starting hours - registration hours for the drop = new starting hours.

22 - 4 hours dropped = new starting hours of 18 (new starting hours are saved for next CRN processing).

*Determine Enrolled Hours*

New starting hours - previous from flat hours = enrolled hours.

18 - 12 = enrolled hours of 6.

Fee assessment checks to see if the student is still enrolled in more hours than the previous from flat hours for the rule. If they are, this indicates that the student still qualifies for the previous flat hour rule. Since 6 hours are greater than zero, there is no change in the flat hour qualification.

**4.3.** CRN 1003 is processed.

The **Withdrawal Indicator** for the registration status code in STVRSTS is checked, so *dropped hour processing* is performed.

*Dropped Hour Processing*

Starting hours (saved from previous CRN processing) - registration hours for the drop = new starting hours.

18 - 4 hours dropped = new starting hours of 14 (new starting hours are saved for next CRN processing).

*Determine Enrolled Hours*

New starting hours - previous from flat hours = enrolled hours.

14 - 12 = enrolled hours of 2.

Fee assessment checks to see if the student is still enrolled in more hours than the previous from flat hours for the rule. If they are, this indicates that the student still qualifies for the previous flat hour rule. Since 2 hours are greater than zero, there is no change in the flat hour qualification.

The next registration/refund interim period and corresponding CRNs are processed.

CRN	Registration Status Code	Hours	Refund % defined for RSTS code/date	Liability % based on refund rule	Date of activity
1005	DC	3	10	90	23-JAN-03
1006	DC	4	10	90	23-JAN-03

**4.4.** CRN 1005 is processed.

The **Withdrawal Indicator** for the registration status code in STVRSTS is checked, so dropped hour processing is performed.

*Dropped Hour Processing*

Starting hours - registration hours for the drop = new starting hours.

14 - 3 hours dropped = new starting hours of 11 (new starting hours are saved for next CRN processing).

*Determine Enrolled Hours*

New starting hours - previous from flat hours = enrolled hours.

11 - 12 = enrolled hours of - 1.

Fee assessment checks to see if the student is still enrolled in more hours than the previous from flat hours for the rule. If they are, this indicates that the student still qualifies for the previous flat hour rule. Since - 1 hours are not greater than zero, *there is a change in the flat hour qualification.*

*New Formula*

Registration hours + enrolled hours = dropped hours.

3 registered hours + -1 enrolled hour = 2 dropped hours. (The student has dropped 3 hours, but only 1 of those hours brings the student below the from flat hours point.)

The dropped hours are not less than 0.

Deduct the dropped hours from the registered hours.

3 registered hours - 2 dropped hours = 1 liable hour.

Multiply the liable hours by the liability percent expressed as a decimal.

1 hour \* .9 = .9 liable hours.

Add .9 to the total liable hours.

The liable hours saved from first CRN processed equal 4.0.

The total liable hours now equal 4.9.

**4.5.** CRN 1006 is processed.

The **Withdrawal Indicator** for the registration status code in STVRSTS is checked, so dropped hour processing is performed.

*Dropped Hour Processing*

Starting hours - registration hours for the drop = new starting hours.

11 - 4 hours dropped = new starting hours of 7 (new starting hours are saved for next CRN processing).

*Determine Enrolled Hours*

New starting hours - previous from flat hours = enrolled hours.

7 - 12 = enrolled hours of - 5.

Fee assessment checks to see if the student is still enrolled in more hours than the previous from flat hours for the rule. If they are, this indicates that the student still qualifies for the previous flat hour rule. Since - 5 hours are not greater than zero, there is a change in the flat hour qualification.

*New Formula*

Registration hours + enrolled hours = dropped hours.

4 registered hours + - 5 enrolled hour = - 1 dropped hours.

The dropped hours are less than 0. Therefore all 4 registered hours are 90% liable.

Multiply the liable hours by the liability percent expressed as a decimal.

4 hours \* .9 = 3.6 liable hours.

Add 3.6 to the total liable hours.

The liable hours saved from first CRN processed equal 4.9.

The total liable hours now equal 8.5.

The next registration/refund interim period and corresponding CRN are processed.

CRN	Registration Status Code	Hours	Refund % defined for RSTS code/date	Liability % based on refund rule	Date of activity
1004	DC	3	0	100	15-FEB-03

**4.6.** CRN 1004 is processed.

The **Withdrawal Indicator** for the registration status code in STVRSTS is checked, so dropped hour processing is performed.

*Dropped Hour Processing*

Starting hours - registration hours for the drop = new starting hours.

7 - 3 hours dropped = new starting hours of 4 (new starting hours are saved for next CRN processing).

*Determine Enrolled Hours*

New starting hours - previous from flat hours = enrolled hours.

4 - 12 = enrolled hours of - 8.

Fee assessment checks to see if the student is still enrolled in more hours than the previous from flat hours for the rule. If they are, this indicates that the student still qualifies for the previous flat hour rule. Since - 8 hours are not greater than zero, there is a change in the flat hour qualification.

*New Formula*

Registration hours + enrolled hours = dropped hours.

3 registered hours + - 8 enrolled hour = - 5 dropped hours.

The dropped hours are not greater than 0. Therefore, all 3 registered hours are liable.

Multiply the liable hours by the liability percent expressed as a decimal.

3 hours \* 1.00 = 3 liable hours.

Add 3 to the total liable hours.

The liable hours saved from first CRN processed equal 8.5.

The total liable hours now equal 11.5.

Processing is complete for all courses.

5. Rule evaluation is performed using the determined total new liable hours.

- New liable hours = 11.5.
- The rule qualification for 11.5 liable hours is detail code T2.
- T2 is a per credit charge of \$420.00 per hour.
- $420 \times 11.5$  liable hours = \$4830.00.
- The new charge in TBRACCD will be T2 4830.00.
- The charge in TBRACCD for last assessment is FLAT 5000.00.

The student's accounting record will show a reversal of the detail code FLAT for \$5,000.00, since the student no longer qualifies for that rule. A charge will be posted for \$4830.00 with the Detail Code of T2.

If a single detail code of T2 were used for all three rules, there would be a transaction of - 170.00 (the difference between \$5,000.00 and \$4,830.00) posted to detail code T2 for the date the fee assessment was run.

### Refunding When Overload Rules Are Used

When refunding is performed using overload hour rules, fee assessment will use the straight liability hours processing (for refunding by course) for the hours up to the point when the student's liable hours drop below the start hours for overload charge. When the student's liable hours drop into the flat charge range based upon the flat hour charge range that is defined for the rule, the refunding process described above for flat hour refunding will be used.

### Refunding and Variable Credit Hours

When a variable credit hour course is adjusted and the student had a flat assessment, assessment will always go back and re-evaluate all courses to determine if a penalty should be charged. The adjusted credit hours are treated in the same way as the original credit hours, and a reassessment occurs. This is essential, as the system has no way to determine if the adjustment is a drop, an add, or a correction to the credit hours.

Here are examples using variable billing hours with the following rules.

*For SFARGFE:*

Detail Code	Per Credit	Liable From and To Hours	Charge Type	Flat Rate	Overload
T101	100.00	0 - 11.99			
T102	125.00	12 - 99.99	FLAT	1200.00	21

For *SOATERM*:

- The **Reverse Non Tuition/Fee** checkbox is checked (set to *Y*).
- The **Refund by Total** checkbox is unchecked (set to *N*).
- The **Allow Swapping** checkbox is unchecked (set to *N*).

For *SFARSTS*: using a 50% refund:

Registration Status Refund Rule	Start Date	End Date	Percentage Fees Refund
DC	01-JAN-2009	31-JAN-09	100%
DC	01-FEB-09	31-MAR-09	50%

**Example 1: Variable hours are not changed**

1. Student registers for 12.00 hours (01-MAR-09)

CRN 90001 - student registers for 3 hours

CRN 90002 - student registers for 3 hours

CRN 90003 - student registers for 3 hours

CRN 90004 - student registers for 3 hours

Detail code T102: assessed at \$1200.00

2. Student drops 6.00 hours during a 50% refund period on *SFARSTS* (15-MAR-09)

CRN 90001 - student drops class for 3 hours

CRN 90002 - student drops class for 3 hours

Detail code T101: assessed at \$900.00, 6 non-dropped hours plus 6 dropped hours at .5, (6 ND + (6@.5)=9.0)

*Calculation:* 6.00 hours dropped x .50 = 3.00 + 6.00, hours registered = 9.00

3. Student changes billing hours from 0.00 to 2.00 hours (16-MAR-09)

CRN 90005 - student changes registration from 0 to 2 hours

Detail code T101: assessed at \$1100.00

*Calculation:* 6.00 hours dropped x .50 = 3.00 + 8.00, hours registered =11.00

*Result:* Credit hours were not adjusted. Therefore, straight assessment occurs.

**Example 2: Variable hours are changed**

1. Student registers for 12.00 hours (01-MAR-09)

CRN 90001 - student registers for 3 hours

CRN 90002 - student registers for 3 hours

CRN 90003 - student registers for 3 hours

CRN 90004 - student registers for 3 hours

Detail code T102: assessed at \$1200.00

2. Student drops 6.00 hours during 50% refund period on SFARSTS (15-MAR-09)

CRN 90001 - student drops class for 3 hours

CRN 90002 - student drops class for 3 hours

Detail code T101: assessed at \$900.00, (6 ND + (6@.5)=9.0)

*Calculation:* 6.00 hours dropped x .50 = 3.00 + 6.00, hours registered = 9.00

3. Student registers for 0.00 hour course (16-MAR-09)

CRN 90005 - student registers for 0 hours

Detail code T101: assessed at \$900.00

*Calculation:* 6.00 hours dropped x .50 = 3.00 + 6.00, hours registered = 9.00

4. Student changes billing hours from 0.00 to 2.00 hours (16-MAR-09)

CRN 90005 - student changes registration from 0 to 2 hours

5. Charges are assessed at 10.00 liable hours, which is correct.

*Assessment is doing the following:* Started at 12 hours, then dropped 6 hours and added 2 hours

*Calculation:* 4.00 hours dropped x .50 = 2.00 + 8.00, hours registered = 10.00

*Result:* Dropped class is treated as going from 12.00 to 8.00, 12 hours to 8 hours

Since credit hours on an existing course were changed, assessment is treated as if that is how it started.

**Example 3: Variable hours are changed within a flat charge period**

1. Student registers for 15.00 hours (01-MAR-09)

CRN 90001 - student registers for 3 hours

CRN 90002 - student registers for 6 hours

CRN 90003 - student registers for 3 hours

CRN 90004 - student registers for 3 hours

Detail code T102: assessed at \$1200.00

2. Student drops 9.00 hours during 50% refund period on SFARSTS (15-MAR-09)

CRN 90001 - student drops class for 6 hours

CRN 90002 - student drops class for 3 hours

Detail code T101: assessed at \$900.00, (6 ND + (6@.5)=9.0)

*Calculation:* 6.00 hours dropped x .50 = 3.00 + 6.00, hours registered = 9.00

*Result:* Dropped class is treated as going from 12 hours to 6 hours

3. Student registers for 0.00 hour course (16-MAR-09)

CRN 90005 - student registers for 0 hours

Detail code T101: assessed at \$900.00

*Calculation:* 6.00 hours dropped x .50 = 3.00 + 6.00, hours registered = 9.00

4. Student changes billing hours from 0.00 to 2.00 hours (16-MAR-09)

CRN 90005 - student changes registration from 0 to 2 hours

5. Charges are assessed at 10.00 liable hours

*Assessment is doing the following:* Started at 15 hours, then dropped to 6 hours and added 2 hours

*Calculation:* 4.00 hours dropped x .50 = 2.00 + 8.00, hours registered = 10.00

*Result:* Dropped class is treated as 15.00 to 12.00, which is within the flat range and is then liable for the drop from 12 hours to 8 hours.

Since credit hours on an existing course were changed, assessment is treated as if that is how it started.

## Registration Activity Processing Order

Fee Assessment processes registration transactions in sequential order based on the registration status date. Since the processing is performed chronologically, the order in which adds and drops are entered may impact the determined student liable billing hours.

## Examples of Registration Activity Processing Order

This set of examples uses a student rule that is set up for refund by course/flat charge refund processing.

Detail Code	Per Credit	Min	Max	Liabe Hrs From	Liabe Hrs To	Flat Charge From	Flat Charge To	Flat Charge Amount	Overload
CRED	100.00	0	9999.99	.01	11.99				
FLAT	100.00	0	9999.99	12.00	99.99	12.00	99.99	1200	18

### Example 1:

A student registers for 19 hours and qualifies for flat charging. The student's fee assessment audit is as follows:

Detail Code FLAT	1200.00
Rule Student Hours	19.0
Rule Liabe Hours	19.0
Rule Flat Hour Range	12.0 - 99.99
Overload Hours	1.0

The student drops two hours during a 90% refund period and adds an additional four hours immediately following the drop. Both registration changes are performed in the same session. Fee assessment is then run.

The student's new fee assessment audit is as follows:

Detail Code FLAT	1200.00
Rule Student Hours	21.1
Rule Liabe Hours	21.1
Rule Flat Hour Range	12.0 - 99.99
Overload Hours	3.1

**Calculation:**

Current Non-Dropped (ND) Hours	17.0	
Drop Two Hours at a 90% Refund	0.1	Penalty on one overload hour. No penalty on second hour because student remains in the flat charge hour range.
		19 previous liable hours - 18 overload start = 1 liable
		Overload hour: $1 * .1 = .1$
Add Four Hours	4.0	
Total Liable Hours	21.1	

**Example 2:**

The student registers for 19 hours. The student's fee assessment audit is as follows:

Detail Code FLAT	1200.00
Rule Student Hours	19.0
Rule Liable Hours	19.0
Rule Flat Hour Range	12.0 - 99.99
Overload Hours	1.0

The student adds an additional four hours and drops two hours during a 90% refund period immediately following the add. Both registration changes are performed in the same session. Fee assessment is then run.

The student's new fee assessment audit is as follows:

Detail Code FLAT	1200.00
Rule Student Hours	21.2
Rule Liable Hours	21.2
Rule Flat Hour Range	12.0 - 99.99
Overload Hours	3.2

**Calculation:**

Current Non-Dropped (ND) Hours	17.0
Add Four Hours	4.0
	17 ND hours + 4 new hours = 21 ND hours
Drop Two Hours at a 90% Refund	0.2
	Penalty on two overload hours since student is registered in 21 hours.
	21 NDs > overload start 18 hours
	All dropped hours have overload liability.
	2 dropped hours * .1 = .2
Total Liable Hours	21.2

**Example 3:**

The student registers for 14 hours and qualifies for flat charging. The student's fee assessment audit is as follows:

Detail Code FLAT	1200.00
Rule Student Hours	14.0
Rule Liable Hours	14.0
Rule Flat Hour Range	12.0 - 99.99
Overload Hours	0.0

The student drops four hours during a 90% refund period and adds an additional two hours immediately following the drop. Both registration changes are performed in the same session. Fee assessment is then run.

The student's new fee assessment audit is as follows:

Detail Code FLAT	1200.00
Rule Student Hours	12.2
Rule Liable Hours	12.2

Rule Flat Hour Range 12.0 - 99.99

Overload Hours 0.0

**Calculation:**

Current Non-Dropped (ND) Hours 10.0

Drop Four Hours at a 90% Refund 0.2

10% penalty on two of the four hours. No penalty on two of the hours, because two of the four hours were in the flat charge range.

14 previous liable hours - 4 dropped hours = 10

Start for flat is 12 hours.

2 of the 4 dropped hours are in the flat range.

2 remaining dropped hours have liability.

$2 * .1 = .2$

Add 2 Hours 2.0

Total Liable Hours 12.2

**Example 4:**

The student registers for 14 hours and qualifies for flat charging. The student's fee assessment audit is as follows:

Detail Code FLAT 1200.00

Rule Student Hours 14.0

Rule Liable Hours 14.0

Rule Flat Hour Range 12.0 - 99.99

Overload Hours 0.0

The student adds an additional two hours and drops four hours during a 90% refund period immediately following the add. Both registration changes are performed in the same session. Fee assessment is then run.

The student's new fee assessment audit is as follows:

Detail Code FLAT	1200.00
Rule Student Hours	12.0
Rule Liable Hours	12.0
Rule Flat Hour Range	12.0 - 99.99
Overload Hours	0.0

**Calculation:**

Current Non-Dropped (ND) Hours	4.0
Add 2 Hours	2.0
	$14 + 2 = 16$
Drop Four Hours at a 90% Refund	0.0
	No penalty on any of the dropped hours, as student is back in the flat hour range after the add.
	$16 \text{ ND hours} - 4 \text{ dropped hours} = 12$
Total Liable Hours	12.0

## Drop/Delete Processing

Processing dropped/deleted (*DD*) courses in fee assessment treats the assessment as if registration for the course that is being dropped/deleted never occurred. When students have qualified for a flat charge rule in the past and a drop/delete has occurred since the last assessment, the assessment process needs to re-assess the student from the top down, and in essence start over with the assessment. Fee assessment will go back and recalculate the student's assessment and make the appropriate adjustments to fee assessment and the student's account.

This top down assessment methodology is used for flat charge refunding and refund by course processing. Reassessment will need to be re-run for each refund interim to determine the correct assessment. Fee assessment processing on all registration status codes that do not count in assessment will be treated in the same manner as with the drop/delete processing.

Fee assessment will create intermediate assessment audit rows in SFRFAUD without posting any changes to accounting. The following will take place:

1. Assessment processing will check to see if the student has ever met a flat charge rule and has had a drop/delete issued since the last assessment was run.
2. Assessment processing will then select all registration records with a status code where `STVRSTS_INCL_ASSESS` is set to *Y* as *RE*. The liability for each course will be stored in `SFTFEES` as the full billing hours with 100% liability.
3. The `SFTFEES` rows will be processed, and assessment rule evaluation performed.
4. The assessment liability will be stored in `SFRFAUD` using a `SFRFAUD_ASSESS_RFND_PENLTY_CDE` value of *D*.
5. The `SFTFEES` rows will be deleted.
6. Assessment will then proceed to perform regular assessment processing.

### Examples of Drop/Delete Processing

The following examples illustrate drop/delete processing.

#### **Example 1:**

Drop/delete a course that has a status of *RE*, and the student remains in the per hour range. The flat hour range is 12 hours with no overload fee.

1. The student's initial registration is for 15 hours and is assessed.  
The student is liable for 15 hours.
2. The student drops 3 hours during a 90% refund interim and is assessed.  
The student remains in the flat hour range and has no change in assessment. The student is currently liable for 12 hours.
3. The student drops an additional 3 hours during a 50% refund interim and is assessed.  
The student drops out of the flat hour range and into the per hour assessment. The flat fee assessed will be reversed, and the per hour fee will be assessed. The student is liable for 10.5 hours (9 non-dropped hours, plus 50% of the 3 dropped hours (1.5)).
4. The student drops/deletes an additional 3 hours and is assessed.  
This is the point where the error occurred. However, the following should now occur at this point in the process.

When the student drops/deletes the course, the assessment will go back and reassess the student as if they were never registered for the last 3 hours that were dropped/deleted. The assessment process will calculate the student's assessment as if the following had occurred:

1. The student's initial registration would be considered for 12 hours.

The student is in the flat hour range and is liable for 12 hours.

2. The student drops 3 hours during a 90% refund interim.

The student drops out of the flat hour range and into the per hour range. The flat fee assessed will be reversed, and the per hour fee will be assessed. The student is liable for 9.3 hours (9 non-dropped hours, plus 10% of the 3 dropped hours (.3)).

3. The student drops an additional 3 hours during a 50% refund interim.

The student stays in the per hour range. A credit will be applied to the student's account for a percentage of the course that was dropped. The student is liable for 7.8 hours (6 non-dropped hours plus .3 liable hours from the previous drop, plus 50% of the current 3 dropped hours (1.5)).

4. The end result is that the student is liable for 7.8 hours and is assessed at a per hour rate.

**Example 2:**

Drop/delete a course that was previously dropped, and student stays in per hour range. The flat hour range is 12 hours.

1. The student's initial registration is for 12 hours and is assessed.

The student is liable for 12 hours.

2. The student drops 3 hours during a 90% refund interim and is assessed.

The student drops out of the flat hour range and into the per hour range. The flat fee assessed will be reversed, and the per hour fee will be assessed. The student is liable for 9.3 hours (9 non-dropped hours, plus 10% of the 3 dropped hours (.3)).

3. The student drops/deletes the same 3 hour course they withdrew from at 90% and is assessed.

This is the point where the error occurred. However, the following should now occur at this point in the process.

When the student drops/deletes the course, the assessment will go back and reassess the student as if they were never registered for the last 3 hours that were dropped/deleted. The assessment process will calculate the student's assessment as if the following had occurred:

1. The student's initial registration would be considered for 9 hours.

The student is liable for 9 hours, and a per hour charge should occur.

2. The end result is that the student is liable for 9 hours and is assessed at a per hour rate.

**Example 3:**

Drop/delete a course, and add another course at the same time that will cause the student to go back into the flat hour range and out of per hour range. The flat hour range is 12 hours.

1. The student's initial registration is for 15 hours and is assessed.

The student is liable for 15 hours.

2. The student drops 6 hours during a 90% refund interim and is assessed.

The student drops out of the flat hour range and into the per hour range. The flat fee assessed will be reversed, and the per hour fee will be assessed. The student is liable for 9.3 hours (9 non-dropped hours, plus 10% for 3 of the dropped hours (.3). (3 have no penalty because of flat rate.)

3. The student drops/deletes another 3 hour course, adds 6 hours at the same time, and is assessed.

This is the point where the error occurred. However, the following should now occur at this point in the process.

When the student drops/deletes the course, the assessment will go back and reassess the student as if they were never registered for the 3 hours that were dropped/deleted. The assessment process will calculate the student's assessment as if the following had occurred:

1. The student's initial registration would be considered for 12 hours.

The student is in the flat hour range and is liable for 12 hours.

2. The student drops 6 hours during a 90% refund interim.

The student drops out of the flat hour range and into the per hour range. The student is liable for 6.6 hours (6 non-dropped hours, plus 10% for the 6 of the dropped hours (.6)).

3. The student adds 6 hours, is again in the flat hour range, and is now liable for 12.6 hours (12 non-dropped and .6 (6 \*.10 of liability for dropped course)).

4. The end result is that the student is liable for 12.6 hours and is assessed at a flat rate.

## Batch Fee Assessment - Creating the First Audit History Records

The Registration Fee Assessment Process (SFRFASC) is used to process batch fee assessment. The processing prevents the printing of IDs if no updates took place, eliminating long output files. SFRFASC allows you to:

- Process assessments using a single ID which is very useful for testing of rules.
- Process assessment in audit mode.
- Process assessments using a population selection.
- Use a separate date parameter for refunding by total processing.
- Choose your output format (audit and/or accounting records).
- Create the last audit records for migration purposes.
- Process in collector mode and with an enrollment status.
- Create student accounting records in TBRACCD to assist in migration steps.

## Banner Views Used in Fee Assessment

The following views are used with registration fee assessment processing.

### **SFVFAUD View**

This view is used to select the registration fee assessment audit data on SFRFAUD.

The following rows are in this view.

### **SFVREGD View**

This view joins the SFRSTCR and SFRREGD tables to cumulatively list all registration records for a student, including those that have been dropped/deleted and removed. The view is used in fee assessment processing to determine if courses have been dropped/deleted for a student since their last assessment was produced. It is also used in the SFRFEES report, to cumulatively list all registration records for a student, including those that have been dropped/deleted and removed.

The following rows are in this view.

## Fee Assessment Report (SFRFEES)

This report is used to assist in trouble shooting and debugging fee assessment processing. It is intended to be an efficient way to gather needed information when a question on arises on fee assessment. The report will be the primary method for the ActionLine to obtain contact data, (along with additional delivered SQL\*Plus scripts). These scripts are discussed in the next section.

This report lists various data values stored for a student that have the potential to meet registration assessment rule criteria. The values displayed are for enrollment data, student data, curriculum data, course registration data, optional mock fee assessment data, previous and current fee assessment, and accounts receivable records. The report processes a single ID or a population selection for a term. This report may be used for assessment verification and can be helpful when troubleshooting assessment results. The supported parameters will be expanded in later releases to assist with reviewing assessment information.

This report can also be used as a tool for institutions to evaluate their processing rules or check on a specific group of students. For example, an institution may want to update a rule. They could take a sample population selection, and then compare the current assessment with a mock assessment to determine if this change would be appropriate. Another potential use would be if a user wanted to review assessment results for students who have a specific drop registration status (i.e., *DD*). They would create a population selection containing these students, and run the report. This allows them to easily compare the current assessment to the previous one, and determine if the refund was performed correctly.

## Fee Assessment Script Set

A set of SQL reporting scripts is delivered to assist with evaluating and reviewing registration fee assessment data.

### Overview

This fee assessment script set is used to assist with evaluating and reviewing registration fee assessment data. These scripts provide an institution with the ability to easily gather term-based rule and fee assessment-related data for a term, as well as registration information for a specific student. The scripts are designed to provide a standardized method for institutions to list and examine rule and assessment data for a specific student ID and term so as to assist them in troubleshooting assessment issues independently.

The generated report files from these scripts can also be used as a standardized method for providing the ActionLine with institution test case data when reporting assessment-related issues and creating assessment-related contacts.

These scripts are delivered as part of the PLUS directory, and they can be run from the SQL\*Plus command prompt. Some script output is in a .csv (comma separated value) file format.

A total of 27 scripts are delivered. One of the scripts is a driver script, which calls the remaining 26 scripts. (You must run the `srdriver.sql` script first.) A total of four output files are generated: one .lis file and three .csv files.

All four files follow a standard naming convention using the specific student ID and term.

- The .lis file name follows the naming convention `<term>_<id>.lis`. For example, if the scripts were run for term 200409 and student ID 123456789, the generated file would be named `200409_123456789.lis`.
- The .csv files (data from SSBSECT, SFRRGFE, and SFRFAUD) follow the same naming convention. These files would be named: `<term>_<id>_ssbsect.csv`, `<term>_<id>_sfrrgfe.csv`, and `<term>_<id>_sfrfaud.csv`.

## Description of Scripts

The following scripts and the tables they report on are listed below:

Script Name	Table Reported On	Description
<code>srdriver.sql</code>	N/A	Driver script for the series of assessment data reporting scripts used to create fee assessment contacts with ActionLine.  Input Parameters: <ul style="list-style-type: none"> <li>• Term - Required, no wildcards</li> <li>• ID - Required, no wildcards</li> </ul>
<code>srgtvsdax.sql</code>	GTVSDAX	Script used to identify crosswalk/conversion information for the rules with an <b>Internal Group (Code)</b> of <i>FEE ASSESSMENT</i> .
<code>srsfbests.sql</code>	SFBESTS	Script used to identify refund by enrollment status/student registration status information which defines when the enrollment status code can be used during the specified term.
<code>srsfbetrm.sql</code>	SFBETRM	Script used to identify student registration/enrollment information for a specific student ID and term.

<b>Script Name</b>	<b>Table Reported On</b>	<b>Description</b>
srsfbrfst.sql	SFBRFST	Script used to identify refund by enrollment status/student refund percentage information which defines the refund period and percentage for the enrollment status code during the specified term.
srsfrafee.sql	SFRAFEE, SFREFEE	Script used to identify student registration additional fees information for a specific student ID and term.
srsfrareg.sql	SFRAREG	Script used to identify open learning course registration extension information for a specific student ID and term.
srsfrfaud.sql	SFRFAUD	Script used to identify registration fee assessment audit information for a specific student ID and term. Output is a .csv file.
srsfrfmax.sql	SFRFMAX	Script used to identify minimum and maximum registration fee information. Defines minimum and maximum charges needed for a detail code for a specific term.
srsfrnrcr.sql	SFRRCR	Script used to identify course refund percentage information for a specific term.
srsfrnrfnd.sql	SFRRFND	Script used to identify refund by total refund/penalty periods for a specific term.
srsfrngfe.sql	SFRRGFE	Script used to identify registration fee assessment rules information for a specific student ID and term. Output is a .csv file.
srsfrnrsts.sql	SFRRSTS	Script used to identify refund by course/registration status by term information. Defines when student course registration codes can be used during the specified term.
srsfrstcr.sql	SFRSTCR	Script used to identify student course registration information for a specific student ID and term.
srsobterm.sql	SOBTERM	Script used to identify base term information for a specified term.
srsbsect.sql	SSBSECT	Script used to identify general base section information for a specified term. Output is a .csv file.
srsrattr.sql	SSRATTR	Script used to identify degree program attribute information for a specified term.
srsnextn.sql	SSREXTN	Script used to identify open learning registration extension rule information for a specified term.
srsrfees.sql	SSRFEES	Script used to identify section fee information for a specified term.

Script Name	Table Reported On	Description
srssrrfnd.sql	SSRRFND	Script used to identify open learning registration/section refunding information for a specified term.
srssrrsts.sql	SSRRSTS	Script used to identify open learning registration/section registration status code information for a specified term.
srstvests.sql	STVESTS	Script used to identify student enrollment/registration status information which defines enrollment status codes.
srstvftyp.sql	STVFTYP	Script used to identify fee type validation information.
srstvrvsts.sql	STVRSTS	Script used to identify course registration status validation information.
srtbbctrl.sql	TBBCTRL	Script used to identify accounts receivable billing control information.
srtbbdetc.sql	TBBDETC	Script used to identify detail charge/payment code definition information.
srtbraccd.sql	TBRACCD	Script used to identify account charge/payment detail information for a specific student ID and term.

## How to Run the Scripts

Use these steps to run the scripts, generate the data output files, and send the files to the ActionLine.

1. Verify that the above scripts exist under `$BANNER_HOME/student/plus` and `$BANNER_LINKS`.
2. Navigate to the directory to which the output files can be written.
3. Run the script set from the SQL\*Plus prompt by typing the name of the driving script, `srdriver`, preceded by the `@` command or the start command: `SQLPLUS>`  
`@$BANNER_LINKS/srdriver`.
4. Enter values for the two input parameters at the prompt:
  - *ID* - Required, the ID for the student
  - *Term* - Required, the term for the student
5. Review the following files that are created by the series of SQL scripts:
  - `<term>_<id>.lis`
  - `<term>_<id>_ssbsect.csv`
  - `<term>_<id>_sfrngfe.csv`
  - `<term>_<id>_sfrfaud.csv`

6. Transfer the output files to your PC in ASCII using File Transfer Protocol (FTP) software.
7. Submit the script output files when you contact the Customer Support Center. If you are sending output files to the ActionLine as part of creating a contact, attach the four output files to an email message.

## Files Produced by the Scripts

Here is a breakdown of what is reported in each of the four files produced by the scripts.

### *<term>\_<id>.lis File*

The <term>\_<id>.lis file is comprised of the following data:

#### 1. Term and Control Data

- GTVSDAX - crosswalk/conversion information.
- SOBTERM - term-based information for a specified term.
- TBBCTRL - accounts receivable billing control information.
- SFRFMAX - registration fees maximum information that defines minimum and maximum charges needed for a detail code for a specific term.
- STVRSTS - course registration validation status information.
- STVESTS - student registration status validation information that defines enrollment status codes.
- SSRATTR - degree program attribute information for a specified term.
- STVFTYP - fee type validation information.

#### 2. Refund Data

- Refund By Course
  - SFRRSTS - refund by course/registration status by term information. defines when a student course registration code can be used during the specified term.
  - SFRRFCR - refund by course refund percentage information for specific term.
- Refund By Total
  - SFRRFND - refund by total/refund control information which defines penalty periods for refund by total for a specific term.
- Refund By Enrollment Status

- SFBESTS - refund by enrollment status/student registration status information which defines when enrollment status code can be used during the specified term.
- SFBRFST - refund by enrollment status/student refund percentage information which defines the refund period and percentage for the enrollment code during the specified term.
- Open Learning Registration Refunding
  - SSRRSTS - open learning registration/section open learning registration status code information for a specified term.
  - SSREXTN - open learning registration/section open learning registration extension rules information for a specified term.
  - SSRRFND - open learning registration/section open learning registration refunding information for a specified term.

### 3. Student and Student Registration Data

- SFBETRM - student registration table information for a specific ID/term.
- SFRSTCR - student course registration information for specific ID/term.
- SSRFEES - section fees repeating information for a specified term.
- SFRAFEE - registration additional fees, student registration additional fees, and detail charge/payment code definition information for a specific student ID and term.
- SFRAREG - open learning additional and student course registration information for a specific student ID/term.
- TBRACCD - account charge/payment detail information for specific ID/term.

#### Note

SSBSECT data is spooled to a separate `.csv` file named `<term>_<id>_ssbsect.csv`.

SFRFAUD data is spooled to a separate `.csv` file named `<term>_<id>_sfrfaud.csv`.

SFRRGFE data is spooled to a separate `.csv` file named `<term>_<id>_sfrngfe.csv`. ■

### 4. Detail Code Definitions

- TBBDETC - detail charge/payment code definition information.

#### **.csv Files**

The remaining data is written to three comma separated value (`.csv`) files in delimited format, and the files may be viewed as spreadsheets with Microsoft Excel.

- <term>\_<id>\_ssbsect.csv - section information for a specific term.
- <term>\_<id>\_sfrfaud.csv - registration fee assessment audit information for a specific student ID and term.
- <term>\_<id>\_sfrngfe.csv - registration fee assessment rules information.

## Using the Purge Process

Use the Purge Fee Assessment Audit Process (SFPFAUD) to purge audit history records from the database. You can delete unnecessary records and use a reporting option to review individual accounts when researching possible accounting or assessment errors.

You can run the purge process for range of dates for transactions, for a specific term, or for an ID. You can choose to keep only the last assessment records. The last assessment should be kept when the current term is active and additional assessments are going to occur for that term. If all records are purged for a given term and section fees or other additional fees exist, fee assessment may need to be run twice to ensure accurate assessment. You can print summary or detail information, and you can run the purge in audit or update mode.

This process prevents the intermediate assessment audit that is created to handle records with a status of *DD* from being purged. These interim records will not be purged until a flat charge rule qualification has re-occurred. This will ensure that future assessments will have accurate previous assessment records available for fee assessment processing.

The process deletes SFRFAUD rows for qualified students by assessment rule type (*STUDENT, LEVEL, CAMPUS, ATTR*). The process considers if a student has had prior flat rule qualification but has been reassessed due to having a drop/delete issued. Since the student's assessment in essence starts over when the drop/delete is realized by assessment, any prior assessment audit records that record prior flat charge rule qualification can be safely purged.

SFPFAUD first determines if a drop/delete scenario has been handled by assessment. If it has, any assessment audit prior to the drop/delete being handled can be purged. The process checks to see if a date is found for when a drop/delete was handled, and then goes on to delete all assessment audit prior to the drop/delete, making sure to retain the last assessment audit.

## Updating Records with Incorrect Assessments

The following steps should be used to update any incorrect assessment records:

1. Identify students with inaccurate assessments due to flat charge refunding issues.
2. Record the course drop history for the students (the CRN, the course registration status code, and the date for each dropped course).

3. Purge the SFRFAUD audit data for the students.
4. Re-register the students, and assess them.
5. Drop the appropriate courses using the course registration status codes and dates noted in Step 2 above.
6. Run SFRFASC in audit mode, if you want to preview the results prior to posting the assessment.
7. Review and verify the assessment results.
8. Run the assessment in update mode, if the assessment was previewed in audit mode.

## Registration Fee Assessment and Open Learning Courses

### Refunding Rule Setup

Before setting up refunding rules for use with open learning courses and fee assessment, create the term in the Term Control Form (SOATERM), and define the required registration dates, census dates, and status codes on SOAORUL.

Then consider the following recommendations:

- To default the appropriate registration, extension, and refunding rules to the section, the CRNs must be created either through the Term Roll Report (SSRROLL) or directly through the Schedule Form (SSASECT).

All new open learning sections (those sections defined with no part-of-term, with an instructional method, registration from/to dates, student start from/to dates, duration units, and number of units) will be given section level registration dates, registration status codes, and extension rule and refunding rule records, based on the information established in the Open Learning Rules Form (SOAORUL) for the course and/or section characteristics.

The registration from and to dates will reflect the most appropriate registration dates as per SOAORUL, based on course and/or section characteristics. These rules are accessible via the Schedule Processing Rules Form (SSARULE).

- Modifications to the registration dates, registration status codes, extension rules, and refunding rules are permitted if the original open learning rule has been denoted as overrideable.
- It is strongly suggested that fee assessment be established in the Schedule Detail Form (SSADETL). Once established at the section level, the **Track by CRN** indicator on in the Term Control Form (SOATERM) is used to add the CRN number to all fee assessment transactions on the student's accounts receivable records. The **Assess by Course** indicator on SFARGFE does the same in the

refunding process. This will facilitate the tracking of fees to an individual registration.

- As an alternative to defaulting fees from the course level, registration fees can be defined in the Section Fee Assessment Control Form (SSADFEE) and will populate the section fees (SSRMEET table) based on course and/or section characteristics. This is a set-up process only and will not physically write the new records to the table until a new section has been created.

When new sections are created, the fee rules defined here will default automatically. If the updating of existing sections with no existing fee rules is required, use the batch process (SSPMFEE) to examine the set-up information and apply the fee rules to the appropriate sections.

- If fee assessment rules are required in addition to section level fees, they should be constructed in the Registration Fee Assessment Rules Form (SFARGFE).

 **Note**

These charges will be assessed per credit hour only, and the section will not be appended to the TBRACCD record. ■

## Examples of Simple Section Level Fee Assessment

### Section Setup

CRN 10001 characteristics:

- Open Learning Course
- 10 week duration
- 3 billing hours
- 4 credit hours

CRN 10002 characteristics:

- Traditional section defined with part-of-term
- 3 billing hours
- 4 credit hours

	<b>Detail Code</b>	<b>Amount</b>	<b>Fee Type</b>	<b>Duration</b>
1	T100	900.00	FLAT	
2	T100	300.00	CRED	
3	T100	90.00	DURN	Week
4	T200	100.00	DURN	Week
	COMP	25.00	FLAT	
5	T200	100.00	BILL	
	TECH	50.00	FLAT	

The following represents the TBRACCD entries that would be placed on the learner's account:

*CRN 10001:*

Scenario 1	T100	900.00	
Scenario 2	T100	900.00	300.00 X 4
Scenario 3	T100	900.00	90.00 X 10
Scenario 4	T200	1000.00	100.00 X 10
	COMP	25.00	
Scenario 5	T200	300.00	100.00 X 3
	TECH	0.00	

*CRN 10002:*

Scenario 1	T100	900.00	
Scenario 2	T100	900.00	300.00 X 4
Scenario 3	Fee assessment would not be accomplished on a duration basis (entry of this scenario would be prohibited in SSADETL).		
Scenario 4	Fee assessment would not be accomplished on a duration basis (entry of this scenario would be prohibited in SSADETL).		
Scenario 5	T200	300.00	100.00 X 3
	TECH	50.00	

## Examples of Simple Section Level Refunding

### Section Setup

CRN 10001 characteristics:

- Open Learning Course
- 10 week duration

	Reg Code	%Complete	Duration Complete	Duration	Tuition Refund	Fee Refund	Extn Refund
1	DC	10			100%	100%	
	DC	20			90	90	
	DC	30			70	70	
	DC	40			50	0	
2	DC		1	WEEK	100	100	
	DC		3	WEEK	75	75	
	DC		5	WEEK	50	0	

The following represents the TBRACCD entries that would be placed on the learner's account.

### Refunding by Percent Complete (Rule Set 1)

#### Scenario 1:

Learner A started course on April 1 paying \$100.00 tuition (no fees) and drops on April 5. The learner was active in the course for 5 days which constitutes 7.1429% complete - between 0 and 10% complete [5 days / (10 weeks \* 7 days) \* 100].

T100                      - 100.00

#### Scenario 2:

Learner B started course on April 1 paying \$100.00 tuition (no fees) and drops on April 15. The learner was active in the course for 15 days which constitutes 21% complete – between 20 and 30% [15 days / (10 weeks \* 7 days) \* 100].

T100                      - 70.00

#### Scenario 3:

Learner B started course on April 1 paying \$100.00 tuition (no fees) and drops on May 15. The learner was active in the course for 45 days which constitutes 64% complete - more than 50% complete [31 days / (10 weeks \* 7 days) \* 100].

No refund processed.

### Refunding by Duration Complete (Rule Set 2)

#### Scenario 4:

Learner A started course on April 1 paying \$100.00 tuition (no fees) and drops on April 5. The learner is in the first week of the course - between 0 and 1 week complete.

T100                      - 100.00

#### Scenario 5:

Learner B started course on April 1 paying \$100.00 tuition (no fees) and drops on April 22. The learner is in the fourth week of the course - between 3 and 5 weeks complete.

T100                      - 50.00

**Scenario 6:**

Learner B started course on April 1 paying \$100.00 tuition (no fees) and drops on May 6. The learner is in the sixth week of the course – more than 5 weeks complete.

No refund processed.

**Examples of Section Level Refunding for Traditional Type Courses**

The following is an example of how a traditional course, defined as an open learning course, can be structured to use open learning refunding rules.

A continuing education course meets every Tuesday between August 21 and October 16 – 9 classroom meetings.

- The refund deadline date is August 23.
- The withdrawal deadline date is October 2.

The Banner setup would be:

- Registration from and to dates could be structured to allow students to register in any timeframe that is convenient prior to first classroom meeting date of August 21.
- Start from and to dates could be defined as the same date of August 21, thereby ensuring that all students have the same start date.
- Refunding rules could be established for the section defining a duration complete or percent complete as follows.

	<b>Reg Code</b>	<b>%Complete</b>	<b>Duration Complete</b>	<b>Duration</b>	<b>Tuition Refund</b>	<b>Fee Refund</b>	<b>Extn Refund</b>
Refunding Rules by % Complete	DC	10			100%	100%	
	DC	75			50	50	
	DC	100			0	0	
Refunding Rules by Duration Complete	DC		1	WEEK	100	100	
	DC		7	WEEK	50	50	
	DC		9	WEEK	0	0	

## Refunding by Percent Complete

### Scenario 1:

Student drops the class on August 23 after the first class.

If determined by duration, they would receive a full refund as they fall within the range of 0 to 1 week.

By percentage, they would also get a 100% refund ((3 days completed / 56 days in total period) \* 100 = 5.35714 or 5% which is between 0% and 10%).

## Refunding by Duration Complete

### Scenario 2:

Student drops the class on September 25.

If determined by duration, they would receive a 50% refund as they fall within the range of 2 to 7 weeks.

By percentage, they would also get a 100% refund ((35 days completed / 56 days in total period) \* 100 = 62.5 or 62% which is between 10% and 75%).

### Scenario 3:

Student drops the class on October 9.

If determined by duration, they would not receive a refund as they fall within the range of 8 to 9 weeks.

By percentage, they would also get no refund ((49 days completed / 56 days in total period) \* 100 = 87.5 or 87% which is between 75% and 100%).

## Extension Fee Processing

For open learning courses, you may require the assessment of fees if the student's expected completion has been extended. In effect, the student will be able to "buy" additional time in the course. Rules are established at the section level (SSARULE) to allow the definition of how those rules should be assessed.

To apply the extension to an individual learner, access SFARHST, where the extension rules established for the section are defaulted and may be altered (based on whether overrides are permitted). Therefore, fees will need to be assessed to the student's account reflecting this transaction.

Extension fees are processed similarly to registration fees:

- Extension fees are processed from common extension fee assessment procedures.
- Extension fees are processed from the form if the **Registration Fee Assessment On-line** checkbox is checked on SOATERM.
- Extension fees are processed from batch if the **Registration Fee Assessment On-line** checkbox is *not* checked on SOATERM.
- The CRN should be appended to the TBRACCD record if the **Track by CRN** checkbox is checked on SOATERM.

The differences from registration fee assessment are as follows:

- Fees are pre-calculated based on the extension rule defined in SSARULE and SFARHST (by duration) and will therefore be treated as flat fees in the fee assessment process.
- The date assessed is captured in the Additional Registration Information Table (SFRAREG) after the student's account record (TBRACCD) has been generated either online or through the batch fee assessment process.

 **Note**

It is possible for the extension fees to be waived. In that case, the extension fee amount will be zero. In the case where there are zero fees, no record is inserted in the TBRACCD table. ■

## Extension Refunding Processing

The processing for extension refunding is similar to that accomplished for open learning registration. Rules are attached to the status code and subsequently assigned to the extension that has been deemed as a withdrawal (STVRSTS\_WITHDRAW\_IND) and has been allocated to extension processing (STVRSTS\_EXTENSION\_IND).

The drop or withdrawal of an individual extension is processed through the Registration Extensions block of the Student Registration History and Extension Form (SFARHST). If the course is withdrawn from or dropped via the Student Course Registration Form (SFAREGS), all extensions for that course will also be withdrawn from or dropped. This form permits the user to define the process date in the Key Block, and it should be this date that is used to determine the current date.

If a student drops an open learning course with an extension prior to the beginning of that extension, the refund given is determined by the registration date that is assigned to the registration status code for the extension. This date is displayed in the Course Status Date field in the Student Registration Extension Information window on SFARHST. It is stored in the SFRAREG table, in the SFRAREG\_RSTS\_DATE field. The field will store the date when a course registration status code (STVRSTS) is created or updated for an extension record. This allows an extension record to have its own registration status date that is separate from the course registration status date.

## Processing Algorithms

### *Example:*

The student was granted a 5-week extension, and on January 28, 2002, wants to drop the extension. The extension start date is January 15, 2002, with an expected completion date of February 19, 2002. A week is defined as having 7 days.

### **Percent Complete Calculation**

Number of days elapsed in the registration:

Calculate the number of days between the current extension start date (SFRAREG\_START\_DATE) and the current date (or the process date in the event that the total course is dropped).

### *Example:*

Difference between January 15, 2002 and January 28, 2002 = 13 days

Number of days available in the registration:

Calculate the number of days between the current extension start date (SFRAREG\_START\_DATE) and the current expected completion date (SFRAREG\_END\_DATE).

### *Example:*

Difference between January 15, 2002 and February 19, 2002 = 35 days

Calculate the percent complete:

$(\text{Number of days elapsed in registration} / \text{number of days available in the registration}) * 100$

### *Example:*

$(13 / 35) * 100 = 37.14285\%$

This percentage would be compared to the percent complete rule defined for the registration code (rules defined in the SSRRFND table) to ascertain the refund percentage to use in the calculation of the refund amount.

### **Duration Complete Calculation**

Number of duration units elapsed in the registration:

Calculate the number of days between the current extension start date (SFRAREG\_START\_DATE) and the current date (or the process date in the event that the total course is dropped), and divide by the number of days defined for the duration code (SFRAREG\_DUNT\_CODE) assigned to the section (GTVDUNT\_NUMBER\_OF\_DAYS).

*Example:*

Difference between January 15, 2002 and January 28, 2002 = 13 days

Translate to duration unit of week = 13 days / 7 days = 1.8571428 weeks

The elapsed duration units would be compared to the duration complete rule defined for the registration code (rules defined in the SSRRFND table) to ascertain the refund percentage to use in the calculation of the refund amount.

## Examples of Individual Extension Refunding

Extensions are granted for an open learning course as follows:

- Original Duration: 10 weeks
- Extension: 5 weeks
- Extension Fee: \$150.00

	Reg Code	%Complete	Duration Complete	Duration	Tuition Refund	Fee Refund	Extn Refund
Refunding Rules by % Complete	WX	50					50%
	WX	100					0
Refunding Rules by Duration Complete	WX		2	WEEK			50%
	WX		5	WEEK			0

### Refunding by Percent Complete

#### Scenario 1:

Student has been granted a 5 week extension, and on January 28, 2002, wants to withdraw from the extension. The extension start date is January 15, 2002, with an expected completion date of February 18, 2002.

They would receive a 50% refund (13 days completed / 35 days in total period) \* 100 = 37.1429 or 37% which is between 0% and 50%).

## Refunding by Duration Complete

### Scenario 2:

Student has been granted a 5 week extension, and on February 2, 2002, wants to withdraw. The original extension date is January 15, 2002, and their expected completion date is February 18, 2002.

They would receive no refund, as they fall within the range of 2 to 5 weeks.

## Examples of Extension Refunding for Dropped/Withdrawn Course

### Section Setup

CRN 10001 characteristics:

- Open Learning Course
- 10 week duration

	Reg Code	%Complete	Duration Complete	Duration	Tuition Refund	Fee Refund	Extn Refund
1	DC	10			100%	100%	100%
	DC	20			90	90	50
	DC	30			70	70	0
	DC	40			50	0	0
2	DC		1	WEEK	100	100	0
	DC		3	WEEK	75	75	0
	DC		5	WEEK	50	0	0

## Refunding by Percent Complete with Extensions (Rule Set 1)

### Scenario 1:

Learner B started course on April 1 paying \$100.00 tuition (no fees), and drops the course (by default all extensions) on May 15. A registration extension was granted for a 5 week period commencing on June 10 at a cost of \$50.00 (charged to the same detail code as the original registration). The learner was active in the course for 45 days which constitutes 64% complete - more than 50% complete  $[(31 \text{ days} / (10 \text{ weeks} * 7 \text{ days})) * 100]$ .

No refund processed.

The extension refund is processed. As the extension was not in effect yet, 0% completed, the learner would receive a full refund of the cost of the extension.

T100                      - 50.00

## Refunding by Duration Complete with Extensions (Rule Set 2)

### Scenario 2:

Learner B started the course on April 1 paying \$100.00 tuition (no fees), and drops the course (by default all extensions) on May 6. A registration extension was granted for a 5 week period commencing on June 10 at a cost of \$50.00 (charged to the same detail code as the original registration). The learner is in the sixth week of the course - more than 5 weeks complete.

No refund processed.

The extension refund is processed. Although the extension was not in effect yet - 0 weeks complete, the learner, based on the rules that were set up, would receive no refund of the cost of the extension.

No refund processed.

## Registration Fee Assessment and Study Paths

### Set up Study Paths with Fee Assessment

Use the following steps to set up study path processing with fee assessment and Banner Accounts Receivable.

1. Set up study paths in Banner Student baseline and Banner Student Self-Service.  
Refer to the Appendix E, "Study Path Processing".
2. Create fee assessment rules on SFARGFE by *STUDYPATH* or *STUDYPATH\_ATTR* rule type.
3. Use the Student Curriculum Rules block on SFARGFE to set up curriculum rules for registration.
4. Check the **Section Fees by Study Path** checkbox on SOATERM to control whether study path data is stored with a charge, when the charge is generated from section fees.
5. Check the **Display Study Paths** checkbox the TSACTRL to display study path information on TSAAREV, TSADETL, and TSIQACT.

# Registration Fee Assessment Combined Fee Assessment Process

## Fee Assessment Functionality

Processing supports the use of the section schedule type and section instructional method on SFARGFE. For example, you may have the requirement to assess technology fees to only those sections that have an instructional method of *WEB*. This fee would be inappropriate for students registered in a traditional classroom setting.

- These rules are not considered in the situation where **Tuition and Fee Waiver** flag on SSASECT and **Override (Indicator)** on SFARGFE are checked.
- If rules are defined in SFARGFE with part-of-term information, they will not be applicable to open learning courses, as these sections will not have a part-of-term attributed to them.
- If rules are defined with registration from/to dates, they will not be applicable to open learning courses due to the fact that these dates are static, and potentially, each open learning section may be defined with different registration periods.

For those fees calculated from the section level fee rules defined in SSADETL, the accounting records (TBRACCD) incorporate the CRN if **Track by CRN** is checked on SOATERM.

## Processing Algorithms

The following applies to processing algorithms:

- If SSRFEES\_FEE\_IND = **FLAT**, calculation is necessary.
- If SSRFEES\_FEE\_IND = **CRED**,  $SSRFEES\_AMOUNT * SFRSTCR\_CREDIT\_HR$ .
- If SSRFEES\_FEE\_IND = **BILL**,  $SSRFEES\_AMOUNT * SFRSTCR\_BILL\_HR$ .
- If SSRFEES\_FEE\_IND = **DURN**,  $SSRFEES\_AMOUNT * SFRAREG\_NUMBER\_OF\_UNITS$ .

Extreme care should be taken when creating section level (SSADETL) and term level (SFARGFE) fee rules, as term level rules will not have the same flexibility of fee type as the section level rules. Also, term level rules can be developed for part-of-term and/or registration from/to dates which will not be applicable to open learning courses.

## Tuition and Fee Refunding Functionality

This refunding should only be invoked for open learning section registration records (no part-of-term is defined for the section), if no extensions have been processed for this registration record ( $SFRAREG\_EXTENSION\_NUMBER = 0$  of the most current (maximum) SFRAREG records), and the **Extension Indicator** (STVRSTS\_EXTENSION\_IND) of the

registration status code used for the drop contains a value of *N*. Otherwise, the extension refund processing should be invoked.

At the section level, criteria for refunding fees is defined in the section level rule processing. Refunds are based on the elapsed time. Open learning courses can be identified as those courses where no part of term information is contained on the SSBSECT record.

You need to determine how to calculate the amount of time elapsed since the individual student started the course. Students registered in the same section will have individualized start dates. Therefore the traditional means of refunding based on static dates is not possible. The registration start and end dates reside in the SFRAREG table.

This functionality should not be dependant upon how the original fees were assessed. Therefore, if section level fees or fees assessed through SFARGFE were used in the calculation of the original charge, there should be no change in refunding protocol.

 **Note**

Refunding rules are tied to a registration status and would be invoked whenever that status was applied to a registration record. ■

 **Note**

SFARFND, SFARSTS, and SFAESTS refund processing is not applicable for open learning courses. ■

Percent complete is based on the amount of time given to the student to complete the course, and monies would be refunded on the percentage of used or elapsed time. This elapsed time is calculated specifically for the individual student's start date and represents a percentage of the total course duration.

Duration complete is based on the duration units and duration period assigned to the section in SSASECT. Refunding rules can be developed to assess the number of duration periods that have passed with the student's start date and refund monies based on rules established in SSARULE for that section.

## Processing Algorithms

*Example:*

The student started a 15-week course and on April 22, 2002 wants to drop. The registration start date is April 1, 2002 with an expected completion date of July 15, 2002. A week is defined as having 7 days.

### **Percent Complete Calculation**

Number of days elapsed in the registration:

Calculate the number of days between the registration start date (SFRAREG\_START\_DATE) and the current date.

*Example:*

Difference between April 1, 2002 and April 22, 2002 = 21 days

Number of days available in the registration:

Calculate the number of days between the current extension start date (SFRAREG\_START\_DATE) and the current expected completion date (SFRAREG\_END\_DATE).

*Example:*

Difference between April 1, 2002 and July 15, 2002 = 105 days

Calculate the percent complete:

$(\text{Number of days elapsed in registration} / \text{number of days available in the registration}) * 100$

*Example:*

$(21 / 105) * 100 = 20.00\%$

This percentage would be compared to the percent complete rule defined for the registration code (rules defined in the SSRRFND table) to ascertain the refund percentage to use in the calculation of the refund amount.

### ***Duration Complete Calculation***

Number of duration units elapsed in the registration:

Calculate the number of days between the current extension start date (SFRAREG\_START\_DATE) and the current date, and divide by the number of days defined for the duration code (SFRAREG\_DUNT\_CODE) assigned to the section (GTVDUNT\_NUMBER\_OF\_DAYS).

*Example:*

Difference between April 1, 2002 and April 22, 2002 = 21 days

Translate to duration unit of week =  $21 \text{ days} / 7 \text{ days} = 3.00 \text{ weeks}$

The elapsed duration units would be compared to the duration complete rule defined for the registration code (rules defined in the SSRRFND table) to ascertain the refund percentage to use in the calculation of the refund amount. Ensure that the CRN is captured on the student's account record (TBRACCD) when the **Track by CRN** flag is checked on SOATERM.

## Register Students

The Student Course Registration Form (SFAREGS) provides an automated mechanism for registering students into sections created in the Schedule module. This form also assesses the tuition and fee charges related to the registration and passes them to the Accounts Receivable module. This form further allows for student maintenance, performs the functions necessary for add/drop activity, and provides the ability to print a student's schedule and bill.

The form contains the logic to check the repeat limit or repeat maximum hours, which is controlled by the flags set on the Term Control Form (SOATERM). The repeat checking process examines the courses which are in progress and exist in academic history to determine if the repeat rules are violated.

Equivalent courses that are specified at the Catalog module are also examined when determining repeats.

SFAREGS contains the logic to check the prerequisite and test score restrictions; this logic is controlled by the registration error flag on SOATERM. The form also contains the logic to check the campus restrictions; this logic is also controlled by the registration error flag on SOATERM.

All changes made in the Registration information *must* be saved before the user is permitted to exit the form. Users are not permitted to exit the registration form if fatal errors exist.

This form supports block scheduling via the use the **Delete all CRNS** checkbox, and **Process Block** checkbox, and the **Block Schedule** field. Select Update Student's Term Information from the Options Menu to open the Student Term window where the **Block Schedule** field is located.

SFAREGS displays the following messages in the circumstances described below:

1. When the course status is not defined for part of term, the message will display *Course registration status rules not defined for part of term.*
2. When the course status is defined, but is out of the date range, the message will display *Course status dates not within range for part of term.*
3. If enrollment statuses have not been created for the term on the Enrollment Status Control Form (SFAESTS), the message will display *Status undefined or date range invalid; press KEY-CLRBLK OR KEY-CLFRM to exit.*
4. A warning message is generated if the user attempts to change a student's major or college, if that student's degree record has been updated to pending graduation status.
5. Test score and prerequisite checking are combined, and generate the message *Preq & Test Score - Error*: if the student does not meet the prerequisite requirements for a

course. The message *PREQ in progress* will display if the student is currently registered for a prerequisite in a prior term, and it has not been graded, and the **In Progress (Indicator)** for that term has been unchecked (set to *N*) on SOATERM.

6. The Maximum Hours check only updates those records which bring the student over the Maximum Hours Allowed with a *Maximum hours exceeded* message. Maximum Hours errors cannot be overridden, but the Maximum Hours may be increased in the Registration information section of the form.
7. If the user attempts to perform an Exit or Rollback function from the Registration section when changes have been made to this section which may affect registration fee assessment, the message *\*ERROR\* Invalid Key. Must SAVE registration changes before exiting.* will be generated.
8. If the user attempts to perform an Exit or Rollback function from the Student Information window when changes have been made to this window, the message *\*ERROR\* Invalid Key. Must SAVE student AND registration changes before exiting.* will be generated.
9. If the user attempts to perform an Exit or Rollback function from the Registration section when changes have been made to this section, the message *\*ERROR\* Invalid Key. Must SAVE student AND registration changes before exiting.* will be generated.

The Registration Section Query Form (SFQSECM) is used to assist the registration user in resolving registration problems if they occur. The user may request specific queries against the section data and compare the results to the student's current schedule.

Also used in the registration process is the Registration Course Query Form (SFQSECT), which displays information pertaining to the registration of a course, as well as override fields for repeat checking, campus restrictions, and test score restrictions.

## Open Learning Registration

Open learning registration provides learners with the ability to register for a class based on start/end dates rather than a term. This open learning approach is optional and works with Banner Student's registration processing for enrollment and administrative purposes. Please refer to the *Banner Student Open Learning Registration Handbook* for more information on using this processing.

Open learning allows you to do the following in the Registration module:

- Run reports (such as student schedules, schedule/bills, transcripts, and enrollment verifications) using date ranges in place of term.
- Permit students to select, as part of the registration process, either the date they wish to start their course or the date they wish to finish the course.

- Calculate either the start and/or expected completion dates of the class based on the duration of the section in conjunction with the date the student selected at the time of registration.
- Permit the student to buy more time in a class, thereby extending their expected completion date.
- Use the section level rules defined through the section creation process.
- View all registration activity for a student, irrespective of term.
- Process withdrawals or drops based on the individual student's progress in the course versus static date ranges for the term or part-of-term.
- Create rules for registration and fee assessment processing that will provide the appropriate level of flexibility for open learning courses. These rules are defined outside the traditional part-of-term and static date registration processing.
- Specify dates when registration will be accepted (outside of the usual term definitions on SOATERM) to lay the foundation for non-term based registration.

## Set Up Open Learning Rules

Before setting up open learning rules, make sure all section-related rules and validation codes have been defined in Banner.

1. Access the Open Learning Section Default Rules Form (SOAORUL), and enter the term in the Key Block.
2. Use Next Block to access the Registration Date Defaults block, and enter the course/section criteria for the rule (college, department, campus, schedule type, instructional method).

This criteria will be used to associate the registration default information to the section or group of sections. For example, if all Web-based nursing sections will be available for registration between a particular range of dates, the department should be set to the nursing department code, and the instructional method should be set to the code that represents Web-based delivery.

3. Enter the registration start and end dates for the period of time that the students are allowed to register for a section.

These dates will default to all new section records created, matching the identifying criteria defined here. These dates will also default to the start from and to dates on the section record. Both of these date ranges are updatable in SSASECT, if the **Override (Indicator)** is checked.

4. Enter the census dates to be defaulted to the corresponding fields in the Enrollment Data block of the Schedule Form (SSASECT).

5. Save the records.
6. Define the registration status codes that will be allowable for the rule.
  - 6.1. To do this, position the cursor on the record with the appropriate criteria, and use the **Detail** button or the Registration Status Codes item in the Options Menu to access the Default Registration Status Code Definitions block.
  - 6.2. Enter all the registration status codes and usage cutoff percentages that apply for this set of course characteristics. The description and indicator settings from STVRSTS are displayed.
7. Save the records.
8. Define extension rules for the term using extension registration status codes with the **Extension Indicator** checkbox checked on STVRSTS.
  - 8.1. To do this, position the cursor on the extension status code, and select the Extension Rules item in the Options Menu. You will see an error message if the code you chose is not defined as an extension code.

This rule defines the default information that will be displayed when granting extensions in SFARHST.
9. Enter the percentage of the original duration period for the various sections that meet the identifying criteria to be used to extend the learner's expected completion date.
10. Define the rate per duration unit.
11. Check the **Override (Indicator)** if the defined values can be overridden after the information has been defaulted to the section (SSARULE).
12. Define refunding rules. Refunding rule definitions are required for each registration code that will be used to drop, withdraw, or cancel a registration record.

Unlike the refunding rules defined for registration codes in SFARSTS, refunding is accomplished based on the elapsed time from the student's individual start date based on the duration of the section. This elapsed time is defined as a completion percentage. At the section level, rules may be defined based on the duration complete. This functionality was not provided here due to the fact that these are general default rules, and the duration is set at the section level.

For example, the original duration of the section is ten weeks, and institutional policy states that a 100% tuition refund will be granted in the first week of the student's registration. A rule should be defined with a completion percentage of 10% and a tuition refund rate of 100%. Multiple refunding rules can be defined for an individual registration status. After all refunding rules have been defined, save the records.

The process of defining registration status codes, refunding rules, and extension rules must be completed for all required department, college, campus, schedule type, and instructional method combinations prior to the creation of section records. If this task has not been completed before CRNs are generated, a batch process (SSPRDEF) may be used to default these rules to all open learning sections (in the term) that do not have processing rules.

## Register for an Open Learning Course

Before processing registration records for an open learning course, make sure all open learning rules and course sections have been defined in Banner.

1. Access the Student Course Registration Form (SFAREGS).
2. Enter the ID of the student who is registering for the course.
3. Use Next Block to access the Registration Information block, and enter the CRN number in the **CRN** field, (or search for appropriate sections using the **Search** feature for the **CRN** field). You may also enter the subject, course number, and section directly if the CRN is unknown.
4. Save the record, and fix any errors.
5. The Start/End Date Entry window will be displayed for open learning courses. Enter the start or end date selected by the student in the window.
  - If the start date is entered, the expected completion date of the course will be calculated based on the duration defined for the section.
  - If the student has chosen the date they wish to finish the course, the start date will be calculated. The start date, regardless of how derived, will be checked against the start from and to dates on the section record.
6. Save the date information. You will be returned to the Registration Information block where you must save again to trigger the checking for registration restrictions (i.e., prerequisites, time conflicts, etc.).
7. Save the record so that fee assessment processing can take place.
8. An entry is created in the Additional Registration Information Table (SFRAREG) for the start and end dates and the information for the instructor or tutor assigned to the student for the section. The number of extensions field will be populated with a zero to signify the original registration record.

### Note

Entries are created in this table or traditional and open learning course registration records. This information is then available for Financial Aid processing. ■

## Create an Extension for an Open Learning Course

Before creating an extension for an open learning course, make sure all open learning rules and course sections have been defined in Banner.

1. Access the Student Registration History and Extension Information Form (SFARHST), and enter the ID of the student for whom you wish to process the extension.
2. Use Next Block to access the Registration History block, and select the record for the course to be extended.
3. Position the cursor on the desired course and use Next Block, or select the Course Extension item from the Options Menu to access the Registration Extensions Block.

### Note

You will not be allowed to proceed if: a final grade has already been processed for the course, the selected course has not been defined as open learning (evidenced by lack of part-of-term and start/end date information), the class has been dropped or withdrawn, or the section has not been set up to allow extensions. ■

4. Insert a record in the Registration Extension block. The contents of the extension rule defined for the section in SSARULE will be interpreted and used to populate the fields in this record. The transaction amount will be calculated and represents the charge that will be applied to the student's account.

### Note

Extension processing will not be possible if: the student has passed their expected completion date, the student will exceed the maximum number of extensions allowed for the section, or the student has registration holds. ■

5. If the section requires pre-approval, use the **Approval Override** checkbox to signify that special approval requirement has been granted.
6. If, in the case of an administrative extension, the charge amount should be waived, check the **Waived** checkbox, and the **Amount** field will be set to zero.
7. Save the record when you are satisfied that the correct information exists. A new entry will be entered in the Additional Registration Information Table (SFRAREG).
8. If online fee assessment is turned on in SOATERM, the fee assessment processing can take place for the extension fees (evidenced by the assess date). If online fee assessment has not been turned on, you will need to run the Batch Fee Assessment Process (SFRFASC) to update the student's account.

## Drop or Withdraw from an Open Learning Course

Before dropping out of or withdrawing from an open learning course, make sure all open learning rules and course sections have been defined in Banner.

1. Access the Student Course Registration Form (SFAREGS).
2. Enter the required term and student ID.
3. Use Next Block to access the Registration Information block, and enter the appropriate drop or withdrawal code in the **Status** field. (The status code *must* be defined in STVRSTS with the **Withdrawal Indicator** checkbox checked and have a **Status Type** of *W* for withdrawals or *D* for drops.)

### Note

If extensions have been processed for the registration, they will also be dropped. ■

4. Save your changes. This updates the existing registration record and the most current and future records in the Additional Registration Information Table (SFRAREG). The status code of withdrawn extensions will not be affected.
5. Save again. (Your cursor will now be in the **Fees** field.) This generates the appropriate refunds based on the open learning refunding rules, if online fee assessment has been turned on in SOATERM. Otherwise, you will need to run the Batch Fee Assessment Process (SFRFASC) to update the student's account.

## Drop or Withdraw from an Extension

Before dropping out of or withdrawing from an extension, make sure all open learning rules and course sections have been defined in Banner.

1. Access the Student Registration History and Extension Information Form (SFARHST), and enter the ID for the required student.
2. Use Next Block to access the Registration History block, and select the course to be dropped or withdrawn from.
3. Position the cursor on the required course, then use Next Block or select the Course Extension item in the Options Menu.
4. Use Next Record to locate the extension to be dropped or withdrawn from.

5. Enter an appropriate registration status code.(The status code *must* be defined in STVRSTS with both the **Withdrawal Indicator** and **Extension Indicator** checkboxes checked and have a **Status Type** of *W* for withdrawals or *D* for drops.)

 **Note**

Only active, future-dated extensions may be dropped or withdrawn from. This process does not drop or withdraw the student entirely from the course. *Extension records may not be removed.* ■

6. Save your changes. Only the dropped or withdrawn from entry in the Additional Registration Information Table (SFRAREG) will be affected. If online fee assessment is turned on in SOATERM, fee assessment processing will perform the necessary calculations to determine the student's indebtedness to your institution. If online fee assessment has not been turned on, you will need to run the Batch Fee Assessment Process (SFRFASC) to update the student's account.

## Using Usage Cutoffs

Open learning processing in scheduling (SSARULE) and registration (SOAORUL) allows usage cutoffs on the *DD* course registration status code. This affords open learning courses the same functionality that exists for traditional courses when usage cutoff rules are used. (In open learning, usage cutoff rules are based on each learner's chosen start date for the course.) Only the *RE* course registration status code is restricted from usage cutoff. The *DD* course registration status code is processed like any other STVRSTS code.

Open learning processing in scheduling (SSARULE) and registration (SOAORUL) also allows negative usage cutoffs on course registration status codes, so that registration status codes can be limited to a period of time before the learner has actually started class. Negative numbers can be entered in the various usage cutoff fields. The usage cutoff percentage range is -100 to 100. The usage cutoff duration range allows positive and negative values for the length of the course. (For example, for a 16-week course, the range will be -16 to 16. For a two-month course, the range will be -2 to 2.) Completion calculations convert all durations to days, as defined on GTVDUNT.

One thing to keep in mind when working with negative percentages or durations, is that a calculated completion rate may be meaningless.

### **Example:**

A learner registers on January 1 for a one-week course, which he elects to start on June 1. On January 5, he drops the course. The duration complete is -21 units, and the percentage complete is -2100%. Assume the same scenario exists with a one-day course. On January 5, the duration complete would be -147 units, and the percentage complete would be -14700%.

These large negative numbers are not useful and can vary greatly from one section to another, based on registration dates and learner start dates. Therefore, if an institution wants a course registration status code to be available “from the day the student registers

until...”, the “from” part of the usage cutoff range *must* be set to *NULL*. The system will then allow any completion rate to satisfy the “from” part of the range, as long as the completion rate is less than or equal to the specified “to” value.

## Processing Examples

Here are some examples that show how to set up registration status usage cutoff ranges. Each code is valid if the learner's completion rate for the course falls within the usage cutoff range specified for the course registration status code. If the usage cutoff “from” and “to” values are both left *NULL*, the course registration status code is available for use at any time.

### Calculating the Learner’s Completion Rate

In order to calculate the learner's completion rate, you need to determine how many days of class have been completed. This is done by subtracting the learner's start date from the registration status date.

- If the learner's start date has not yet been realized, it is not counted in the number of days completed. (See Examples 1 and 2 below.)
- If the learner's start date has been realized, one day is added to the number of days completed, making the completion rate inclusive of both the learner's start date and the registration status date. (See Examples 3 and 4 below.)

#### **Example 1:**

The learner is registered for Course A and has elected to start the course on 15-NOV-2006. On 01-NOV-2006, he decides to drop the course.

Number of days complete = (registration status date - learner start date)

Number of days complete = (01-NOV-2006 - 15-NOV-2006)

Number of days complete = -14

#### **Example 2:**

The learner is registered for Course A and has elected to start the course on 15-NOV-2006. The day before his start date, he decides to drop the course.

Number of days complete = (registration status date - learner start date)

Number of days complete = (14-NOV-2006 - 15-NOV-2006)

Number of days complete = -1

### Example 3:

The learner is registered for Course A and has elected to start the course on 15-NOV-2006. On 18-NOV-2006, he decides to drop the course. (Because the start date has been realized, it is included in the number of days completed.)

$$\text{Number of days complete} = (\text{registration status date} - \text{learner start date}) + 1$$

$$\text{Number of days complete} = (18\text{-NOV-2006} - 15\text{-NOV-2006}) + 1$$

$$\text{Number of days complete} = (3) + 1$$

$$\text{Number of days complete} = 4$$

### Example 4:

The learner is registered for Course A and has elected to start the course on 15-NOV-2006. On the first day of class, he decides to drop the course. (Because the start date has been realized, it is included in the number of days completed.)

$$\text{Number of days complete} = (\text{registration status date} - \text{learner start date}) + 1$$

$$\text{Number of days complete} = (15\text{-NOV-2006} - 15\text{-NOV-2006}) + 1$$

$$\text{Number of days complete} = (0) + 1$$

$$\text{Number of days complete} = 1$$

From the above examples, it is clear that number of days completed can never equal zero (0). Therefore, the student's percentage complete or duration complete will never equal zero (0). However, this does not restrict zero (0) from being used on SSARULE or SOAORUL.

- Using zero (0) for the usage cutoff “from” value specifies “from the day the learner starts class until...”, and can only be followed by a positive number for the usage cutoff “to” value.
- Using zero (0) for the usage cutoff “to” value specifies “until the day before the learner starts class” and can only be preceded by a *NULL* value or a negative number for the usage cutoff “from” value.

## Calculating the Usage Cutoff Percentage

Here are examples of course registration status code usage cutoffs for a 10-week course.

### Example 1:

Status Code	From	To
DD	NULL	0

*DD* is available from the day the learner registers until the day before he starts class.

**Example 2:**

Status Code	From	To
DD	NULL	-10
DW	-9	0
DC	0	10

*DD* is available from the day the learner registers until one week before he starts class.

*DW* is available only for the six days prior to the learner starting class.

*DC* is available from the day the learner starts class through the first week of class.

**Example 3:**

Status Code	From	To
DD	NULL	-10
DW	-10	0

*DD* is available from the day the learner registers until one week before he starts class.

*DW* is available for the entire week before the learner starts class.

### Calculating the Usage Cutoff Duration

**Example 4:**

Status Code	From	To
DD	NULL	0

*DD* is available from the day the learner registers until the day before he starts class.

**Example 5:**

Status Code	From	To
DD	NULL	-1
DW	-99	0
DC	0	1

*DD* is available from the day the learner registers until one week before he starts class.

*DW* is available only for the six days prior to the learner starting class.

*DC* is available from the day the learner starts class through the first week of class.

**Example 6:**

Status Code	From	To
<i>DD</i>	<i>NULL</i>	<i>-1</i>
<i>DW</i>	<i>-1</i>	<i>0</i>

*DD* is available from the day the learner registers until one week before he starts class.

*DW* is available for the entire week before the learner starts class.

 **Note**

In Examples 3 and 6 above, both registration status codes (*DD* and *DW*) are available on the same day, exactly one week before the learner starts class. To avoid having multiple codes available on the same day, usage cutoff values in the “from” and “to” fields cannot overlap. The only exception to this is zero (0), as explained above. ■

## Report and Update Scripts

Optional scripts are provided to be run by institutions who have used usage cutoff values of zero (0) to indicate that a registration status code was to be available prior to the learner starting class. As discussed above, if a status code is to be available “from the day the learner registers until...”, the usage cutoff “from” field must be set to *NULL*.

- The report scripts identify records in SSRRSTS and SORRSTS that have zeroes (0) in the usage cutoff “from” fields.
- The update scripts update these zeros (0) to *NULL* values.

Table	Script	Result
SSRRSTS	srsrrsts1.sql	Reports all SSRRSTS rows where usage cutoff from is 0 (either percentage or duration)
SORRSTS	srsorrsts.sql	Reports all SORRSTS rows where usage cutoff from is 0

Table	Script	Result
SSRRSTS	suprrsts.sql	Updates all SSRRSTS rows identified by the report script, changing usage cutoff from values from 0 to NULL (either percentage or duration)
SORRSTS	suporrsts.sql	Updates all SORRSTS rows identified by the report script, changing usage cutoff from values from 0 to NULL

## Enrollment Verification Processing

The Enrollment Verification Request Form (SFARQST) allows the user to request retrieval of the most commonly requested data such as registration information, academic standing, GPA, etc., for enrolled students. The student must have at least one general student record created via the Admissions process. Curriculum summary information can also be viewed. This form will not process verifications for students with verification holds on their records unless password-authorized overrides are entered by the requester. Select Term Summary (SHQTERM) from the Option List or perform a Duplicate Record function from the **Term** field in the Key Information to return the Term Summary Form (SHQTERM). This query form displays the valid history terms associated with the student.

The Enrollment Verification Request Rules Form (SFAEPRT) allows the user to generate the types of information to be printed on the Enrollment Verification Document. Print options include self-service options, service types, and payment options. An unlimited number of enrollment verification document types may be created and maintained by the user. SFAEPRT has a **Messages** checkbox which controls the printing of messages on enrollment verification documents.

The Enrollment Verification Message Form (SFAMESG) is used to enter specific enrollment verification type codes, term codes, or student identification numbers and the messages related to them.

The Enrollment Verification Report (SFRENRL) produces the enrollment verification reports which were processed using the Enrollment Verification Request Form (SFARQST) or selected using the population selection parameters. You can specify the number of copies of the enrollment verification that are to be printed on SFARQST. Term, registration date, or academic year information from SFARQST is used to determine the term information that is included in the report. The report also processes information based on terms that are part of student centric periods. Enrollment dates, attendance information, enrollment history, and course summary information are printed as student centric period data.

Specify the Enrollment Verification Distribution printer parameter on the Banner Student System Distribution Initialization Form (SOADEST) in the **Enrollments** field when requesting enrollment verification. This same printer parameter should be specified when

running the Enrollment Verification Report (SFRENRL), so that the output is routed to the correct printer. The Student Distribution Initialization Form (SOADEST) will be returned prior to the Enrollment Verification Request Form (SFARQST) being displayed, if it has not been processed prior to SFARQST being accessed. Once SOADEST has been processed by a user during a session, any printer changes or additions will need to be made by accessing the form through a menu **Go To... (Direct Access)** field.

You can perform enrollment verification requests from the baseline or in self-service at any time and for any term. You can also prevent requests from being printed by using a specific cutoff term. If registration drops and/or adds are still in progress, those enrollment verification requests will not be processed, thereby preventing the printing of verifications for IDs whose statuses may be altered as a result of ongoing registration changes.

## Selection of Concurrent Curricula Enrollment Verification Data

You can select the curriculum data to be printed on the Enrollment Verification Report (SFRENRL) and the Self-Service View Term Data Page (BWSKRSTA.P\_RegsStatusDisp, and BWSKGSTU.P\_StuInfo). SFRENRL will print all parts of the primary and secondary curriculum, and the self-service pages and the Enrollment Verification Request Form (SFARQST) will display a summary of all current and active curriculum and field of study records.

The maximum number of fields of study that can be printed on the enrollment verification is based on the allowable current maximum established for the module and type. This includes field of study types that are outside of the major, minor, or concentration.

Concentrations for enrollment verification are printed as follows:

- Concentrations attached to the major are printed under the major with a label of “Maj/Concentration”.
- Concentrations attached to the base curriculum are printed after the minors and have a label of “Concentration”.

The following items from the base curriculum are included in the enrollment verification output:

- program
- level
- degree
- campus
- college

The fields of study will always print in the priority order within the field of study grouping:

- majors/departments
- concentrations attached to majors will follow the major
- minors
- concentrations attached to the base curriculum
- other field of study types

## Execution of Curriculum Conversions

Curriculum conversions can be executed from enrollment verification requests (SFARQST and SFRENRL) and self-service view pages where curriculum data can be printed before any processing occurs, so that all curriculum data appears on the hardcopy output or online. All objects in which concurrent curriculum processing is implemented will attempt to convert the learner and outcome curriculum data from the original host tables to the concurrent curricula tables. The concurrent curricula conversion will automatically be executed when SFRENRL begins to process enrollment verification for a student. If the curriculum data has already been converted, the conversion process will end without completing any activity.

## Time Status and Enrollment Verification

Use the Time Status Rules Form (SFATMST) to print the enrollment summary information on the enrollment verification document and list the student's actual time status based on their course work for the term. This form allows the user to specify the rules associated with the calculation of the time status information. These rules include effective term, student level, campus, college, degree, major, and student type. A course level is also used to determine which courses should be used in calculating the time status.

Using these rules criteria, the user may specify the minimum and maximum credit hours which the student must have for a term to obtain the time code specified in the rule.

*The following are some examples of time status rules:*

For effective term 199301, level 01 students (undergraduates), the minimum credits to be classified as a full time student are 12.00, and the maximum credits are 17.99. (No campus, college, degree, major, or student type are specified in the rule.) Only undergraduate credits are to be included in the calculation. If an undergraduate student has 9.00 credits of graduate work (level 02) and 6.00 credits of undergraduate work, then they do not meet the rule specified, and another rule must be found. If no rule can be found for the student, then the user-entered time status that exists on the student's record will display on the report, and an asterisk "\*" will display to indicate that the time status does not reflect the student's actual course work.

The Enrollment Verification Report (SFRENRL) uses population selection parameters to produce the enrollment verification requests which were processed on the Enrollment Verification Request Form (SFARQST). Students must have had an enrollment verification request processed on the Enrollment Verification Request Form (SFARQST), or they will not be processed. There is a message area on the report where messages which are user defined by person, term, and/or enrollment request type on the Enrollment Verification Message Form (SFAMESG) will appear. The enrollment history portion of the report includes the student's calculated full-time/part-time status information on a term-by-term basis. Graduation term and year are also shown on the report.

The enrollment verification process first checks to determine if a manual override time status history record exists for the appropriate term on SFAREGS. If it does exist, the manual override time status will be reported. If no manual time status exists, then the existing time status calculation within SFRENRL will be used to calculate and report the student's time status, based on the value entered for the Time Status Calc Credit Type parameter (either *E* for Earned Hours or *A* for Attempted Hours as recorded in Academic History).

## SSN/SIN/TIN, ID, and Birth Date Format Masks

You have the option to select the birth date, SSN/SIN/TIN, Banner ID, or none of those to be printed on the enrollment verification requests. Use the checkboxes in the Print Options block on SFAEPRT to choose the data you wish to include. You can change how the SSN/SIN/TIN or Banner ID appear on the enrollment verification. You can also change the birth date format for the paper or self-service enrollment verification to any valid date format using the pulldown list.

### SSN/SIN/TIN and ID

The rules for adding in a character mask to the SSN/ID values are as follows:

- Use the character X to display data and the character \* to conceal data.
- This can be used only for display-only columns.
- This cannot be used when there is data entry involved on the column.

The following describes valid format masks for character strings such as the SSN or ID number:

Element	Example	Description
*	*****	Characters are displayed as asterisks.
X	XXXXXX	Characters are displayed as normal value.

Two examples of format masks and the SSN would be:

- Value 123456789 and mask \*\*\*\*\*XXX will print as \*\*\*\*\*789.
- Value 123456789 and mask \*\*\*XXX\*\*\* will print as \*\*\*456\*\*\*.

### Dates/Birth Dates and Times

The following describes valid format masks for dates, such as the birth date, and times, and can be used to change how the date appears on the enrollment verification:

Element	Example	Description
YYYY	2003	four-digit year
YYY	003	three-digit year
YY	03	two-digit year
Y	3	one-digit year
SYYYY	-2003	S adds a prefix of a - to a BC date.
Y,YYY	2,003	Year with comma in this position
BC or AD	2003AD	BC/AD indicator
B.C. or A.D.	2003A.D.	BC/AD indicator with periods
RR		Defaults to correct century. Calculates the century from a date entered by comparing the two -digit year entered with the year and century to which the computer's internal clock is set. Years 00 - 49 will be given the 21st century (the year 2000), and years from 50 - 99 will be given the 20th century (the year 1900).
MM	January = 01	two-digit month
MONTH	JANUARY	Name of month, padded with blanks to a length of nine characters
MON	JAN	Name of month, three letter abbreviation
DDD		Day of year (1 - 366)
DD		Day of month (1 - 31)
D		Day of week (1 - 7; Sunday = 1)
DAY	SUNDAY	Name of day, padded with blanks to a length of nine characters
DY	SUN	Name of day, three letter abbreviation

Element	Example	Description
J		Julian day, the number of days since January 1, 4712 BC
AM or PM		Meridian indicator
A.M. or P.M.		Meridian indicator with periods
HH or HH12	1100	Hour of the day (1 - 12)
HH24	2300	Hour of the day (0 - 23)
MI		Minute (0 - 59)
SS		Second (0 - 59)
SSSSS		Seconds past midnight (0 - 86399)
/.		Punctuation is produced in the result.
"..."		Quoted string is produced in the result.
FM		Fill mode: assumes implied characters such as O or space, displays significant characters left justified. Allows end user's input to be shorter than the format mask. (Use in conjunction with FX to require specific delimiters.)
FX		All date literals must match the format mask exactly, including delimiters.

Two examples of format masks and for dates and times would be:

- Birth date value 01-JAN-1980 and mask 'DD-MON' will display as 01-JAN.
- Birth date value 01-JAN-1980 and mask 'Month DD' will display as January 01.

## Self-Service Request and Payment Options

Records are inserted into Accounts Receivable when charge amounts exist that are greater than \$0.00. When an available payment option has been set up in STVWPYO that requires a self-service credit card charge and/or payment, both the charge and the credit will be inserted into the appropriate Accounts Receivable table when the self-service request has been completed. That insert can occur whether the charge type is *M* (record is inserted into TBRMISD) or *S* (record is inserted into TBRACCD).

- If the charge type is *M*, then the payment option must be a credit card type, because that is the only way to ensure that payment has been collected. By definition, TBRMISD requires a payment at the same time it posts a charge.

- If the charge type is *S*, and the payment option is not a credit card type, then any charges set up for the services are not inserted into the student's account from self-service. An example of this could be "Bill My Account."
- Charges of type *S* (that are not credit card charges) are inserted into TBRACCD when you run SFRENRL for enrollment verification requests.

The following four conditions affect the information that is displayed on self-service request pages, based on the settings in the Print Options window for SFAEPRT.

Conditions in Self-Service Print Options Window	Data/Message Displayed to the Student in Banner Self-Service Request Pages
1 <ul style="list-style-type: none"> <li>• Service level type is <i>M</i></li> <li>• Charge is greater than \$0.00</li> <li>• Payment options exist, both credit card and non-credit card types</li> </ul>	Display only those payment options where the <b>Credit Card Indicator</b> is <i>Y</i> in STVWPYO.
2 <ul style="list-style-type: none"> <li>• Service level type is <i>M</i></li> <li>• Charge is greater than \$0.00</li> <li>• Payment options exist, but none is a credit card type</li> </ul>	Display Infotext error message:  <i>There is no credit card payment option available, so we cannot complete your request. Please contact the Bursar or Registrar for assistance.</i>
3 <ul style="list-style-type: none"> <li>• Service level type is <i>S</i></li> <li>• Charge is greater than \$0.00</li> <li>• Payment options exist that are credit card and/or non-credit card types</li> </ul>	Display all payment options.
4 <ul style="list-style-type: none"> <li>• Service level type is <i>S</i> or <i>M</i></li> <li>• Charge is greater than \$0.00</li> <li>• No payment options exist</li> </ul>	Display Infotext error message:  <i>There are no payment options available, so we cannot complete your request. Please contact the Bursar or Registrar for assistance.</i>

## Enrollment Verifications Submissions in Banner Self-Service

A self-service Web page is available for enrollment verification submissions processing that allows a student to request a copy of their enrollment verification for a term. This page resides in the secure login off the Student Record menu so a learner can request an enrollment verification report at any time. The page populates the same table that is behind SFARQST.

The data the learner enters includes:

- term and/or academic year
- type of request
- number of copies
- issue to name and address or fax number (A pulldown list is used to select the learner's address.)
- confirmation page for student to view their request

Controls in the Self-Service Print Options window on SFAEPRT are used to indicate the types and special handling/payment options that are available for self-service requests.

Use the *MAXEVREQNO* rule on the Crosswalk Validation Form (GTVSDAX) to limit the number of self-service enrollment verification requests the student is allowed to make per term. The default is 999 (essentially, unlimited). You must change this value if you want to restrict the number of requests allowed per term.

External Code	Internal Code	Internal Code Sequence Number	Internal Code Group	Description	Activity Date
999	MAXEVREQNO		STUWEB	Max Enrl Ver Requests per Term	Sysdate

Use the *WEBCCEPRTREQ* process name on the Process Name Validation Form (GTVPROC) for credit card processing for self-service enrollment verification requests. If your institution charges for self-service enrollment verification requests and wants to allow students to make credit card payments, you must create a corresponding record in GORMERC (using the GOAMERC form).

Process Name Code	Description	System Required
WEBCCEPRTREQ	Web Credit Card Enrollment Verification Charge Process	Y

## Schedule/Invoice/Statement Options

On the Student Course Registration Form (SFAREGS) there are options to request an individual student's bill and/or schedule. The bill refers to the printing of a student bill in "INVOICING" mode via the Student Invoice/Billing Statement (TSRCBIL), and the schedule refers to the printing of a Student Schedule Report (SFRSCHD).

The printing of either or both of these documents can occur in any of the following ways:

- Requested online and printed by the Sleep/Wake process.
- Requested online and printed when the batch process is run.
- Requested when the batch process is run using the parameters which include population selection.

To request either or both documents to print online via TSRCBIL and SFRSCHD, the Sleep/Wake process must have been defined. The request may be entered online and the batch process(es) run without defining the Sleep/Wake process.

The first set of options which follows describes the choices regarding the printing of bills, and the second set describes the choices for the printing of schedules. Any combination may be used to print one or both documents. For example, the Student Schedule Report (SFRSCHD) can be defined to the Sleep/Wake process and requested online and printed, while the Student Invoice/Billing Statement (TSRCBIL) can be requested online without the Sleep/Wake process defined and then be printed later through the batch process.

Reference	Name	Description
Collector Tables Used	SFRCBRQ	Registration Student Schedule Collector Table
	TBRCBRQ	Invoice/Statement Collector Table
Form Used	SFAREGS	Student Course Registration Form
Reports Used	SFRSCHD	Student Schedule Report
	TSRCBIL	Student Invoice/Billing Statement
Process Used	Sleep/Wake	N/A

## Printing of Bills

The **Print Bill** box on the Student Course Registration Form (SFAREGS) automatically defaults to checked when the **Registration Fee Assessment On-line** box is checked on the Term Control Form (SOATERM) and defaults to unchecked when the **Registration Fee Assessment On-line** box is unchecked on SOATERM. Whichever value defaults, the opposite value may be entered and saved.

### Option 1:

Form/Process	Field/Parameter	Value
SFAREGS	Print Bill box	Checked
Sleep/Wake	Set up and executed	Yes for TSRCBIL
TSRCBIL	ID	COLLECTOR
	Printer	% or value from SOADEST
	Run Mode	INVOICING

If a Save function is performed when this field is checked, a record is written to the Invoice/Statement Collector Table (TBRCBRQ). If the Sleep/Wake process is set up to process these requests, the student invoice is printed, and the system automatically clears out the Invoice/Statement Collector Table (TBRCBRQ).

The report process that needs to be set up with the Sleep/Wake process is the Student Invoice/Billing Statement (TSRCBIL). This report should have the Run Mode parameter set to "INVOICING".

### Option 2:

Form/Process	Field/Parameter	Value
SFAREGS	Print Bill box	Checked
Sleep/Wake	Set up and executed	No for TSRCBIL
TSRCBIL	ID	COLLECTOR
	Printer	% or value from SOADEST
	Run Mode	INVOICING

If a Save function is performed when this field is checked, a record is written to the Invoice/Statement Collector Table (TBRCBRQ). If the Sleep/Wake process is not set up to process these requests, the student invoice can be printed when the Student Invoice/Billing Statement (TSRCBIL) is run from the host or through job submission. This report should have the Run Mode parameter set to "INVOICING". When the process is run, the system automatically clears out the Invoice/Statement Collector Table (TBRCBRQ).

### Option 3:

Form/Process	Field/Parameter	Value
SFAREGS	Print Bill box	Unchecked
Sleep/Wake	Set up and executed	Yes or No for TSRCBIL
TSRCBIL	ID	N/A*
	Printer	N/A
	Run Mode	INVOICING or STATEMENT

\* (COLLECTOR would not be used for this scenario)

If the operator unchecks this field, or the **Registration Fee Assessment On-line** box is unchecked on the Term Control Form (SOATERM), nothing happens when a Save function is performed. No record is written to the Invoice/Statement Collector Table (TBRCBRQ).

The student invoice or bill statement can be printed when the Student Invoice/Billing Statement (TSRCBIL) is run from the host or through job submission.

#### Note

TSRCBIL can also be run in “STATEMENT” mode. When the Run Mode parameter is set to *STATEMENT*, the TSRCBIL process generates a .lis file of statements for students who owe a balance to the school. Users can parse the output and store the individual statements, or use third-party software to perform the parse, enhance and brand the statement, convert each file into PDF format, and store the PDF file. These files can be displayed in Banner or Self-Service. For more information, please refer to the *Banner Accounts Receivable User Guide*. ■

## Printing of Student Schedule

The **Print Schedule** box on the Student Course Registration Form (SFAREGS) automatically defaults to checked. It may be manually unchecked.

### Option 1:

Form/Process	Field/Parameter	Value
SFAREGS	Print Schedule box	Checked (default)
Sleep/Wake	Set up and executed	Yes for SFRSCHD
SFRSCHD	ID	COLLECTOR
	Printer	% or value from SOADEST

If a Save function is performed when this field is checked, a record is written to the Registration Student Schedule Collector Table (SFRCBRQ). If the Sleep/Wake process is set up to process these requests, the student schedule is printed, and the system automatically clears out the Registration Student Schedule Collector Table (SFRCBRQ).

The Student Schedule Report (SFRSCHD) needs to be set up with the Sleep/Wake process.

### Option 2:

Form/Process	Field/Parameter	Value
SFAREGS	Print Schedule box	Checked (default)
Sleep/Wake	Set up and executed	No for SFRSCHD
SFRSCHD	ID	COLLECTOR
	Printer	% or value from SOADEST

If a Save function is performed when this field is checked, a record is written to the Registration Student Schedule Collector Table (SFRCBRQ). If the Sleep/Wake process is not set up to process these requests, the Student Schedule Report (SFRSCHD) can be run from the host or through job submission. This report can have the Printer parameter designated for the collector printer set in the Sleep/Wake process. When the process is run, the system automatically clears out the Registration Student Schedule Collector Table (SFRCBRQ).

### Option 3:

Form/Process	Field/Parameter	Value
SFAREGS	Print Bill box	Unchecked
Sleep/Wake	Set up and executed	Yes or No for SFRSCHD
SFRSCHD	ID	N/A *
	Printer	N/A
		* (COLLECTOR would not be used for this scenario)

The **Print Schedule** field on the Student Course Registration Form (SFAREGS) is manually unchecked. If a Save function is performed when this field is unchecked, nothing happens. No record is written to the Registration Student Schedule Collector Table (SFRCBRQ).

The Student Schedule Report (SFRSCHD) can be printed when the Student Schedule Report (SFRSCHD) is run from the host or through job submission.

 **Note**

Requests to print bills or schedules always add records to the collector tables. These tables should be monitored, and SQL scripts can be used to delete records that are no longer needed. ■

## Produce Student's Schedule

A student's schedule of classes listing meeting times, places, instructors, and campuses may be produced immediately from the Student Course Registration Form (SFAREGS). It may also be produced through a batch process, SFRSCHD, for all students.

## Unsatisfied Links

The Unsatisfied Links Report (SFRLINK) lists students and CRNs for which they have registered, which have unsatisfied links for the term. The only parameter for this report is a single term. The report will produce unsatisfied link results regardless of whether link section security is a fatal registration error on the Term Control Form (SOATERM).

When No Check is selected for the Links radio group in the Registration Error Checking window of the Term Control Form (SOATERM), the Unsatisfied Links Report (SRFLINK) can be run after registration is completed to produce a list of students who have unsatisfied or missing section links for the term. The report is a post-registration batch alternative to an online fatal check for unsatisfied or missing links during registration processing.

## Produce Student's Bill

Student bills listing all their charges for the term, any past due amount, any future charges, and any current payment may be produced immediately from the Student Course Registration Form (SFAREGS) if fees are assessed. It may also be produced for all students through a batch process (TSRCBIL).

## View Student's Registration

The Registration Query Form (SFAREGQ) is used to view a student's registration. It lists all the classes for which a student is registered, the meeting times, the building and room of each class, and the course campus code. If the student is not registered for the term, the user will not be able to leave the Key Information of SFAREGQ.

## Produce Course Request Edit

The Course Request Edit Report (SFPCREQ) lists all course request transactions that contain an error along with an appropriate error message. This process updates the valid transactions so they can be used in course request. Please see the *Course Request and Scheduling Handbook* for more information on using this report.

## Produce Course Request Update

The Course Request Update (SFPFREQ) is used to list all course request transactions that contain errors (i.e., ID not on database, invalid CRN, etc.) along with an appropriate error message. This process updates the database to ready the transactions for processing. Time status history records may also be inserted, if requested.

The billing hours associated with a course when Course Request and Scheduling is run will default when the Course Request Update (SFPFREQ) is run. These hours will be defaulted from the section information or from overrides entered on the student's Course Request Form (SFACREQ).

Please see the “Time Status Calculations” section of the “National Student Clearinghouse (NSC) Reporting Procedures” later in this chapter for more information on using this report.

## Produce Class Roster

The Class Roster Report (SFRSLST) produces an alphabetical list of all students within a section and may be requested for all sections or one particular section.

## Produce Headcount

The Unduplicated Headcount Report (SFRHCNT) is used to produce an actual headcount for a term.

## View Class Roster/Enter Grades

The Class Roster Form (SFASLST) displays the section information and the students enrolled for a particular section. It may be used during registration to monitor a section. This form is also used to enter both mid-term and final grades. The section override values, specified on the Schedule Override Form (SSAOVRR), are used when rolling the courses to academic history. The Class Attendance Roster Form (SFAALST), the Class Roster Form (SFASLST), and the Grade Roll to Academic History (SHRROLL) support this functionality.

The SFAALST and SFASLST forms have an optional **Degree Award Status** in their Key Information sections. The system will look at the **Outcome Status** for the student's degree status on the Degrees and Other Formal Awards Form (SHADEGR). The **Awarded Indicator** is validated on the Degree Status Code Validation Form (STVDEGS).

Setting the **Awarded Indicator** to *P* (Pending) in the Key Information will display only those students in the class with an **Awarded Indicator** of "Pending". Setting the **Awarded Indicator** to *A* (Awarded) in the Key Information will display only those students in the class with an **Awarded Indicator** of "Awarded". If this indicator is *Null*, all students are returned.

By using these fields, the user may query and grade only those students which are selected. This will allow instructors to grade only those students in the class who are eligible to graduate.

## Last Date of Attendance

This section discusses the required entry of the last date of attendance in for specified grade codes. You can specify which grades and student levels require the entry of the last date of attendance. Users will be prohibited from entering a grade for a student without also entering the student's last date of attendance.

You can set up rules on SHAGRDE for specific grades where the entry of the last date of attendance is required for students who are receiving those grades using the **Last Attendance Date Ind(icator)**. When the specified final grades are entered in the Class Attendance Roster Form (SFAALST), the Class Roster Form (SFASLST), or in Faculty and Advisor Self-Service (Final Grades page), those rules will require instructors to use the appropriate form and enter the last date of attendance for students.

- When an administrator enters a grade in SFASLST that requires a last date of attendance based on the rule on SHAGRDE, an error message is displayed that the student's last date of attendance must be entered for the grade, and that the grade and date must be entered using SFAALST.
- When an administrator enters a grade in SFAALST that requires a last date of attendance based on the rule on SHAGRDE, and does not enter the student's last date of attendance, a message is displayed that a last date of attendance must be entered for the grade.

The last date of attendance can also be viewed or entered for a CRN in the Course Detail window of SFAWDRL for use with the withdrawal information for the student ID in the Key Block.

## Handle Student's Registered, Not Paid

The Registered, Not Paid Process (SFRRNOP) is executed in batch to produce a report of all students who have registered but who have not had their charges accepted in the

Accounts Receivable module. This process also has an option to delete the registration of the students selected. This process also maintains census two enrollment based on the user-supplied parameter date.

The Registered, Not Paid Process (SFRRNOP) supports Third Party Processing. The T/P Exempt Indicator parameter is used to indicate whether or not a student may be exempt from deletion when a potential third party payment exists. If the parameter is set to Y, and third party contract memos exist for the student, the student would be bypassed in the registration deletion process.

## Process Canceled Classes

The Registration Mass Entry Form (SFAMREG) can be used to delete registration records for students registered in a canceled section.

## Waitlisting

Prior to adding a student to a waitlist, the waitlist seating information must be specified on the Schedule Form (SSASECT). The waitlist maximum number of seats must be entered or a waitlist cannot be created.

A student can be placed on the waitlist by using a waitlist registration status code which is created on the Course Registration Status Code Validation Form (STVRSTS).

### Note

Caution should be used when setting the **Count in Enrollment** and **Count in Assessment** flags for the Waitlist status. If checked, they will update the section enrollment counts as well as the waitlist counts and assess the student for any waitlisted sections. It is recommended that these values are set to unchecked. ■

You must specify, on the Course Registration Status Control Form (SFARSTS), the period in which the waitlist status code may be used.

Students are placed on the waitlist via the Student Course Registration Form (SFAREGS) by entering the waitlist course status specified on STVRSTS in the **Status Type** field for the course for which the student is being waitlisted. Students can be placed on the waitlist prior to or after the section capacity is filled. However, if a student is to be waitlisted for a course prior to it being filled, it may be necessary to first register the student (RE), and then change the course status to waitlist after saving the changes on the Student Course Registration Form (SFAREGS). Once the number of students enrolled plus the number on the waitlist exceeds the capacity, error messages will inform the user that a waitlist exists.

Consider the following waitlisting example steps:

1. Section 10010, Senior Thesis in Economics, has a section maximum of 7 and a waitlist maximum of 3. There are six students registered. John has asked for special

permission to take the section. The professor will only let John into the section if no other eligible student wants the seat. So John is placed on the waitlist. The section now shows 6 actually enrolled and 1 on the waitlist.

2. When the next student enrolls for the section, the message *OPEN - n WAITLISTED* (where *n* equals the number of students waitlisted) will be displayed to indicate that a waitlist exists and to show the number of students on the waitlist. The section is now filled, and there are two available seats on the waitlist. An override must be used to place the student into the "closed" section. The section is closed, because the number of students already enrolled plus the number on the waitlist is greater than the capacity.
3. The next student to register for the section will get the message *CLOSED - n WAITLIST* (where *n* equals the number of students waitlisted). This indicates that the number of available seats is zero and that one person already exists on the waitlist. The entry operator can choose to override the section capacity by entering a *Y* in the **Override** field. Or, the Course Registration Status can be changed to a waitlist status. Using the waitlist status will increase the waitlist enrollment to two.
4. If a student enrolled in the section drops, then the user can go to the Class Roster Form (SFASLST) to see who is on the waitlist and determine which student is to be registered. Then, using the Student Course Registration Form (SFAREGS), the student's course status can be changed from waitlist to registered. However, a new student attempting to register may do so.

 **Note**

No automatic movement of students from the waitlist to a registered status occurs in the Student Course Registration Form (SFAREGS) when seats become available. ■

5. Once the maximum number of seats and the waitlist maximum have been reached, any student attempting to register will be prohibited from registering or being placed on the waitlist.

So, using the same course outlined above, if the number of students registered is 7 and the number of students on the waitlist is 3, the next student attempting to register will receive the following message: *Closed—Waitlist Full*.

6. If a seat becomes available in a section which has a waitlist, then the *OPEN - WAITLIST* message will be displayed when a student tries to register for the section. This indicates to the operator that a waitlisted student may be eligible for the seat before the student trying to register.

The waitlist enrollment can also be overridden if the user enters a waitlist status code in the **Status Type** field and a *Y* in the **Override** field.

7. To process a Remove function on a waitlisted course on the Student Course Registration Form (SFAREGS), the system requires that a DD (Drop/Delete) function from the Course Registration Status Code Validation Form (STVRSTS) be performed

on a waitlisted course, which will remove the student from the waitlist enrollment count. A Remove function may be performed after the DD function.

Waitlisted courses are checked for time conflicts with registered courses using the Include Waitlisted Courses in Student Options Error Checking section on SOAWLTC. When the **Time** radio group is set to *No*, you to specify when a course can be waitlisted if a registered course already exists in that time slot.

- If this radio group is set to *No*, a course can be waitlisted, even if a registered class already exists for that time slot.
- If this radio group is set to *Yes*, a course may not be waitlisted if a registered class already exists for that time slot.

The Registration Course Query Form (SFQSECT) and the Registration Section Query Form (SFQSECM) allow the user to query all sections which have students on the waitlist where seats are currently available.

The Registered, Not Paid Process (SFRRNOP) removes all students on the waitlist and modifies the waitlist counters.

The Waitlist Enrollment Purge (SFPWAIT) removes all waitlist enrollment information for those students who could not be placed in a specific class section.

## Reserved Seating & Waitlist Processing

Waitlisting can also be used with reserved seating. Waitlist maximums can be established on the Enrollment Data window on SSASECT. If waitlist maximums are established for reserved seats during registration, then the error messages will indicate that reserved seating is being used for the section.

For example, the message *RESERVE CLOSED - WL FILLED* indicates that the reserved seating is filled, and the reserved seating waitlist is filled for the section. An override of the registration status will over-enroll the reserved seating and leave the waitlist alone. Entering a waitlist status and a *Y* in the **Override** field of SFAREGS will over-enroll the waitlist.

The reserved seating check for a student's major examines only the Major 1 (highest priority major) of the student's primary curriculum (highest priority curriculum). The reserved seating check for a student's level examines only the level of the student's primary curriculum (highest priority curriculum).

## Automated Waitlisting

Waitlisting assists in maximizing enrollment numbers in individual course sections. It allows institutions to track excess demand for seats in courses where enrollment limits have been met and then create priority queues to assign seats as they become available due to drops and withdrawals. Students use waitlists to get in line for courses they need to

fulfill their requirements. Automated waitlist processing assists in managing the movement of students from waitlists to active registration statuses through rule and control forms and job submission processes. This processing is also used in self-service registration.

## Processing

Waitlist and registration functionality are used to help students move from waitlisted status to registered status, to help institutions configure rules to control waitlist priorities, and to support self-service waitlist functions. Waitlist notification is term-based and can be turned on and off by term as needed on the Automated Waitlist Term Control Form (SOAWLTC). This form provides verification checking and severity warnings for waitlist processing, similar to the registration error checking on SOATERM. Additionally, SOAWLTC includes rules to prioritize student waitlists beyond the first-come, first-served ordering that is needed for certain situations. Waitlist processing can also be controlled for an individual CRN using the Waitlist Automation Section Control Form (SSAWLSC). Additional waitlist review forms and processes allow you to review waitlisted students, manually adjust a student's waitlist priority, and resort the priority order.

### Note

Automated waitlist processing is not used with open learning courses. ■

When a seat becomes available for registration, an email notification is sent to designated individuals. These can include the student, primary instructor, primary advisor, and registrar. The notification email content is configured on SOAELTR for the letter code defined on GTVLETR and uses the module code of *F* (Registration) from STVELMT. Notification emails are sent when available seats exist. The time period in which the student must register before the next student is notified is defined on SOAWLTC. This automatic notification is performed either online as seats become available or through the Batch Waitlist Notification Process (SFRBWLP).

When the time period has expired and the student has not registered for the course, the student is removed from the waitlist. Before the student is removed, the student's registration status is checked to see if it has changed from “waitlisted” to “registered”. If it has not, the SFRBWLP batch process will update the student's registration status to *DD* (dropped/deleted), remove the registration record, and then notify the next student on the waitlist. If no more waitlisted students exist, the notification processing stops. The dropped student is not notified of the status change.

### Note

The SFRBWLP batch process must be used to update the expired waitlist notices, even if the **On-line Waitlist Notification** checkbox is checked on SOAWLTC. SFRBWLP should be set up and run in sleep/wake mode. ■

Seats become available for notification when the following occurs:

- Another registered student is dropped, and the resulting number of remaining available seats recorded on SSASECT minus the number of unexpired notifications is greater than zero.

- The maximum enrollment is increased on SSASECT, and the resulting number of remaining available seats recorded minus the number of unexpired notifications is greater than zero.
- The SFRBWLP process finds a notification that has expired, the entry is removed from the student's list of registered courses, and the resulting number of remaining available seats on SSASECT minus the number of unexpired notifications is greater than zero.

When automated waitlist processing is no longer valid for a term, the Waitlist Enrollment Purge Process (SFPWAIT) is used to clear the waitlists and purge term, CRN, and PIDM information for available seats (SFRCOLW table) and waitlist notification (SFRWLNT table).

The Available Seats to Zero Process (SSRASTZ) can also be used to change the remaining available seats for all CRNs to zero.

## Configure Waitlist Processing

You can define how automated waitlist processing will work at your institution. Use the Automated Waitlist Term Control Form (SOAWLTC) to configure general waitlisting by term for general controls, error checking, course selection, priority reordering rules, and exclusion reordering rules.

SOAWLTC allows you to:

- activate the automatic waitlist notification process as needed,
- specify whether waitlist notification is performed online or in batch,
- specify the time period in which students must register before the notification expires,
- specify whether students are allowed to see their positions in the waitlist queue in self-service,
- define who will be notified regarding available seats (student, instructor, advisor, registrar),
- define the host email address for automatic notification,
- define letter codes for the various recipients of the notification emails,
- define waitlist priority rules and waitlist reordering,
- specify section options error checking levels for waitlisting,
- specify whether waitlisted coursework should be included when performing student options error checking,
- define priority rules which give student populations preferential treatment when waitlisted,

- specify course characteristics (college, subject, course number, CRN, section attributes) which must be met before priority rules are applied,
- specify student populations that are not allowed to use the waitlist function,
- define waitlist priority rules and waitlist reordering, and
- copy waitlist configuration controls for an existing term to a new term.

Waitlist registration error checking is set up by term for student and section options. Student Options can be set to *Yes* or *No*. Student Options that are set to *Yes* indicate that waitlisted courses should be included in error checking along with enrolled courses. Section Options can be set to *Fatal*, *Warning*, or *No Check*. When a new record is created, the severity settings for the Section Options are determined by the severity settings on SOATERM for the term. The settings for the Student Options are defaulted in. If no waitlist control records have been defined for the term on SOAWLTC, the error checking process will use the settings on SOATERM.

 **Note**

Corequisites, prerequisites, and links for waitlisted coursework can be met by enrolled coursework, but waitlisted coursework cannot meet enrolled coursework requirements. ■

If a CRN has special requirements for automated waitlist processing, the waitlist setup defined at the institutional level can be changed at the CRN level for that course. Use the Waitlist Automation Section Control Form (SSAWLSC) to configure waitlisting by CRN and term.

SSAWLSC allows you to:

- activate registration error checking as defined on SOAWLTC,
- activate the automatic student waitlist notification process as needed,
- specify whether students are allowed to see their positions in the waitlist queue in self-service,
- specify the deadline time period for students to move from waitlisted status to registered status when seats become available, and
- copy the waitlist control settings to a new term.

Records must exist on SOAWLTC in order for section term controls to be defined on SSAWLSC. If no records exist in the SSBWLSC table, values from the SOBWLTC table will be defaulted in.

When the **Automatic Waitlist Notification** checkbox is unchecked, automated waitlist notification processing will not be used for the CRN. When the **Use Waitlist Registration Error Checking** checkbox is unchecked, waitlist registration checking from SOAWLTC will not be used, and no checking will take place for the CRN.

 **Note**

CRNs that are defined as open learning courses cannot be used with SSAWLSC. ■

Letters formats can be configured for specific information types depending on the recipients. You can:

- configure letter codes on GTVLETR,
- associate the letter module code of *F* (Registration) on STVELMT to the letter codes from GTVLETR, and
- build letters on SOAELTR using the information available from the AS\_STUDENT\_REGISTRATION\_DETAIL Object:Access view.

 **Note**

If automated waitlist processing is not defined for a term, previous waitlist rules will be used, and the system will assume that waitlist notification is turned off (inactivated). ■

## Processing Order

Banner Student automated waitlisting controls the queue of students (with waitlist registration statuses) that are registered for the CRN and allows a waitlisted student to enroll in the course as soon as a seat becomes available. When a student attempts to register as waitlisted for a CRN, automated waitlist processing performs as follows:

1. The process considers the setting of the **Automatic Waitlist Notification** checkbox on SOAWLTC and SSAWLSC to see if automated waitlisting is active. When the **Automatic Waitlist Notification** indicator is checked (set to *Y*) on SSAWLSC, this takes precedence over the setting of the indicator on SOAWLTC.

When no record exists on SOAWLTC, automatic waitlist processing is not performed. Error checking performed for courses with waitlisted students is controlled by the settings on SOATERM, including time conflict checking.

When a record exists on SSAWLSC or SOAWLTC and the **Automatic Waitlist Notification** checkbox is unchecked (set to *N*), automatic waitlist processing is not performed. Error checking performed for courses with waitlisted students is controlled by the settings on SOAWLTC.

Assuming that the **Automatic Waitlist Notification** indicator is checked (set to *Y*), the processing continues as follows:

2. When waitlist exclusion rules have been defined on SOAWLTC, the student's characteristics are compared to the characteristics defined in the rules. If all of the student's characteristics match all the characteristics defined for any of the rules, then the student is not allowed to waitlist the course.

3. The Student Options and Section Options error checking is performed based on the settings defined on the Waitlist Error Checking window of SOAWLTC. If an entry exists on SSAWLSC for the CRN and the **Use Waitlist Registration Error Checking** checkbox is unchecked (set to *N*), no error checking is performed.
4. When no fatal errors are found, an evaluation is performed to match the characteristics of the waitlisted CRN against the characteristics of the entries in the Waitlist Course Selection window on SOAWLTC.

When a match is found or when no entries exist, the student's characteristics are compared to the characteristics defined in the Waitlist Priority Rules window on SOAWLTC. The student's waitlist priority is assigned based on the results of this evaluation.

When no match is found, the student is assigned a priority on a first-come, first-served basis.

5. When seat becomes available, two options exist for notification:

When the **On-line Waitlist Notification** checkbox on SOAWLTC is checked, a notification email is sent to the designated individuals.

When the **On-line Waitlist Notification** checkbox is not checked, the notification is sent the next time the SFRBWLP process is run.

 **Note**

At the time the notification is sent, the expiration date and time are calculated based on the value of the **Waitlist Notification Deadline** field. ■

6. Prior to the expiration date and time, the student is eligible to enroll in the CRN for which the notification was sent. The Student Options and Section Options registration error checking (as defined on SOAWLTC) are enforced at the time that the student tries to register.

If the student does not use the available seat, and the notification deadline expires, that student is removed from the waitlist queue by the SFRBWLP process, and the next student in the waitlist is notified to use the available seat.

Unless there are more seats available than there are students on the waitlist, no students, other than those who have been notified, are allowed to enroll in the course.

Other students are only allowed to register as waitlisted if remaining waitlist seats exist.

## Waitlist Registration Verification Checking

Normal registration eligibility checking occurs before a student can be added to a waitlist. When a fatal error is received, the student cannot register as “waitlisted” for the course. If

SOAWLTC is not used for a term rule, registration error checking is controlled by the settings on SOATERM. Optional controls can be used as well.

SOAWLTC is used for waitlist registration verification checking and error severity warnings. Section options for severity checking on waitlisted courses include: approvals, capacity, field of study, department, college, level, class, campus, degree, program, student attributes, and cohort. Student options for verification on waitlisted courses include: time conflicts, prerequisites, corequisites, duplicates, and links. The student options functionality on SOAWLTC differs from that on SOATERM. For the student options, SOATERM controls the severity level of the error, and SOAWLTC controls whether or not to include waitlisted CRNs in error checking.

- When the **Duplicates** radio group is set to *Fatal* on SOATERM, a student can be enrolled in a course and also be waitlisted for a more desirable section of the same course. In addition, a student can be waitlisted for multiple sections of the same course.
- When the **Duplicates** radio group is set to *No Check* on SOATERM, waitlisted courses are not included in the duplicate error checking, and the student can waitlist multiple sections of the same course. In addition, the student can also be enrolled in a section of the same course but cannot be enrolled in two sections of the same course.
- When the **Duplicates** radio group is set to *Yes* (in the Include Waitlisted Courses in Student Options Error Checking section) on SOAWLTC, a student can only be waitlisted for one section of a course.

Waitlisted courses are included with registered courses in time conflict error checking based on the setting of the **Time** radio group (in the Include Waitlisted Courses in Student Options Error Checking section) on SOAWLTC. Assuming that the **Time** radio group on SOATERM is set to *Fatal*, the following occurs.

- If this radio group is set to *No*, a course can be waitlisted, even if a registered class already exists for that time slot.
- If this radio group is set to *Yes*, a course may not be waitlisted if a registered class already exists for that time slot.

#### **Note**

Time Conflict checking is controlled at the term level. If rules are not set up on SOAWLTC, error checking for time conflicts is based on the setting on SOATERM. ■

The **Links**, **Corequisites**, and **Prerequisites** radio groups (in the Include Waitlisted Courses in Student Options Error Checking section) on SOAWLTC perform error checking as follows.

- When these options are set to *No*, verification is not performed.
- When these options are set to *Yes*, verification that all related coursework requirements are met is performed according to the setting on SOATERM.

Requirements that apply to waitlisted coursework can be met by either another waitlisted course or a by a registered course. Requirements that apply to registered coursework must be met by other registered coursework.

The *Fatal*, *Warning*, and *No Check* settings for the Section Options radio groups perform independently of the respective settings on SOATERM. Courses will allow waitlisting if it is appropriate, based on the SOAWLTC settings and the relevant data that is validated for the settings.

The **Use Waitlist Registration Error Checking** checkbox on SSAWLSC is used to turn the Student Options and Section Options error checking criteria on and off for individual CRNs.

- When the field is checked, error checking is performed for the CRN based on the settings on SOAWLTC.
- When the field is unchecked, error checking is not performed.

 **Note**

For Banner Student Self-Service registration, when the SOATERM setting for an option is *Fatal*, setting the respective section option to a lesser error checking level on SOAWLTC does not apply.

For example, if the **Department** option on SOATERM is *Fatal* and the same option on SOAWLTC is *No Check*, the error checking will only apply to registration records processed on SFAREGS. Since the default processing in self-service is to check the registration status before checking the waitlist status, the fatal registration error from SOATERM will be displayed and will prevent waitlisting. ■

## Registration Verification Checking

When a student is registered as waitlisted, a position on the waitlist is assigned using the waitlist priority rules in first-come, first-served order unless priorities are customized using priority rules or manual adjustments. If the waitlisted student receives an available seat notification, that student can register for the course until the notification deadline has expired. In order to register for the course, the registration status (STVRSTS) must be changed from “waitlisted” to “registered”. This can be processed on SFAREGS or in Banner Student Self-Service. If the waitlisted student tries to register for the course during the notification deadline, and a registration error occurs (such as time conflict, prerequisite, corequisite, and so on, as defined on SOATERM), the student's priority on the waitlist is maintained until the defined deadline. This gives students the opportunity to rearrange their schedules or resolve erroneous errors in order to enroll for the waitlisted course.

 **Note**

If a waitlisted student who has not been notified tries to register for the course, an error is displayed, and registration is not allowed. This will also be true for any student who is not yet registered and is not already on the waitlist. ■

## Manage Waitlist Priorities

You can configure waitlist priorities and exclusions based on rules by term using SOAWLTC. If no rules have been defined, the default priority for the waitlist queue is first-come, first-served. The timestamp of the registration status code on the SFRSTCR table determines the order of the queue.

Waitlist priority rules apply to all sections that meet the institution section selection criteria. These selection criteria include: college, subject, course number, CRN, and section attributes. If no section selection criteria have been defined in the Waitlist Course Selection window on SOAWLTC, the waitlist priority rules apply to all sections.

You can define waitlist priority rules in the Waitlist Priority Rules window on SOAWLTC to alter how priorities are controlled and define groups of students that comply with selection criteria. Rule priorities control which group of students takes precedence, and students within a group are ordered on a first-come, first-served basis. The selection criteria for waitlist priority rules within groups include: class, campus, level, college, program, field of study, department, primary/secondary curriculum, student attributes, student GPA range (minimum/maximum), academic standing, and cohort.

You can also exclude groups of students from waitlist processing in the Waitlist Exclusion Rules window on SOAWLTC. The selection criteria for waitlist exclusion rules within groups include: class, campus, level, college, program, field of study, department, primary/secondary curriculum, student attributes, student GPA range (minimum/maximum), academic standing, and cohort.

## Reorder Waitlist Priorities

When a student is registered as waitlisted, the registration process assigns a waitlist priority to the student for the CRN. Waitlists can be reordered based on priority. Processing events can necessitate a change to the order of an existing waitlist, such as the need to reposition an individual on a waitlist, adjust the priority rules as defined on SOAWLTC, or add/remove CRNs from a cross-listed group. Waitlist priority can be recalculated as described below using forms and a batch process.

Three forms allow you to manually manage the waitlist priority of the students for a CRN or apply the waitlist priority rules to automatically reorder the list.

- The Waitlist Priority Management Form (SFAWLPR) is used to view and manage the priorities of waitlisted students by term and CRN who have not yet been notified of available seats in individual courses.
- The Cross List Waitlist Priority Management Form (SFAXWLP) is used to process CRNs that are part of a cross-listed group.
- The Reserved Seats Waitlist Priority Management Form (SFARWLP) is used to process CRNs with reserved seats.

The Waitlist Priority Reorder Process (SFPWLRO) is used to reorder waitlists in batch for all sections that meet institutionally configured selection criteria and specified rules that have been defined on SOAWLTC. You can use the Automatic Reorder item in the Options Menu from SFAWLPR, SFARWLP, and SFAXWLP to launch SFPWLRO for the CRN. Manual changes must be recorded so that SFPWLRO does not reassign a new priority.

The SFPWLRO process applies the priority rules, reorders the waitlist for the term and CRN or for the term and cross-listed group, and assigns a new waitlist priority number to each student registered on the waitlist. Waitlists are sorted by waitlist priority order and the timestamp for the course registration status code (STVRSTS). By default, manually modified waitlist priorities are left unprocessed. But optionally, when run in batch, this process can override the manual assignments.

Reordering is only applied to sections that fit the selection criteria and is done on a first-come, first-served basis within each rule. Waitlists for cross-listed courses are consolidated and reordered as a single waitlist for the group. Waitlists for courses with reserved seats and overflow allowances are consolidated and reordered as a single waitlist. Waitlists for courses with reserved seats but without overflow allowances are treated as a single waitlist.

Banner Student Self-Service and Banner Faculty and Advisor Self-Service display the student's current position on the waitlist for all waitlisted sections. You can choose which waitlists are displayed in self-service.

## Review Student Waitlist Status and Priority

Students can view their current waitlist positions and notification deadlines on the Student Detail Schedule page in self-service when the settings on SOAWLTC or SSAWLCS allow this for specific CRNs. The waitlist position and notification deadline information is printed on the Class Roster Report (SFRSLST) and is listed for the instructor in self-service. Instructors can also view the student's waitlist position on the Summary Waitlist page and the Detail Waitlist page in self-service. SFAWLPR, SFARWLP and SFAXWLP are used to view student waitlist rosters for those students who have not been notified.

The Class Roster Report (SFRSLST) displays waitlist priority position and expiration date information for students who are waitlisted, based on the course registration status code (STVRSTS). Waitlisted students are displayed separately for each CRN. The expiration date will only be displayed if the student has been notified that a seat is available, and the student has not registered for the course. The printed order of the waitlist is determined by the student's position, which is based on the waitlist priority. A position of zero (0) appears for waitlisted students who have been notified of an available seat.

The Waitlist Notification Query Form (SFIWLNT) is used to query waitlisted students by term and CRN to check on notification of an available seat, assignment of registration deadline, registration date and time, waitlist status, and waitlist priority.

## Reserved Seats Overflow

The **(Reserved Seats) Overflow** checkbox in the Reserved Seats window on SSASECT is used for each reserved seats rule, to allow a specific rule to overflow reserved seating to unreserved, available seats. This indicator allows students who meet the reserved rule to successfully register when the reserved rule is full, and available seats exist in the non-reserved rule. The **(Reserved Seats) Overflow** checkbox is not used to waitlist students in the non-reserved rule. Its sole purpose is to find an available seat for immediate registration.

If the student's reserved rule is full, whether or not it has available seats on the waitlist, if the **(Reserved Seats) Overflow** checkbox is checked (set to *Y*), the non-reserved rule will be checked for seat availability. The non-reserved rule will only be used for overflow seating if available seats exist, and there are no students on the non-reserved rule waitlist. Otherwise, registration processing will use the reserved rule and issue capacity messages, as usual.

## Capacity Verification

When the number of available seats does not exceed the number of students on the waitlist for the course, no other students can enroll in the course. When a seat becomes available and a waitlisted student is notified, this position is reserved for the notified student, and no other students can register for this seat. When a waitlisted student has received notification, the seat remains reserved for the student until the expiration date and time have passed. Prior to the deadline being reached, the student can change the registration status from “waitlisted” to “enrolled” or from “waitlisted” to “dropped” to “enrolled”.

For cross-listed CRNs, capacity verification for enrollment considers the actual enrollment for all the CRNs and the waitlists for the CRNs. The waitlists are consolidated into a single queue. In order for a student to enroll in a cross-listed CRN, there must be at least one available seat for the CRN and the cross-listed group.

- When no available seats exist in the cross-listed group, the student is not allowed to enroll in a cross-listed CRN, even though the CRN may still have available seats. If the CRN allows waitlisting, the student may register for the waitlist.
- When there are available seats in the cross-listed group, but no available seats exist for the cross-listed CRN, the student is not allowed to enroll in the CRN. If the CRN allows waitlisting, the student may register for the waitlist.
- Enrollment in cross-listed CRNs with available seats can take place, even though other CRNs in the cross-listed group are closed and have waitlists.

For reserved seats, capacity verification for enrollment considers the waitlist capacity for each reserved seat rule. If at least one student is registered as waitlisted for the course for a specific reserved seat rule, no other students can enroll in the course using the same rule. The exception to this is where at least one student is registered as waitlisted for an unreserved seats rule or any other rule where the **Overflow (Indicator)** is checked on the

SFARWLP form. In this case, no student is allowed to enroll for the course using the unreserved seats rule. Only waitlisted registration is allowed.

A student who is waitlisted and has been notified of an available seat can enroll in the course before the notification deadline expires. This applies to a student with a dropped status or one who has been dropped due to an error such as a time conflict or a prerequisite and who wishes to resolve the situation.

The following error messages are displayed when a student attempts to register for a course that has waitlisted students.

<b>Error</b>	<b>Description</b>	<b>Result</b>
<i>CLOSED - ### WAITLISTED</i>	No regular seats available, ### student waitlisted	Student registers as waitlisted
<i>OPEN - ### WAITLISTED</i>	Regular seats available, but ### students waitlisted	Student registers as waitlisted
<i>CLOSED - WAITLIST FULL</i>	No seats available neither regular nor in waitlist	Not allowed to register
<i>OPEN - WAITLIST FULL</i>	Regular seats available but no seats on waitlist	Not allowed to register
<i>OPEN - RESERVED FOR WAITLIST</i>	Regular seats available but notified students exist	Not allowed to register

## Notify Students of Available Seats

A seat can become available for a waitlisted student when: a student drops the course, the maximum seat capacity for a CRN is modified on SSASECT, or the maximum seat capacity is modified for a cross-listed CRN on SSAXLST. When any of these events occurs, the automated waitlist process is triggered. The process identifies whether the notification should be performed online or through the batch process. When the batch process is used, a record is inserted into a collector table for later processing. When online notification is used, the waitlist notification process is triggered. This process notifies the next student in the waitlist queue that a seat is available and assigns the student a deadline by which registration must occur. This notification takes place using email. If the student does not enroll in the course by the time the waitlist notification expires, the next student in the queue is notified.

The SFRBWLP batch process is used to notify waitlisted students of new, available seats in CRNs by term. The process also removes students from the waitlist when notifications have expired (SFRWLNT), processes all CRNs in the SFRCOLW collector table with a pending status, and calls the waitlist notification procedure. The waitlist enrollment count will then be updated for the CRN. When SFRBWLP removes registration entries which

have expired, no notification email is sent, but a registration audit record is generated with the message *Waitlist Notification Expired On (date)*.

A notification is considered to be expired when a seat becomes available for a CRN, the list of notified students is examined, and any notifications which have reached the deadline are marked as expired. Then the next student notification is sent. SFRBWLP is used to identify notifications which have expired but have not yet been evaluated, because no new seats have become available for that CRN. SFRBWLP can be run in sleep/wake mode or run on a regular basis to assist in promptly identifying expired notifications.

#### **Note**

Even though some students may remain on the waitlist, a notification does not remain active after it has expired. The student must re-enter the waitlist and receive a new notification. ■

When the waitlist record is removed by the Waitlist Enrollment Purge Process (SFPWAIT) or using mass drop functionality from the Registration Mass Entry Form (SFAMREG) , no automatic notification will be sent to the student regarding the removal from the waitlist.

To use email notification to contact waitlisted students about available seats, the appropriate email letter needs to be defined on SOAELTR. The letter module code of *F* (Registration) must be defined on STVELMT as a system-required value. This code is associated with the AS\_STUDENT\_REGISTRATION\_DETAIL Object:Access view, which contains the necessary data related to waitlist notification. The letter module code can then be associated with the appropriate letter code rules on SOAELTL.

## Modify Available Seats

The Available Seats to Zero Process (SSRASTZ) sets the available seats for a CRN to zero as of a specific date, to force all additional registration records to be processed through the waitlist. This process can be run in Audit or Update Mode for a term or part-of-term and can specify CRNs by campus, subject, and course number. Audit Mode can be used to check which course would be affected without actually changing the available seat count. When run in Update Mode, the maximum enrollment for a section (SSBSECT) will be changed to the same value as the number of students that are registered in the section. If reserved seats exist (SSRRESV), that capacity is also reduced for each rule.

## Courses with Reserved Seats

Reserved seats waitlists are viewed and managed on the Reserved Seats Waitlist Priority Management Form (SFARWLP) for students that have not yet been notified of available seats for CRNs with reserved seats. Waitlisted students are displayed based on the reserved seats rules.

Waitlists for courses with reserved seats are treated as independent waitlists based on the reserved seat rules that have been set up. If a student drops a course, which creates an available seat for the reserved rule that corresponds to this student, and this rule allows for waitlisting, then the next student is selected from the list of waitlisted students on that

specific rule. An exception exists in the case of a NULL rule. If a seat becomes available for the NULL rule, all waitlisted students with rules where the **Overflow (Indicator)** is checked on SFARWLP are treated as a single waitlist, along with students that are specifically waitlisted for the default rule. This allows all eligible students to be considered, and the student with higher priority is notified of the available seat.

Priorities can be manually changed, or you can use the Automatic Reorder item in the Options Menu to launch the Waitlist Priority Reorder Process (SFPWLRO) for the CRN.

## Cross-listed Courses

The Cross List Waitlist Priority Management Form (SFAXWLP) is used to review and manage priorities of waitlisted students who have not yet been notified of available seats in cross-listed courses. Waitlists for cross-listed courses are treated as a single waitlist. When a seat becomes available for a cross-listed course, the processing looks for the next waitlisted student, considering all waitlisted students for the cross-listed CRNs. A seat becomes available when a student drops a cross-listed CRN or when the maximum enrollment of the cross-listed courses has been modified using SSAXLST.

In order to determine which student is next on the waitlist, all waitlists (from all cross-listed CRNs with waitlisted students where remaining seats are greater than zero) must be checked. The student with the highest priority is chosen first. If a waitlist exists for the CRN, but remaining seats are available, it is likely that the maximum enrollment for the cross-listed courses was reached before the maximum enrollment for the CRN was reached. In this case, the next student in the waitlist might not necessarily be the first in line. A student waitlisted for another CRN in the cross-listed group could have a higher priority.

Use the Automatic Reorder item in the Options Menu to launch the Waitlist Priority Reorder Process (SFPWLRO) for the cross-listed group of CRNs.

## Drop Processing

Two GTVSDAX rules are used with automated waitlist processing.

- The *ADMINDROP* rule uses verification checking for connected courses that are waitlisted.
- The *AUTODROP* rule considers a waitlist status to be an active registration status for verification checking.

## Waitlist Students in Self-Service

Waitlist queue positions for students are displayed in Banner Student Self-Service and Banner Faculty and Advisor Self-Service. Students can check their positions on the waitlist on the Student Detail Schedule page. Faculty can also view see the position of the students on the waitlist. Waitlist notification expiration dates can be viewed in self-service.

The following Web pages in Banner Student Self-Service are used with automated waitlisting:

- Student Detail Schedule page
- Registration History page

The following Web pages in Faculty and Advisor Self-Service are used with automated waitlisting:

- View Student Schedule page
- Detail Wait List page
- Summary Wait List page
- Add or Drop Classes page

## Waitlist Examples

These examples assume that the **Automatic Waitlist Notification** and the **On-line Waitlist Notification** checkboxes are both checked (set to *Y*).

### Example for Standard Course

For the following course:

CRN	Subject	Course	Sequence	Title	
10010	BIO	101	01	Biology I	
Enrollment			Waitlist		
Maximum	Actual	Remaining	Maximum	Actual	Remaining
20	20	0	5	4	1

### *Capacity Verification and Waitlist Notification*

When a student tries to enroll for this course, the following message is displayed: *CLOSED - 004 WAITLISTED*. The student can select a waitlist registration status. If no verification error occurs, the student is waitlisted, the waitlist count is updated to 5, and the number of remaining waitlist positions becomes 0.

Enrollment			Waitlist		
Maximum	Actual	Remaining	Maximum	Actual	Remaining
20	20	0	5	5	0

The next student who attempts to enroll in this course receives the following message: *CLOSED - WAITLIST FULL*, and that student is not allowed to register for the course.

If two students drop the course, the enrollment count is updated, showing 2 new available seats and 5 waitlisted students.

Enrollment			Waitlist		
Maximum	Actual	Remaining	Maximum	Actual	Remaining
20	18	2	5	4	0

As each of the two students drops the course, the waitlist automation process is triggered. For each student who drops the course, this process identifies that a seat has become available and notifies the next student in the waitlist queue that an available seat exists.

The waitlist queue is ordered by a waitlist priority. This waitlist priority reflects the position of the student in the waitlist. By default, students are ordered in a first-come first-served basis, unless other waitlist priority rules have been defined.

When a new student or a waitlisted student who has not yet been notified attempts to enroll in this course, the following message is displayed, *OPEN - WAITLIST FULL*, and that student is not allowed to enroll because waitlisted students exist.

#### **Waitlist Queue for CRN 1001, Term 200810**

CRN	ID	Registration Status	Registration Timestamp	Waitlist Priority
10010	210009300	WL	Sept. 30, 2007 09:10	1
10010	210009401	WL	Sept. 30, 2007 09:27	2
10010	210009430	WL	Sept. 30, 2007 11:32	3
10010	210009301	WL	Sept. 30, 2007 11:32	4
10010	210009000	WL	Oct. 2, 2007 20:10	5

In this case, email notifications of available seats are sent out to the first two students in the waitlist queue. This waitlist notification includes a deadline (expiration date and time). The students are allowed to register as enrolled for the course until the notification expires.

#### **Examples for Cross-Listed Courses**

For the courses in the following cross-list group 01:

CRN	Subject	Course	Sequence	Title
10011	BIO	101	01	Biology I
10012	BIO	001	01	Nature I
10013	SCI	010	01	Intro to Natural Sciences
10014	MED	001	01	Intro to Medicine

*Cross-list Enrollment:*

<b>Maximum</b>	<b>Actual</b>	<b>Remaining</b>
37	37	0

<b>CRN</b>	<b>Enrollment</b>			<b>Waitlist</b>		
	<b>Maximum</b>	<b>Actual</b>	<b>Remaining</b>	<b>Maximum</b>	<b>Actual</b>	<b>Remaining</b>
10011	10	10	0	4	4	0
10012	10	10	0	4	2	2
10013	10	8	2	4	3	1
10014	10	9	1	0	0	0

All of the available seats in the cross-listed group are taken. No seats are available, and students are already waitlisted for the first three CRNs.

**Example 1 - Capacity Verification**

When the **Capacity** error checking is set to *Fatal* on SOAWLTC, and a student attempts to enroll in a CRN in the cross-listed group, the following error messages will be displayed, depending on the chosen CRN.

<b>CRN</b>	<b>Enrollment</b>			<b>Waitlist</b>			<b>Error Message</b>
	<b>Max</b>	<b>Actual</b>	<b>Remaining</b>	<b>Max</b>	<b>Actual</b>	<b>Remaining</b>	
10011	10	10	0	4	4	0	<i>CLOSED - WAITLIST FULL</i>
10012	10	10	0	4	2	2	<i>CLOSED - 002 WAITLISTED</i>
10013	10	8	2	4	3	1	<i>CLOSED - 003 WAITLISTED</i>
10014	10	9	1	0	0	0	<i>CLOSED</i>

The student can choose a waitlisted registration status for CRNs 10012 and 10013. The last two CRNs (10013 and 10014) have remaining seats. However, the cross-listed group is full; therefore, no student is allowed to enroll for those courses.

**Example 2 - Capacity Verification and Waitlist Notification**

Using the same cross-list group as in Example 1, one student drops CRN 10012, and one student drops CRN 10014.

*Cross-list Enrollment:*

<b>Maximum</b>	<b>Actual</b>	<b>Remaining</b>
37	35	2

<b>CRN</b>	<b>Enrollment</b>			<b>Waitlist</b>		
	<b>Maximum</b>	<b>Actual</b>	<b>Remaining</b>	<b>Maximum</b>	<b>Actual</b>	<b>Remaining</b>
10011	10	10	0	4	4	0
10012	10	9	1	4	2	2
10013	10	8	2	4	3	1
10014	10	8	2	0	0	0

Two seats are now available at the cross-listed level. One seat is available for CRN 10012. Another seat is now available for CRN 10014.

**Capacity Verification**

When a student attempts to enroll in a CRN in the cross-listed group, the following error messages will be displayed, depending on the chosen CRN.

<b>CRN</b>	<b>Enrollment</b>			<b>Waitlist</b>			<b>Error Message</b>
	<b>Max</b>	<b>Actual</b>	<b>Remaining</b>	<b>Max</b>	<b>Actual</b>	<b>Remaining</b>	
10011	10	10	0	4	4	0	<i>CLOSED - WAITLIST FULL</i>
10012	10	9	1	4	2	2	<i>OPEN - 002 WAITLISTED</i>
10013	10	8	2	4	3	1	<i>OPEN - 003 WAITLISTED</i>
10014	10	8	2	0	0	0	<i>CLOSED</i>

Even when available seats exist at the cross-listed level, no student is allowed to enroll for any course, because of the cross-listed capacity verification condition. (When one CRN in a cross-listed group has waitlisted students and available seats, no other student may enroll for the course.)

**Waitlist Notification**

When the **On-line Waitlist Notification** checkbox is checked (set to *Y*), as each of the two students drops the course, the waitlist automation process is triggered. This process identifies that an available seat exists and notifies each of the two students in the waitlist queue. In this case, the waitlist queue includes all waitlisted students for *any* courses in the cross-list group that are eligible for waitlist notification. Available seats must exist for the cross-listed courses, as well as the CRN, in order for notification to take place.

Using the same scenario, the waitlist notification process identifies CRNs with eligible waitlisted students.

*Cross-list Enrollment:*

Maximum	Actual	Remaining
37	35	2

CRN	Enrollment			Waitlist			Eligibility
	Max	Actual	Remaining	Max	Actual	Remaining	
10011	10	10	0	4	4	0	Not eligible, no seats available for enrollment
10012	10	9	1	4	2	2	Eligible
10013	10	8	2	4	3	1	Eligible
10014	10	8	2	0	0	0	N/A

Only students waitlisted for CRNs 10012 and 10013 are eligible, because there are waitlisted students and remaining enrollment seats for the CRN. Students waitlisted for CRN 1011 are not eligible, because even if available seats exist at the cross-listed level, no available seats exist at the CRN level.

The waitlist queue includes waitlisted students for these two CRNs and is ordered by waitlist priority rules. (The waitlist priority determines the position of the student in the waitlist.) By default, students are ordered in a first-come, first-served basis, unless other waitlist priority rules have been defined or the priority has been manually adjusted.

***Waitlist Queue for Cross-List Group 01, Term 200810***

CRN	ID	Registration Status	Registration Timestamp	Waitlist Priority	Eligibility
1012	210009300	WL	Sept. 30, 2007 09:10	1	Eligible
1011	210012304	WL	Sept. 30, 2007 09:12	2	Not eligible
1013	210009401	WL	Sept. 30, 2007 09:27	3	Eligible
1011	210010034	WL	Sept. 30, 2007 09:34	4	Not eligible
1012	210009430	WL	Sept. 30, 2007 11:32	5	Eligible
1011	200000213	WL	Sept. 30, 2007 12:15	6	Not eligible
1011	230459731	WL	Oct. 1, 2007 09:10	7	Not eligible
1013	210009301	WL	Oct. 1, 2007 09:15	8	Eligible
1013	210009000	WL	Oct. 2, 2007 20:10	9	Eligible

In this case, the first two eligible students in the waitlist queue are notified of the available seats. This notification includes a deadline with an expiration date and time. The students can register for the CRN as enrolled in the course until the notification expires.

- The student with ID #210009300 can enroll in CRN 1012.
- The student with ID #210009401 can enroll in CRN 1013
- All other students in the waitlist queue remain waitlisted.
- A new student who attempts to enroll in a course in the cross-listed group is not allowed to do so. However, that student can register as waitlisted if remaining seats exist for the waitlist for that CRN. Similarly, a student on the waitlist who has not been notified will not be allowed to enroll in the course.

### Examples for Reserved Seats

For the following course with reserved seats, CRN 1010:

- Rules have been numbered for this example.
- Rules do not show all possible elements, just level, program, major, and class.
- Rule 0 is the system-generated rule for unreserved seats.
- Rule 0 is used when a student can enroll in a course where remaining unreserved seats exist, if the rule that matches the student is full, but the **Overflow (Indicator)** is checked (set to Y).

Rule No	Reserved Seats Rule				Enrolled			Waitlisted			Ovr Ind
	Lvl	Prgm	Major	Class	Max	Act	Rem	Max	Act	Rem	
0	##	####	#####	##	7	4	3	5	0	5	
1			BIO		10	10	0	5	4	1	
2				FR	5	5	0	0	0	0	Yes
3	UG				5	5	0	5	0	5	Yes
4	GR		ANTH		2	2	0	5	0	5	
5	GR		ARCH	SP	5	5	0	5	0	5	
	<i>CRN Total</i>				34	31	3	25	4	21	

Rule 1 has four waitlisted students (A, B, C, and D). Students 1 through 6 are also considered. When three students attempt to enroll in the course, rules 2, 3, and 4 are matches.

*Student 1 matches rule 2.*

Rule 2 is full and has no remaining seats. Because the **Overflow (Indicator)** is checked (set to Y), the student is allowed to enroll using an available seat from the unreserved seats rule (rule 0).

Student 2 matches rule 3.

Rule 3 is full and has no remaining seats. Because the **Overflow (Indicator)** is checked (set to Y), the student is allowed to enroll using an available seat from the unreserved seats rule (rule 0).

Student 3 matches rule 4.

Rule 4 is full and has no remaining seats. The **Overflow (Indicator)** is unchecked (set to N). The student receives the *CLOSED - 000 WAITLISTED* message and is only allowed to register as waitlisted, using reserved seats rule 4.

After these changes have taken place, the reserved seats scenario looks like this:

Rule No	Reserved Seats Rule				Enrolled			Waitlisted			Ovr Ind
	Lvl	Prgm	Major	Class	Max	Act	Rem	Max	Act	Rem	
0	##	####	#####	##	7	6	1	5	0	5	
1			BIO		10	10	0	5	4	1	
2				FR	5	5	0	0	0	0	Yes
3	UG				5	5	0	5	0	5	Yes
4	GR		ANTH		2	2	0	5	1	4	
5	GR		ARCH	SP	5	5	0	5	0	5	
	<i>CRN Total</i>				34	33	1	25	5	20	

Three additional students (4, 5, and 6) that match rule 3 attempt to enroll in the course.

Student 4 and rule 3.

Rule 3 is full and has no remaining seats. Because the **Overflow (Indicator)** is checked (set to Y), the student is allowed to enroll using the last available seat from the unreserved seats rule (rule 0).

Students 5 and 6 and rule 3.

Rule 3 is full and has no remaining seats. The **Overflow (Indicator)** is checked (set to Y) for rule 3. This allows the student to enroll using rule 0. However, rule 0 is full, as the last remaining seat was used by student 4, and no more available seats can be used.

Students 5 and 6 receive the *CLOSED - 000 WAITLISTED* message and are allowed to register as waitlisted on rule 3.

After these changes have taken place, the reserved seats scenario looks like this:

Rule No	Reserved Seats Rule				Enrolled			Waitlisted			Ovr Ind
	Lvl	Prgm	Major	Class	Max	Act	Rem	Max	Act	Rem	
0	##	####	#####	##	7	7	0	5	0	5	
1			BIO		10	10	0	5	4	1	
2				FR	5	5	0	0	0	0	Yes
3	UG				5	5	0	5	2	3	Yes
4	GR		ANTH		2	2	0	5	1	4	
5	GR		ARCH	SP	5	5	0	5	0	5	
	<i>CRN Total</i>				34	34	0	25	7	18	

Two additional students (7 and 8), that match the unreserved seats rule (rule 0), attempt to register for the course. The rule is full, so they are registered as waitlisted using rule 0. But this rule is also full, so they are registered as waitlisted on rule 0.

A student who matches rule 2 attempts to enroll and is not allowed because the rule is full. Even though the **Overflow (Indicator)** is checked and waitlist positions are available for rule 0, this student is not allowed to waitlist the CRN. The **Overflow (Indicator)** is strictly for enrollment use and does not apply to students attempting to use a waitlist.

After these changes have taken place, the reserved seats scenario looks like this:

Rule No	Reserved Seats Rule				Enrolled			Waitlisted			Ovr Ind
	Lvl	Prgm	Major	Class	Max	Act	Rem	Max	Act	Rem	
0	##	####	#####	##	7	7	0	5	2	3	
1			BIO		10	10	0	5	4	1	
2				FR	5	5	0	0	0	0	Yes
3	UG				5	5	0	5	2	3	Yes
4	GR		ANTH		2	2	0	5	1	4	
5	GR		ARCH	SP	5	5	0	5	0	5	
	<i>CRN Total</i>				34	34	0	25	9	16	

### **Waitlist Notification**

Three students drop the course in the above scenario.

- One student was enrolled using rule 2.
- One student was enrolled using rule 3.
- One student was enrolled using the unreserved seat rule (rule 0).

Rule No	Reserved Seats Rule				Enrolled			Waitlisted			Ovr Ind
	Lvl	Prgm	Major	Class	Max	Act	Rem	Max	Act	Rem	
0	##	#####	#####	##	7	6	1	5	2	3	
1			BIO		10	10	0	5	4	1	
2				FR	5	4	1	0	0	0	Yes
3	UG				5	4	1	5	2	3	Yes
4	GR		ANTH		2	2	0	5	1	4	
5	GR		ARCH	SP	5	5	0	5	0	5	
	<i>CRN Total</i>				34	31	3	25	9	16	

The waitlist notification process works as follows:

- A new seat is available for reserved rule 2. There are no waitlisted students for that rule, and no action is required.
- A new seat is available for reserved rule 3. There are two waitlisted students using this rule.
- The next waitlisted student, who is using rule 3, would be notified that a seat is available.
- Only students waitlisted for rule 3 are eligible.
- The first eligible waitlisted student for rule 3 is student 5.

**Waitlist Queue for CRN 1010, Term 200810, use reserved seats**

		Reserved Seats Rule				Enrolled			Wtl		
CRN	ID	Rule	Lvl	Prgm	Mjr	Cl	Ovr Ind	Reg Stat	Registration Timestamp	Pri	Eligibility
1010	Student A	1			BIO			WL	Oct. 1, 2007 09:10	1	Not eligible
1010	Student B	1			BIO			WL	Oct. 1, 2007 09:20	2	Not eligible
1010	Student C	1			BIO			WL	Oct. 1, 2007 10:30	3	Not eligible
1010	Student D	1			BIO			WL	Oct. 1, 2007 11:15	4	Not eligible
1010	Student 3	4	GR		ANTH			WL	Oct. 2, 2007 09:00	5	Not eligible
1010	Student 5	3	UG				Yes	WL	Oct. 3, 2007 08:00	6	Eligible
1010	Student 6	3	UG				Yes	WL	Oct. 3, 2007 08:10	7	Eligible
1010	Student 7	0	##	#####	#####	##		WL	Oct. 4, 2007 10:00	8	Not eligible
1010	Student 8	0	##	#####	#####	##		WL	Oct. 2, 2007 10:01	9	Not eligible

A new seat is available for unreserved rule 0. The unreserved seats rule (rule 0) is treated as an exception. The process will look for the next waitlisted student using rule 0, or any other rule where the **Overflow (Indicator)** is checked (set to Y). The next waitlisted

student is notified that a seat is available. Only students waitlisted in rule 0 or in rules where the **Overflow (Indicator)** is checked (set to Y) are eligible.

The first eligible (next available) waitlisted student is number 6. Student 5 has already been notified.

**Waitlist Queue for CRN 1010, Term 200810, use reserved seats**

CRN	ID	Reserved Seats Rule					Enrolled		Registration Timestamp	Wtlt Pri	Eligibility
		Rule	Lvl	Prgm	Mjr	Cl	Ovr Ind	Reg Stat			
1010	Student A	1			BIO			WL	Oct. 1, 2007 09:10	1	Not eligible
1010	Student B	1			BIO			WL	Oct. 1, 2007 09:20	2	Not eligible
1010	Student C	1			BIO			WL	Oct. 1, 2007 10:30	3	Not eligible
1010	Student D	1			BIO			WL	Oct. 1, 2007 11:15	4	Not eligible
1010	Student 3	4	GR		ANTH			WL	Oct. 2, 2007 09:00	5	Not eligible
1010	Student 5	3	UG				Yes	WL	Oct. 3, 2007 08:00	0	Eligible, but notified
1010	Student 6	3	UG				Yes	WL	Oct. 3, 2007 08:10	7	Eligible
1010	Student 7	0	##	####	#####	##		WL	Oct. 4, 2007 10:00	8	Eligible
1010	Student 8	0	##	####	#####	##		WL	Oct. 2, 2007 10:01	9	Eligible

When seats become available for the course, rule 0 is the last rule that is evaluated by the process.

**Examples for Connected Courses**

Two types of dependencies exist for connected courses that are waitlisted.

- Course A requires that the student is enrolled in course B.  
Course B does not require that the student is enrolled in course A.
- Course A requires that the student is enrolled in course B.  
Course B requires that the student is enrolled in course A.

Linked courses also have the same relationships at CRN level.

Banner Student does not allow a student to be enrolled in a course that does not comply with a dependency restriction for a waitlisted course, because the waitlisted course may eventually be dropped.

When the Student Options for **Links**, **Corequisites**, and **Prerequisites** are set to *Yes* on SOAWLTC, and the same options are set to *Fatal* on SOATERM, the results are shown in the example below with the allowed combinations for each case.

### Example 1 - Course A requires course B

Course	-----Allowed-----				-----Not Allowed-----			
Course A	Enrolled	Waitlisted	Waitlisted	Dropped	Dropped	Enrolled	Enrolled	Waitlisted
Course B	Enrolled	Waitlisted	Enrolled	Enrolled	Waitlisted	Waitlisted	Dropped	Dropped

### Example 2 - Course A requires course B, and course B requires course A

Course	-----Allowed-----				-----Not Allowed-----			
Course A	Enrolled	Waitlisted	Waitlisted	Enrolled	Enrolled	Waitlisted	Dropped	Dropped
Course B	Enrolled	Waitlisted	Enrolled	Waitlisted	Dropped	Dropped	Enrolled	Waitlisted

A student wants to register for the lecture course BIO 101, which requires the lab course BIO 102.

- If the lab is full, the student is not allowed to enroll for the lecture course BIO 101, even if the student has already registered as waitlisted for the lab course BIO 102.
- If the lecture is full, the student is allowed to register as waitlisted for the lecture course BIO 101 and as enrolled for the lab course BIO 102.
- If both the lab and lecture are full, the student is allowed to register for both courses as waitlisted.

However, for the last two options, if the student drops the waitlisted lab course (BIO 102), an invalid combination is generated, and the autodrop functionality will drop both courses or ask for confirmation based on the *AUTODROP* rule on GTVSDAX.

## Drop Last Class

Students can be dropped from the last class for which they registered or from all classes.

If a student is registered for a single class, use one of the drop codes defined on the Course Registration Status Code Validation Form (STVRSTS) or on the Course Registration Status Form (SFARSTS) (for traditional courses) or the Schedule Processing Rules Form (SSARULE) (for open learning courses) to drop the last class. If there are no registration errors, the last class should be dropped.

If the student is registered for multiple classes, use one or more of the drop codes defined on STVRSTS or SFARSTS and/or SSARULE to drop all classes. If there are no registration errors, all classes (which would include the last class) should be dropped.

Please review the information that follows for *Drop/Withdrawal Processing for Connected Courses* for specific details regarding dropping or withdrawing from associated courses.

## Drop/Withdrawal Processing for Connected Courses

When a student is registered in two associated or “connected” courses (corequisites, prerequisites, or linked courses), and you request that one of the courses be dropped, the course is allowed to be dropped under certain conditions.

Courses cannot be dropped and refunded at 100% unless the drop meets criteria specified in two rules on the Crosswalk Validation Form (GTVSDAX) and has been assigned the appropriate setup code (allowing a course to be dropped and refunded at 100%) on the Course Registration Status Form (SFARSTS) (for traditional courses) or the Schedule Processing Rules Form (SSARULE) (for open learning courses). Connected courses are included in this processing.

Errors are tracked as the following:

- *Registration add* (displayed on the Add or Drop Classes page in Self-Service when a class is added), which reports errors that are encountered when a student is trying unsuccessfully to register for a class, for example a time conflict.
- *Registration update* (displayed on the Add or Drop Classes page in Self-Service), which appears when a connected course is dropped or withdrawn from and either has no drop code assigned or has multiple drop codes assigned, and can also appear when a student tries to change the status of a course that has a connection.
- *Administrative* (not displayed to the student), which can be reviewed on the Registration Admin Messages Report (SFRRGAM).

### Status Types

The **Status Type** field on STVRSTS is used to assign a status type to describe the course registration status code for baseline, self-service, and telephone applications. Valid values are *R* (Registered), *D* (Dropped), *L* (Waitlisted), or *W* (Withdrawn).

Web registration uses the **Status Type** field on the Course Registration Status Code Validation Form (STVRSTS) to determine the type of code that can be placed on the course and the processing that is affected based on this code. This type code determines what is displayed in the **Action** pulldown list on the Add or Drop Classes page.

#### Note

The **Status Type** field *must* be filled in for every status code that is in use. If the **Status Type** field is left blank, unexpected results can occur. ■

The following conditions apply when using status type codes:

- If the course status is marked as an *R* (Registered) type code, then all other type codes can be displayed (depending on their availability).
- If the course status is marked as a *D* (Drop) or *W* (Withdrawal) type code, then only *R* type actions will be displayed.

- The *RE* (Registered) type code or other *R* type codes (with the exception of the *WEBREGRSTS* code) will be included in the pulldown list if the **Web Indicator** checkbox is selected on *STVRSTS*.
- The registration code designated on *GTVSDAX* for internal code *WEBREGRSTS* is not displayed in the pulldown list, because it is used only for initial registration via the Web.

The system does not allow a student to drop a course that has already been dropped or withdrawn from.

## Automatic Drops

An automatic drop is one that occurs if certain conditions are met when a user attempts to drop a connected course. When a connected course is dropped, the appropriate drop code and refund (if any) are applied to the student.

A single, active drop code must be available for a successful connected or automatic drop to occur.

- If no drop codes exist for any part of a connection, no courses in the connection are allowed to be dropped.
- If multiple drop codes exist for any part of a connection, no courses in the connection are allowed to be dropped automatically. This is because the system does not choose which drop code to use for the automatic drop. In this case, the user can initiate the drop by selecting one of the multiple drop codes where necessary. The drop is processed with the selected drop code, and the refund (if any) associated with the code is applied.

### *Example:*

Let's say a student is registered for History 308, English 310, and Mathematics 125. History 308 and English 310 are corequisites. History 308 has a single drop code of *DC*, but English 310 has two drop codes available: *DC* and *DW*.

Now let's say that the user chooses to drop History 308 with the *DC* code. The system determines that it is connected to English 310, which has two drop codes. In this case, the drop is rejected because the system does not know which of the two drop codes to assign to English 310.

On the other hand, if the user chooses to drop English 310 with either of the drop codes, the system drops History 308 automatically with the *DC* drop code, because it is the only one available.

Finally, if the user chooses to drop both courses simultaneously and specifies a drop code for each, the drops are allowed.

When a student is dropped or withdraws from a connected course without dropping the entire connection, the system determines which of the following conditions applies and takes the associated action shown in the table that follows.

Condition	Action Taken	GTVSDAX Setting
Connected drops are processed only with approval of the student.	<p>The Connected Course Drop Confirmation page is displayed asking the user whether all connected courses should be dropped.</p> <ul style="list-style-type: none"> <li>• If the user chooses to drop all connected courses, they are all dropped simultaneously.</li> <li>• If the user chooses not to drop all connected courses, the initial request is ignored, and the student continues to be registered in all connected courses.</li> </ul> <p><b>Note:</b> The drops occur only if all courses that are connected have a single, active drop code.</p>	<i>AUTODROP</i> set to <i>C</i>
Connected drops are processed automatically. (All connected courses are dropped when one is.)	<p>The drop is processed, and the student is dropped from all courses with no notification.</p> <p><b>Note:</b> The drops occur only if all courses that are connected have a single, active drop code.</p>	<i>AUTODROP</i> set to <i>Y</i>
Connected drops are not allowed.	<p>The drop is cancelled, and a message is displayed saying that all connected courses must be dropped simultaneously. The user can initiate the drop for all connected courses at the same time, and the drop will be successful.</p>	<i>AUTODROP</i> set to <i>N</i>

 **Note**

In Banner Voice Response, error checking is performed on each CRN as it is entered. Because of this, if you enter *N* for the *AUTODROP* rule, it will not be possible for connected courses to be dropped. Therefore, SunGard Higher Education recommends that you use either *C* or *Y* for the *AUTODROP* rule. ■

The connected course(s) that can be dropped are dropped with the appropriate drop code based on the settings on the following forms:

- Crosswalk Validation Form (GTVSDAX)
- Course Registration Status Form (SFARSTS) (for traditional courses)
- Schedule Processing Rules Form (SSARULE) (for open learning courses)

The code designated in *WEBRSTSDRP* does not work as a “clean up” code for registration errors related to automatic drops and administrative drops. The *WEBRSTSDRP* code works like a regular drop/withdrawal.

For example, if a user tries to register a student for Psychology 200 and the registration results in a *PREQ* or *TEST SCORE* error, the *DW* code is used to remove the course from the schedule and reverse any charges that were associated with it.

If your institution does not allow a student's last class to be dropped via the Web (that is, the external code for *WEBDROPLST* is *N*), then the system will not drop a connection if the student is not registered in any other classes.

The rest of this section provides a variety of scenarios to help illustrate how the system processes requests based on your system setup. These scenarios are not meant to be all-inclusive but rather to show several examples.

### Connected Drops Allowed with User Approval

You want the system to notify the user if one course is dropped, but a course to which it is associated is not, thereby allowing the user to choose to drop both or to drop neither. To accomplish this, you have set the external code to *C* for the *AUTODROP* rule.

Let's say a student has registered in the following courses:

- History 320 (corequisite with Sociology 320)
- Sociology 320 (corequisite with History 320)
- Religious Studies 225
- Mathematics 162

If a user attempts to drop the history course but not the sociology one, the system displays the Connected Course Drop Confirmation page letting the user know that the two courses must be dropped simultaneously and asking whether the user wants to drop or not drop the entire connection. If the user chooses to drop, both courses are dropped. If the user chooses not to drop, neither course is dropped.

If a user attempts to drop the history course and the mathematics class, but not the sociology course, the system displays the Connected Course Drop Confirmation page letting the user know that the history and sociology courses must be dropped simultaneously and asking whether the user wants to drop or not drop them. Regardless of the user's choice regarding dropping the connection, the mathematics course is dropped per the student's original request.

Now let's say a student has registered in the following courses:

- Biology 405 lecture (linked to Biology 405 lab)
- Biology 405 lab (linked to Biology 405 lecture)
- Anthropology 307 (corequisite with Archeology 305)
- Archeology 305 (corequisite with Anthropology 307)
- Latin 150

If a user tries to drop the Biology lecture course and the Anthropology course, the system displays the Connected Course Drop Confirmation page showing both connections and asking whether the user wants to drop or not drop them. The decision the user makes on this page applies to both connections: if the user chooses to drop the courses, all four are dropped; if the user chooses not to drop the courses, none of the four are dropped.

### Connected Drops Processed Automatically

You want the system to automatically drop a linked course if the course to which it is linked is dropped. To accomplish this, you have set the external code to *Y* for the *AUTODROP* rule.

Let's say a student has registered in the following courses:

- Zoology 505 lecture (linked to Zoology 505 lab)
- Zoology 505 lab (linked to Zoology 505 lecture)
- Psychology 410
- Mathematics 380
- German 202

If a user attempts to drop the lecture course but not the lab, the system automatically drops both. The system does not notify the user that the lab was also dropped.

#### Note

The system drops both courses in the connection as long as the connected course has a single, active drop code; otherwise both classes are returned to their original registration status. ■

### Connected Drops Not Allowed

You do not want students to be able to drop a connected course unless all the courses in the connection are dropped simultaneously by the user. To accomplish this, you have set the external code to *N* for the *AUTODROP* rule.

Let's say a student has registered in the following courses:

- Biology 101 lecture (linked to Biology 101 lab)
- Biology 101 lab (linked to Biology 101 lecture)
- English 105
- History 102

If a user attempts to drop the lecture course but not the lab, the system displays a message that the course cannot be dropped unless the course to which it is linked (in this case, the lab) is dropped at the same time. The student remains registered in both courses.

To drop both classes, the user must select both in the same transaction.

 **Note**

In Banner Voice Response, error checking is performed on each CRN as it is entered. Because of this, if you enter *N* for the *AUTODROP* rule, it will not be possible for connected courses to be dropped. Therefore, SunGard Higher Education recommends that you use either *C* or *Y* for the *AUTODROP* rule. ■

## Drop Last Class Not Allowed

You do not want a student to be able to drop his or her last class via the Web. To accomplish this, you have set the external code to *N* for the *WEBDROPLST* rule.

Let's say a student has registered in the following courses:

- English 260 (corequisite with English 260W)
- English 260W (corequisite with English 260)

If a user attempts to drop one course but not the other (or if the student attempts to drop both simultaneously), the system does not drop either course because of the setting on the *WEBDROPLST* rule, regardless of the setting for the *AUTODROP* rule.

## Administrative Drops

An administrative drop is one that occurs automatically when a user accesses a student's registration record after certain changes that affect registration records occur within the system, after registration has opened and enrollment for a course exists. These changes can include:

- A CRN's prerequisites are changed.
- A CRN's corequisites are changed.
- A CRN is linked to another CRN.
- An approval requirement is added to a CRN.
- The meeting day or time of a CRN is changed (which can cause a time conflict in a student's schedule).
- An equivalent course is added (which can cause a duplicate course error on the student's schedule).

When a student has registered and later their registration record is accessed via Banner self-service or Banner Voice Response, the system determines whether any of the above kinds of changes occurred. If so, the system determines which of the following conditions applies and takes the associated action shown in the table below.

Condition	Action Taken	GTVSDAX Setting
Administrative drops are allowed.	The drop is automatically processed, and a message is written to the SFTRGAM table, but the user is not notified of the action.  <b>Note:</b> The drop occurs only if <i>all</i> courses with administrative errors or classes that are connected to them have a single, active drop code.	<i>ADMINDROP</i> set to <i>Y</i>
Administrative drops are not allowed.	A message is written to the Student Course Registration Audit Form (SFASTCA), but the drop is not processed, and the student continues to be registered in the course.	<i>ADMINDROP</i> set to <i>N</i>

 **Note**

The system does not perform an administrative drop if a student fails an in-progress prerequisite after registering for a CRN, although the Registration Admin Messages Report (SFRRGAM) captures the error.

Also, if registration is accessed via the Student Course Registration Form (SFAREGS), the *ADMINDROP* rule is not invoked, because the types of errors that the *ADMINDROP* rule addresses would be encountered and dealt with by the administrator. ■

If the student's record is accessed and changed in the Student Course Registration Form (SFAREGS), any administrative errors encountered must be resolved. You can run the Registration Admin Messages Report (SFRRGAM) to review administrative drop errors that need to be resolved.

The rest of this section provides a variety of scenarios to help illustrate how the system processes requests based on your system setup. These scenarios are not meant to be all-inclusive, but rather to show several examples.

### Administrative Drop if an Approval is Added to a CRN

You want the system to perform administrative drops. To accomplish this, you have to set the external code to *Y* for the *ADMINDROP* rule. You have also included a single, active drop code (*DC* for Drop Course) for Linguistics 318 on these forms:

- Schedule Processing Rules Form (SSARULE) (for open learning courses)
- Course Registration Status Form (SFARSTS) (for traditional courses)

Let's say a student has registered in the following courses:

- Linguistics 318
- English 350

- Comparative Lit 302
- Geology 220

After the student has registered in the course, an instructor approval code is added to Linguistics 318.

If a user accesses the student's registration record via Banner self-service or Banner Voice Response, the system checks for administrative errors and finds one for this student: in this case, that the student no longer meets the requirements of Linguistics 318. That is, that the student does not have the required instructor approval. The system then checks SSARULE or SFARSTS (as applicable) and finds the *DC* drop code, so it changes the student's registration status to *DC*. This occurs before the Add or Drop Classes page is displayed on the Web, and the change is reflected when the page is displayed. No additional information is provided to the student.

Only those students whose records are accessed will have this drop performed. For example, if 30 students were registered in this class and only three of these students' records were accessed, they would be the only ones dropped from the course.

The Registration Admin Messages Report (SFRRGAM) identifies the students who might have had classes dropped after a change has been made. You can use this report to identify and resolve the errors in Banner (for example, enter an override) before the students' records are accessed.

### **Administrative Drop if a Corequisite is Added to a CRN**

You want the system to perform administrative drops. To accomplish this, you have set the external code to *Y* for the *ADMINDROP* rule. You have included a single, active drop code (*DC* for Drop Course) on the Schedule Processing Rules Form (SSARULE) for Astronomy 105 and for Astronomy 106.

Let's say a student has registered in the following courses:

- Astronomy 105 (corequisite with Astronomy 106)
- Astronomy 106 (corequisite with Astronomy 105)
- Mathematics 130
- Physical Education 154
- Computer Science 205

After the student has registered in the course, an Astronomy 107 seminar is added as a corequisite of Astronomy 105.

If a user accesses the student's registration record via Banner self-service or Banner Voice Response, the system checks for administrative errors and finds one for this student: in this case, that the student has not registered in a corequisite. The system then checks

SSARULE and finds the *DC* drop code for both courses, so it drops the courses and changes the registration status for both courses to *DC*. This occurs before the Add or Drop Classes page is displayed on the Web, and the change is reflected when the page is displayed.

### **Administrative Drops if Active Drop Codes are Not Defined**

You want the system to perform administrative drops. To accomplish this, you have set the external code to *Y* for the *ADMINDROP* rule. You have included a single, active drop code (*DC* for Drop Course) for Anthropology 215 on the Schedule Processing Rules Form (SSARULE), but you have not defined an active drop code for Sociology 215 on SSARULE (for open learning courses) or the Course Registration Status Form (SFARSTS) (for traditional courses).

Let's say a student has registered in the following courses:

- Anthropology 215 (corequisite with Sociology 215)
- Sociology 215 (corequisite with Anthropology 215)
- Economics 105
- French 201

After the student has registered in the course, a seminar is added as a corequisite of Anthropology 215.

If a user accesses the student's registration record via Banner self-service or Banner Voice Response, the system checks for administrative errors and finds one for this student: in this case, that the student has not registered in a corequisite. Processing continues, and the system finds that Sociology 215 is a corequisite of Anthropology 215, and therefore must also be dropped. There is no active drop code, however, for Sociology 215. Because both courses cannot be dropped appropriately, neither are dropped, and both are returned to their previous registration statuses. This occurs before the Add or Drop Classes page is displayed on the Web.

### **Administrative Drops if Other Errors are Found during Processing**

You want the system to perform administrative drops. To accomplish this, you have set the external code to *Y* for the *ADMINDROP* rule. You have also included a single, active drop code (*DC* for Drop Course) on the Schedule Processing Rules Form (SSARULE) and the Course Registration Status Form (SFARSTS) for Music 118 and Music 250, but you have not defined an active drop code for Physics 105.

Let's say a student has registered in the following courses:

- Music 118 (corequisite with Music 250)
- Music 250 (corequisite with Music 118)

- Political Science 101
- Physics 105

After the student has registered in the course, a seminar is added as a corequisite of Music 118.

If a user accesses the student’s registration record via Banner self-service or Banner Voice Response, the system checks for administrative errors and finds one for this student: in this case, that the student has not registered in a corequisite. Processing continues, and the system finds that Music 250 is a corequisite of Music 118, and therefore must also be dropped. There is an active drop code for both music courses.

Processing continues further, and the system finds that the meeting day of Physics 105 has been changed and now conflicts with Political Science 101. There is no active drop code, however, for Physics 105. Because Physics 105 cannot be dropped appropriately, *none* of the courses are dropped, and all are returned to their previous registration statuses. This occurs before the Add or Drop Classes page is displayed on the Web.

## Rules on GTVSDAX

Two rules are used on the Crosswalk Validation Form (GTVSDAX) with the improved drop/withdrawal processing. These rules are delivered via scripts.

### AUTODROP Rule

The *AUTODROP* rule is used to determine whether connected courses that are in error can be dropped using Banner self-service or Banner Voice Response.

External Code	Internal Code	Internal Code Sequence Number	Internal Code Group	Description	Activity Date
C	AUTODROP	N/A	REGISTRATION	Drop connected courses	Sysdate

This rule can be set to process the dropping of connected courses in three ways:

- *C (Confirm)* - Automatic drops are allowed for connected courses, *after* input is received from the user. This is the default value.
- *Y (Yes)* - Automatic drops are allowed for connected courses. A single, active drop code must exist for all connected courses that would be dropped. No input is needed from the user.

- *N (No)* - No automatic drops are allowed for connected courses. The user *must* initiate dropping the connected courses. All connected courses *must* be dropped at the same time.

 **Note**

In Banner Voice Response, error checking is performed on each CRN as it is entered. Because of this, if you enter *N* for the *AUTODROP* rule, it will not be possible for connected courses to be dropped. Therefore, SunGard Higher Education recommends that you use either *C* or *Y* for the *AUTODROP* rule. ■

If *multiple* drop codes exist or *no* drop codes exist, no connected course drops are allowed to occur.

### ADMINDROP Rule

The *ADMINDROP* rule is used to drop courses where schedule or restriction changes have occurred *after* enrollment exists.

External Code	Internal Code	Internal Code Sequence Number	Internal Code Group	Description	Activity Date
Y	ADMINDROP	N/A	REGISTRATION	Drop courses in admin error	Sysdate

This rule can be set to process the dropping of courses in two ways:

- *Y (Yes)* - Courses with administrative errors are allowed to be dropped if a single, active drop code is available for the section or the part-of-term. This is the default value.
- *N (No)* - Courses that have administrative errors are not dropped. Run the Registration Admin Messages Report (SFRRGAM) to see errors in the student's schedule. Registration leaves the courses with administrative errors in their registered status on the schedule.

You can run the Registration Admin Messages Report (SFRRGAM) report to review any errors in the student's schedule regardless of how the *ADMINDROP* rule is set up.

The Registration Administrative Message Temporary Table (SFTRGAM) stores the error messages that result from the use of the *ADMINDROP* rule to drop courses during the registration session.

## Rules and Use of the Term Control Form (SOATERM) in Repeat Processing

Repeat processing in registration uses the schedule type, level, title, and transfer courses when checking for a repeat condition. Registration repeat checking functions in the same way as academic history repeat checking and considers all academic history (courses graded and rolled to history), as well as in-progress courses that are either graded or unrolled and ungraded.

Please review the settings of the Key Block fields on SHARPTR in the “Academic History” chapter for more information on how to set up registration repeat checking limits by schedule type, level, title, and transfer courses.

When a student's record is assessed for registration repeat instances, the process will specifically count the following:

- The total number of times the course has been taken (in rolled and unrolled registration records).
- The total credits taken by the student (in rolled and unrolled registration records).
- Both transfer and history records, including the current registration attempt.

### Repeat Limit

#### Note

The **(Repeat) Limit** and **(Repeat) Maximum Hours** fields referred to in this section are set up on the Basic Course Information Form (SCACRSE) for use on SOATERM in repeat processing. ■

### Using Repeat Limit only as a fatal error on SOATERM

#### Note

Use these rules if your institution checks Repeat Limit but not Repeat Maximum Hours. ■

When the user designates via the **Repeat Limit** flag on SOATERM that the Repeat Limit is to be checked as a fatal error, the following rules apply:

- If the **(Repeat) Limit** is null or zero, regardless of the value in the **(Repeat) Maximum Hours** field, the course may not be repeated.
- If the **(Repeat) Limit** has a value, regardless of the value in the **(Repeat) Maximum Hours** field, then the course may be repeated as follows:

Repeat Limit = 2

Repeat Maximum Hours = any value

The course may be taken three times for an unlimited number of credits; that is, after the course has been taken the first time, it may be repeated twice.

## Using Repeat Maximum Hours only as a fatal error on SOATERM

### Note

Use these rules if your institution checks Repeat Maximum Hours but not Repeat Limit. ■

When the user designates via the **Repeat Hours** flag on SOATERM that the Repeat Hours are to be checked as a fatal error, the following rules apply:

- Regardless of the value in the **(Repeat) Limit**, if the **(Repeat) Maximum Hours** is null, the course can be repeated for an unlimited number of credits.
- Regardless of the value in the **(Repeat) Limit**, if the **(Repeat) Maximum Hours** is zero, the course cannot be taken at all.
- Regardless of the value in the **(Repeat) Limit**, if the **(Repeat) Maximum Hours** has a value, the course may be taken as many times as desired, as long as the credit hours do not exceed those specified in the **(Repeat) Maximum Hours** field.

Repeat Limit = any value

Repeat Maximum Hours = 10

If a three credit course is attempted to be taken four times, the fourth will not be allowed, because it exceeds the Repeat Maximum Hours.

## Using both Repeat Limit and Repeat Maximum Hours as fatal errors on SOATERM

### Note

Use these rules if your institution checks both Repeat Maximum Hours and Repeat Limit. ■

- If both the **(Repeat) Limit** and **(Repeat) Maximum Hours** are null, the course cannot be repeated.
- If the **(Repeat) Limit** is zero and the **(Repeat) Maximum Hours** is zero, the course cannot be repeated because of the Repeat Maximum Hours rules.
- If the **(Repeat) Limit** has a value and **(Repeat) Maximum Hours** is zero, the course cannot be repeated because of the Repeat Maximum Hours rules.
- If the **(Repeat) Limit** is zero and **(Repeat) Maximum Hours** has a value, the course cannot be repeated because of the Repeat Limit rules.
- If the **(Repeat) Limit** is null and **(Repeat) Maximum Hours** has a value, the rules for Repeat Maximum Hours are used:

Repeat Limit = null

Repeat Maximum Hours = 7

- If a three credit course is taken more than two times, it will exceed the Repeat Maximum Hours rule and may not be repeated.

- If the **(Repeat) Limit** has a value and **(Repeat) Maximum Hours** is null, the Repeat Limit rules are used:  
Repeat Limit = 1  
Repeat Maximum Hours = null  
A course can only be repeated once here, regardless of credits.
- If the **(Repeat) Limit** and **(Repeat) Maximum Hours** each have values, and if either rule fails the test, repeat checking will prevent registration.  
Repeat Limit = 3  
Repeat Maximum Hours = 10
- Taking a three credit course for the fourth time, as allowed by the Repeat Limit, would exceed the Repeat Maximum Hours of ten, and therefore this repeat would not be allowed.
- Taking a two credit course for the fifth time, as allowed by the Repeat Maximum Hours, would exceed the Repeat Limit of three, and therefore this repeat would not be allowed.

All errors received in registration because of Repeat Limit or Repeat Maximum Hour constraints can be overridden, and students are then able to register for those courses.

## Selection Rules

Repeat/equivalent course processing is controlled by the **(Repeat) Limit** and the **(Repeat) Maximum Hours** fields on the Basic Course Information Form (SCACRSE). These fields are used in the Registration Module according to the status of the registration error flags on SOATERM and are calculated in Academic History according to the rules on the Repeat/Multiple Course Rules Form (SHARPTR).

### Note

The **Repeat Status (Code)** field on SCACRSE is informational only and is not used in Repeat Processing. ■

## Repeat Policies

The Repeat/Multiple Course Rules Form (SHARPTR) is used to establish the institution's repeat policy. It allows for repeated courses to be treated in two different ways (repeat limit rule or repeat hours rule) with three different course selections (last, highest, or first passing).

The **Repeat Limit Selection Rule** field is used when the number of times a may student take a course is limited. Repetition of the course will invoke the specified repeat rules. This is defined on the Basic Course Information Form (SCACRSE) in the **(Repeat) Limit** field.

The **Repeat Hours Selection Rule** field is used when there is a maximum number of hours that may be earned before the course is considered to be a repeat.

Each rule has an associated evaluation grade that determines the minimum grade a course must have to be considered for repeat processing evaluation. Registration repeat checking uses the evaluation grade to determine if a course should be considered in repeat checking, based upon whether repeat hours or repeat limit rules are to be used.

The value in the **Repeat Hours Evaluation Grade** field is the minimum grade that will be used for repeat checking, for the term, level, and selection rule. Once this grade is set, courses with a numeric value less than the evaluation grade will not be considered in repeat checking.

## National Student Clearinghouse (NSC) Reporting Procedures

### Overview of Processing for Clearinghouse Reporting

Your institution has the option to report student enrollment information to the National Student Clearinghouse (NSC), which then tracks and reports that information to lenders and guarantors of student loans at no cost to the reporting institution. The following sections outline the processing requirements and procedures for submitting information extracted from the Banner Student System to the Clearinghouse.

Reporting of student enrollment information is based on calculating and storing a student's time status, where the time status is associated with any online or batch processing, when the processing results in the creation or modification of registration records and the credit hours (non-CEU hours) associated with those records. By design, a student is considered for reporting during a given term only if a registration term header record exists for the student.

The calculation of a student's enrollment time status is based on rules established in the existing Time Status Rules Form (SFATMST). Each time status code defined by an institution in the Time Status Code Validation Form (STVTMST) must include an NSC equivalent for Clearinghouse reporting purposes.

Specific data elements are required in the extract file that is transmitted to the Clearinghouse. To assist end users in identifying any missing or invalid data prior to processing the file that will be transmitted to the Clearinghouse, an option is provided in the Clearinghouse Extract Report (SFRNSLC) that will produce a listing of invalid or missing data. In addition, the Time Status Calculation Update Process (SFRTMST) includes comments in the output which will assist in identifying potentially invalid data. No invalid or missing data should exist prior to processing and producing the extract output file, or some of the data that is transmitted to the Clearinghouse will be inaccurate or misrepresented.

## Sources of Data for Clearinghouse Reporting

The validity of the data reported by the Clearinghouse Extract Report (SFRNSLC) depends on specific data entry requirements and procedural consistencies. A registration term header record *must* exist for a student to be included in the reporting for a term.

### Note

The record is represented by the enrollment status data in the Enrollment Information block of the Student Course Registration Form (SFAREGS). This record is created when a Save function is performed for the first time in the form, even if no registration for CRNs exists.

Students who are considered to be “enrolled” by an institution, but who have not been officially registered in courses in the Student Course Registration Form (SFAREGS), are still included in the group of students reported to the Clearinghouse. A student can have an SFBETRM record and an SFRSTCR record and be included in the report, but all that is needed is the SFBETRM record.

Students who are enrolled in courses, but for institutionally specific reasons should not be reported to the Clearinghouse, should be assigned a student attribute which will be input as a value to the Student Attributes to Exclude parameter when processing the report. ■

For all students enrolled for the term, an enrollment status is determined. For all enrollment statuses, with the exception of a withdrawn student, the **Third Party Withdrawal Indicator** on the Enrollment Status Code Validation Form (STVESTS) must have a value of *N* or unchecked for the enrollment status code that exists in the Enrollment Information block of the Student Course Registration Form (SFAREGS). In some specific cases, start dates for enrollment statuses must be reported. The statuses are checked for in the order listed below, and the data requirements (form field, source of status date, if required) for each status are indicated:

#### 1. *D* - Deceased (requires status date)

A value of *Y* or checked must exist in the General Person Form (SPAPERS) **Deceased (Indicator)**. The status date is selected from the **Deceased Date** field on the same form.

#### 2. *G* - Graduated (requires status date)

A degree with a status code that has an **Awarded Indicator** of *A* on the Degree Status Code Validation Form (STVDEGS) must exist in the Degrees and Other Formal Awards Form (SHADEGR). In addition, the level of the degree code must match the level of the current general student record (the maximum term that is less than or equal to the reporting term). The level check is included so that a student who is currently enrolled in a graduate program, but previously has been awarded an undergraduate degree from the same institution, will not be erroneously reported as graduated. The status date is selected from the **Graduation Date** field on the same form.

3. *A* - Approved Leave of Absence (status date *not* required)

A leave code exists in the General Student Form (SGASTDN) for the current effective term (the maximum term that is less than or equal to the reporting term) which includes the reporting date between the leave from and to dates on the same form. For example, a student is on a medical leave of absence from February 1 through March 15, 1995. The Clearinghouse Extract report date of March 1, 1995 will identify this student as on an approved leave of absence.

4. *W* - Withdrawn (requires status date)

A student enrollment status code exists for the term where the **Third Party Withdrawal Indicator** is *Y* or checked on the Enrollment Status Code Validation Form (STVESTS). The status date is selected from the **(Enrollment) Status Date** on the Student Course Registration Form (SFAREGS).

 **Note**

SFRNSLC uses the **Third Party Withdrawal Indicator** on STVESTS to determine whether a student is counted as withdrawn when reporting to the Clearinghouse. When the **Third Party Withdrawal Indicator** is checked for an enrollment status code, and that enrollment status code is assigned to a student on SFAREGS, the student will be reported as withdrawn.

When the Effective Withdrawal Date parameter is set to *Y*, the date used for the effective withdrawal date is selected from the student's withdrawal record (SFRWDRL\_EFF\_WDRL\_DATE). When no SFRWDRL record exists or when the Effective Withdrawal Date parameter is set to *N*, the date used for the effective withdrawal date is selected from the student's enrollment record (SFBETRM\_ESTS\_DATE). ■

5. *F* - Full-time; *H* - Half-time; or *L* - Less than Half-time (conditionally requires status date)

A student who has a registration term header record, but is not deceased, graduated, on an approved leave of absence, or withdrawn, is considered to be actively enrolled, and their maximum time status history record that is less than or equal to the reporting date will be examined to determine the enrollment status. A status date is reported when a student drops from a "higher" status to a "lower" status in a subsequent report to the Clearinghouse during the same term.

A drop from a higher to a lower status would include: from full-time to half-time; from full-time to less than half-time; and from half-time to less than half-time. When a drop in enrollment is determined, the status date is selected from the **(Time Status) Date** in the Time Status History window in SFAREGS for the maximum time status history record that is less than or equal to the date of the report currently being submitted to the Clearinghouse. A status date is *not* reported if a student increases from a lower status to a higher status in a subsequent report to the Clearinghouse during the same term.

## Overall Data Requirements

The following are set-up requirements which only need to be completed once.

### Establish Time Status Codes

Codes and descriptions for institutionally defined student time statuses should be established on the Time Status Code Validation Form (STVTMST). For each code, a National Student Clearinghouse (NSC) equivalent value must be designated.

#### Note

An exception to this is a code and a rule which must be built for 0.00 minimum and 0.00 maximum credit hours applicable to each student level and a system-required code of 99 - Error Calculating Time Status - refer to the section on establishing Time Status Rules below for more detailed information. ■

The NSC equivalents are limited to three specific values: *F* for full-time, *H* for half-time, and *L* for less than half-time. It is possible that an institution may have multiple time status codes that would equate to the same NSC equivalent. For example, an institution may wish to distinguish between three-quarters and half-time enrollment with separate codes. For purposes of reporting to the Clearinghouse, both of these codes would be equivalent to *H* - half-time.

### Establish Time Status Rules

Institutionally specific student enrollment time status rules should be defined on the Time Status Rules Form (SFATMST). When establishing rules, the following guidelines are recommended.

1. Include rules for all valid student levels for time status calculations.

#### Note

**(Student) Level** is not a required field on the form. If a rule does not include a specific student level, it will apply to all student levels that may exist. ■

2. For each rule, at least one course level is required in the Time Status Level section. Enter the course level(s) that should be included in calculating time status for each individual rule.
3. Build rules so no gaps exist between hour ranges.

For example, if half-time enrollment is at least 6 but not more than 12 credit hours, and full-time enrollment is 12 credit hours or more, do not specify the half-time rule minimum and maximum credits as 6 and 11, and the full-time rule minimum and maximum credits as 12 and 99. If a student can take a combination of courses that will total to a fractional amount between 11 and 12 (such as 11.5 credits), then the student will not match a rule. To avoid such a problem, designate the half-time rule

minimum and maximum credits as 6 and 11.99. Equate each rule to an NSC equivalent of either *F* - full-time, *H* - half-time, or *L* - less than half-time, with the exception noted in item 4) below.

4. Build a rule that designates both the minimum and maximum credits as 0.00 for every student level. *Do not equate the time status code for this rule to an NSC equivalent.*

This rule is needed to accurately reflect a withdrawal from all courses in the Time Status History window in SFAREGS. A system-required value is not dictated so that a meaningful institution specific code and description can be built. If such a rule does not exist, and a student withdraws from all courses, the first record in the display in the Time Status History window will be the system-required code 99 - Error Calculating Time Status. (Suggestion: Build one rule, and do not specify a student level, so that the rule will be selected for all students, regardless of their level, if credit hours drop to zero (0).)

5. Do *not* build a rule for the system-required 99 (Error Calculating Time Status) time status code.

This code is reserved for the purpose of updating and inserting time status records with the value of 99 when the system is unable to calculate time status. A current time status code of 99 will alert the user that a problem was encountered when the system attempted to calculate time status. Please refer to error messages in the Time Status Calculations section below.

6. If necessary, time status rules may be updated in subsequent terms if student enrollment rules change, by adding rules with a new effective term code.

For example, in term 199301, a student is considered to be half-time if enrolled for at least 6 but less than 9 credits hours. In term 199601, new rules take effect so that to be considered half-time, a student must be enrolled in less than 12 credit hours. To accommodate the change effective in 199601, a new rule should be added with an effective term of 199601 with the new minimum and maximum credits.

## Establish Institution FICE Code for Reporting

Enter the correct FICE code for your institution in the **Institution FICE Code** field on the the Academic History Control Form (SHACTRL). The FICE code entered is reported in the extract file that is sent to the Clearinghouse. This field is not currently used for any other purpose in the Banner Student System.

## Establish Term Control for Time Status Calculation

The following is a set-up requirement which needs to be completed on a term-by-term basis.

For each term that student enrollment information should be reported to the Clearinghouse, set the **Calculate Time Status (Indicator)** on the Term Control Form (SOATERM) to *Y* or checked if dynamic time status calculations should be performed in

online forms that add or update credit hour (non-CEU hour) enrollment. As an alternative to performing time status calculations dynamically, time status records can be created in batch with the Time Status Calculation Update Process (SFRTMST). (See additional information about the SFRTMST process in the “Time Status Calculations” section below.) This indicator defaults to *N* or unchecked when controls are initially created for a new term.

### Establish Time Status Hours

You can retain previous hours on a course before a dropped/withdrawn status is recorded for use in the time status calculations as defined in the time status rules. The **Count in Time Status (Indicator)** on STVRSTS is used to provide control of the hours to be used in time status calculations. When the **Count in Time Status (Indicator)** is checked, the time status hours are set to the last credit hour value that was counted in enrollment for the course. When the indicator is unchecked, the time status hours are set to zero for the course. This allows an institution to set the **Count in Enrollment (Indicator)** to unchecked for institutional processing without impacting the time status calculation. The time status calculation process will produce a sum of the time status hours values that is displayed on SFAREGS.

### Establish Attempted Hours

You can retain hours that existed on a course before a dropped or withdrawn status was recorded so they are counted in the attempted hours for GPA data in academic history. The **Count in Attempted (Hours Indicator)** on STVRSTS is to control attempted hours that will be rolled to academic history. When the **Count in Attempted (Hours Indicator)** is checked, attempted hours are set to the last credit hour value that was counted in enrollment for the course. When the indicator is unchecked, the attempted hours are set to zero for the course.

#### Note

Attempted hours are displayed on SFAREGS and SFASTCA. SHATCKN also displays the institutional course attempted hours that have been rolled after grading. ■

The **Count in Enrollment (Indicator)** on STVRSTS can be unchecked, and credit hours will be *0.000*, but the Financial Aid Satisfactory Academic Progress processing will report the hours in academic history that existed prior to the withdrawal or drop. This allows an institution to set the **Count in Enrollment (Indicator)** to unchecked for other institutional processing without impacting the attempted hours that are rolled to history.

### Establish Withdrawn Enrollment Status

The **Third Party Withdrawal Indicator** on STVESTS is used to determine the withdrawn status of a student for NSC/NSLDS reporting. It also provides reporting that will not affect the return of financial aid funds, due to a mismatch in reporting based on a student’s withdrawal from a course.

If the **Third Party Withdrawal Indicator** is checked for the student's enrollment status code, the student will be reported as withdrawn to the NSLDS or NSC through the Clearinghouse Extract Report (SFRNSLC) and the NSLDS SSCR Process (SFRSSCR). If the **Third Party Withdrawal Indicator** is unchecked for an enrollment status code that is assigned to a student on SFAREGS, even if the **Affect Headcount (Indicator)** is also unchecked, the report processes will not consider the student as withdrawn and will report the last time status for the student.

The **Third Party Withdrawal Indicator** allows institutions to report a student as withdrawn for NSC/SSCR reporting purposes, even though the student may still be enrolled at the institution. For example, a student may drop all regular credit courses but may still be enrolled in CEU (Continuing Education Unit) courses. This permits the **Affect Headcount (Indicator)** to be set as needed for other processing and reporting, such as unduplicated headcounts.

### Establish Leave of Absence for Reporting

The **Third Party Report Indicator** on STVLEAV indicates whether a leave of absence is to be selected from the general student record and reported as a leave by the Clearinghouse Extract Report (SFRNSLC) and the NSLDS SSCR Process (SFRSSCR). This allows institutions to define leave of absence codes that should not be reported to the Clearinghouse or NSLDS by setting the **Third Party Report Indicator** to *N* or unchecked.

## Time Status Calculations

### Update and Insert Time Status Records

As mentioned above, the value of *Y* or checked for the **Calculate Time Status (Indicator)** on the Term Control Form (SOATERM) results in dynamic time status calculations and update and insert of time status records on the Student Course Registration Form (SFAREGS), the Registration Mass Entry Form (SFAMREG), and in the Telephone Registration processing. These time status calculations write a time status history record when a time status is calculated for the first time in the term, and also when a change in time status has been calculated. The history of status changes is stored in the time status history table.

In addition, the most recently calculated time status is updated and stored on the registration term header record. User overrides to calculated time statuses are permitted in the Student Course Registration Form (SFAREGS). Detailed time status processing information on the individual forms is described below.

### Dynamic Calculation of Time Status and Update/Insert of Records

#### Note

Time status calculations occur in SFAREGS, SFAMREG, telephone registration, and Web registration only when the **Calculate Time Status (Indicator)** on SOATERM has been set to *Y* or checked. No messages

are included in those forms to inform the user that the indicator is set either to *Y* (checked) or *N* (unchecked) on SOATERM. ■

In SFAREGS, SFAMREG, telephone registration, and Web registration, where processing can affect a student's total credit hours enrollment (*CEU credit hours are not included in Clearinghouse processing and reporting*), the existing time status code is “remembered” in the form prior to the occurrence of any processing. After processing has been completed in each form and you perform either an Exit or Rollback function, the total credit hours as a result of processing are read from the database, and the current/new time status is retrieved from the database.

Within each form, the previously existing (“remembered”) and the current/new time status codes are compared, and if they are different, a time status history record is inserted, and the registration term header record is updated. The calculation uses the time status rules on the Time Status Rules Form (SFATMST) and determines the time status code that matches the qualifying credit hours enrollment.

### **SFAREGS - System Time Status Calculations, Functionality, and Error Messages**

During student course registration processing, a student's enrollment time status is calculated after additions and/or changes have been completed and saved in the form, and you perform an Exit or Rollback function. Changes in student information, such as college, campus, degree, major, or student type, may or may not result in a change to a previously calculated time status, depending on whether institution-specific rules exist for differences in any one or more of those characteristics. Changes in course registration and/or student information may or may not cause a new time status to be calculated, depending on the rules that have been established.

The autohelp message *\*WARNING\* Unable to calculate time status. Check rules on SFATMST* displays if time status calculations have been enabled on the Term Control Form (SFATMST), but no time status rule can be found which matches the range of hours, student characteristics, and course levels that exist in the student's registration record. When this message displays, the system inserts a time status history record with the system-required code of 99 - Error Calculating Time Status, and also updates the registration term header record with the code of 99. The error should be investigated by examining the rules on SFATMST.

After the problem has been found and corrected, the student registration where the error occurred should be accessed again on SFAREGS. Performing two Next Block functions (cursor will be in the Course Registration section), Save, then a Rollback or Exit function will update the time status calculation, if appropriate. Correcting the problem will not delete the time status history record of 99. That record remains as an historical record, and the new record will be inserted.

#### **Note**

Refer to the Time Status Calculation Update Process (SFRTMST) in the “Reports” section of this chapter for an alternative to online reprocessing

when problems with the time status rules have been found and corrected. ■

To view the history of student enrollment time statuses that have been calculated, select View Time Status Information from the Options Menu or perform a Duplicate Item function from the **ID** or **Date** fields when you are in the Key Information of the form. This displays the Time Status History window. The time status records are displayed in reverse chronological order (most recent changes first). An Edit function can be performed on the (**Time Status**) **Date** field in the window to display the full date and time that the time status calculation was performed, in the format DD-MON-YYYY HH24:MI:SS. No fields in the display are updateable, and existing records cannot be deleted.

The Time Status History window cannot be accessed unless registration exists for the term (at minimum a registration term header record). If you attempt to access the Time Status History window when no registration exists, the message *\*ERROR\* Registration MUST exist for term before updating time status history* displays. The source of the calculation, either SYSTEM or USER will display. The Banner user ID (Oracle ID) of the user associated with both SYSTEM and USER calculations is stored in the time status history table, but is not currently displayed online. For auditing purposes, access to that information is available by authorized personnel through SQL\*Plus.

When a time status history record is added, the registration term header record is also updated with the new/current time status code, time status date, time status maintenance indicator (either “S” -SYSTEM or “U” - USER), and the Banner user ID (Oracle ID) responsible for the update to the record. The Banner user ID field from the time status history record, as well as from the registration term header record, is not displayed from any existing form in the Student System, but for auditing purposes, access to that information is available by authorized personnel through SQL\*Plus. The other fields are displayed in the Time Status History window on SFAREGS. (The values actually displayed are from the time status history table, and not from the registration term header table, but they would be the same.)

## Overriding System Time Status Calculations

Time statuses that have been calculated by the SYSTEM can be overridden by the USER. To override a previously calculated time status, first access the Time Status History window in the Key Information of SFAREGS. Next, perform an Insert Record function, and add the override time status code that is appropriate. If desired, the List function can be performed from the **Time Status (Code)** field to display the valid time status codes from the Time Status Code Validation Form (STVTMST). The time status date on the added record will default to the current date, but may be overridden. The Source will default to USER.

After the USER record has been added and saved, it cannot be modified or deleted. If an incorrect time status was entered, either a new record should immediately be added with

the correct time status, or the existing record should be updated in the time status history table by authorized personnel through SQL\*Plus.

 **Note**

*Once a USER override time status history record exists, subsequent SYSTEM time status calculations will not occur for the student for that particular term.* ■

If registration changes after a USER time status history record exists, the message *\*WARNING\* Time status information MUST be updated manually* is displayed on autohelp line of the Student Course Registration Form (SFAREGS).

Users who have access to add and/or update registration information on SFAREGS also have access to add manual (USER) time status history records in the Time Status History window. There is no separate form level security access for the window. Users can selectively be prevented from being able to add manual (USER) time status history records by controlling grants to the time status history table.

### Back Dating Registration

If you back date the date in the Key Information of SFAREGS, be aware that the time status history record that may be calculated and inserted will be date stamped with the current date (Time Status Date). If desired, a user-added time status record may be added with the back-date. Also note that if a user time status record is added with a time status date that is chronologically earlier than the system calculated record, no future system calculations will occur, because an indicator has been set on the registration term header record.

### SFAMREG - System Time Status Calculations, Functionality, and Error Messages

A time status calculation is performed for each student added or dropped from a section, and a new time status history record is created if appropriate. If an appropriate rule cannot be found to calculate a new time status for a student the message *\*WARNING\* Unable to calculate time status for ID <student ID>. Check SFATMST rules* is displayed in the **Message** field in the Results window.

When this message displays, the system inserts a time status history record with the system-required code of 99 - Error Calculating Time Status, and also updates the registration term header record with the code of 99. Each problem should be investigated and resolved by examining the rules on the Time Status Rules Form (SFATMST). After each problem has been corrected, the student(s) with the error(s) should have their time statuses updated properly. Correcting the problem and recalculating time status will not delete the time status history record of 99. The 99 record remains as an historical record, and the new record will be inserted. How this is done depends on whether the course that was dropped was also deleted, and also on the user's preference for updating dynamically

online or in batch at a later date. If desired, updates in batch can be performed by the Time Status Calculation Process (SFRTMST) at an appropriate time.

 **Note**

Refer to the Time Status Calculation Update Process (SFRTMST) in the “Reports” section of this chapter for detailed information about batch time status processing. ■

If a manual (USER) time status history record exists for a student being processed on SFAMREG, the message *\*WARNING\* Time status history for ID <student ID> MUST be updated manually* is displayed in the **Message** field in the Results window. When this warning message displays, institutional policies and procedures will determine if the user should update the time status history manually in the Time Status History window in the Student Course Registration Form (SFAREGS).

 **Note**

The warnings that are detected by the Student Course Registration Form (SFAREGS) and the Registration Mass Entry Form (SFAMREG) are not considered to be fatal errors, and do not stop or interfere with processing of course registrations. ■

### **Telephone Registration Processing - System Time Status Calculations, Functionality, and Error Messages**

Please refer to the Banner Voice Response user documentation for more information on telephone registration processing.

Because of technical and procedural issues, checks for the warning conditions in SFAREGS and SFAMREG are performed in telephone registration processing for either a rule that cannot be found, or a time status that must be updated manually, but the display of the warning messages has been inactivated. These messages are not displayed in the form processing, because the calculations and error checking cannot be performed until the user either Exits or performs a Rollback after Saving. You may hang up the phone after receiving confirmation of registration and are not technically required to perform an Exit or a Rollback. Therefore, there is no guarantee that a warning message would be consistently conveyed and appropriate follow-up would occur.

As with SFAREGS and SFAMREG, if an error is encountered in attempting to calculate time status, a time status history record with the system-required value of 99 - Error Calculating Time Status is inserted into the time status history table, and the registration term header is updated with the 99 code. These errors will be identified later by either the Time Status Calculation Update Process (SFRTMST) and/or the Clearinghouse Extract Report (SFRNSLC). As is the same case with SFAREGS and SFAMREG, the warnings are not considered to be fatal errors, and do not stop or interfere with the processing of course registrations.

## SFPFREQ - System Time Status Calculations, Functionality, and Error Messages

The Course Request Update Process (SFPFREQ) inserts course registration records via a parameter which optionally calculates and adds a time status history record for the processing term. If this process was run without calculating and adding time status history records initially, the Time Status Calculation Update Process (SFRTMST) could be run at a later time to create and update the time status records.

### Batch Calculation and Update/Insert of Time Status Records

The Time Status Calculation Update Process (SFRTMST) calculates time status and updates/inserts time status records if appropriate in a batch mode. If dynamic time status calculations have not been enabled for the term by setting the **Calculate Time Status (Indicator)** on SOATERM to *Y* or checked, or if the indicator has been turned on and off one or more times during the term, this process must be executed to calculate students' time statuses and update/insert time status records that are needed for the Clearinghouse Extract Report (SFRNSLC).

This process uses the **Count in Time Status (Indicator)** on STVRSTS for each course registration status code on each CRN to determine which sections are included in the time status calculation. The time status calculation will use the sum of the credit hour hold values (SFRSTCR\_CREDIT\_HR\_HOLD) where the **Count in Time Status (Indicator)** is set to *Y*. Therefore, if the **Count in Time Status (Indicator)** is checked for a course registration status code on STVRSTS, the SFRSTCR\_CREDIT\_HR\_HOLD value will be used. Otherwise, time status hours will default to zero for the course. This allows an institution to set the **Count in Enrollment (Indicator)** to any value needed for institutional processing and without creating any processing issues for the time status calculation.

The SFRTMST process should be run in audit mode first to review any error conditions that may need to be resolved before making permanent changes to the database in update mode. The process can be run in audit mode as many times as desired without any adverse effects on the data. For example, the process can be run multiple times in audit mode for different combinations of campus and/or level so that individual outputs can be directed to appropriate offices, departments, or individuals for review. After necessary corrections have been made, it is recommended that update mode be processed for all levels and campuses, so that all students are updated simultaneously.

The process selects all students registered for the term, and determines if the existing time status in the database is the same as the time status that is calculated when the process is run. If the calculated time status would be different, the student is selected for printing on the report. For each selected student, the existing time status code (if one exists), the revised time status code (what the current calculated time status would be), and an appropriate comment are printed on the report. The following is a list of all of the possible comments which could be included in the output, and a description of what each indicates. The comments fall in two groups: 1) comments indicating that the status of a student is different from one of the “enrolled” statuses (either *F* - full-time, *H* - half-time, or *L* - less

than half-time) and that they do not have a time status reported; and 2) comments pertinent to enrolled students who require a time status to be reported.

The process also calculates the student centric period time status in addition to the existing term time status when the student has a cycle designator in effect for the registration term and CRNs being processed. A new student centric period time status history record is inserted in SFRSTSH if the time status for the student centric period has changed since the last update. If the time status has not changed, no additional record is created. When a student has a manually inserted time status record, no additional time status record is inserted.

Comments for students with statuses that do not have a time status reported:

1. Deceased - Student is deceased
2. Withdrawn - Student has withdrawn
3. Graduated - Student has graduated
4. Leave of Absence - Student is on a leave of absence

Comments for enrolled students who require a time status to be reported:

**1. *MUST be updated manually***

This indicates that the most recent time status history record for the student is a USER-entered override time status. These students should be reviewed to determine if the USER time status code is still appropriate. If any student with a USER time status should be updated, the update could be performed by adding another USER (manual) time status in the Time Status window in SFAREGS, or the existing registration term header record could be updated in SQL\*Plus by authorized personnel. If the registration term header record is updated to allow SYSTEM time status calculations to resume, the existing USER time status history record remains as a historical record, but subsequent changes, if any, to the student's enrollment may result in additional (future) SYSTEM time status records.

**2. *ERROR - Must be resolved***

This message appears when an error is encountered when the process attempts to calculate the student's current time status. The system-required 99 (Error Calculating Time Status) displays as the revised code on the printed output. You must diagnose and resolve the problem. It is likely that a problem exists in the Time Status rules. You should investigate the student's current registration, and compare the student's characteristics and levels of the registered courses against the existing Time Status Rules to determine the problem. After correcting any problems with the Time Status Rules, the SFRTMST process can be run again. If the changes have successfully resolved the problems that caused the 99 codes to display on the report, the 99 codes should now be replaced by other "real" calculated time status codes.

### 3. \*\*

A legend centered at the beginning of the report output indicates that the students will have their time status updated if the process is run in update mode. The number of students in this group may be significantly large if dynamic time status calculations have not been enabled for all or part of the term. When the **Calculate Time Status (Indicator)** on SOATERM has been set to *N* prior to running this process, there will be no value in the column displaying the existing time status on the report output.

If all enrolled students for the term have time status records that are current, and there are no students who are deceased, graduated, withdrawn, or on leave of absence, and if there are no enrolled students with USER (manual) time status records, the output of SFRTMST will print the statement *No Time Status Records to be Updated*.

The process can be used to serve several purposes. First, it can be used to update/insert time status records after certain errors, such as gaps or other types of errors in Time Status Rules, have been corrected. If the process does update/insert time status records, the value of “SFRTMST” will be inserted in the USER field in both the registration term header record and the time status history record. Second, it can be used to verify that students with USER (manual) time statuses are valid. Third, it can be used to detect procedural inconsistencies. An example of a procedural inconsistency would be when a student has a time status that equates to the institution rule where minimum and maximum credit hours are zero (0), and has actually withdrawn from the institution, but displays on the output. This would be an indication that the student's enrollment status had not been changed to a status (SFAESTS for the registration term) where the **Third Party Withdrawal Indicator** was set to *Y* or checked (STVESTS).

#### **Warning**

The timing of the execution of this batch process is critical. ■

Time statuses are calculated and time status history records updated/inserted with an activity date that is equal to the day the process is executed. If, for example, your institution determines time statuses will always be processed in batch, careful consideration must be given to the dates when the batch process should be executed so that the information that is reported to the Clearinghouse is accurate as of the intended reporting dates. It is not possible to calculate time status and insert time status history records as of a point in time in the past, because a complete historical audit of course registration changes is not available in the database. If a report needs to be submitted to the Clearinghouse on September 10, the batch process would need to be executed prior to September 10.

The batch process allows you to control the frequency of the calculation of time status and update/insert of time status history records. Depending on the frequency of execution, some historical changes may not be reflected when reviewing a student's time status history online in SFAREGS. For example, consider the following registration history for a student, and assume that the **Calculate Time Status (Indicator)** on SOATERM has been set to *N* or unchecked:

*Example registration changes:*

September 1	13 credit hours	Full-time status
September 6	8 credit hours	Half-time status
September 15	12 credit hours	Full-time status

*Example batch processing and update of time status history:*

September 2	Full-time status
September 10	Half-time status

If the batch process was run for the first time on September 2nd, this student would have a time status history record indicating full-time status inserted for that date. If the next batch process was run on September 10th, this student would now have a new time status history record inserted, because their current time status is half-time. The batch process provides point-in-time updates to time status history, but would not reflect changes that may have occurred between the distinct points in time of batch updates.

If the date of the first report to the Clearinghouse was September 20, the student would be reported as half-time. This would not be correct, because the student had actually added additional courses on the 15th of September which returned them to full-time status. Because the batch time status update was not run after September 15th, the time status was not updated/inserted properly.

 **Warning**

Time status cannot be calculated for a point in time in the past, because a complete history of all registration changes is not available in the database. The Clearinghouse report depends on timely and accurate information in the time status history table. It is critical that batch time status calculations are planned, so that time status history data is current and accurate for Clearinghouse reporting. ■

## Reporting to the Clearinghouse (SFRNSLC)

Your institution should contact the Clearinghouse directly to arrange for transmission of EDI or EDI.Smart™ extract files. The Clearinghouse can accept files that are sent using FTP, as well as files sent on diskette. The Clearinghouse can be contacted as follows:

National Student Clearinghouse  
13100 Worldgate Drive, Suite 245  
Herndon, VA 22070  
Phone number: (703) 742-7791  
Fax number: (703) 742-7792

## Report Processing Overview

The Clearinghouse Extract Report (SFRNSLC) includes three run mode options:

1. report of missing or invalid data,
2. EDI output, and
3. EDI.Smart output.

Prior to extracting and submitting the extract file to the Clearinghouse, the report should be run in the missing or invalid data mode as many times as needed to detect and then correct certain types of errors, as described in the next section. In addition, if the **Calculate Time Status (Indicator)** on SOATERM has been set to *Y* or checked, the Time Status Calculation Update Process (SFRTMST) should be run to update/insert time history records prior to creating the extract file so that students' time statuses are current. Either the EDI or EDI.Smart output run mode options will produce the extract file of student enrollment information which is submitted to the Clearinghouse.

## Identifying and Correcting Missing or Invalid Data

The report of missing or invalid data detects the following problems with data, which must be fixed by users or authorized technical personnel either online or through updating the database through SQL\*Plus, or other programmatic means.

The following are the error messages that may print on the report, the source of the error, and what is required to fix the error:

- *No Institution FICE code on SHACTRL*

This message indicates that the **Institution FICE Code** field on the Academic History Control Form (SHACTRL) is blank. The correct institution FICE code should be entered online in the form.

- *No SSN Number on SPAPERS*

This message indicates that the **SSN/SIN/TIN (Social Security Number, Social Insurance Number, Tax Identification Number)** field on the General Person Form (SPAPERS) is blank. The social security number is required for all students that are reported to the Clearinghouse. A social security number must be entered in this field, even if it is used as the student's ID number.

- *No Date of Birth on SPAPERS*

This message indicates that the **Birth Date** field on the General Person Form (SPAPERS) is blank. The date of birth is *not* required for all students that are reported to the Clearinghouse, but it is recommended. When a record is submitted with a blank birth date, zeroes are inserted in place of the birthdate.

A DMG segment exists in the records after the IN2 segment with 7 segments, where only the second segment needs to be populated with the date of birth from SPAPERS (SPBPERS\_BIRTH\_DATE).

For example, for Daniel Earp ( ID is @00000976), with birthdate of Feb. 27, 1934, with format CCYYMMDD:

```
ST|190|000000126
BGN|11|000000126|000228|1350|ES
ENR|EB4|UN|||||Y|Y|D8|20000228
DTP|382|RD8|19970901-19971215
DTP|007|D8|19981219
ENT|01|S2|34|
IN2|02|Daniel
IN2|05|Earp
DMG||19340227|||||<-----here
N3|123 Easy Street
N4|Malvern||193554209
ENT|02|M8|DS|999900||||U2|Fall 1997
SE|12|000000126
```

- *No Address on SPAIDEN*

This message indicates that address information could not be found for the address hierarchy that was entered. For example, if 1MA and 2 PR were the address types selected for the report, this message would indicate that neither an MA or PR address type could be found for the student. If it appears that the student does have an address that matches the hierarchy that was entered, the error message is probably caused by the effective date of the address not being valid for the report date. (The effective date of the address needs to be prior to the report date; addresses effective the same date as the report date are not selected.)

Address information is required for all students that are reported to the Clearinghouse. An address with an effective date prior to the report date must be entered that will match the address hierarchy that is used for the report.

- *No Expected Grad Date on SGASTDN*

Students who have been identified as full-time, half-time, or on a leave of absence require the expected graduation date to be reported. This message indicates that the **Expected Graduation Date** on the General Student Form (SGASTDN) is blank. An expected graduation date must be entered in this field. This field is located in the Graduation Data window, which is accessed by selecting Graduation Status from the Options Menu.

 **Note**

The expected graduation date on the general student record will roll to the **(Anticipated) Graduation Date** on the Degrees and Other Formal Awards Form (SHADEGR) during the first grade roll to academic history, (either performed online with the Class Roster Form (SFASLST) or in batch with the Grade Roll to Academic History (SHRROLL)). ■

- *No Graduation Date on SHADEGR*

Students who have been awarded a degree (have a status of graduated) require the (anticipated) graduation date to be reported. This message indicates that the **(Anticipated) Graduation Date** on the Degrees and Other Formal Awards Form (SHADEGR) for a degree with an **Awarded Indicator** of A (from the Degree Status Code Validation Form (STVDEGS)), where the level of the degree matches the level of the current general student record, is blank. An (anticipated) graduation date must be entered in this form.

- *No Time Status on SFAREGS*

Students who are enrolled for the term must have a time status history record that has been created before the reporting date so the time status can be reported. This message indicates that no time status history record exists for the student, because an error described previously in SFAREGS or SFAMREG processing was not resolved, or because an error prevented time status from being calculated in telephone or Web registration, or because the **Calculate Time Status (Indicator)** was not set to Y or checked on SOATERM when registration processing occurred. The Time Status Calculation Update Process (SFRTMST) should be executed to calculate time status and update/insert time status records that are missing. If any errors prevent the batch calculation of time status and/or the update/insert of a time status history record, the specific error will be described on the report output of the SFRTMST. Depending on the error, corrections (such as changes to the Time Status Rules) may be required online.

- *No NSC Equiv for <time status code> on STVTMST*

If this message displays with your institution time status code for 0.00 minimum and 0.00 maximum credit hours, it means that the enrollment status for the student's registration record has a **Third Party Withdrawal Indicator** of N or unchecked on the Student Enrollment Status Validation Code Form (STVESTS). Students who withdraw completely from classes must be updated on SFAREGS with a student status that has the **Third Party Withdrawal Indicator** set to Y or checked on STVESTS. If a student drops all courses (credit hour total would be zero (0) for the term), but the student enrollment status does affect the headcount, the Clearinghouse Extract Report will select the student as enrolled for the term.

- *Time Status Calc Error on SFAREGS*

This messages indicates that either an error exists which prevents the student's time status from being calculated successfully, or the student's time status was not recalculated either online or in batch after appropriate corrections were made following a diagnosis of the cause of the problem. Viewing the time status history record on SFAREGS displays the system-required code of 99 (Error Calculating Time Status) as the most recent time status. The error should be diagnosed and the problem corrected. It is likely that there is a problem with the time status rules. After the problem is corrected, the time status can be recalculated online in SFAREGS or in batch with SFRTMST.

The process should be run in the report of missing or invalid data mode as many times as necessary, and all errors resolved until the message *No invalid or missing data for the <term code> term* prints on the output. When that message displays, it indicates that all the preceding error conditions have been resolved.

The process does *not* check for the following types of conditions or errors:

1. Use of fields for purposes other than that designated for baseline processing.

For example, a different type of number other than social security number is stored in the **SSN/SIN/TIN (Social Security Number, Social Insurance Number, Tax Identification Number)** field on the General Person Form (SPAPERS). Institution-specific use of the leave of absence fields and the student enrollment status fields should be examined for possible problems in reporting to the Clearinghouse (see previous section on Identifying and Correcting Missing Data discussed in the Reporting to the Clearinghouse section).

2. User updates to time status codes and rules during a term.

Changes made to Time Status codes and rules will *not* cause prior existing time status history records to be recalculated and updated. Rules should be tested thoroughly prior to implementing in production to avoid changes after time status history records exist for a term. If rules are modified, the Time Status Batch Calculation process (SFRTMST) could be run to update students' time status records, if applicable, based on changes to the Time Status Rules. This situation should be avoided, because time status cannot be recalculated for a point in time in the past.

## Creating the Extract File for Submitting to the Clearinghouse

After all errors have been resolved, the Clearinghouse Extract Report (SFRNSLC) can be run in either the EDI or EDI.Smart mode to produce the flat file that can be submitted to the Clearinghouse. Only institutions that have licensed EDI.Smart and have contacted the Clearinghouse and made appropriate arrangements for the transmission of an EDI.Smart file should select that run mode.

You can use population selection when creating the extract file, to create the population that is reported based in institutionally defined needs. This also allows you to report time status for students each time the process is run, regardless of the amount of credits they are registered for. The SFRNSLC process will select students in the population selection, and any students that do not have an SFBETRM record will be listed on the output, when the Run Mode parameter is set to *I*.

The report also processes information based on terms that are part of a student centric period. Data comes from the SFASTSR and SFASCPR forms.

The possibility exists, when using population selection, that a student may have multiple time status records, and a change in the status record be reported to the NSC even if the student was never previously reported. In this case, if a student is submitted to the NSC with a change of status, and that student was not previously submitted, the NSC will

continue their current practice of automatically removing the change of status record from the file and will then submit the students' current status when providing the submission to the lending institutions.

*For example:*

On July 1, Student A and Student B both register as full-time students.

On July 15, the institution runs a population selection report for SFRNSLC that includes only Student A, and the report is submitted to the NSC.

On July 30, Student B drops from full-time to half-time status.

On August 1, the institution runs a population selection report for SFRNSLC that includes Student B, and the report is submitted to the NSC.

Student B is reported as having a “drop in status”, because he went from full-time to half-time between the dates of the first and second runs of SFRNSLC, even though he was not transmitted in the first run. The NSC is receiving a status change record for Student B, even though they have no prior status for him. The NSC has always, and will continue to, remove the change of status row for a student who was not previously reported, prior to submitting the data to the lender.

The report uses the **Third Party Withdrawal Indicator** on STVESTS to determine students who have withdrawn. When the **Third Party Withdrawal Indicator** is checked for the student's enrollment status code, the student will be reported as a withdrawn student to the NSLDS or NSC through the SFRNSLC report. When the indicator is unchecked, the SFRNSLC report will not consider the student as withdrawn and will report the last time status for the student that was calculated by the time status rules.

The report uses the **Third Party Report Indicator** on STVLEAV to select the leave of absence codes for the student. When the indicator is checked, the report will only select leave of absence codes from the general student record to report the leaves to third parties.

The Create Summary parameter is used to produce a summary report/overview of the data to be transmitted to the NCS. This summary can be used to easily view student information such as: names, Banner IDs, SSNs, dates of birth, enrollment statuses, term start and end dates, and graduation dates. This file is created in addition to the pipe-delimited files and the missing/invalid data report that are produced by SFRNSLC.

The flat file produced by the SFRNSLC process can be transmitted using an institutionally defined branch code in the Branch Code parameter. Enter the two digit branch number code to be associated with the header record and individual records when transmitted in the file to third party agencies. If left blank, 00 is defaulted in.

- If your institution maintains student records under multiple OE (FICE) numbers or branch codes, you can run a separate report for each OE number or branch code combination. For example, you could run one report for the medical school and one report for all other students.

- If your institution maintains student records under one OE number, but has academic programs with different terms or mandatory attendance periods, you should consult the Clearinghouse as to your reporting expectations. (For example, medical schools often have different attendance periods than undergraduate schools.) You may want to generate separate data for the different academic programs and differentiate between them by using an “alternate” branch code or the official branch code.

The files created by SFRNSLC are handled as follows:

- When SFRNSLC is run through job submission (GJAPCTL), three files are created and stored in the job submission directory:
  - sfrnslc\_oneup#.log
  - sfrnslc\_oneup#.lis
  - sfrnslc\_oneup#.txt
- The sfrnslc\_oneup#.log and sfrnslc\_oneup#.lis files are viewable on the GJIREVO form.
- The sfrnslc\_oneup#.txt file can be found in the job submission directory.

When the Run Mode parameter is set to 1 (Report of Missing/Invalid Data), no output is created for the pipe-delimited data file (.txt). Only the error report (.lis) is created with a control page and a .log file.

When the Run Mode parameter is set to 2 (EDI TS190) or 3 (EDI.Smart TS190), and the Create Summary Report parameter is set to Y, (create a summary report for Run Modes 2 (EDI TS190) and 3 (EDI.Smart TS190)), the summary report is created (.lis) with a control page. The pipe-delimited file is created (.txt), and a .log file is created.

When the Run Mode parameter is set to 2 (EDI TS190) or 3 (EDI.Smart TS190), and the Create Summary Report parameter is set to N, (do not create a summary report for Run Modes 2 (EDI TS190) and 3 (EDI.Smart TS190)), the summary report is created (.lis) with the message: *Summary Report Not Requested*, and a control page is printed. The pipe-delimited file is created (.txt), and a .log file is created.

### Initial Reporting Versus Subsequent Reporting for the Same Term

The Clearinghouse Extract Report inserts a row in the SFRTCTL control table each time run mode 2 (EDI) or run mode 3 (EDI.Smart) is selected. The first report for the term is identified by the process by determining that the combination of term code and report flag from the process parameters entered does not currently exist in the control table. As part of the processing, the row is inserted with the term code, report date, report flag, and activity date.

A subsequent report for the same term is identified by determining that the combination of term code and report flag from the process parameters entered does exist in the control table. If more than one row exists, the most recent row historically is used in the process

to find the report date of the previous run, which is then used to determine if changes have occurred in student enrollment since the previous report.

## Using Multiple Branch and FICE Codes

The SFRNSLC report and the SFRTCTL table process Branch and FICE codes. This allows institutions to run SFRNSLC for multiple branch campuses and ensures appropriate time status results.

Four optional scripts are delivered for use by institutions that have already run SFRNSLC for multiple Branch codes. These scripts allow institutions to alter the control file for terms that are still being submitted by creating control records for all Branch and FICE codes that were previously submitted for these terms.

### ***National Student Loan Clearinghouse Data Extract Process Control Table (SFRTCTL)***

The SFRTCTL\_BRANCH\_CDE (Branch code) and SFRTCTL\_INST\_FICE (Institution FICE code) columns on SFRTCTL are used with the Term Code and Report Flag parameters in SFRNSLC, when the process searches the control table for the record from the previous submission.

The SFRTCTL\_BRANCH\_CDE column defaults to 00. The SFRTCTL\_INST\_FICE column defaults from the value that exists on SHACTRL. If no **Institutional FICE Code** value exists on SHACTRL, it will default to 000000.

### ***Using the Institution FICE Code On SHACTRL***

It is strongly recommended that the **Institution FICE Code** value be entered on SHACTRL before the Release 8.2 upgrade scripts are run. For institutions that run SFRNSLC for multiple FICE codes, this would be the FICE code that was last processed for SFRNSLC. If no **Institution FICE Code** value exists on SHACTRL, and the column in the SFRTCTL table is defaulted to 000000, an optional update script (susfrtctl.sql, which is described below) can be used to set the column to the appropriate value.

Institutions that do not run SFRNSLC for multiple branches or multiple FICE codes can ignore the optional scripts. The only exception is, if the **Institution FICE Code** field on SHACTRL is *Null* when the upgrade is performed, the optional update script must be run to set the Institutional FICE Code in the SFRTCTL table to the correct value.

### ***Using the FICE Code Parameter on SFRNSLC***

The FICE Code parameter on SFRNSLC is optional and supports institutions that use different FICE codes for different branch campuses. Enter the FICE code to be reported. If no code is entered, the **Institution FICE Code** value from SHACTRL will be used. If no code exists on SHACTRL, 000000 will default.

The FICE code must exist on SHACTRL, or it must be entered in the FICE Code parameter when the Run Mode parameter is set to 2 (EDI TS190 output) or 3 (EDI.Smart

TS190 output). Submittal .txt files are no longer produced with the FICE code set to 000000. If no FICE code is provided for Run Modes 2 or 3, the value will default to 000000, and the process will terminate with an error.

### **Using the Optional Scripts**

Four optional scripts are delivered that allow users to view, update, insert, and delete records from the SFRTCTL table, after the new columns have been added by the upgrade to Release 8.2.

These scripts only need to be run after the upgrade to Release 8.2. They will not be used on a continuing basis. Those institutions that have already run the SFRNSLC process for multiple Branch or FICE codes in terms that are still active will use these scripts to bring the control table up to date, so that records exist for all the Branch and FICE codes that have already been submitted. After that, SFRNSLC will insert the control records for the correct Branch and FICE codes, whenever the process is run in modes 2 or 3.

Institutions that do not run SFRNSLC for multiple Branch codes or multiple FICE codes do not need to run any of the optional scripts, unless the **Institution FICE Code** value on SHACTRL was *Null* at the time of the upgrade.

No wildcard values (%) may be entered for these scripts. A specific value must be entered for each prompt that is displayed. When a date and/or time is requested, enter the date and time in the format presented, with a single space separating the date and time components.

No commits are performed by the scripts. After running the update, insert, or delete script, you can review the changes by re-running the report script (`srsfrtctl.sql`), to see the effect of the update, insert, or delete process. At that point, you can decide whether you want to save the changes or roll them back.

#### *Report Script - srsfrtctl.sql*

The `srsfrtctl.sql` script is run for the Term and will display SFRTCTL records that exist for the entered term. The `sfrtctl.lis` file is produced, so you can review the output.

#### **Note**

If the report script is run multiple times, the output file will be overwritten each time. If you want to preserve any particular output from the report script, rename the existing `sfrtctl.lis` file before re-running the script. ■

#### *Update script - susfrtctl.sql*

The `susfrtctl.sql` script can be run to update the Branch code and FICE code to the appropriate values on existing SFRTCTL records. (For example, if the institution last submitted a report for the Branch code of 03, they can use this script to update the Branch code on the existing record to 03). Prompts are explanatory as the script is executed.

### *Insert script - sisfrctl.sql*

The `sisfrctl.sql` script can be run to insert records for other Branch codes and FICE codes that were previously run for the term. If an institution last ran SFRNSLC for the Branch code of *03*, they can now insert SFRTCTL records that reflect their previous submissions of Branch codes *01* and *02*.

### *Delete script - sdsfrctl.sql*

The `sdsfrctl.sql` script can be run to delete records from the SFRTCTL table, should there be a need to do so. It contains prompts for Term, Report Date/Time, Standard Indicator, Branch Code, and FICE Code. Only the records that match all entered values will be deleted.

## **Processing Recommendations for Creating the Extract Files**

Time delays should be avoided between obtaining the message of *No invalid or missing data for the <term code> term* when running the Clearinghouse Extract Report in the report of missing or invalid data mode and producing the extract file to send to the Clearinghouse.

Data entry changes even in a short period of time could result in errors being introduced before the data is extracted. Optimally, the processing should be run during off hours to minimize possible additions or updates to data which could introduce new errors.

Subsequent reports to the Clearinghouse for the same term rely on comparing the students' statuses from the previous report to determine any changes in enrollment and reporting of status start dates, if required. A control table is used to store the term, report date, report flag, and activity date each time the EDI or EDI.Smart TS190 output is created by the Clearinghouse Extract Report. For consistency, the user responsible for processing the extract file that is submitted to the Clearinghouse must use the same parameter values for each submission during the same term. It is recommended that the Job Parameter Set Default feature in job submission, which allows a user ID to store more than one set of parameter defaults for the same job, be used to save the parameters that are used each time to process the Clearinghouse Extract file. With this information available online, you can recall the previous set of parameters submitted, update them by changing only the report date, and then save the change to a new job parameter set name.

If an error occurred and was detected in the process of creating the extract file, and the file needed to be created again (either problems with data or incorrect parameters, entered, etc.), it is necessary for authorized personnel to delete the appropriate row or rows from this table in SQL\*Plus. This *must* be done, because subsequent reports for the same combination of term and report flag compare the control table report date from the previous processing date to the time status history table to determine if changes in student enrollment status have occurred.

## Job Stream Processing Alternatives and Recommendations

There are three basic alternatives to job stream processing for reporting to the Clearinghouse. The processing flow is dictated by when, and if, the **Calculate Time Status (Indicator)** on the Term Control Form (SOATERM) is set to *Y*. The options, on a term-by-term basis, for this indicator are:

1. always set to *Y* or checked,
2. always set to *N* or unchecked, or
3. sometimes set to *Y* (checked) and sometimes set to *N* (unchecked).

If processing demands are heavy during peak periods of registration activity, it may be advisable to set the **Calculate Time Status (Indicator)** to *N* or unchecked. If the indicator is set to *N* or unchecked, you should determine, in conjunction with technical personnel, when the Time Status Calculation Update Process (SFRTMST) should be executed. It may be desirable to run this process nightly, possibly in conjunction with registration fee assessment. If it is important to your institution to track all enrollment status changes and the precise dates on which they occur for institutional reporting purposes, it is advisable to run this process daily if the SOATERM indicator is set to *N* or unchecked.

If the **Calculate Time Status (Indicator)** on SOATERM is set to *N* or unchecked during any period of activity that affects registration (online in SFAREGS, SFAMREG, telephone registration, and Web registration), it will be critical to run the Time Status Calculation Batch Process (SFRTMST) *at a minimum of the day before* it is necessary to submit an extract file to the Clearinghouse. It would be advisable to run the batch process to double check for errors that may not have been resolved, even if the indicator had been set to *Y* (checked) and not changed to *N* (unchecked) at any time during processing.

## Additional Information About Clearinghouse Reporting

As the Clearinghouse Extract Report only selects currently registered students, the termination date for previously enrolled students who do not return in a subsequent term reported is handled as follows:

The Clearinghouse maintains the complete history of data that is reported from your institution. Their programs compare current reports with previous reports, and their processing determines that a student has terminated their enrollment if they are not included in the next term reported by your institution. The Clearinghouse will report the termination date as the end date of the previous term. The term start and end dates are data elements that are reported as part of the extract processing.

Students who are enrolled in special programs are considered to be full-time students, and should be reported to the Clearinghouse, but are not registered in any courses, should *not* be enrolled in "dummy" courses for the purpose of reporting to the Clearinghouse. This should be handled as follows:

There are two options, given the current design of Clearinghouse processing.

- First, a registration term header record can be created without actually registering the students in courses (Save in SFAREGS without adding courses). Once this registration term header record exists, a manual (USER) time status record can be entered by accessing the Time Status History window from the Key Information of SFAREGS. Maintaining the information becomes a manual process. Be aware, however, that adding a registration term header record can have many processing consequences in the Banner Student System, including adding to the headcount, causing registration fee assessment to occur if there are “generic” registration fee assessment rules built, affecting IPEDS reporting, etc.
- The second option is to manually edit the extract file.

The process performs an additional check to ensure that the ZIP code length transmitted in the extract file does not exceed the nine positions permitted by the NSC. If a ZIP code longer than nine positions is found, the following message will be printed when the process is run selecting the Report of Missing/Invalid Data run mode option: *Zipcode length exceeds 9 characters*

If this error is found on the report, you should review the ZIP/Postal code for the address record that would have been processed, based on the address hierarchy parameter values. Please note that hyphens (-) are excluded by the process so that a ZIP/Postal code of 12345-1111 will be reported in the extract file correctly as 123451111. Also, any blank spaces that may exist at either the beginning or end of the data are also excluded. Blank spaces contained within the ZIP/Postal code, however, are not automatically removed, because the syntax requirements for the ZIP/Postal code in some cases correctly includes blank spaces (for example, Canada).

## Foreign Addresses

In the N4 segment of the Transaction Set 190 for SFRNSLC, the reference designator N402, data element 156, accommodates foreign addresses. If the student’s selected address does not have a state code, the state code in this data element needs to be populated with a value equal to *FO*. If the value of *FO* is in the State field, then the country code as defined on the SPRADDR record, in reference designator N404, data element 26, needs to be updated with the EDI equivalent country code found in STVNATN\_EDI\_EQUIV.

## Reporting Graduates and Summer Term Enrollment

### Reporting Spring Graduates

The Clearinghouse would like to receive a separate, graduates-only report and will accept a report that includes graduates as well as other students enrolled in the term of graduation. The Clearinghouse has also specified that they prefer the Academic Term data element be in the Header Record of the file reference Spring Graduates, but this is not an

absolute requirement. The SFRNSLC process will print the Term Code Validation Form (STVTERM) description in the Academic Term data element, and this is acceptable.

The most critical part of processing your Clearinghouse file to report Spring Graduates is having the correct response to the SFRNSLC process Report Flag parameter. The Clearinghouse has requested that this report be submitted as a non-standard report. To create a non-standard report for the purpose of identifying Spring Graduates, the response to the Report Flag parameter must be *N*. This identifies that the report is for non-standard term data, and places the proper value in report flag position of the file. For normal term processing, the Report Flag parameter must be set to *Y*.

It is critical that a non-standard report of Spring Graduates be completed and submitted to the Clearinghouse prior to any scheduled file submittal for the next regular term. If your Spring Graduates report is delayed beyond the first submittal for the next regular term (fall, not summer), students who graduated will be assumed by the Clearinghouse to have withdrawn from the institution, because they no longer appear in the file. The Clearinghouse will report these individuals to lenders and guarantors as withdrawn, with the effective date being the last day of the previous term. One consequence is the possibility of having already passed the grace period, leaving little time for lenders to notify the students of repayment obligations and deadlines. This usually is a problem with Fall Graduates, rather than Spring Graduates, because of the limited time between the end of the fall term and the beginning of the winter or spring academic term.

Please be aware that the graduation date that is reported should reasonably reflect the date that the student terminated with the institution. The SFRNSLC process reports the **(Anticipated) Graduation Date** on the Degrees and Other Formal Awards Form (SHADEGR) as the graduation date. This may be an issue if the ceremonial graduation date is recorded in this date, and the actual ceremony is several weeks or months beyond the final day of the semester. Please review your current policy for recording this date, to determine if your procedures are in compliance with this requirement.

## Reporting Summer Enrollment

The Clearinghouse would prefer to receive a report only for summer term students who are enrolled full-time or half-time, but they will accept a submission where other students cannot be excluded. Please be aware that the SFRNSLC process will include all enrolled students for your summer term(s).

As with the Spring Graduates file, the Clearinghouse would like to have the Academic Term data element in the Header Record of the file reference Summer Term. Again, this is not an absolute requirement, and the description for your summer term(s) from the Term Code Validation Form (STVTERM) prints in this data element and is acceptable.

Your Time Status Rules Form (SFATMST) may need to be updated to reflect the correct values for calculating the different enrollment classifications (full-time, half-time, less than half-time) for summer enrollment. Because Banner time status rules are effective-term driven, it may be necessary to add a rule for your summer term(s), and then add

another rule for the upcoming fall term, so that enrollment classifications are calculated correctly.

As with the Spring Graduates report, it is critical that your summer enrollment reports to the Clearinghouse are specified as non-standard reports. To identify the summer report as non-standard, you must set the Report Flag parameter to *N*.

## FERPA and Clearinghouse

The National Student Clearinghouse uses a Data Block Indicator in the Clearing House Extract Report (SFRNSLC) so that schools who participate in the Clearinghouse will remain compliant with The Family Educational Rights and Privacy Act - FERPA. The only items that the block relates to are the name of and dates for the student.

The output of the ENR10 segment record is affected by the Data Block Indicator. The value of the record can be *Y* (Yes, the student requests their name and date information be confidential), or *N* (No, the student does not request their name and date information be confidential).

The **Confidential (Indicator)** on the General Person Form (SPAPERS) must also be set correctly.

- The ENR10 element will be set to *Y* when the **Confidential (Indicator)** on SPAPERS is checked (SPBPERS\_CONFID\_IND = Y).
- The ENR10 element will be set to *N* when the **Confidential (Indicator)** on SPAPERS is unchecked (SPBPERS\_CONFID\_IND = N).

*For example:*

```
ST|190|000000001
BGN|11|000000001|981214|1232|ES
ENR|EB6|UN|D8|20000513|N|Y|D8|19981214
      ^-here the ENR10 element = N
DTP|382|RD8|19970901-19971215
ENT|01|S2|34|5 2443935
IN2|02|Michael
IN2|05|Gates
N3|1640 Yates Avenue
N4|Bronx|NY|10461
ENT|02|M8|DS|999900|U2|Fall 1997
SE|11|000000001
```

## Deletion of Time Status Records

The following processes may be used to delete time status history records.

- The Registered, Not Paid Process (SFRRNOP) can be used to delete any time status history records that may exist for the processing term.

- The Registration Purge (SFPREGS) can also be used to optionally delete any time status history records that may exist for the processing term.

## Troubleshooting - Error Messages

### SFAREGS Error Messages and Resolutions

- *\*ERROR\* Registration MUST exist for term before updating time status history*

This message indicates that the ID for the term in the Key Information is not registered for the term. Time status records cannot be calculated and then viewed and/or updated until registration exists (at a minimum the registration term header record must exist).

- *\*WARNING\* Time status information MUST be updated manually*

This message indicates that a USER (manual) time status currently exists for the ID for the term in the Key Information. This message is not a fatal error. It is an alert to the user that changes in registration will not automatically override a USER (manual) update to time status.

- *\*WARNING\* Unable to calculate time status. Check rules on SFATMST*

This message indicates that a problem was encountered in attempting to calculate a time status for the ID and term in the Key Information. A problem may exist in the construction of the Time Status Rules (SFATMST). Check to make sure there are no gaps in the rules, and that a rule exists for 0.00 minimum and 0.00 maximum credit hours. This message is not a fatal error, but the problem should be investigated and resolved.

- *\*WARNING\* Unable to update SFBETRM*

This message indicates an Oracle grants problem. Contact the DBA for assistance.

- *\*WARNING\* Unable to insert into SFRTHST*

This message indicates an Oracle grants problem. Contact the DBA for assistance.

### SFAMREG Error Messages and Resolutions

- *\*WARNING\* Unable to calculate time status for ID <ID number>. Check rules on SFATMST*

This message indicates that a problem was encountered in attempting to calculate a time status for the student associated with the message in the Results window. A problem may exist in the construction of the Time Status Rules (SFATMST). Check to make sure there are no gaps in the rules, and that a rule exists for 0.00 minimum and 0.00 maximum credit hours. This message is not a fatal error, but the problem should be investigated and resolved.

- *\*WARNING\* Time status for ID <ID number> MUST be updated manually*

This message indicates that a USER (manual) time status currently exists for the ID number displayed in the error message. This message is not a fatal error. It alerts

you that changes in registration will not automatically override a USER (manual) update to time status.

- *\*WARNING\* Unable to update SFBETRM*

This message indicates an Oracle grants problem. Contact the DBA for assistance.

- *\*WARNING\* Unable to insert into SFRTHST*

This message indicates an Oracle grants problem. Contact the DBA for assistance.

## Other Errors and Problems

- No time status displays in the Time Status History window in SFAREGS after registering a student.

The **Calculate Time Status (Indicator)** on SOATERM must be set to *Y* (checked), or if it is set to *N* (unchecked), the Time Status Calculation Update Process (SFRTMST) needs to be run.

- The time status that was calculated seems to be incorrect.

The time status calculation is based on the rules that have been established on the Time Status Rules Form (SFATMST). Those rules should be examined closely. First, determine that there are no gaps in the rules and that a rule exists for 0.00 minimum and 0.00 maximum credit hours for all applicable student levels. Depending on the complexity of the rules, check carefully for the rule that matches all of the characteristics of the student in question -- are there rules for student campus, college, degree, major, etc. Remember that if one of the elements in a rule is blank, it is treated like a wildcard, and all students will match that element, regardless of the value.

For example, if there are two rules for the main campus, and one of those rules is specific to engineering majors, all other majors will be considered by the rule that does not specify engineering majors. Also, examine the course levels included in the rule that you expect the student to meet, and the actual level of the courses on SFAREGS.

- A SYSTEM ("S") calculated time status record was added after a USER ("U") time status record already existed. USER records are not supposed to be treated as overrides, and prevent SYSTEM calculations from adding additional time status history records.

This happened because SYSTEM calculations can be forced to resume if needed for a particular student term if a USER time status history record exists. Either the update to the registration term header record was made by authorized personnel in SQL\*Plus, or the complete time status history record (SFRTHST) was added in SQL\*Plus.

# National Student Loan Data System (NSLDS) Student Status Confirmation Report (SSCR) Roster File Procedures

## Overview of Processing for NSLDS SSCR Reporting

This report is provided for direct lending institutions to process and update, as appropriate, data received for Title IV aid recipients on the Student Status Confirmation Report (SSCR) from the National Student Loan Data System (NSLDS). Any questions about the SSCR process should be directed to the NSLDS Customer Service Center at 1-800-999-8219.

The following sections outline the processing requirements and procedures for processing the SSCR file and creating the updated School Submittal file, and processing the Error Notification File.

### **Note**

Use of these processes requires that both the Banner Financial Aid System and the Banner Student System are installed and are in production to supply the data necessary to comply with federal regulations.

Enrollment status information is dependent on information calculated and stored in the Banner Student System as a result of the reports used for National Student Clearinghouse (NSC) Reporting.

Selection of new Title IV aid recipients is dependent on accepted awards with a Federal Fund ID of “STFD” for the Aid Years identified by the institution. This information is stored in the Banner Financial Aid System. ■

NSLDS places each institution's SSCR File on the Title IV WAN. Your institution must review, update, and return the file within 30 days of receipt. Once your institution has transferred the Roster File from the Title IV WAN to their Banner system, the SFRSSCR process will read that file, match records in the file to Banner, perform updates as appropriate, and write out the updated School Submission flat file which is then submitted to NSLDS. Any issues directly related to obtaining and accessing the SSCR File, and returning the updated file should be reported directly to the Customer Service Center at NSLDS.

## Sources of Data for SSCR Roster File Update

The validity of the updates to student enrollment information depends on the use of the Banner functionality to perform time status calculations (based on student enrollment) for the purpose of reporting to the National Student Clearinghouse (NSC). Please refer to the “Registration Procedures” section of the “Registration” chapter for overall data requirements, term specific data requirements, and a detailed description of how a

student's status (enrollment status, or other status such as deceased, on an approved leave of absence, etc.) is calculated and reported.

 **Note**

The same logic from the Clearinghouse Extract Report (SFRNSLC) is used to determine each student's enrollment status when processing the SSCR Roster File. For efficiency, time status information is retrieved from the registration term header record, rather than from the time status history table, because the most current time status is always reported to NSLDS. The actual values reported and used to update the file, however, are different from the values reported in the SFRNSLC program. In the SFRNSLC process, each enrollment status is translated to the equivalent EDI TS 190 required code for that status. This translation does not occur in the SFRSSCR process.

The following list summarizes both the SSCR and EDI TS 190 codes that are reported with a brief description, to assist users familiar with the SFRNSLC process: ■

<b>Description</b>	<b>NSLDS Code</b>	<b>EDI TS 190 Code</b>
Approved Leave of Absence	A	EB9
Deceased	D	EB1
Full-time	F	EB6
Graduated	G	EB4
Half-time or more, but less than Full-time	H	EB7
Less than Half-time	L	EB8
Withdrawn	W	EB3
Never attended *	X	N/A
No record found **	Z	N/A

 **Note**

\* A status of "Never attended" indicates that an individual on whose behalf a loan was certified or awarded, who was admitted, and may have enrolled (registered), never attended classes at the institution (institution has a record of the person, but no record that they actually attended classes). This status is not used when reporting to the NSC. Although the Class Attendance Roster Form (SFAALST) includes an informational field for entering the total hours that a student attended the class, this does not serve the purpose of identifying registration without attendance.

For SSCR file processing, an individual is reported with a status code of X if they exist in Banner (a match is found), but no registration term header

record exists for the term associated with the SSCR file. It is assumed that if a student pre-registered for a term, but never attended, either one of two actions would be taken procedurally. One action would be to run the Registered, Not Paid Process (SFRNNOP), which would result in the registration records being deleted. The other action would be to update the student enrollment status on the registration record to a code that would indicate that the student was not actively enrolled. The enrollment status code should have the **Third Party Withdrawal Indicator** set to *Y* on STVESTS. In the first situation, the student is reported as Never Attended (*X*), whereas in the second situation the student is reported as Withdrawn (*W*). ■

 **Note**

\*\* A status of “No record found” is reported when no matching person record is found in Banner. ■

## Process Flow for SSCR File Processing

Complete the following procedural steps in the sequence outlined to ensure that up-to-date, valid, and complete data is available for processing the SSCR File. These steps should be verified and/or completed just prior to each scheduled SSCR update.

### Initial receipt of SSCR Roster File

#### *Financial Aid Office*

Verify that data entry for Title IV Awards is current for the Aid Year(s).

#### *Registrar's/Enrollment Office*

1. Verify that registration add/drops are current.
2. Run the Time Status Calculation Update Process (SFRTMST) in Audit mode.
  - 2.1. Review output for messages.
  - 2.2. Review data and complete updates as required to resolve missing or invalid data issues; re-run in Audit mode until all data issues are resolved.
3. Run SFRTMST in Update mode.
  - 3.1. Review output for messages - confirm that no new errors have been introduced between Audit and Update mode runs.

If new errors exist, return to Audit mode and repeat process.

4. Run SFRSSCR for Roster File in Audit mode.
  - 4.1. Review output for messages.
  - 4.2. Review data and complete updates as required to resolve missing or invalid data issues; re-run in Audit mode until all data issues are resolved.
5. Run SFRSSCR for Roster File in Create flat file mode to produce Submittal File.
  - 5.1. Review output for messages - confirm that no new errors have been introduced between Audit and Create flat file mode runs.

If new errors exist, return to Audit mode and repeat process.

### Subsequent receipt of Error Notification File

#### *Registrar's/Enrollment Office*

1. Run SFRSSCR for Error Notification File in Error listing mode.
  - 1.1. Review output for messages indicating success or errors in previously submitted file.
  - 1.2. No Errors exist - no further action required.

- or -
  - 1.3. Errors exist
    - Review data and complete updates as required to resolve NSLDS errors reported in Error listing mode output.
    - Run SFRSSCR for Error Notification File in Audit mode.
    - Review output for messages.
    - Review data and complete updates as required to resolve missing or invalid data issues; re-run in Audit mode until all data issues are resolved.
    - Run SFRSSCR for Error Notification File in Create flat file mode to produce Error Correction File.
    - Review output for messages - confirm that no new errors have been introduced between Audit and Create flat file mode runs. If new errors exist, return to Audit mode and repeat process.

#### **Note**

If an Error Correction File is submitted, NSLDS will return an Error Notification File in response to the Error Correction File. The new Error Notification File must also be processed using the same steps described above. The cycle of Error Notification and Error Correction Files will continue until NSLDS reports that no errors found. ■

## NSLDS SSCR Roster File Update Process (SFRSSCR)

Initially, your institution will upload the SSCR Roster File from NSLDS. That file is to be updated appropriately, and returned to NSLDS as the SSCR School Submittal File. NSLDS analyzes the returned Submittal File, and subsequently returns an SSCR Error Notification File to your institution. The Error Notification File may indicate that all records in the Submittal File were accepted and processed without errors, or it may indicate that errors were encountered in the processing of the Submittal File. If errors were found, the records in error are returned in the Error Notification File, along with specific error codes that identify the problem(s) found. Those errors must be investigated, and an Error Notification Correction File must be returned to NSLDS with changes to resolve the errors that were reported. The SFRSSCR process is designed to accommodate the processing of both the Roster File and the Error Notification File.

The SFRSSCR process allows new students with loans to be selected based on the level, campus, or college associated with the current general student record. Multiple values may be entered for each parameter, or % may be designated for all values. Level, campus, and college values entered as parameter selections are compared only to the student's primary curriculum information. This allows institutions with different schools to identify the appropriate groups of students with new loans if they receive multiple files from NSLDS to process.

Because of great variance in the data supplied by the various lenders and guarantee agencies to NSLDS, the process allows the option to Match on ID/SSN only, rather than on ID/SSN and Last Name. For processing, it is recommended that the Roster File should initially be processed in Audit mode matching on both ID/SSN and Last Name (the default). Depending on the consistency and/or integrity of the data in the SSCR File, it may be desirable to process the Roster File again in Audit mode, but selecting the Match on ID/SSN only option. The two outputs should be compared to determine which option is best for evaluating matched records. If the Match on ID/SSN only option is selected, you should be aware that the possibility could exist that an incorrect SSN in the Roster File could become associated with the wrong person in Banner.

This process uses the **Third Party Withdrawal Indicator** on STVESTS to report students as withdrawn to the NSLDS. When the indicator is not checked, the process will not consider the student as withdrawn and will report the last time status for the student that was calculated by the time status rules.

The process also uses the **Third Party Report Indicator** on STVLEAV to select leave of absence codes for the student. The process will only select leave of absence codes from the general student record to be reported as valid leaves when the indicator is checked.

### Roster File Processing

The Roster File can be processed in either Audit mode or Create Flat File mode. In Audit mode, any records that cannot be identified as a match to an existing Banner record will be reported, and any missing and/or invalid data that would be required for creating the updated flat file will be reported. The Audit mode report should be reviewed, and

corrections and/or adjustments should be made to resolve all data problems. Audit mode can be executed as many times as needed to identify and resolve errors.

 **Note**

If the Create Flat File mode is selected, the potential exists for missing or invalid data to be written to the Submittal File, depending on the amount of time that has elapsed since processing in Audit mode. The report information from Create Flat File processing should also be reviewed for errors. The process can be run in Create Flat File mode multiple times because no database updates in Banner occur. Running the process again in Create Flat File mode creates a new version of the Submittal File. ■

## Resolving Data Errors in the Roster File

The Audit mode report for the Roster File will detect problems with data, which must be fixed by authorized users. The following are the error messages that may print on the report, the source of the error, and what is required to fix the problem:

- *No Address on SPAIDEN*

This message indicates that address information could not be found for the address hierarchy that was entered. For example, if 1MA and 2PR were the address types selected for the report, this message would indicate that neither an MA or PR address type could be found for the student. If it appears that the student does have an address that matches the hierarchy that was entered, the error message is probably caused by the effective date of the address not being valid as of the date of processing. Address information is required for all students that are reported to NSLDS. An address with an effective date prior to the processing date must be entered that will match the address hierarchy that is used for the process. Please note that this processing occurs only for records that have no address in the file.

 **Note**

As of March 1, 1999, the NSLDS no longer requires address information in SSCR files. The NSLDS will obtain this information from other sources. Institutions will not be sent error messages if this information is provided. ■

- *No Expected Grad Date on SGASTDN*

Students who have been identified as full-time, half-time, or on a leave of absence require the expected graduation date to be reported. This message indicates that the **Expected Graduation Date** field on the General Student Form (SGASTDN) is blank. An expected graduation date must be entered. (**Note:** The expected graduation date on the general student record will roll to the **(Anticipated) Graduation Date** on the Degrees and Other Formal Award Form (SHADEGR) during the first grade roll to academic history (either performed online with the Class Roster Form (SFASLST) or in batch with the Grade Roll to Academic History (SHRROLL).

- *SSN must be entered on SPAPERS*

This message will occur only when new students with loans are added to the file and indicates that the **SSN/SIN/TIN** field on the General Person Form (SPAPERS)

is blank. The social security number is required for all new students added to the file, and must be entered.

- *No Deceased Date on SPAPERS*

This message will occur only when a student is identified as deceased and the **Deceased Date** field on the General Person Form (SPAPERS) is blank. This date, if available, is reported as the status effective date for a deceased student; otherwise the date is reported as "00000000".

- *Time Status on SFAREGS is missing or invalid*

Students who are enrolled in classes for the term must have a time status record that has been created before the reporting date, so the time status can be reported. This message indicates that either no time status record exists for the student because online or batch calculation of a time status has not occurred previously for the report term, or an error was encountered when the time status was calculated previously. To resolve this problem, run the batch Time Status Calculation Update Process (SFRTMST) in Audit mode to review more detailed messages about the errors. After resolving any problems that may exist with time status rules, etc., SFRTMST may be run in Update mode to calculate and store time status records, or the time status can be re-calculated and stored online on the Student Course Registration Form (SFAREGS).

- *Expected Grad Date on SGASTDN precedes current date*

This message indicates that the **Expected Graduation Date** on the General Student Form (SGASTDN) is a past date, rather than a future date. If this message occurs, the date in this field should be reviewed and updated as appropriate to a future date.

- *SGASTDN grad date precedes term end*

This message indicates that the **Expected Graduation Date** on the General Student Form (SGASTDN) is not greater than or equal to the end of the processing term. If this message occurs, the date in this field should be reviewed and updated as appropriate to a future date.

- *No Graduation Term on SHADEGR*

Students who have been awarded a degree during the current term (have a status of graduated) require the date of completion of course requirements to be reported. The most recent part of term end date for graded courses for the term is reported for the completion date. If no graded courses exist for the term, the **(Anticipated) Graduation Date** on the Degrees and Other Formal Awards Form (SHADEGR) is reported as the completion date. This date must be entered on this form.

## Matching Students in the SSCR File to Banner Records

Each student record in the SSCR Roster File includes a social security number and last name. These elements are used as the basis for searching for a matching record within Banner. The SFRSSCR process examines the social security number data element in the General Person Form (SPAPERS), as well as all IDs in the General Person Identification

Form (SPAIDEN), both current and previous, to determine a match to the SSN reported in the Roster File. The process also examines all last names, previous and current, to determine a last name match. If a match for any SSN/last name combination cannot be found, a record is written to the control report with the information from the SSCR file - SSN, Last Name, First Name, Middle Name, Date of Birth, Street Address 1, City, State, County, and ZIP/Postal Code.

If in fact the student in the Roster File is unknown to your institution, the SFRSSCR process will report that individual as a status of "Z", indicating no record exists at your institution for that person, without any further user intervention. If, however, you can identify an individual at your institution who should "match" the Roster File record, but was not matched because the SSN and last name reported in the Roster File did not match an existing combination of ID/SSN and any current or previous last name in Banner, it is necessary to add either an Identification record (SPAIDEN) and/or a social security number in Banner to "force" a match so that the individual can be associated with the Roster File record and then be processed, updated, and reported properly.

If the Roster File last name is different from any existing Banner last name, a name change record can be added using SPAIDEN. If the Roster File SSN is different from any existing Banner ID or the SSN on SPAPERS, an ID change record can be added using SPAIDEN, or the SSN can be entered, if this is preferable and appropriate. Please note that the SFRSSCR process will not under any circumstances update SSNs that are transmitted by NSLDS. The SSN reported on the SSCR file will always be the SSN that is returned in the Submittal File and the Error Correction File.

If a match is found on SSN/Last Name combination, the record is updated with the appropriate enrollment status code and effective date for that status, if needed. If any of the name fields (**Last Name**, **First Name**, or **Middle Name**) do not match the corresponding current name fields, then all of the fields provided for reporting a name change in the SSCR file (these fields are referred to as New Student's Last Name, New Student's First Name, and New Student's Middle Name) are updated with the data in the current name record as null. Please note that if a middle name is reported in the Roster file, but no middle name exists in Banner, the middle name is not updated to blank (null) in the returned Submittal File.

### Source of Effective Dates for Statuses

For each student enrollment status, an effective date for that status is reported. The following lists the source of data for each enrollment status reported:

Enrollment Status	Source of Data - Form	Source of Data - Field
Approved Leave of Absence	SGASTDN	<b>Leave of Absence From Date</b>
Deceased	SPAPERS	<b>Deceased Date</b> , if available; otherwise reported as "00000000"
Full-time	SFAREGS	Most recent ( <b>Time Status</b> ) <b>Date</b>

<b>Enrollment Status</b>	<b>Source of Data - Form</b>	<b>Source of Data - Field</b>
Graduated	SSASECT	Most recent <b>Part of Term (End Date)</b> for graded courses for the term
Half-time or more, but less than Full-time	SFAREGS	Most recent <b>(Time Status) Date</b>
Less than Half-time	SFAREGS	Most recent <b>(Time Status) Date</b>
Withdrawn	SFAREGS	(Enrollment) Status Date
Never attended *	N/A	<b>Certification Date **</b>
No record found *	N/A	<b>Certification Date **</b>

\* See explanation under Sources of Data for SSCR Roster File Update.

\*\* Certification Date is the date/time the Roster File is processed and updated to create the Submittal File.

### **Updating Existing Records With New/Changed Information**

Fields exist to report changes in date of birth and address information. The SFRSSCR process compares the birth date supplied in the Roster File to the birth date on the General Person Form (SPAPERS). If no birth date is reported in the Roster File, or if the birth date is different from the birth date in Banner, the Banner birth date is written to the Submittal File. Address information, if supplied in the Roster File, is not compared to Banner address information, and no updates will be proposed for address information in the Submittal File.

Date of Anticipated Completion is reported in the SSCR file, if applicable. The Banner process will compare the reported anticipated completion date to the current Banner expected graduation date in the General Student Form (SGASTDN). If the dates are different, the SSCR file is updated with the Banner date. A check is performed to ensure that the expected graduation date is greater than the certification date for the file. If this date is earlier than the certification date, the error message *Expected Grad Date on SGASTDN precedes current date* is written to the report information.

### **Identifying New Title IV Recipients and Adding Them to the SSCR File**

As records in the SSCR File are matched to Banner records, the PIDM for each matched Banner record is saved internally in the program. In a subsequent processing step, the program will determine if there are additional individuals in Banner Financial Aid who have accepted awards with a Federal Fund ID of "STFD" for Aid Years specified by the institution (via a response to a parameter in the process which allows multiple aid years) who were not included on the SSCR file. If an individual found in this selection has not already been processed, then the record is added to the end of the SSCR file output, populating the following fields in the Detail Record as specified:

**1. Record Sequence Number**

Students added to the roster file are identified by the sequence number 9999998.

**2. Student's Social Security Number**

The social security number data element as found on the General Person Form (SPAPERS) is reported if it is not null; otherwise an error message will indicate *SSN must be entered on SPAPERS*.

**3. Student's Social Security Number Indicator**

An *R* (for real) must be reported in this field for new students added to the file.

**4. New Student's Last Name**

The current last name is reported.

**5. New Student's First Name**

The current first name is reported. If no first name exists, the hard-coded value *NFN* (no first name) is reported.

**6. New Student's Middle Name**

A two-character substring of the current middle name is reported, if it exists.

**7. Date of Student's Birth**

The date of birth data element as found on the General Person Form (SPAPERS) is reported if it is not null; otherwise the value is reported as *19000101*.

**8. Date of Anticipated Completion**

The expected graduation date as found on the current term effective general student record (SGASTDN) is reported, with the exception of students who are classified as graduated, deceased, or withdrawn. If no value exists in this field, an error is written to the control report. This field must be updated online with the date that is the institution's most current estimate. In addition, a check is performed to make sure this date is greater than the create date (Certification Date) of the Submittal File.

**9. Street Address 1**

The Street Line 1 Address that matches the address record, selected from the address information retrieved, based on the response(s) to the Address Hierarchy parameter in the process, is reported. If no address record was retrieved, an error is written to the control report. An address must be reported. Either different responses to the Address Hierarchy parameter may be needed or address information may need to be updated or added online.

**10. Street Address 2**

The Street Line 2 Address that matches the address record selected as described in item #9.

**11. City**

The City that matches the address record selected as described in item #9.

**12. State**

The State Code that matches the address record selected as described in item #9.

**13. Country**

The description of the Nation that matches the Nation Code in the address record selected as described in item #9. Please note that if a value exists in the **Nation** field, the **State or Province** field is reported as *FC* (Foreign Country). US clients are advised not to populate the nation code with a code for USA for this reason.

**14. ZIP/Postal Code**

The ZIP/Postal Code that matches the address record selected as described in item #9.

**15. Address Effective Date**

The address From Date data element for the address selected based on the Address Hierarchy as found on the General Person Identification Form (SPAIDEN), is reported if it is not null; otherwise the start date for the report term is reported.

**Error Notification File Processing**

The Error Notification File can be processed in Error Listing mode, Audit mode, or Create Flat File mode. The file should be processed initially in Error Listing mode. This produces a report listing the records flagged by NSLDS as errors, and the error conditions that were encountered. The messages about the error conditions are taken from the SSCR User's Guide as follows:

<b>Error</b>	<b>Message/Description</b>
11	<i>No Detail Record matches the record identifiers, Student's SSN, Student's First Name, Date of Student's Birth in NSLDS</i>
12	<i>Both Student's First Name and Student's Last Name must be provided</i>
13	<i>Invalid Date of Student's Birth</i>
14	<i>Invalid Date for Address Effective Date</i>
15	<i>Invalid Date of Anticipated Completion</i>

<b>Error</b>	<b>Message/Description</b>
17	<i>All address fields (Street Line 1,2,3, City, State or Province, and ZIP or Postal Code) must be provided</i>
18	<i>Invalid State Code</i>
19	<i>Missing Code for Enrollment Status</i>
20	<i>Invalid Code for Enrollment Status</i>
21	<i>Invalid Date Enrollment Status Effective</i>
23	<i>Missing Date of Enrollment Status Effective; mandatory when Code for Enrollment Status is not equal to D for Deceased</i>
24	<i>Record was on Roster file and not updated by School</i>
25	<i>Anticipated Completion Date must equal Date Enrollment Status Effective</i>
26	<i>Anticipated Completion Date must be greater than Certification Date when Enrollment Status Code = A, F, H, or L</i>
27	<i>Ad hoc record has been added maximum of 5 times</i>

The Error Listing report can be reviewed. When data has been reported as invalid, the messages associated with the error codes contained in the Error Notification File are printed in the report information to assist you in identifying and resolving these types of errors. The process should also be run in Audit mode to identify any areas where missing or invalid Banner data may need to be corrected for these records.

After all data issues have been resolved, process the Error Notification File in Create Flat File mode to create the updated Error Correction File, then re-submit the file to NSLDS.

### **Resolving Data Errors in the Error Notification File**

Processing the Error Notification File in Audit mode performs the same data checking and validity that is performed for the Roster File in Audit mode. Please refer to the previous section on Roster File Processing which describes the Audit mode processing and error messages that apply.

### **Job Stream Processing Recommendations**

Because accuracy is vital in processing, updating, and returning the School Submittal File to NSLDS, time status enrollment calculations should be performed in batch prior to SSCR File processing. This will ensure the time status (Full-time, Half-time, and Less than Half-time) enrollment information is up to date. Please refer to the “Registration Reports” section of the “Registration” chapter for information on running the Time Status

Calculation Update process (SFRTMST). It is strongly recommended that the SFRTMST process be executed in both Audit and Update modes prior to processing an SSCR Roster File.

## Roster File and Error Notification File Processing Errors and Troubleshooting

The following outlines errors that may occur in both Roster and Error File processing and resolutions to those errors. Although it is unlikely that these errors will be encountered, appropriate checks were included in the program to detect these unlikely events.

- *Header Record is missing or has invalid seqno, aborting job.*

This message indicates that the first record read and processed did not have the expected sequence number of 0000000. Please contact the Customer Service Center at NSLDS when this error occurs.

- *\*ERROR\* Certification Date precedes SSCR Create Date, aborting job.*

This message indicates that the processing date (current date and time) is earlier than the NSLDS create date and timestamp transmitted on the file being processed. Please contact the Customer Service Center at NSLDS when this error occurs.

- *\*ERROR\* SSCR File Type does not match designated type of file, aborting job.*

This message indicates that the user's response to the SSCR File Type parameter did not match the file that was specified for the SSCR File to Process parameter. The user either entered an *E* instead of *R* to process a Roster File, or an *R* instead of *E* to process an Error Notification File. Re-submit the job request with the correct parameters.

- *\*ERROR\* Trailer record found before end of file, aborting job.*

This message indicates that additional data was found beyond the record with a sequence number of 9999999, which should be the last record in the file. Please contact the Customer Service Center at NSLDS when this error occurs.

- *\*ERROR\* Trailer record is missing or has invalid sequence number, aborting job.*

This message indicates that a valid trailer record with a sequence number of 9999999 could not be found. Please contact the Customer Service Center at NSLDS when this error occurs.

- *\*ERROR\* Record Sequence Number is not sequential, aborting job.*

This message indicates that in processing, a situation was encountered where the next record did not have a greater sequence number than the record just processed. Please contact the Customer Service Center at NSLDS when this error occurs.

- *\*ERROR\* Incorrect number of detail records processed, aborting job.*

This message indicates that the total count of records indicated by NSLDS in the Trailer Record does not match the actual number of records that the SFRSSCR

process read. Please contact the Customer Service Center at NSLDS when this error occurs.

- *Dynamic Memory Error, aborting job.*

This message indicates that not enough memory was available for processing. This problem should be brought to the attention of technical support staff, who will need to identify appropriate actions to make sufficient memory available for the execution of the program. This message would be related to the amount of memory required for linked list processing in the program. NSLDS provided an estimate that a "typical" SSCR Roster File could contain a record count that is 60% of an institution's enrollment.

## Error Notification File Only Processing Errors and Troubleshooting

The following outlines general errors that may occur and solutions to those errors.

- *\*ERROR\* Error Notification File contains no records, aborting job.*

This message indicates that a request was submitted to process the Error Notification File in Create Flat File mode, but no errors exist that require an update.

To confirm that no errors exist, process the file in the Error Listing mode. No errors are confirmed by the message \* \* \* *Submittal File accepted and processed without errors* \* \* \* printed in the report output.

- *New Student Date of Birth is invalid date*
- *New Student Date of Birth must be before date of roster certification*
- *Certification Date must be greater than or equal to date enrollment status effective date*
- *Attempted to add an ad hoc student but the student was not found in the database*
- *Student status could not be applied as current due to a reporting/history violation*
- *Anticipated Completion Date must be greater than or equal to Date Enrollment Status Effective*

Please refer to the most recent updates for the SSCR User's Guide, or contact NSLDS if you have any questions about the above error messages.

## General File Execution Processing Errors and Troubleshooting

The following outlines general errors that may occur, and resolutions to those errors.

- *\*ERROR\* Parameters entered on the command line are invalid, aborting job.*

This message indicates that the syntax for the execution of the program submitted from the command line is invalid. Re-submit the job request with the correct command line parameters.

- *\*ERROR\* Cannot open file: <filename>, aborting job.*

This message indicates that either the Roster File or Error Notification File specified to be processed cannot be found, or that file permissions do not allow the input file to be opened for processing. Check the spelling of the path and filename, as well as the permissions for the file. Correct as needed and re-submit the job request, or contact technical support staff, if needed, for assistance. The message could also indicate that an error was encountered attempting to open the output file(s), which could also be related to permissions problems. The filename specified will indicate which file cannot be opened.

## Registration Set-Up Procedures for Banner Student Self-Service

The following steps are required to implement basic Registration in Banner Student Self-Service. If you are implementing Registration Priority Time-Ticketing, Third-Party Controls, Alternative PIN Processing, and Registration Permit-Overrides, you will need to complete additional optional steps. Instructions for these topics follow the Web setup instructions.

### Note

Before you begin, make sure you have activated any appropriate Web display indicators on Banner validation forms. ■

## Supporting Validation Forms

A number of validation forms include Web display indicators. These indicators control whether a specific value in the validation form will display and be available for selection via the Web. In most cases, the Web Indicator must be checked (set to Y) for a value to be available on the Web.

In addition to setting the Web indicators correctly, you should also review the description of each value flagged for Web display. The description of a value will display on the Web when an item is Web-enabled.

The following validation forms include Web display indicators which control Registration processing via the Web.

- Subject Code Validation Form (STVSUBJ)
- Course Registration Status Code Validation Form (STVRSTS)

## Subject Code Validation Form (STVSUBJ)

Indicated values will display in the list of subjects available to search when the Look Up Classes page is selected. The output of the Catalog and Schedule reports for display on the corresponding Web pages also is restricted to the Web-enabled subject codes. Please note that a student will not be prevented from registering for a specific section by entering the CRN directly, even if the subject code for that section is not Web-enabled.

## Course Registration Status Code Validation Form (STVRSTS)

Values which are Web-enabled will be used either in the Add/Drop process or as additional options which a student can select, such as audit or waitlist.

At least two values, one which will be used when courses are added via the Web and one which will be used when courses are dropped via the Web, must be Web-enabled. The specific values you use for these two actions will be controlled by entries in the Crosswalk Validation Form (GTVSDAX). You can use the traditional *RE (Registered)* and *DD (Drop/Delete)* values for these entries, or you can define additional values for Web Registered and Web Dropped. If you define additional values for the codes used for these purposes, you must set all the indicators for each value to correspond with the indicators set for *RE* and *DD*.

### Warning

Careful consideration should be given to which codes are Web-enabled. For example, if students should only be permitted to add courses on the Web, no drop status codes should be Web-enabled. Also, a waitlist course status should be Web-enabled only if students should be permitted to select a waitlist status for a course if a section is closed and a waitlist is available. An institution may also want to consider whether course statuses with refunding rules should be Web-enabled. ■

## Registration Setup Overview

1. Set up the global Web rules using Customize Web Rules in Web Tailor.
2. Establish Web processing and Web display controls on the Term Control Form (SOATERM) for a specific term. This step is required for every registration term.
3. Establish and Web-enable Web-related enrollment and course status codes on the Course Registration Status Code Validation Form (STVRSTS). This step is required for the initial set-up of Web registration.
4. Establish term-specific date ranges for course statuses on the Course Registration Status Form (SFARSTS) or the Schedule Processing Rules Form (SSARULE). This step is required for every registration term.

5. Update rules for registering or dropping via the Web on the Crosswalk Validation Form (GTVSDAX) as necessary. This step is required for the initial set-up of Web registration.
6. Review the Subject Code Validation Form (STVSUBJ) for those codes that should be Web-enabled. This step is only required for the initial set-up of Web registration.
7. If your institution is using WebCT and you want class titles to be displayed as hyperlinks to the WebCT login page, set the appropriate Web Tailor parameters. This step is required for the initial set-up of Web registration.
8. Establish the appropriate display settings for midterm and final grades. This step is required for every registration term.

## Registration Setup Steps

1. Set up the global Web rules using Customize Web Rules in Web Tailor. Set up the title, header, back URL and link, and help URL and link fields using Customize a Web Menu or Procedure in Web Tailor. If these rules, links, and fields have not been reviewed and customized for your institution, do this now.
2. Establish term-specific Web controls on the Term Control Form (SOATERM) for the following sets of information.
  - Web Processing Controls
  - Web Display Controls
  - Web Registration Dates

This is required for each registration term.

- 2.1. Review and/or establish term-specific Web Processing and Web Display Controls.

On the Term Control Form (SOATERM), enter a term in the Key Information and use Next Block to access the fields in the main window. Select the **Process Web Controls** button to display the Web Processing Controls window.

The fields in this window are used for two main functions:

- to restrict or enable selected registration related actions in self-service for Class Change Options, Grade Display, Faculty and Advisor, and WebCAPP, and
- to restrict or enable selected searching capabilities for Catalog and Schedule (including open learning courses) when a student performs a search for available sections on the Look Up Classes page.

For more information on the fields in this window, see *SOATERM* in the Banner Student online help.

- 2.2. Review and/or establish Web registration date range periods to restrict Web registration.

On the Term Control Form (SOATERM), enter a term in the Key Information, use a Next Block function to navigate through the main window, and use a second Next Block function to access the Part of Term and Web Registration Controls window.

The Web Registration Dates section of the Part of Term and Web Registration Controls window is used to specify the date ranges during which registration via the Web is available for the term in the Key Information. Web registration dates are established as follows:

- Enter one or more start and end dates for Web Registration periods. Note that the ability to enter more than one Web Registration period allows the institution to turn Web Registration access on and off during the term.
  - The start and end dates entered should not fall outside (either before or after) the date ranges that are established for both student enrollment statuses (SFAESTS) and course registration statuses (SFARSTS) for the term, or errors will prevent a student from registering via the Web.
3. Establish and Web-enable Web-related course status codes on the Course Registration Status Code Validation Form (STVRSTS).

This is an initial set-up requirement only.

Status codes that are Web-enabled are used either in the Add/Drop process or as additional options that a student can select, such as Audit or Waitlist.

To use registration on the Web, you must have at least one course status code enabled. If you want to allow students to drop classes from their schedules using the Web, you also need to define a drop status code and Web-enable it. You can use the traditional *RE* (Registered) and *DD* (Drop/Delete) codes, or you can create new codes. If you create new codes, you *must* set all indicators for each value to correspond with the settings for *RE* and *DD*. (SunGard Higher Education delivers the codes *RW* and *DW*, which you can use if you want to, or you can create new codes.)

 **Note**

You can give any names to these status codes; the documentation uses the generic terms “Web registered” and “Web drop”. When naming your course status codes, remember that the descriptions are what will be displayed on the Web and should therefore be clear enough to be understood by your users. ■

The Web registered status is required to initially add a class on the Web. An institution can disable the Web-dropped status if students should not be allowed to drop classes on the Web. Optionally, other course statuses may be Web-enabled, such as Audit, Waitlist, etc., if institutional policies determine that these actions should be available for selection on the Web.

The Web Registered (*RW*) and Web Drop (*DW*) course status codes are controlled by entries in the Crosswalk Validation Form (GTVSDAX), which is covered in the next step.

 **Note**

A student may be able to waitlist a course if a waitlist course status is Web-enabled on STVRSTS, a valid date range is defined for the status on SFARSTS, and a waitlist is available. Careful consideration should be given as to whether institutional policy should allow waitlist registrations via the Web. ■

 **Warning**

Set the indicators on STVRSTS as specified in the following table. These indicators must *not* be changed, or Web registrations will not be processed properly: ■

<b>Processing Indicator</b>	<b>Add</b>	<b>Drop</b>
<b>Allowed to Enter</b>	checked/ <i>Y</i>	checked/ <i>Y</i>
<b>Count in Enrollment</b>	checked/ <i>Y</i>	unchecked/ <i>N</i>
<b>Count in Assessment</b>	checked/ <i>Y</i>	unchecked/ <i>N</i>
<b>Withdrawal Indicator</b>	unchecked/ <i>N</i>	unchecked/ <i>N</i>
<b>Waitlist Indicator</b>	unchecked/ <i>N</i>	unchecked/ <i>N</i>
<b>Gradable Indicator</b>	checked/ <i>Y</i>	unchecked/ <i>N</i>
<b>Print on Schedule (Indicator)</b>	checked/ <i>Y</i>	unchecked/ <i>N</i>
<b>Web (Registration) Indicator</b>	checked/ <i>Y</i>	checked/ <i>Y</i>

In order for the system to determine which status code(s) to be displayed, in the **Status Type** field, enter the status code type:

- *R* - Registered (enrolled)
- *D* - Dropped
- *L* - Waitlisted
- *W* - Withdrawn

 **Note**

If the **Status Type** field is left blank, unexpected results can occur. ■

4. Establish term-specific date ranges for enrollment and course statuses.

This is required for each registration term.

4.1. Review and/or establish enrollment status codes, their associated start and end dates, and refunds as applicable for the registration term on the Enrollment Status Control Form (SFAESTS).

4.2. Review and/or establish course registration status codes, their associated start and end dates, and refunds as applicable for the registration term and parts-of-term within the registration term on the Course Registration Status Form (SFARSTS).

4.3. For open learning courses, define usage/cutoff rules for course registration status codes on the Schedule Processing Rules Form (SSARULE).

5. Update the Crosswalk Validation Form (GTVSDAX) as necessary.

5.1. If you created new course status codes for Web processing, take the following actions.

- If you created a new course status code for “Web registered”, for the internal code *WEBRSTSREG*, enter your “Web registered” code in the **External Code** field.
- If you created a new course status code for “Web drop”, for the internal code *WEBRSTSDRP*, enter your “Web drop” course registration status code in the **External Code** field.
- If you are using the *RE* and *DD* course status codes for Web registrations and drops, you do not need to make any changes to the entries for the *WEBRSTSREG* or *WEBRSTSDRP* internal codes for the *WEBREG* internal group code on GTVSDAX, because as delivered, these codes are set up for use on the Web.

 **Note**

You may define only one code for “Web registered” and one for “Web drop” on GTVSDAX. If you wish to change the code later, change the external code on GTVSDAX. ■

 **Note**

The drop code that is crosswalked to the *WEBRSTSDRP* internal code drops the course and removes it from the student’s schedule. ■

5.2. For the internal code *MAXREGNO* with group code *WEBREG*, in the **External Code** field, enter the maximum number of enrollment attempts your institution wants to allow on the Web.

5.3. To display the *Dynamic Schedule by Date Range* field values on the select term or date range, enter *Y* in the **External Code** field for the *SCHBYDATE* internal code.

**5.4.** If your institution is using WebCT and you want to identify schedule types for WebCT content and/or delivery, create a row for each applicable schedule type as follows.

- In the **Internal Code** field, enter *WEBCONTENT*.
- In the **(Internal) Group (Code)** field, enter *INTCOMP*.
- In the **External Code** field, enter the schedule type.
- In the **Translation Code** field, enter *WEBCT*.

**5.5.** For the internal code *AUTODROP*, enter the appropriate value in the **External Code** field.

- If you want users to be allowed to choose whether to drop all or no connected courses if not all were selected to be dropped, enter *C*.
- If you want an entire connection to be automatically dropped if not all were selected to be dropped, enter *Y*.
- If you want no connected courses to be dropped unless all were selected, enter *N*.

 **Note**

In Banner Voice Response, error checking is performed on each CRN as it is entered. Because of this, if you enter *N* for *AUTODROP*, it will not be possible for connected courses to be dropped via Banner Voice Response. Therefore, if your institution uses both Banner Voice Response and Banner Student Self-Service, SunGard Higher Education recommends that you use either *C* or *Y* for *AUTODROP*. ■

**5.6.** For the internal code *ADMINDROP*, enter the appropriate value in the **External Code** field.

- If you want administrative errors that have been encountered when a registration record is accessed to be ignored, enter *N*.
- If you want the system to automatically drop a course if an administrative error is encountered when a registration record is accessed, enter *Y*.

**6.** Review subjects for Web display on the Subject Code Validation Form (STVSUBJ).

This is an initial set-up requirement only.

Web-enable those subjects that should display when a student searches for available sections on the Web. Remember that the Web-enabled subject codes will also control the Catalog and Schedule display as well.

The **Web (Display) Indicator** checkbox on the Subject Code Validation Form (STVSUBJ) specifies which subjects are allowed to be displayed in the Web Course Catalog, Class Schedule, and Look Up Classes pages. The installation process automatically defaults checked or *Y* for the **Web (Display) Indicator** for all of your subject codes. Without any changes, all subject code descriptions will display on the Web. You should review subject code descriptions for clarity, as well as update the

**Web (Display) Indicator** to *N* only for the subject code descriptions that should not be displayed on the Web.

7. If your institution is using WebCT, and you want class titles to be displayed as hyperlinks to the WebCT login page, set the appropriate Web Tailor parameters.

This step is required for the initial set-up of Web registration.

- 7.1. Set the WEBCTINUSE parameter to *Y*.
- 7.2. Set the CPINUSE parameter to *N*.
- 7.3. Set the WEBCTLOGIN parameter to the URL for the links' destination. The URL must be complete, including domain, destination, and port. For example:

```
http://university.edu:1234/webct/ticket/ticketLogin
```

8. Establish the appropriate display settings for midterm and final grades.

This step is required for every registration term.

On the Term Control Form (SOATERM), enter a term in the Key Information and use Next Block to access the fields in the main window. Select the **Process Web Controls** button to display the Web Processing Controls window.

Use the grade display checkboxes on SOATERM to control the display for the whole term. You can, however, then use the Section Web Controls From (SSAWSEC) to override the SOATERM setting for specific classes.

For example, if you choose to display midterm grades for the whole term on SOATERM, but a particular professor does not want to display their midterm grades, you can uncheck the **Display Midterm Grades** checkbox on SSAWSEC.

- 8.1. Set the Grade Display checkboxes in the Web Processing Controls window of SOATERM to specify whether you want midterm and/or final grades and/or grade detail for the whole term to be available on the Web. For more information on the fields in this window, refer to the online help.
- 8.2. If you want to override the settings on SOATERM for a specific class, set the Grade Display checkboxes on SSAWSEC in the Banner Student Self-Service Display Controls block.
- 8.3. On the Grade Component Definition Form (SHAGCOM), define grade detail for the class if your institution wants grade detail to be available via the Active Registrations page.

## Display Term Date Ranges in Self-Service

System-required rules are delivered on the Crosswalk Validation Form (GTVSDAX) for use with term selection in Self-Service. Use these rules to display term date ranges in the

**Term** field pulldown lists on Web pages in Banner Student Self-Service and Banner Faculty and Advisor Self-Service. This helps the user determine which term to use for registration without being dependent on term descriptions. The date display format is controlled by the setting in Banner General.

Set the rules as follows:

- Set the *WEBTRMDTE* rule for group *STUWEB* to *Y* to display date ranges for terms on all Banner Student Self-Service pages where the term is selected.
- Set the *WEBTRMDTE* rule for group *FACWEB* to *Y* to display date ranges for terms on all Banner Faculty and Advisor Self-Service pages where the term is selected.

External Code	Internal Code	Internal Code Sequence Number	Internal Code Group	Description	Activity Date
N	WEBTRMDTE	N/A	FACWEB	Web Term Displays Dates	Sysdate
N	WEBTRMDTE	N/A	STUWEB	Web Term Displays Dates	Sysdate

## Registration Time-Ticketing in Banner Student Self-Service and Banner Voice Response

Registration Time-Ticketing allows institutions to optionally establish priority driven registration period time slots for registration via Banner Student Self-Service registration and Banner Voice Response telephone registration.

Time-Ticketing slots for Web and telephone registration processing are established using the following forms:

- Registration Priority Control Form (SFARCTT)
- Registration Group Control Form (SFARCTL)
- Student Registration Group Query Form (SFIRGRP)

There are two primary methods of registration eligibility control checking:

- Registration Time-Ticketing

If time tickets are used to control registration eligibility, there are two variations available, *unrestricted* time ticketing and *restricted to* time ticketing.

- Unrestricted time tickets refers to students with assigned time tickets who are only eligible for registration (for the term) as applicable for their time ticket. If a student does not have a time ticket, that student may register (for the term) at any time (subject to other restrictions, as applicable).

- Restricted time tickets refers to students with assigned time tickets who are subject to the same eligibility restrictions as with unrestricted time tickets. The difference with this method is that all students *must* have a time ticket to register. If they do not have an assigned time ticket, the student will *not* be eligible for registration (for the term) under any circumstances.

- Registration Time Controls

The Third Party Registration Time Controls Form (SFARGTC) provides an alternative to individually assigned time-ticketing, by offering the ability to create term-specific registration eligibility profiles whereby only those students who match the criteria for a valid time control may register at any given time.

These methods are controlled by rules on GTVSDAX (and GORFLAG for Banner Voice Response) and provide a registration indicator of eligible or ineligible for the student based on the selected method of registration control and checking against the rules on SFARGTC (for registration time controls) or the records on SFARGRP (for restricted and unrestricted time tickets). The student is permitted to continue with registration once the checks have taken place.

The rule on the Crosswalk Validation Form (GTVSDAX) must be created as follows:

- The **Internal Code** is *WEBRESTTKT*.
- The **Sequence (Number)** is blank (null).
- The **(Internal) Group (Code)** value is *WEBREG*.
- The **External Code** can be set to *Y*, to restrict registration to time tickets, or *N*, to not restrict registration to time tickets. *N* is the delivered default.
- The **Description** is *WebVR Restrict Reg to Time Tkt*.
- The **Translation Code** and **Reporting Date** can be left blank (null).
- The **System Requirements (Indicator)** must be checked.

Students with time tickets (for a specified term) can only register within the timeframes established for that ticket (or tickets). All students must have a time ticket to register. If a student does not have a time ticket established, they are *not* eligible for registration under any circumstances.

## Registration Priority Time-Ticketing Setup Overview

The following steps are required to implement Registration Priority Time-Ticketing:

1. Build registration group codes in the Registration Group Control Form (SFARCTL).
2. Build registration time slots in the Registration Priority Control Form (SFARCTT).
3. Link the time slots with their priorities to the Registration Groups.

4. Assign term specific registration groups to individual students on the Student Registration Group Form (SFARGRP).

Steps 1 through 4 are required for each registration term. However, Steps 1 and 2 may be completed in reverse order. If the time slots are built first on the Registration Priority Control Form (SFARCTT) as indicated in Step 2, then steps 1 and 3 can be combined as the next step.

In addition, a model script is available to partially automate the building of registration group codes and assign those codes to students who are eligible to register. See additional detailed notes about this script (`sfrgrup.sql`) following the implementation steps below.

## Registration Priority Time-Ticketing Setup Steps

1. Build registration group codes in the Registration Group Control Form (SFARCTL).

### Note

At this time, build the codes only; do not try to associate a priority with a group until the next step has been completed. ■

The Registration Group Control Form (SFARCTL) is used to define registration group codes and the assigned registration priorities for those group codes for Banner Student Self-Service Web registration and Banner Voice Response telephone registration. There is no validation for the group code. A group code may be initially defined without a priority, and the priority may be associated with the code after time slots and priorities are established on the Registration Priority Control Form (SFARCTT).

Students assigned to registration groups will be permitted access to Web and telephone registration only during the time slot(s) specified by their assigned registration group code and assigned priority on the Student Registration Group Form (SFARGRP). Codes must be established on the Registration Group Control Form (SFARCTL) before they can be assigned to students on the Student Registration Group Form (SFARGRP).

Procedurally, registration group codes can be defined on SFARCTT without priorities at the same time that registration time slots are defined on SFARCTL. Priorities can then be assigned to the group codes on SFARCTT after the time slots exist with their assigned priorities on SFARCTL.

2. Build registration time slots in the Registration Priority Control Form (SFARCTT).

The Registration Priority Control Form (SFARCTT) is used to define rules that assign the begin and end dates and times and priority assignment for each registration time slot for Banner Student Self-Service Web registration and Banner Voice Response telephone registration. Time slots are required to have a begin date and time, end date and time, and a priority.

More than one registration time slot can be assigned the same priority. If more than one time slot has the same priority, any group assigned that priority on the

Registration Group Control Form (SFARCTL) will have all of those time slots assigned and available for Web and telephone registration. Students who are assigned to the group in the Student Registration Group Form (SFARGRP) will be permitted to register via the Web or telephone during any of the time slots assigned to the priority of the group.

3. Link the time slots with their priorities to the registration groups.

Link the time slots with their priorities to the registration groups by updating the **Group Priority** field on the Registration Group Control Form (SFARCTL).

4. Assign term-specific registration groups to individual students on the Student Registration Group Form (SFARGRP).

The Student Registration Group Form (SFARGRP) is used to assign a registration group to individual students on a term-by term-basis. A registration group that has been defined, but not associated with a priority, cannot be assigned to a student on this form. Only one registration group can be assigned to a student for a specific term. Use a List function from the **(Registration) Group (Code)** field to display the Registration Group Control Form (SFARCTL), which in turn displays the valid codes and allows for an Exit with Value.

The user ID that assigned the registration group code is stored and displayed on the form, as well as the activity date associated with the most recent change.

Registration group assignments cannot be made when the student status for the selected term does not allow registration (i.e., the **Allow Registration** flag on the Student Status Code Validation Form (STVSTST) is unchecked or *N*). You cannot create group assignments for a term for which the student record has an inactive status.

You may query the registration time slots and the students who have been assigned to those time slots for specific registration group codes using the Student Registration Group Query Form (SFIRGRP).

When more than one time slot is assigned the same priority, and that priority has been assigned to a registration group, all of the time slots are displayed in the Student Registration Group Control section of the form. The cursor cannot be positioned to any fields in the form, but in query mode, **(Registration) Group Code, Group Priority, Begin Date, End Date, Begin Time, and End Time** can be accessed and used to specify query criteria.

Students assigned to the registration group code display in the Student Information section of the form. When the cursor is scrolled through multiple time slot records, if they exist, the list of student names that displays will be the same for each record. **Group** is an optional Key Information field. If no group code is entered in the Key Information, all existing registration groups and their assigned students, if any exist, are retrieved for display.

## Model Script for Populating Registration Groups

The SQL script `sfrgrup.sql` may be used as a model for creating registration groups from your existing student population. This script should be analyzed and modified as appropriate by technical support staff prior to execution. The model script does the following:

- Prompts for a term code.
- Creates student registration group records (SFBRGRP) for every general student in the database whose student status (SGBSTDN\_STST\_CODE) allows registration (STVSTST\_REG\_IND = "Y"). (These students represent the IDs that will be entered in the Key Information of SFARGRP).
- Creates registration group code records (SFBWCTL) and assigns the appropriate code to each of the students (SFBRGRP) above by examining academic history as follows:
  - Sums the earned hours in academic history for all of the Term GPA records (SHRTGPA\_HOURS\_EARNED) that have the same level as the level of the general student record that is effective for the term specified in the prompt.
  - Subtracts the sum of hours from the previous step from 1000. This result is the group code that is assigned to the student.

Here are some examples:

Student	Sum of Hours Earned	Calculation	Group Code Assigned
One	46	1000 - 46	0954
Two	104	1000 - 104	0896
Three	18	1000 - 18	0982
Four *	0	1000 - 0	1000

\* Freshmen with no earned hours in academic history will be assigned to group 1000 based on the logic in the model script.

Once the script is executed, the group codes are associated with the students. The group codes are displayed on SFARCTL. The order of the display of the codes is by earned hours seniority, if no modifications are made to the script. In other words, the group codes are character values and are ordered in ascending order.

The students who have completed the most hours will have codes that are at the top of the list of codes displayed on SFARCTL, and the students who have completed the fewest hours will have codes that are at the bottom of the list of codes displayed on SFARCTL.

The codes in the example above would be displayed in the following order on SFARCTL:

- 0896
- 0954

- 0982
- 1000

When the group codes have been associated with students, you must build the time slots and their priorities on SFARCTT (if not built previously), then associate the time slots (priorities) with the groups on SFARCTL by populating the **Group Priority** field. Once those tasks have been completed, the SFARGRP form can be used to display the time slots for individual students for the term, and the Student Registration Group Query Form (SFIRGRP) can be used to query registration groups, their associated time slots, and the students assigned to those groups.

5. Set up the rule for restricted time tickets on GTVSDAX.

### GTVSDAX Rule for Restricted Time Tickets

External Code	Internal Code	Internal Code Sequence Number	Internal Code Group	Description	Activity Date
Y/N	WEBRESTTKT		WEBREG	WebVR Restrict Reg to Time Tkt	Sysdate

### Scenarios for Using the GTVSDAX Rules for Restricted Time Tickets and Time Controls

#### 1. Time Controls

- *WEBMANCONT* = Y
- *WEBRESTTKT* = N (This record setting is not applicable if you are using third-party controls.)
- No valid SFARGTC record profile match exists for the student/term at this time.

Because no SFARGTC record exists, when the user tries to access the Add or Drop Class and Change Class Options pages, the following MCERR message is displayed:

*The student is not permitted to register at this time.*

The Look Up Classes page will display, the search can be performed, and the results are displayed without a **Registration** checkbox.

#### 2. Time Controls

- *WEBMANCONT* = Y
- *WEBRESTTKT* = N (This record setting is not applicable if you are using third-party controls.)

- *SFARGTC = Last Name* same as student

The Add or Drop Class, Change Class Options, and Look Up Classes pages can be accessed.

### 3. Time Controls

- *WEBMANCONT = Y*
- *WEBRESTTKT = Y* (This record setting is not applicable to Third Party Controls.)
- No valid *SFARGTC* record profile match exists for the student/term at this time.

Because no *SFARGTC* record exists, when the user tries to access the Add or Drop Class and Change Class Options pages, the following MCERR message is displayed:

*The student is not permitted to register at this time.*

The Look Up Classes page is displayed, the search can be performed, and the results are displayed without a **Registration** checkbox.

### 4. Time Tickets

- *WEBMANCONT = N*
- *WEBRESTTKT = N*
- No *SFARGRP* record

The Add or Drop Class, Change Class Options, and Look Up Classes pages can be accessed. The Registration Status page displays the time ticket appropriately.

### 5. Time Tickets

- *WEBMANCONT = N*
- *WEBRESTTKT = Y*
- No *SFARGRP* record exists for the student.

If Web registration is attempted, then because *WEBRESTTKT* is set to *Y*, the user will receive the following TTERR message:

*You have no Registration Time Ticket. Please contact the registration administrator for your time ticket.*

The Look Up Classes page is displayed, the search can be performed, and the results are displayed without a **Registration** checkbox. The Registration Status page can be accessed.

### 6. Time Tickets

- *WEBMANCONT = N*

- $WEBRESTTKT = N$
- A valid SFARGRP record exists for the student.

The Add or Drop Class, Change Class Options, and Look Up Classes pages can be accessed. The Registration Status page displays the time ticket appropriately.

#### 7. Time Tickets

- $WEBMANCONT = N$
- $WEBRESTTKT = N$
- An invalid SFARGRP record exists for the student.

Because the student does not have an active SFARGRP record, the following TTTIMES error message is displayed on the Add or Drop Class and Change Class Options pages:

*You may register during the following times.*

The Look Up Classes page is displayed, the search can be performed, and the results are displayed without a **Registration** checkbox. The Registration Status page displays the time ticket appropriately.

#### 8. Time Tickets

- $WEBMANCONT = N$
- $WEBRESTTKT = Y$
- A valid SFARGRP record exists for the student.

The Add or Drop Class, Change Class Options, and Look Up Classes pages can be accessed. The Registration Status page displays the time ticket appropriately.

#### 9. Time Tickets

- $WEBMANCONT = N$
- $WEBRESTTKT = Y$
- An invalid SFARGRP record exists for the student.

Because the student does not have an active SFARGRP record, the following TTTIMES error message is displayed on the Add or Drop Class and Change Class Options pages:

*You may register during the following times.*

The Look Up Classes page is displayed, the search can be performed, and the results are displayed without a **Registration** checkbox. The Registration Status page displays the time ticket appropriately.

## Setting up Third-Party Controls

Your institution can choose to use third-party controls instead of time-ticketing. Third-party controls allow you to define rules that control timed access to add/drop functions. Time control records can use any combination of the following to define assigned time slots for registration activity:

- PIN
- Last name
- Student type
- Earned hours
- College
- Degree
- Department
- Campus
- Class
- Major

Management control time ticketing is dynamic. When a student attempts to register, his or her current data is compared to defined management control records to determine whether the action can be performed.

Management controls are maintained and displayed in the Third Party Registration Time Controls Form (SFARGTC).

Use the Crosswalk Validation Form (GTVSDAX) to indicate that you are using third-party controls. The rule on GTVSDAX should be set up as follows:

- The **Internal Code** is *WEBMANCONT*.
- The **Sequence (Number)** is blank (null).
- The **(Internal) Group (Code)** value is *WEBREG*.
- The **External Code** should be *Y*. (The delivered value is *N*, which should be changed if you want to use third-party controls *instead of* registration group time ticketing controls.)
- The **Description** is *Web Use Management Controls*.
- The **Translation Code** and **Reporting Date** can be left blank (null).
- The **System Requirements** checkbox must be checked.

When third-party controls are being used to enforce Web registration availability, a student's characteristics are matched against management control records maintained in the SFRCTRL table and displayed on SFARGTC. Multiple records can be defined for each term.

Management control records are checked against the student's data to determine at the time of login whether any permit the student to perform add/drop activity. If no management control records that allow access at the current date and time are matched, the message *Please contact the registration administrator for your time ticket* is displayed, and add/drop activity will not be allowed.

One of the items that can be used in management control time-ticket rules is PIN. Different registration periods can be defined for different PIN ranges. Because two PINs can exist for a student (the login PIN and the term-specific alternative PIN), you can select which PIN is to be used in management control checking. The PIN selection is done using another GTVSDAX rule, which should be set up as follows:

- The **Internal Code** is *WEBALTPINU*.
- The **Sequence (Number)** is blank (null).
- The **(Internal) Group (Code)** value is *WEBREG*.
- The **External Code** should be *Y* if you want the alternative PIN (from the SPRAPIN table) for the term to be used when matching management control time ticket records to student characteristics, or **External Code** should be *N* if you want the login PIN (from the GOBTPAC table) to be used.
- The **Description** is *Web Alt PIN Use*.
- The **Translation Code** and **Reporting Date** can be left blank (null).
- The **System Requirements** checkbox must be checked.

## Setting up Alternative PIN Processing

Alternative PIN processing allows you to require a student to enter an additional PIN before he or she can perform initial add/drop activity for a term. Institutions typically use this functionality to “force” a student to contact an advisor, who will provide the PIN, before initially registering for the term. When a student tries to register for the first time (via either the Add or Drop Classes page or the Look Up Classes results page), if alternative PIN processing is turned on and an alternative PIN has been entered for the student on the Alternate Personal Identification Number Form (SPAAPIN), then the system displays the Alternate PIN Verification page. (If no alternative PIN has been entered on SPAAPIN, the system displays the requested page without displaying this page first.)

Alternative PIN processing works together with third-party controls. The following table shows the different ways you can set up alternative PIN processing in the Crosswalk Validation Form (GTVSDAX). The internal codes in the table are described as follows.

- *WEBMANCONT* - Uses third-party controls to determine when students are eligible to register.
- *WEBALTPINA* - Indicates that the alternative PIN is required if it has been set on SPAAPIN.
- *WEBALTPINU* - Indicates when *Y* that the alternative PIN from the SPRAPIN table is used for the term, or indicates when *N* that the login PIN from the GOBTPAC table is used.

Internal Code	External Code	System Action
WEBMANCONT	N	Use registration time-ticketing as set up on SFARCTT.
WEBALTPINA	Y	Requires entry of the alternative PIN designated for the student and term on SPAAPIN, if one exists.
WEBALTPINU	N	This value is not relevant, as third party controls on SFARGTC are not used when the WEBMANCONT rule is set to <i>N</i> .
WEBMANCONT	Y	Requires that registration appointment requirements defined on SFARGTC be met.
WEBALTPINA	Y	Requires entry of the alternative PIN designated on SPAAPIN for the student and term, if one exists, for process name <i>TREG</i> .
WEBALTPINU	N	Requires that the GOATPAD PIN for the student is in the range set up on SFARGTC.
WEBMANCONT	Y	Requires that registration appointment requirements defined on SFARGTC be met.
WEBALTPINA	N	Student will not be required to enter an alternate PIN, even if one has been assigned on SPAAPIN.
WEBALTPINU	Y	Alternate PIN from SPAAPIN for process name <i>TREG</i> will be used by the SFARGTC PIN range settings.

Internal Code	External Code	System Action
WEBMANCONT	N	Use registration time-ticketing as set up on SFARCTT.
WEBALTPINA	N	Student will not be required to enter an alternate PIN, even if one has been assigned on SPAAPIN.
WEBALTPINU	Y	This value is not relevant, as third party controls on SFARGTC are not used when the WEBMANCONT rule is set to <i>N</i> .
WEBMANCONT	Y	Requires that registration appointment requirements defined on SFARGTC be met.
WEBALTPINA	Y	Requires entry of the alternative PIN designated for the student and term on SPAAPIN, if one exists.
WEBALTPINU	Y	Requires entry of the alternative PIN designated on SPAAPIN for the student and term, if one exists, for process name <i>TREG</i> .

- On the Crosswalk Validation Form (GTVSDAX), enter the appropriate value, as described in the table above, in the **External Code** field for the following internal codes:
  - WEBMANCONT*
  - WEBALTPINA*
  - WEBALTPINU*
- For each term code for which you want to use alternative PIN processing, on the Alternate Personal Identification Number Form (SPAAPIN), define the alternative PIN(s) as follows.
  - In the **Term Code** field, enter the term code.
  - In the **Process Name** field, enter *TREG*.
  - In the **Alternate PIN** field, enter the PIN.
  - Save your changes.

# Student Registration Permit-Override Procedure

This section applies to Banner Student System baseline registration, Telephone Registration processing, and Banner Student Self-Service registration.

Registration Permit-Override processing allows institutions to optionally establish combinations of allowable automatic overrides for registration processing that can be assigned to individual students. These permit-overrides are available by term on a course or section basis. These overrides will bypass the error checking that is performed in the baseline Student Course Registration Form (SFAREGS), Telephone Registration processing, and Banner Student Self-Service Registration, when the corresponding term controls on the Term Control Form (SOATERM) are flagged as either *Warning* or *Fatal*, where applicable.

The following registration errors can be designated for permit-overrides.

For Student Options:

- duplicate course override
- course link override
- corequisite override
- prerequisite and test score override
- minimum hours override
- maximum hours override
- time conflict override

For Section Options:

- special approval override
- capacity permit override
- field of study restriction override
- department restriction override
- college restriction override
- level restriction override
- class restriction override
- repeat hours override
- holds override
- repeat limit override
- campus restriction override

- degree restriction override
- program restriction override
- student attribute restriction override
- cohort restriction override

For more detailed information about the above registration error checking categories, please refer to the chapters in the *Banner Student User Guide* for “Catalog”, “Class Schedule”, and “Registration”.

## Permit-Overrides Set-Up Summary

Permit codes from STVROVR are used to set up override criteria on SFAROVR. If these items cause registration errors to occur based on the severity set on SOATERM, the items checked for each permit code rule allow overrides of these errors so that registration can continue.

### 1. Initial Set-up

- 1.1.** Review and/or establish permit-overrides on the Registration Permit-Override Code Validation Form (STVROVR).
- 1.2.** Enter permit-override codes and their descriptions on the form.

### 2. Term-Specific Processing

- 2.1.** Review and/or establish term specific permit-override processing rules on the Registration Permit-Overrides Control Form (SFAROVR).
- 2.2.** Review and/or establish the automatically allowed registration error checking override flags for permit-override codes available for the registration term.

### 3. Term-Specific Processing

- 3.1.** Assign specific permit-overrides to students for courses and/or sections on the Student Registration Permit-Override Form (SFASRPO).
- 3.2.** Review and/or assign registration permit-override codes to individual students for specific courses and/or sections.

## Student Registration Permit-Override Steps

Permit-overrides are established in the following order:

1. Define permit-override codes on the Registration Permit-Override Code Validation Form (STVROVR).

The Registration Permit-Override Code Validation Form (STVROVR) is used to define and maintain the codes and descriptions for assigning registration permit-override groups to individual students in the Student Registration Permit-Override Form (SFASRPO) for registration processing. The rules for each registration permit-override group are defined on the Registration Permit-Overrides Control Form (SFAROVR) on a term-by-term basis, and must exist before they can be assigned to students.

2. Establish, on a term-by-term basis, the permit-override codes and the specific registration error checking overrides that are allowed using the Registration Permit-Overrides Control Form (SFAROVR).

The Registration Permit-Overrides Control Form (SFAROVR) is used to establish the registration permit-override codes and their associated allowable registration error overrides on a term-by-term basis. When a new permit-override code is added, all overrides initially default to unchecked or *N* (no automatic override), but may be updated to checked or *Y* (registration error checking override automatically allowed). These override codes are then assigned to individual students on a specific term and course or section basis.

You cannot make a permit-override entry until a Permit-Override code (defined on the Registration Permit-Override Code Validation Form (STVROVR)) has rules defined for the term in the Key Information of SFAROVR. Entry of a code which is defined only on STVROVR which does not have rules defined on SFAROVR for the Key term is not allowed.

3. Assign student-specific permit-override codes on a term and course or section basis using the Student Registration Permit-Override Form (SFASRPO).

The Student Registration Permit-Override Form (SFASRPO) is used to assign specific permit-override codes to individual students on a term and course or section basis. When a code is assigned to a student for a specific term, the **CRN**, **Subject**, **Course Number**, and **Section** fields are available to specify when assigning the specific permit-override code. At a minimum, a subject and course number must be designated when assigning a code. If a subject and course number are specified, the permit-override registration error checking will apply to any section of that subject and course number when the student registers. If a specific CRN is entered, the subject, course number, and section number will default. If a subject, course number, and

section number are entered, the CRN will default. Multiple permit-override codes can be assigned to the same subject and course number combination, or the same CRN.

 **Warning**

Caution should be exercised when assigning permit-override codes. If a permit-override code is assigned to a subject and course number combination that is not associated with a CRN, and a different permit-override code (with a different set of registration error overrides allowed) is assigned to a specific CRN that has the same subject and course number, the logic in the permit-override checking “combines” the rules in the sense that all of the Y (Yes) overrides for registration error checking are combined from both rules.

This is *not* a problem if the Y overrides permitted for the specific CRN are the same, or include more Y overrides than the rule associated with the same subject and course number combination.

This *is* a problem if the Y overrides permitted for the specific CRN are fewer and/or different from the overrides permitted for the same subject and course number combination.

The effects of combining overrides when the same subject and course number are specified in more than one permit-override rule are illustrated in the following examples. ■

**Example of Permit-Override Rules**

Permit Code	Capacity	Duplicates	Links	Co- Reqs	Pre- Reqs	Time				
ALLOWALL	Y	Y	Y	Y	Y	Y				
	<b>Spc- Appr</b>	<b>Major</b>	<b>College</b>	<b>Level</b>	<b>Class</b>	<b>Campus</b>	<b>Rpt Hrs</b>	<b>Rpt Lmt</b>	<b>Degree</b>	<b>Prgm</b>
	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

Permit Code	Capacity	Duplicates	Links	Co- Reqs	Pre- Reqs	Time				
CAPACITY	Y	N	N	N	N	N				
	<b>Spc- Appr</b>	<b>Major</b>	<b>College</b>	<b>Level</b>	<b>Class</b>	<b>Campus</b>	<b>Rpt Hrs</b>	<b>Rpt Lmt</b>	<b>Degree</b>	<b>Prgm</b>
	Y	N	N	N	N	N	N	N	N	N

In the examples below, the "student" is an undergraduate sophomore biology major, and Section 02 of PSYC 300 (CRN 10050) and Section 03 of PSYC 300 (CRN 10051) are restricted to junior and senior psychology majors at the undergraduate level.

*Example 1 of specific overrides assigned to the student:*

<b>Permit Code</b>	<b>CRN</b>	<b>Subj</b>	<b>Course</b>	<b>Section</b>
ALLOWALL		PSYC	300	
CAPACITY	10050	PSYC	300	02

In Example 1, the student has been granted an automatic override for the specific section 02 of PSYC 300 (CRN 10050) *only* if the class's maximum enrollment has been reached or exceeded (capacity permit = Yes). However, because the ALLOWALL rule grants automatic overrides for all registration error checking categories, the student will automatically be enrolled in the either section 02 or 03 of PSYC 300, if selected at the time of registration, even though the student does not meet the requirements for the class and major for enrollment in the sections.

*Example 2 of specific overrides assigned to the student:*

<b>Permit Code</b>	<b>CRN</b>	<b>Subj</b>	<b>Course</b>	<b>Section</b>
CAPACITY		PSYC	300	
ALLOWALL	10050	PSYC	300	02

In Example 2, the student has been granted an automatic override for all registration error checking categories for the specific section 02 of PSYC 300 (CRN 10050). If the student attempts to register for section 02 of PSYC 300 *only*, the ALLOWALL rule will grant automatic overrides for all registration error checking categories, including the capacity error, and the student will be successfully registered in the section. If the student attempts to register for section 03 of PSYC 300 (CRN 10051), registration errors will occur on both Class restriction and Major restriction, but *not* capacity.

Permit-override codes are assigned in the Student Registration Permit-Overrides section of SFASRPO. Permit-override types can be assigned only when they have been authorized for the term in the Key Information using the Registration Permit-Overrides Control Form (SFAROVR). Several functions are available in this section as follows:

- A List function from the **Permit (-Override Code)** field displays the Registration Permit-Override Codes LOV, which is derived from the Registration Permit-Overrides Control Form (SFAROVR). You may select a value from this window or select Define Permit/Override Rules from the Options Menu to access SFAROVR, which displays the valid codes and allows Exit with Value.
- A Help function from the **CRN** field displays the Registration Course Query Form (SFQSECT) when a valid CRN is present. You may also use the **Search** feature and select View Section Information (SFQSECT) to access SFQSECT.
- A List function from the **Subject** field displays a list of valid subject codes.

- A Count Query Hits function from the **CRN, Subject, Course Number, and Section** fields displays the Registration Section Query Form (SFQSECM). You may also use the **Search** feature and select Search for Sections (SFQSECM) to access SFQSECM from the **CRN** field.
- A Duplicate Record function from the **Subject and Course Number fields** displays the Existing Courses LOV, which is derived from the Subject/Course Query Form (SCQSUBJ).

The user ID that assigned the override-permit code is stored and displayed on the form, as well as the activity date associated with the most recent change.

Student Schedule information is also displayed on the form. The information displayed is the same as that displayed in the Student Schedule section of the Registration Section Query Form (SFQSECM).

## Registration Restrictions and Prerequisites

### Overview

Registration restrictions can be defined by: department, field of study (major), class, level, degree, program, campus, college, student attribute, and cohort, as well as test score and prerequisites. Registration restrictions can be used to check equivalent courses, use of course ranges, use of groups of courses, use of course attributes, to require a minimum grade point average in a group of prerequisite courses, and to handle in progress courses for prerequisite checking.

These prerequisite definition elements exist in the rules and requirements structure used for the definition of areas within the CAPP module and CAPP compliance processing.

Because current prerequisite restrictions may satisfy many institutions, and because the prerequisites for many courses can be defined using the current structure, current prerequisite restriction processing is maintained in Banner, and an institution may choose, on a section-by-section basis, which type of prerequisite rule definition and analysis will be used.

Registration restrictions are defined, controlled, and used by a number of system modules and processes:

- Registration restrictions can be defined at the Catalog level on the Course Registration Restrictions Form (SCARRES). Prerequisite requirements at the Catalog level can be defined on the Catalog Prerequisite and Test Score Restrictions Form (SCAPREQ).
- When a section is created online, catalog information defaults into the Schedule module, where it can be modified if needed to reflect the restrictions and prerequisites which apply to the specific section. Section-level restrictions are maintained using the Schedule Restrictions Form (SSARRES), and section-level

prerequisites are maintained using the Schedule Prerequisite and Test Score Restrictions Form (SSAPREQ). When sections are rolled from one term to another, restrictions and prerequisites are copied exactly from the existing section, based upon parameter options selected for the Schedule Roll Process (SSRROLL).

- Enforcement of restrictions by the Registration module is controlled by error-checking switches on the Term Control Form (SOATERM). Whether in progress courses will be allowed to fulfill prerequisite requirements is also controlled by a switch on SOATERM.
- Codes for types of registration overrides and special permissions are defined on the Registration Permit-Override Validation Form (STVROVR).
- The types of permits and overrides which can be performed for a term, and the specific conditions a permit or override governs, are defined for each term using the Registration Permit-Override Control Form (SFAROVRO).
- Permits and overrides authorized for a person/term combination are maintained on the Student Registration Permit-Overrides Form (SFASPRO).
- Restrictions, prerequisite requirements, and permits and overrides are checked by the Student Course Registration Form (SFAREGS), telephone registration processing, and the Banner Student Self-Service registration procedures.
- If a restriction is overridden, or if a special permit or override is used, each course in which an override was performed or a permit was used is flagged with the override. These override flags are stored in the student course registration record (SFRSTCR) and displayed on the Registration Course Query Form (SFQSECT).

For clarity, terminology and other assumptions about prerequisite processing are included as follows.

## Terminology

### Corequisite

A corequisite is a course which must be taken *in the same term* as the course to which it is a corequisite. If two (or more) courses must absolutely be taken in the same term, corequisites should be used. No changes to corequisite processing have been made, but they are discussed in this introduction to clarify the difference between a concurrent prerequisite and a corequisite.

### Prerequisite

A prerequisite is a course which must usually be completed in a term earlier than the course for which registration is attempted and prerequisites are being checked, but it may be taken in the same term, based upon the value of the **Concurrency Indicator**.

## Use of the Concurrency Indicator

The **Concurrency Indicator** can be used to modify a prerequisite requirement and indicate that the prerequisite course can be taken *either in an earlier term or in the same term* as the course in which registration is attempted.

When not set, the prerequisite course *must* be taken in a term *earlier* than the one in which registration is attempted. When set, the prerequisite course can be taken in an *earlier term* or can be taken *in the same term* as the one in which registration is attempted.

## Use of Minimum Grade

It is assumed that the minimum grade value will be used in all prerequisite requirements unless the requirement can be fulfilled based upon a test score alone. *If minimum grade is not used, evaluation of prerequisite requirements will cause results other than those desired and expected.* When evaluating prerequisite requirements, failed courses and withdrawn courses *will* fulfill requirements unless a minimum grade (with a numeric value higher than those for failure and withdrawal grades) is specified in the rule.

Graded courses will be considered completed, and a prerequisite will either be fulfilled or failed, regardless whether they are transfer, courses in academic history, or courses which have not yet been rolled to academic history.

- If a grade exists for a course, the grade will be used, whether the course is a transfer course, an institutional course in academic history, or an institutional course in registration.
- If the prerequisite course is an institutional course in academic history, only the most recent grade will be used.
- If the prerequisite course has been graded but has not yet been rolled to academic history, the grade in registration will be used. (A course which only has a mid-term grade will not be considered graded for prerequisite checking purposes.)

## Use of In Progress Courses

Use the **In Progress** checkbox on the Term Control Form (SOATERM) to specify, on a term-by-term basis, whether in progress courses can be used to fulfill prerequisite requirements. When this checkbox is checked, prerequisite requirements will be able to be fulfilled by in progress courses, and *no warning or error message will be issued and need to be acknowledged.* When this checkbox is unchecked, in progress courses *will not* be able to be used to fulfill prerequisite requirements. In progress courses are defined as active ungraded courses for earlier terms than the one in which registration is attempted. Enrollments in which a person is waitlisted, from which a person has withdrawn, or which has already been graded will never be considered in progress courses. Future-term enrollments, while in progress for transcript purposes, will *never* be considered by prerequisite checking.

## Prerequisite Processing

Prerequisite processing performs as follows:

- If a potential prerequisite exists in transfer work in academic history for any term (past, present or future), it will be used, based upon the minimum grade specified. If using CAPP areas for prerequisite rules, the **Use Transfer** flag will control whether or not transfer work can fulfill the requirement. The result will either be a successful registration or a *Pre-Req or Test Score Error*, depending on the minimum grade. *Transfer work still in transfer articulation will not be considered for prerequisite checking purposes.*

If a potential prerequisite exists in history for a term less than or equal to the term of the enrollment being processed, it will be used. The result will either be a successful registration or a *Pre-Req or Test Score Error*, depending on the minimum grade requirement.

- If a required prerequisite does not exist in either transfer work or academic history, enrollments in registration for terms equal to or less than that of the enrollment being processed will be checked.

Enrollments in sections which are not gradable will not be considered.

- The course registration status of all considered, ungraded courses will be checked in all cases.
  - If the registration status does not count in enrollment (STVRSTS **Count in Enrollment (Indicator)** *is not* checked), the course will be bypassed. (This will prevent DD status from satisfying a prerequisite.)
  - If the registration status is a withdrawn status (STVRSTS **Withdrawal Indicator** *is* checked), the course will be bypassed.
  - If the registration status is a waitlist status (STVRSTS **Waitlist Indicator** *is* checked), the course will be bypassed.
- If a considered enrollment for a term less than or equal to the registration term has already been graded but not yet rolled to history, the minimum grade will be checked. The result will either be a successful registration or a *Pre-Req or Test Score Error*, depending on the minimum grade.
- Ungraded enrollments for all terms less than the term of the enrollment being checked will always be considered *only* if the **In Progress** checkbox on SOATERM is checked for the term for which registration is attempted.
- Ungraded enrollments for the *same term* as the enrollment being checked will be considered only when the concurrent option has been chosen for the prerequisite being checked. The result will be a successful registration if all other requirements have also been met. If an ungraded, qualifying course

exists within the same term and concurrent enrollment is not allowed, the result will be a *Pre-Req or Test Score Error*.

Equivalent courses will also be used in prerequisite checking when CAPP areas are used to define prerequisite requirements.

At the time of registration, if a course has a corequisite requirement at either the Catalog or Schedule level, enrollments in registration for the same term as the attempted enrollment will be checked. The course registration status of all considered courses will be checked in all cases.

- If the registration status does not count in enrollment (**STVRSTS Count in Enrollment Indicator**) is not checked), the course will be bypassed. (This will prevent DD status from satisfying a corequisite.)
- If the registration status is a withdrawn status (**STVRSTS Withdrawal Indicator** is checked), the course will be bypassed.
- If the registration status is a waitlist status (**STVRSTS Waitlist Indicator**) is checked), the course will be bypassed.

Registration attempts for a course with a corequisite will result in either a successful registration or a corequisite error.

Here are a few examples of correct and incorrect ways of defining prerequisite requirements.

#### Example of Incorrect Prerequisite Definition:

In this scenario, prerequisite checking was perceived to be performed incorrectly. Here is a sample of the incorrect prerequisite rules which were used:

<b>A/O</b>	<b>Subj</b>	<b>Crse</b>	<b>Lvl</b>	<b>Grd</b>	<b>Con</b>
	ENGL	110	01	A	N
<i>OR</i>	ENGL	110			Y

The actual requirement, stated in simple terms, is “have taken ENGL 110 and earned a grade of A *or* be concurrently enrolled in ENGL 110”. With the rules established in this fashion on SSARRES, a student who had taken ENGL 110 in a previous term and failed it, passed prerequisite checking.

However, this is how the above requirement was interpreted: “(have taken ENGL 110 and earned a grade of A) *or* (have taken ENGL 110 and earned any grade or be enrolled in ENGL 110 concurrently)”. Because the second line said that any previous *or* concurrent enrollment in ENGL 110 was acceptable, regardless of the grade, a failure still satisfied the prerequisite requirement.

### Example of Correct Prerequisite Definition:

The correct way to write the requirement so that it is interpreted as desired would be as follows. Note that the concurrency indicator is set *on the same line* as the rest of the requirement.

A/O	Subj	Crse	Lvl	Grd	Con
	ENGL	110	01	A	N

The use of CAPP areas as prerequisite requirements provides additional flexibility and data elements to be used in prerequisite checking. When defining prerequisite requirements using CAPP areas, area general requirements and detail attachments (and rules) can be used. If the prerequisite requirements are more complex than can be stated using areas alone, groups can also be used. Here are some simple examples of some of the conditions you can define:

#### Example:

Requirement: "Have taken ENGL 110 and earned a grade of A or be concurrently enrolled in ENGL 110."

Area General Requirements:

1 course

Detail Attachments:

Subj	Crse Low	Crse High	Req Crd	Connect	Req Crs	Min Grd	Concurrent
ENGL	110			None	1	A	Y

#### Example:

Requirement: "Have taken 15 credits or 5 courses in lower-level English with a GPA of 2.5 and no single grade lower than a C in the used courses."

Area General Requirements:

15 credits or 5 courses

2.5 Area GPA

Detail Attachments:

Subj	Crse Low	Crse High	Req Crd	Connect	Req Crs	Min Grd	Concurrent
ENGL	1000	2999	15	OR	5	C	

**Example:**

Requirement: "Have taken ENGL 110 and earned at least a C or scored at least 500 on the SAT Verbal Test."

Area General Requirements:

None

Detail Attachments:

Set	Sub Set	Subj	Crse Low	Crse High	Req Crd	Connect	Req Crs	Min Grd	Test	Min	Max
A10	010	ENGL	110			None	1	C			
A10	015								S01	500	700

**Example:**

Requirement: "Have an overall GPA of 3.00."

Area General Requirements:

3.00 Area GPA

Detail Attachments:

Subj	Crse Low	Crse High	Req Crd	Connect	Req Crs	Max Crd	Connect	Max Crs
	1000	9999	0	None		999		

 **Note**

The detail requirements in this case must be written in a fashion to select all courses that the student has taken. The course number range must be all-inclusive, and both a required number of credits (or courses) and a maximum number must be specified. ■

## Setting up Catalog Restrictions and Prerequisites

Use the Catalog Prerequisite and Test Score Restrictions Form (SCAPREQ) to set up and maintain information about prerequisite requirements for a course.

- Use the **Course Title** field and the **Prerequisite Check Method** radio group in the Course Information section of the main window to set up a course prerequisite. The radio group can be updated in this section of the form, but the title must be maintained on the Basic Course Information Form (SCACRSE). Use the

**Maintenance** button in this window to copy an existing course. Change the checkbox value when the type of prerequisite to be used changes over time.

This information is also displayed on SCACRSE.

- Use the Course Test Score and Prerequisite Restrictions section in the Course Prerequisite Restrictions window to display and maintain catalog-level test score and prerequisite restrictions.
- Use the Course Area Prerequisite Restrictions section in the Course Prerequisite Restrictions window to display and maintain the CAPP area(s) which include prerequisite requirements for the course.
- Use the Course Registration Restriction Form (SCARRES) set up all other restrictions at the Catalog level.

Both test score and prerequisite restrictions and area prerequisites can be maintained for a course for the same effective term range, but only one type will be used for the course, depending on the setting of the **Prerequisite Check Method** radio group. Choices are *Basic or None*, *CAPP*, and *DegreeWorks*. Remember that the actual prerequisite requirements imposed on a student are those found in the Schedule module for each section of a course. Restrictions maintained at the Catalog level are merely used as defaults when sections of a course are created online using the Schedule Form (SSASECT).

#### **Note**

The **Prerequisite Check Method** radio group is found in the Course Information section of the main window of the Basic Course Information Form (SCACRSE). This radio group is used to determine the type of prerequisite requirements which will be listed in the Bulletin Report (SCRBULT) or the Web Catalog and will also default to sections created online using the Schedule Form (SSASECT). Prerequisite requirements can be defined using the existing test score and prerequisite restrictions structure, using CAPP areas, or using DegreeWorks. ■

## Setting up Schedule Restrictions and Prerequisites

Use the Schedule Prerequisite and Test Score Restrictions Form (SSAPREQ) to set up and maintain information about prerequisite requirements for a section.

- Use the **Subject**, **Course Number**, and **Section Title** fields and the **Prerequisite Check Method** radio group in the Section Information in the main window to set up a section prerequisite. The radio group can be updated in this section of the form, but the other values are display only and must be maintained on the Schedule Form (SSASECT).

This information is also displayed on SSASECT.

- Use the Section Test Score and Prerequisite Restriction section in the Section Test Score and Prerequisite Restrictions window to display and maintain section-level test score and prerequisite restrictions.

- Use the Section Area Prerequisite Restriction section of the form in the Section Test Score and Prerequisite Restrictions window to display and maintain the CAPP area(s) which include prerequisite requirements for the section.
- Use the Schedule Restrictions Form (SSARRES) to set up all other restrictions at the Schedule level.

Both test score and prerequisite restrictions and area prerequisites can be maintained for a section, but only one type will be used by registration prerequisite checking, depending on the setting of the **Prerequisite Check Method** radio group. Choices are *Basic or None*, *CAPP*, and *DegreeWorks*. This allows users who already have prerequisite requirements defined but who wish to move to the use of CAPP area prerequisite requirements to be able to view both types of requirements at once and also to easily test the prerequisite rules.

#### **Note**

The **Prerequisite Check Method** radio group is found in the Section Information in the main window of the Schedule Form (SSASECT). This radio group is used to determine the type of prerequisite requirements that will be enforced for a person attempting to enroll in the section. It will default from the value maintained for the course on the Basic Course Information Form (SCACRSE) but may be changed on a section-by-section basis. Prerequisite requirements can be defined using the existing test score and prerequisite restrictions structure, using CAPP areas, or using DegreeWorks. ■

All restrictions will be copied from the Catalog module when a section is created using the Schedule Form (SSASECT) and can also be rolled from a previous term using the Schedule Roll process (SSRROLL). Only restrictions defined for a section will be enforced by registration restriction checking.

## Setting Up Registration Restrictions and Prerequisites

Use the checkboxes on the Registration Permit-Overrides Control Form (SFAROVR) to allow definition of permit-overrides for a number of registration restrictions.

The Student Course Registration Form (SFAREGS) handles the following restriction and prerequisite processing:

- The form checks restrictions, using the data in both the primary and secondary curriculum of the effective student record. If a type of restriction fails, a restriction error will be issued. Restriction errors will not be issued if an appropriate permit/override exists for the student. Restriction errors can be overridden by the operator using normal override processing.
- If a prerequisite is fulfilled by an in progress course, and in progress courses are permitted to fulfill prerequisite requirements based upon the **In Progress** checkbox on the Term Control Form, a *PRE-REQ IN PROGRESS* message will not be issued.

- If a section fails a prerequisite requirement, a *PRE\_REQ OR TEST SCORE RESTRICTION* error message will be issued.
  - If standard prerequisite and test score restrictions are used to define the prerequisite requirements for the section, no further information will be available. The prerequisite error can be overridden by the operator using normal override processing.
  - If the prerequisite requirement is defined using CAPP areas, you can access the Detailed Restriction Results Form (SFQPREQ) from the Student Course Registration Form (SFAREGS), where the details of the prerequisite conditions which were not met will be displayed. After reviewing the conditions which were failed, additional enrollments can be added to allow the student to fulfill requirements (for example, if additional courses would fulfill requirements for concurrent-enrollment prerequisites), the error can be overridden using standard override processing, or the enrollment can be dropped.

Use the checkboxes on the Registration Course Query Form (SFQSECT) to display overrides which have been authorized for the listed restrictions.

Use the radio group options in the Registration Error Checking window of the Term Control Form (SOATERM) to establish appropriate error checking criteria for restrictions. These restrictions will allow either *Fatal*, *Warning*, or *No Check* error checking, or *Fatal* or *No Check* error checking.

## Setting up CAPP Restrictions and Prerequisites

Use the **Compliance** (use area in compliance when performing a compliance evaluation), **Prerequisite** (use area as a registration prerequisite for a course or section), and **Dynamic** (use of area as a qualifier for non-captive programs) checkboxes on the Area Library Form (SMAALIB) to set up CAPP restrictions and prerequisites. These flags are used as follows:

- Only areas flagged for compliance usage (**Compliance** checkbox checked) will be able to be attached to a program in the Program Area Attachment and Management window of the Program Requirements Form (SMAPROG), and only areas flagged for compliance usage will be considered during dynamic area selection. Only compliance in a non-captive program can select the program.
- Only areas flagged as prerequisite areas (**Prerequisite** checkbox checked) will be able to be assigned as course area prerequisites on the Catalog Prerequisite and Test Score Restrictions Form (SCAPREQ) or as section area prerequisites on the Schedule Prerequisite and Test Score Restrictions Form (SSAPREQ).
- Only areas flagged as dynamic (**Dynamic** checkbox checked) can be processed based on qualifiers for non-captive programs. If an area is attached to a captive program, the setting of the **Dynamic (Indicator)** is ignored.

Use the following fields in the Course/Attribute Attachment Results window of the Area Output Inquiry Form (SMIAOUT) to set up CAPP restrictions and prerequisites:

- The **Concurrent Enrollment** checkbox will be used only when an area is used for prerequisite checking. It specifies that the prerequisite requirement can be a concurrent enrollment, in other words, an enrollment in the same term as the course to which it is a prerequisite. When not checked, the prerequisite requirement must be fulfilled by enrollment in the prerequisite course in a term earlier than the one for which registration is attempted.
- The **Test Code**, **Score Minimum**, and **Score Maximum** fields can be used to define test type and score range which will fulfill the detail requirement. Test scores can be used in compliance areas, prerequisite areas, and (in the future) areas used as registration prescriptions. In order to define a test requirement, no other data elements (except set and subset) can be entered on the detail line. In other words, a line of detail requirements can include a rule, other criteria, or test scores but not any other combination.

## Implementing Area Prerequisite Processing

### Introduction

Area prerequisite processing is an optional feature of Banner Student. Prerequisite and test score restriction processing can be still performed using existing rules. Area prerequisite processing provides added flexibility in definition of prerequisite requirements and expanded display of the results of a failure to meet prerequisite requirements. Area prerequisite processing can be selected on a section-by-section basis.

### Processing Steps

1. (Required) Area prerequisite processing uses the CAPP Program Compliance Report (SMRCMPL) to evaluate prerequisite requirements and their fulfillment. Compliance processing requires that areas be evaluated within the context of a program, and compliance results are attached to a program.

Determine a single code to use as the prerequisite program code. Define this “program rule” on the Program Definition Rules Form (SMAPRLE), and then enter an appropriate row using this code in the Crosswalk Validation Form (GTVSDAX).

The GTVSDAX record must be created as follows:

- The **Internal Code** must be *PREREQPROG*.
- The **Sequence (Number)** must be blank (null).
- The **Internal Group (Code)** value must be *PREREQUISITES*.
- The **External Code** must be the prerequisite program code defined on SMAPRLE.
- The **Description** can be any desired description of the crosswalk rule.

- The **Translation Code** and **Reporting Date** can be left blank (null).
- The **System Requirements** box must be checked.

The program code defined for prerequisite processing on GTVSDAX will be used to provide a logical link within compliance to process areas as registration prerequisites. This code is loaded to the temporary request record (SMRRQCM) built for the duration of the Registration Prerequisite process.

2. Determine a coding structure to use for Area Prerequisite requirements. **Area (Code)** is a ten character field. Using a coding structure like "PENGL1005", where "P" indicates a prerequisite requirement, and "ENGL1005" is the course for which prerequisites are defined, will provide for easy queries of prerequisite areas, and simplify data entry and reporting.
3. (Required) Use the Area Requirements Form (SMAAREA) to define the requirements for a prerequisite area. If you have not already defined an area to the Area Library, you will be able to do so at this time.
4. (Optional) Use the Catalog Prerequisite and Test Score Restrictions Form (SCAPREQ) to attach area(s) containing prerequisite requirements to a course.
5. (Optional) Use the **Prerequisite Check Method** radio button group on either SCAPREQ or the Basic Course Information Form (SCACRSE) to specify which type of prerequisite requirements will be in effect for the course. Values are *Basic or None*, *CAPP*, and *DegreeWorks*.
  - When the **CAPP** radio button is selected, prerequisite requirements defined in the attached CAPP area will be listed for the course in the Bulletin Report (SCRBULT) and in the self-service catalog package.
  - When the **Basic or None** radio button is selected, prerequisite requirements defined in the Course Test Scores and Prerequisite Restrictions block of SCAPREQ will be listed for the course in the SCRBULT Report and in the self-service catalog package.
  - The **DegreeWorks** radio button is only used when DegreeWorks prerequisite checking is in use, in place of CAPP area prerequisite checking.
6. (Required) Use the Schedule Prerequisite and Test Score Restrictions Form (SSAPREQ) to attach area(s) containing prerequisite requirements to a section.
7. (Required) Use the **Prerequisite Check Method** radio group on either SSAPREQ or the Schedule Form (SSASECT) to specify which type of prerequisite requirements will be in effect for each section. Values are *Basic or None*, *CAPP*, and *DegreeWorks*.
  - When the **CAPP** radio button is selected, prerequisite requirements defined in the attached CAPP area will be applied to attempts to register for the section. When area requirements are used as prerequisites, registration processes use the Program Compliance Report (SMRCMPL) to evaluate fulfillment of the requirements.

- When the **Basic or None** radio button is selected, prerequisite requirements defined in the Section Test Score and Prerequisite Restrictions block of SSAPREQ will be applied to attempts to register for the section, and current prerequisite restriction selection will occur. If you choose to not implement area prerequisites, you will see no changes in prerequisite processing.
  - The **DegreeWorks** radio button is only used when DegreeWorks prerequisite checking is in use, in place of CAPP area prerequisite checking.
8. (Required) Use the Term Control Form (SOATERM) to control prerequisite checking parameters.
- Use the **In Progress** checkbox (in the main window) to specify whether in progress courses should be used to fulfill prerequisite requirements when using area prerequisites. When checked, an in progress course will automatically fulfill a prerequisite requirement, and no acknowledgment of this usage is required. When unchecked, in progress courses will not be allowed to fulfill a prerequisite requirement, and a *Pre-req or test score restriction* error will be given.
  - In progress courses are "active" ungraded qualifying courses for an *earlier* term, or a course attempted in the *same* term if the **Concurrent Enrollment Allowed (Indicator)** is checked in the Course/Attribute Attachment window of SMAAREA or SMAGROP. Enrollments in which a person is waitlisted, from which a person has withdrawn, or which have already been graded, will never be considered an "in progress" course. Future-term enrollments, while "in progress" for transcript purposes, will never be considered by prerequisite checking.
  - Use the **Prerequisites** radio group (in the Registration Error Checking window) to specify whether prerequisite checking should be performed or not. The **No Check** option specifies that prerequisite restrictions will not be checked. The **Fatal** option indicates that failure of a prerequisite restriction will raise a fatal error.
9. (Required) Determine if pipe processes or advanced queuing will be used to submit compliance requests for prerequisite checking.

Use the *AQ4PIPES GTVSDAX* rule to toggle between pipes and advance queues.

 **Note**

Advanced queuing is used for session communication with Oracle RAC technology where the database runs across multiple instances. Pipes and queues can co-exist, and you can switch between the two options. However, you must choose to run one or the other. They cannot be run together. ■

Refer to the “Student Records” chapter of the *Banner Student Self-Service User Guide* or the “Student Information” chapter of the *Banner Faculty and Advisor Self-Service User Guide* for more information on using pipes and advanced queues.

- 9.1.** For pipe processes, determine how the processes which will submit compliance requests will be managed.

When using area prerequisite requirements, Oracle pipes can be used to submit compliance requests from the various registration processes. Two pipe programs are involved:

- The Compliance Listener Start Up Process (SFRPINI) initializes the Compliance Pipe Process (SFRPIPE) for each pipe listed in the SFBPIPE table.
- The Compliance Pipe Process (SFRPIPE) is used as a listening agent for Oracle pipes to initiate the compliance process to perform prerequisite processing for registration.

Use the *PIPETIME GTVSDAX* rule with pipes to manage the timeout period for a response from compliance processing.

 **Note**

Pipes used by area prerequisite processing are similar to those used by Job Submission (GURJOBS), and their management is usually a database administrator or systems-type responsibility.

Appropriate pipes must be initialized in order for area-prerequisite processing to occur, and they may be best initialized during normal system start-up routines. Ten rows have been delivered in the SFBPIPE table, and ten pipes will be initialized by SFRPINI. Determining the required number of pipes to use is each institution's responsibility. If processes are waiting for pipe responses, it may be best to initialize additional pipes. ■

- 9.2.** For advanced queuing, determine how the processes which will submit compliance requests will be managed.

When using area prerequisite requirements, Oracle advanced queuing can be used to submit compliance requests from the various registration processes. Two advance queuing programs are involved:

- The Queue Initialization Process (SFRQINI) initializes the SFRADVQ listener process to be run in the background, where it listens for Oracle advanced queue calls to execute the compliance process.
- The Compliance Advanced Queue Process (SFRADVQ) is used as a listening agent for Oracle advanced queue processing. It tells advanced

queuing to initiate the compliance process to perform prerequisite processing for registration.

Use the *QUEUETIME GTVSDAX* rule with advanced queues to manage the timeout period for a response from compliance processing.

10. Perform registration as usual. There will be different results, depending upon the method of registration used.

- 10.1. Online registration using the Student Course Registration Form (SFAREGS):

When area prerequisites are not in effect for a section, prerequisite checking will be performed as it has been in the past. There are three possible results: a successful registration, an *In progress* message, or a *Pre-Req and Test Score Restriction* error. The operator must respond either by dropping the request or overriding the error.

When area prerequisites are in effect for a section, prerequisite processing will be performed by a piped call for a compliance evaluation. There are two possible results: a successful registration or a *Pre-Req and Test Score Restriction* error. If a *Pre-Req and Test Score Restriction* error occurs, the operator may respond in one of several ways:

- Override the error immediately.
- Drop the request.
- Request additional information on why the prerequisite requirement was not met. Additional prerequisite failure information is presented in the Detailed Restriction Results Form (SFQPREQ). This form is available as an option from SFAREGS using the **CRN** field **Search** feature and the Option List (select View Detailed Results) or a Duplicate Item function when positioned on a course for which an area prerequisite was not met. After reviewing the requirements which have not been met, the operator is returned to SFAREGS, where additional enrollments can be requested, the error can be overridden, or the section can be dropped.

 **Note**

Please note that SFQPREQ is available for display only for enrollment attempts in sections which use area prerequisites. If you request display of SFQPREQ for all enrollment attempts where test score and prerequisite restrictions are used, the error message *\*ERROR\* CAPP Area Prerequisite error not encountered* will be given. ■

- 10.2. Web Registration (either Banner Student Self-Service or Banner Faculty and Advisors Self-Service):

When area prerequisites are not in effect for a section, prerequisite checking will be performed as it has been in the past. There are two possible results: a

successful registration or a *Pre-Req and Test Score Restriction* error. Following an error, the request to enroll in the section is automatically deleted.

When area prerequisites are in effect for a section, prerequisite processing will be performed by a piped call for a compliance evaluation. There are two possible results: a successful registration or a *Pre-Req and Test Score Restriction* error.

If a *Pre-Req and Test Score Error* is returned for an enrollment attempt which uses an area prerequisite, a link will be available from the CRN for the enrollment, and you will see a line below the CRN. The student can select the link, and a new Web page, the CRN Prerequisite Area Results will be displayed. This page will display all prerequisite areas for the CRN which *have not* been met. It will not display required prerequisite areas which *have* already been met.

The display is in table format, and includes the following sections:

- For each CRN for which an area prerequisite has not been met, the CRN, Subject, Course Number, and Course Title will display.
- Each area which has not been met will be listed, and Area Code and Area Description will display.
- The Required Credits, Courses, and Minimum GPA from the area's general requirements will display, if the area includes any of these items in its general requirements.
- Detailed requirements for the area will display, *if the **Print Indicator** checkbox for the area is checked on the Area Library Form (SMAALIB). If the **Print Indicator** checkbox is not checked for the area, no detail requirements will display.* For example, you may have an area in which a minimum GPA is required, and the only thing you want to communicate to the student is whether the GPA requirement has been met or not. Setting the **Print Indicator** checkbox to unchecked for the area will suppress the display of the detail requirements for the area.

After viewing the results of the prerequisite evaluation, the student has several options:

- Use the **Menu** button to return to the Registration Menu.
- Use the **Exit** button to exit from Banner Student Self-Service.
- Use the Return to Add/Drop link to return to the Add/Drop Classes page.

## Registration Prerequisite Checking using DegreeWorks

This section discusses using DegreeWorks software with Banner prerequisite checking in the Catalog, Schedule, and Registration modules. This is optional functionality that can be

turned on as needed using a rule on GTVSDAX. DegreeWorks version DW4.0.7 supports this functionality.

 **Warning**

Once you have turned on DegreeWorks prerequisite checking and converted the records, attempting to revert back to CAPP prerequisite checking is *not* recommended. You can continue to use Banner basic prerequisite checking.

You cannot turn on DegreeWorks prerequisite checking for prior terms that have registration records. Prior terms will still use CAPP and/or Banner basic prerequisite checking. ■

Communication between DegreeWorks and Banner is handled by Oracle advanced queue processing. GTVSDAX rules are also used to set up this processing. Please refer to the DegreeWorks documentation regarding listener services used to communicate with Banner Student.

## Processing Overview

This section contains information on:

- setting up Banner
  - running the update and conversion scripts
  - turning on the prerequisite GTVSDAX rule
  - turning on prerequisite checking for courses and sections
  - viewing errors in registration
- integrating the processing with DegreeWorks
  - using the DegreeWorks Scribe tool
  - using the DegreeWorks Scribe Requisite blocks
  - using the DegreeWorks listener services
- setting up Oracle advanced queuing
  - turning on the advanced queue GTVSDAX rule
  - using the “degreeworks” user role
  - using the Prerequisite Service
  - using the Description Service
  - using Oracle object types

## Banner Setup

Banner General 8.3 must be installed before Banner Student 8.4.1 is installed, in order to use this processing. After Banner Student 8.4.1 has been installed, the *PREREQCHK* GTVSDAX rule can be configured. You can then run the optional update and conversion scripts to update the prerequisite checking method on the SCBCRSE and SSBSECT tables. The mandatory update and conversion scripts were automatically run as part of the Student 8.4 upgrade.

### Update and Conversion Scripts

Four update and conversion scripts are delivered for use with DegreeWorks prerequisite checking.

- `sscbrseu_080400.sql`

Run automatically as part of Banner Student 8.4 upgrade

- `sssbsectu_080400.sql`

Run automatically as part of Banner Student 8.4 upgrade

- `sscbrseu_dw_08040100.sql`

Optional, run manually after Banner Student 8.4.1 upgrade for DegreeWorks prerequisite checking

- `sssbsectu_dw_08040100.sql`

Optional, run manually after Banner Student 8.4.1 upgrade for DegreeWorks prerequisite checking

#### ***sscbrseu\_080400.sql***

The `sscbrseu_080400.sql` update script is used to populate the `SCBCRSE_PREREQ_CHK_METHOD_CDE` column in SCBCRSE for all terms.

#### **Note**

The `SCBCRSE_PREREQ_CHK_METHOD_CDE` column replaces the `SCBCRSE_CAPP_PREREQ_TEST_IND` column. ■

*This script was run automatically during the Banner Student 8.4 upgrade process.*

The script sets the `SCBCRSE_PREREQ_CHK_METHOD_CDE` column to the appropriate value for the prerequisite.

- If the obsolete `SCBCRSE_CAPP_PREREQ_TEST_IND` column was set to *Y*, the `SCBCRSE_PREREQ_CHK_METHOD_CDE` column is set to *C*.
- If the obsolete `SCBCRSE_CAPP_PREREQ_TEST_IND` column was set to *N* or *Null*, the `SCBCRSE_PREREQ_CHK_METHOD_CDE` column is set to *B*.

### ***sssbsectu\_080400.sql***

The `sssbsectu_080400.sql` update script is used to populate the `SSBSECT_PREREQ_CHK_METHOD_CDE` column in `SSBSECT` for all terms.

#### **Note**

The `SSBSECT_PREREQ_CHK_METHOD_CDE` column replaces the `SSBSECT_CAPP_PREREQ_TEST_IND` column. ■

*This script was run automatically during the Banner Student 8.4 upgrade process.*

The script sets the `SSBSECT_PREREQ_CHK_METHOD_CDE` column to the appropriate value for the prerequisite.

- If the obsolete `SSBSECT_CAPP_PREREQ_TEST_IND` column was set to *Y*, the `SSBSECT_PREREQ_CHK_METHOD_CDE` column is set to *C*.
- If the obsolete `SSBSECT_CAPP_PREREQ_TEST_IND` column was set to *N* or *Null*, the `SSBSECT_PREREQ_CHK_METHOD_CDE` column is set to *B*.

### ***sscbrseu\_dw\_08040100.sql***

The `sscbrseu_dw_08040100.sql` conversion script is used to change CAPP prerequisite checking to DegreeWorks prerequisite checking for courses by term by updating `SCBCRSE`. When the `SCBCRSE_PREREQ_CHK_METHOD_CDE` is set to *C*, the script updates the setting to *D*.

*This script is optional and is run after the 8.4.1 upgrade is complete, and only needs to be run if you are implementing DegreeWorks prerequisite checking.*

Before this script is run, update the delivered `PREREQCHK` rule on `GTVSDAX` to the valid beginning term code. This is the term when you wish to start using DegreeWorks for prerequisite checking.

This script verifies that registration is not in progress, and that no courses have registration records for the term code entered for the `PREREQCHK` rule or for any active or future term codes that are greater than the beginning term code. If registration records exist, an error is displayed, and a different future term must be selected.

The script also creates a new *course detail record* on the Course General Information Base Table (`SCBCRSE`) using the beginning term from the `PREREQCHK` rule as the new effective term. It then updates the value for the prerequisite checking method (`SCBCRSE_PREREQ_CHK_METHOD_CDE`) for CRNs that have active terms equal to or greater than the beginning term for the rule.

### ***sssbsectu\_dw\_08040100.sql***

The `sssbsectu_dw_08040100.sql` conversion script is used to change CAPP prerequisite checking to DegreeWorks prerequisite checking for sections by term by updating

SSBSECT. When the SSBSECT\_PREREQ\_CHK\_METHOD\_CDE is set to C, the script updates the setting to D.

*This script is optional and is run after the 8.4.1 upgrade is complete, and only needs to be run if you are implementing DegreeWorks prerequisite checking.*

Before this script is run, update the delivered *PREREQCHK* rule on GTVSDAX to the valid beginning term code. This is the term when you wish to start using DegreeWorks for prerequisite checking.

This script verifies that registration is not in progress, and that no sections have registration records for the term code entered for the *PREREQCHK* rule or for any active or future term codes that are greater than the beginning term code. If registration records exist, an error is displayed, and a different future term must be selected.

The script updates the value for the prerequisite checking method (SSBSECT\_PREREQ\_CHK\_METHOD\_CDE) for CRNs/sections that have active terms equal to or greater than the beginning term for the rule. This script does not create any new records on the Section General Information Base Table (SSBSECT).

### Prerequisite Checking GTVSDAX Rule

The *PREREQCHK* rule is used with DegreeWorks prerequisite checking. When this rule is in use and DegreeWorks is installed at your institution, registration prerequisite checking can take place through DegreeWorks.

The *PREREQCHK* rule is delivered with the external code set to 999999. You need to set the rule to the term code for the beginning term for which you wish to use DegreeWorks prerequisite checking.

The following conditions apply on SCACRSE and SSASECT:

- When the **External Code** field is set to a begin term of 999999 or an invalid term code, the *DegreeWorks* option in the **Prerequisite Check Method** radio group is disabled.
- When the **External Code** field is set to a begin term that is equal to or less than the current term, the *CAPP* option in the **Prerequisite Check Method** radio group is disabled.
- At least one course area prerequisite restriction must exist on SCAPREQ or SSAPREQ, in order to set the **Prerequisite Check Method** radio group to *CAPP* and save the record on SCACRSE or SSASECT.

The following conditions apply on SCAPREQ and SSAPREQ:

- When the **External Code** field is set to a begin term of 999999 or an invalid term code, the *DegreeWorks* option in the **Prerequisite Check Method** radio group is disabled.

- When the **External Code** field is set to a begin term that is equal to or less than the current term, the *CAPP* option in the **Prerequisite Check Method** radio group is disabled.
- When the **External Code** field is set to a begin term that is equal to or less than the current term, and the **Prerequisite Check Method** radio group is set to *DegreeWorks*, the tab for the Course Prerequisite Restrictions or the Section Test Score and Prerequisite Restrictions window is disabled.
- When the **External Code** field is set to a begin term of 999999 or an invalid term code, a CAPP area prerequisite must exist in the Course Prerequisite Restrictions or the Section Test Score and Prerequisite Restrictions window in order to set the **Prerequisite Check Method** radio group to *CAPP* and save the record.
- When the **External Code** field is set to a begin term that is equal to or less than the current term, and the **Prerequisite Check Method** radio group setting is changed from *DegreeWorks* to *Basic or None*, the tab for the Course Prerequisite Restrictions window or the Section Test Score and Prerequisite Restrictions is enabled.
- When the **External Code** field is set to a begin term that is prior to the availability of DegreeWorks prerequisite checking, the **View DegreeWorks Prerequisite Description** button is not displayed on SCAPREQ or SSAPREQ.

<b>External Code</b>	<b>Internal Code</b>	<b>Internal Code Sequence Number</b>	<b>Internal Code Group</b>	<b>Description</b>	<b>Activity Date</b>
Begin term code, default 999999	PREREQCHK	1	DEGREEWORKS	DegreeWorks Prereqs Specified	Sysdate

## Catalog and Schedule

DegreeWorks prerequisite checking can be set up at the course level on SCACRSE and SCAPREQ and at the section level on SSASECT and SSAPREQ using the **Prerequisite Check Method** radio group. Set the radio group to *DegreeWorks*, instead of *Basic or None* or *CAPP*.

The DegreeWorks description for the course or section can be viewed using the **View DegreeWorks Prerequisite Description** button on SCAPREQ and SSAPREQ. This opens the Prerequisite Information window. When no information exists for the prerequisite description, the message *No prerequisite was defined for this course. Please contact the Registrar's Office is delivered* is displayed in the window. This message text is delivered and can be customized in DegreeWorks version DW4.1.0.

 **Note**

As of DegreeWorks version DW4.0.7, if no course description is entered in DegreeWorks, the Prerequisite Information window will be displayed but will be blank. ■

The prerequisite descriptions from DegreeWorks and associated prerequisite error messages can also be viewed in the Catalog and Schedule modules in Banner Student Self-Service and Banner Faculty and Advisor Self-Service to assist students and faculty members to determine the order in which courses need to be taken.

Prerequisite information from DegreeWorks is displayed on the following pages in Self-Service:

- Detailed Course Information (bwckctlg.p\_disp\_course\_detail)
- Detailed Class Information (bwckschd.p\_disp\_detail\_sched)
- Add or Drop Classes (bwskfreg.P\_AddDrpCrse) (Student Self-Service)
- Add or Drop Classes (bwlkfrad.P\_FacAddDropCrse) (Faculty and Advisor Self-Service)

The Bulletin Report (SCRBULT) displays DegreeWorks course prerequisites in the output. The report calls the DegreeWorks Description Service to obtain the prerequisite descriptions scribed in the remarks in the Requisite blocks associated with the course.

The Term Roll Report (SSRROLL) rolls the prerequisite checking method and or converts prerequisite checking from a CAPP method to a DegreeWorks method according to the begin term in *PREREQCHK* rule on GTVSDAX. This allows you to create the schedule of class sections for terms where DegreeWorks will be used. SSRROLL will not allow the new sections to have a CAPP prerequisite checking method, unless a CAPP area is associated with the section per the Roll CAPP Area or DW Pre-reqs parameter.

Set the *PREREQCHK* rule to the beginning term code for which you use to use DegreeWorks. When SSRROLL is run and the Roll CAPP Area or DW Pre-reqs parameter, the process converts the prerequisite checking method for the sections from CAPP to DegreeWorks, based on the parameter setting. You can roll and convert the prerequisite checking method from Catalog, from Schedule, or you can choose to not roll the data. Not rolling the data resets the **Prerequisite Check Method** radio group to *Basic or None* (SCBCRSE\_PREREQ\_CHK\_METHOD\_CDE and SSBSECT\_PREREQ\_CHK\_METHOD\_CDE set to *B*).

You can review the settings on GTVSDAX for the *PREREQCHK* rule after running SSRROLL. When a valid term code is stored in the **External Code** field that is less than or equal to the term code the data was rolled to, the settings should be as follows:

- For CRNs where the SSBSECT\_PREREQ\_CHK\_METHOD\_CDE is set to *C*, the setting is changed to *D*.

- For CRNs where the `SSBSECT_PREREQ_CHK_METHOD_CDE` is set to *B*, the setting remains as it is.

## Registration

DegreeWorks prerequisite registration errors can be viewed on SFAREGS for a student and term. They can also be viewed in Self-Service.

The Student Temporary DegreeWorks Error Messages Table (SFTDWER) is used to store the DegreeWorks prerequisite checking errors that are displayed on SFAREGS and in Self-Service. SFTDWER is a child table of the Registration Temporary Table (SFTREGS). Records in SFTDWER must be deleted before associated records can be deleted from SFTREGS.

DegreeWorks prerequisite checking is called by SFAMREG for mass registration, but individual DegreeWorks errors must be viewed from SFAREGS. A Message window on SFAREGS is used to display the prerequisite error messages by CRN. This window also displays course descriptions when errors do not exist.

The Registration Admin Messages Report (SFRRGAM) uses prerequisite checking with DegreeWorks and displays pre-registration DegreeWorks prerequisite error messages for students.

## DegreeWorks Integration Setup

Reports can be run from DegreeWorks using Transit to view prerequisite setup in Banner and DegreeWorks. You can use the reports to identify prerequisite setup issues in DegreeWorks, such as courses and sections where the DegreeWorks prerequisite indicator has been set but no rules exist. You can also identify courses and sections that have the indicator set for existing rules. This will assist you in setting up processing for registration errors and preventing students from receiving unnecessary prerequisite error messages. The section prerequisite checking method determines the use of DegreeWorks in Banner registration processing when DegreeWorks has been installed.

Please refer to the DegreeWorks documentation suite (version DW4.0.7) for more information.

## Scribe Tool

The DegreeWorks Scribe tool is used to encode degree requirements. It contains templates that can be used to enter Requisite blocks (rules) for courses and sections. It is used to create a prerequisite rule for a course, as well as add a description. The courses in the descriptions can have hyperlinks in the Web display as long as they are used in the rule. The descriptions are extracted from the Scribe Remarks (notes on the requirements) and are available to Banner Student Self-Service and Banner Faculty and Advisor Self-Service on the Detail Course Information pages and the Detailed Class Information pages. They are available to Banner baseline in the Bulletin Report (SCRBULT) and on the SCAPREQ and SSAPREQ forms. The error messages seen by the student or registrar when a

prerequisite is not met are contained in the Scribe ProxyAdvice. These messages are displayed to the students and faculty members in Self-Service and to the registrar in the error details in SFAREGS.

Please refer to the DegreeWorks documentation suite (version DW4.0.7) for more information.

## Scribe Requisite Blocks

Scribe Requisite blocks are made up of remarks (prerequisite description), the class (course) prerequisite rules, and ProxyAdvice. Rules are defined by course and term range, or by term and CRN. They are linked to Banner when the `SCBCRSE_PREREQ_CHK_METHOD_CDE` column or the `SSBSECT_PREREQ_CHK_METHOD_CDE` column is set to *D*.

The Requisite block also prevents in-progress courses from being used to meet prerequisites on a rule-by-rule basis or on a course-within-a-rule basis. The setting of the **In Progress** checkbox on `SOATERM` is not used in DegreeWorks. The DegreeWorks standard is that in-progress courses will meet prerequisites.

### Note

Courses that have been waitlisted, withdrawn from, or already graded do not qualify as in-progress for prerequisite checking. ■

Please refer to the DegreeWorks documentation suite (version DW4.0.7) for more information.

## Oracle Advanced Queue Processing

Advanced queue processing is used to connect Banner and DegreeWorks for prerequisite checking. This is similar to the pipes processing used with CAPP prerequisite checking. The `squeqtabc_08040100_02.sql` and `squeqtabc_08040100_03.sql` scripts are run during the 8.4.1 upgrade to establish the administrative queues and queue tables for advanced queuing.

Please see the *Banner General 8.3 Release Guide* for more information on Oracle Advanced Queue Processing.

## Advanced Queue Processing GTVSDAX Rule

The `QUEUETIME` rule is used with advanced queue processing for DegreeWorks queues.

Internal Code	Internal Group Code	External Code	Description
QUEUETIME	QUEUETIMEOUT	300	SFRADVQ timeout in seconds

The *QUEUE* rule allows you to change the timeout period for the advanced queue process. The delivered default timeout period is 300 seconds (five minutes). You need to set the rule to the timeout value you choose for the queue to work with the advanced queuing.

Please refer to the DegreeWorks documentation for information on starting listener services.

## DegreeWorks User Role

A “degreeworks” Oracle user is used with this processing. The `USR_DEGREE_WORKS` role is the default role given to this user. This role will only be granted to execute specific objects as defined by the `gurtgrdw.sql` script. (This grant script is also part of the 8.4.1 upgrade.) This allows the DegreeWorks listener processes (DAP61 for the Prerequisite Service and DAP62 for the Description Service) to be executed as the DegreeWorks user, only allowing access to the specific objects required for DegreeWorks prerequisite checking.

## Prerequisite Service

The Prerequisite Service sends the prerequisite courses that are used for `SCRBULT`, `SCAPREQ`, and `SSAPREQ` in baseline and the Detailed Course Information page (`bwckctlg.p_disp_course_detail`) and the Detailed Class Information page (`bwckschd.p_disp_detail_sched`) in Banner Student Self-Service and Banner Faculty and Advisor Self-Service. When a student has not met the requirements, a message is displayed.

The Add or Drop Classes page (`bwskfreg.P_AddDnpCrse`) in Banner Student Self-Service and the Add or Drop Classes page (`bwlkfrad.P_FacAddDropCrse`) in Banner Faculty and Advisor Self-Service also display prerequisite messages.

A registration request to the Prerequisite Service contains the term code, `PIDM`, `SPRIDEN` ID, level, degree, `CRN`, subject code, course number, section number, and credit hours. The response returns the course prerequisite information, including in-progress and error information.

The Registration DegreeWorks Advanced Queuing Package (`SFKDWAQ`) package is used by the Banner registration process when DegreeWorks prerequisite checking is implemented. It facilitates communication across the Oracle queues for the DegreeWorks listener process - DAP61 for the Prerequisite Service.

## Description Service

The Description Service sends the course prerequisite descriptions that are used for `SCRBULT`, `SCAPREQ`, and `SSAPREQ` in baseline and the Detailed Course Information page (`bwckctlg.p_disp_course_detail`) and the Detailed Class Information page (`bwckschd.p_disp_detail_sched`) in Banner Student Self-Service and Banner Faculty and Advisor Self-Service.

A catalog request is initiated in Self-Service when the course details hyperlink is selected. The request must contain required data for term code, subject code, and course number. The request can contain optional data for section number, student ID, degree, and level.

A class schedule request is initiated in Self-Service when the class section hyperlink is selected. The request must contain required data for CRN, term code, subject code, course number, and section number. The request can contain optional data for student ID, degree, and level.

The Description Service response to a catalog request or a class schedule request is displayed to the user as course or section prerequisite description information when the description is found or as an error message if the service is not available, the description is not found, or the Scribe Requisite block is not found.

The Registration DegreeWorks Advanced Queuing Package (SFKDWAQ) package is used by the Banner registration process when DegreeWorks prerequisite checking is implemented. It facilitates communication across the Oracle queues for the DegreeWorks listener process - DAP62 for the Description Service.

## Oracle Object Types

Four high-level, complex, Oracle object types are used that rely on dependant, lower-level object types for their creation. The object types are: `so_dw_preq_request`, `so_dw_preq_response`, `so_dw_desc_request`, and `so_dw_desc_response`. These objects represent the communication payload that is sent across one of the four, unique, Oracle queues also used with this processing. The four Oracle queues are: `DW_PREQ_REQUEST_Q`, `DW_PREQ_RESPONSE_Q`, `DW_DESC_REQUEST_Q`, and `DW_DESC_RESPONSE_Q`.

### *so\_dw\_preq\_request*

The `so_dw_preq_request` object is populated by the Banner SFKPREQ package. It represents information used by DegreeWorks to perform a prerequisite evaluation. This informational payload is sent from Banner across the `DW_PREQ_REQUEST_Q` queue so that the DegreeWorks DAP61 listener process can submit the prerequisite evaluation.

Variable Name	Underlying Oracle Object Type
CORRELATIONID	BANINST1.SO_DW_PREQ_CORRELATION_ID
TERMCODE	BANINST1.SO_DW_PREQ_TERM
STUDENT	BANINST1.SO_DW_PREQ_STUDENT
COURSESECTION	BANINST1.SO_DW_PREQ_CRSE_REQUEST_V

### *so\_dw\_preq\_response*

The `so_dw_preq_response` object is populated by DegreeWorks. It represents information for the results of the prerequisite evaluation. DegreeWorks process DAP61 posts this payload on the `DW_PREQ_RESPONSE_Q` so that Banner (SFKPREQ) can listen for this response. Once the response is received, Banner decodes the object and proceeds with the registration prerequisite evaluation, based upon the results received.

Variable Name	Underlying Oracle Object Type
CORRELATIONID	BANINST1.SO_DW_PREQ_CORRELATION_ID
TERMCODE	BANINST1.SO_DW_PREQ_TERM
STUDENT	BANINST1.SO_DW_PREQ_STUDENT
COURSESECTION	BANINST1.SO_DW_PREQ_CRSE_RESPONSE_V

### ***so\_dw\_desc\_request***

The `so_dw_desc_request` object is populated by the Banner SFKPREQ package. It represents information used by DegreeWorks to query course description information. This informational payload is sent from Banner across the `DW_DESC_REQUEST_Q` queue so that the DegreeWorks DAP62 listener process can submit the query information on the DegreeWorks platform.

Variable Name	Underlying Oracle Object Type
CORRELATIONID	BANINST1.SO_DW_PREQ_CORRELATION_ID
TERMCODE	BANINST1.SO_DW_PREQ_TERM
STUDENT	BANINST1.SO_DW_PREQ_STUDENT
COURSESECTION	BANINST1.SO_DW_PREQ_CRSE_REQUEST

### ***so\_dw\_desc\_response***

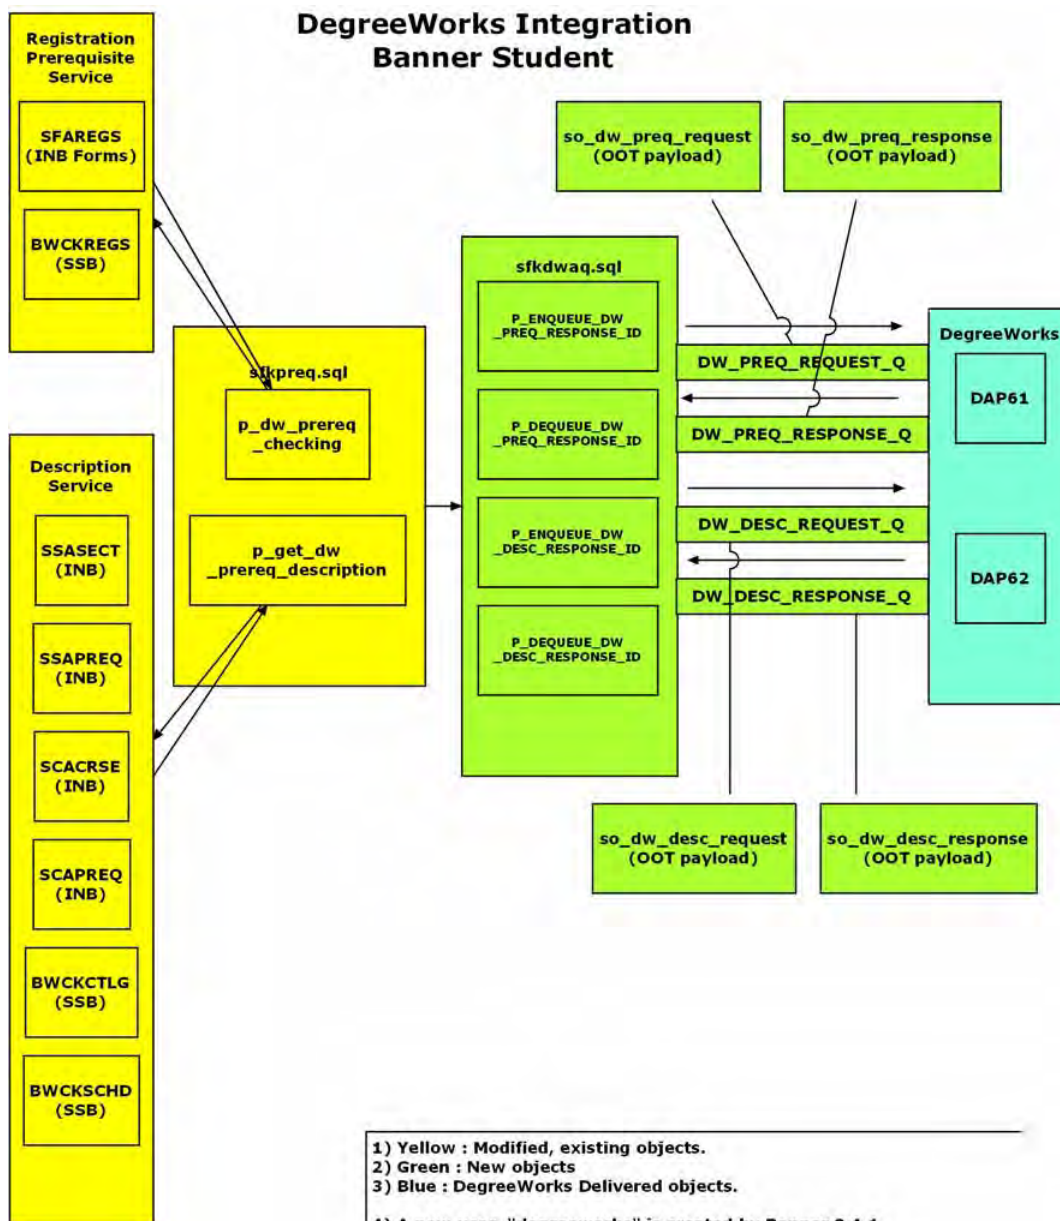

The `so_dw_desc_response` object is populated by DegreeWorks. It represents information for the course description. DegreeWorks process DAP62 posts this payload on the `DW_DESC_RESPONSE_Q` queue so that Banner (SFKPREQ) can listen for the response. Once the response is received, Banner decodes the object and proceeds with returning the course description results to the calling processes (i.e., baseline Banner or Self-Service Banner).

Variable Name	Underlying Oracle Object Type
CORRELATIONID	BANINST1.SO_DW_PREQ_CORRELATION_ID
COURSESECTION	BANINST1.SO_DW_PREQ_CRSE_REQUEST
DESCRIPTION	BANINST1.SO_DW_DESC_DESCRIPTION_V
REFERENCE	BANINST1.SO_DW_DESC_REFERENCE_V

## Process Flow

Here is a process flow that shows how pipes and queues are used with prerequisite checking.

## DegreeWorks Integration Banner Student

- 1) Yellow : Modified, existing objects.
- 2) Green : New objects
- 3) Blue : DegreeWorks Delivered objects.
- 4) A new user, "degreeworks" is created by Banner 8.4.1. This user only has access to green objects.
- 5) A new role, "usr\_degree\_works" is created by Banner 8.4.1. New role granted to green objects and new user in #4 above.
- 6) A new grant script, gurtgrdw.sql, is created by Banner 8.4.1. Used for compiling green objects to grant new role to objects.

# Return of Title IV Funds Processing

## Overview

Return of Title IV Funds processing provides one simplified Return of Title IV Funds policy for all students, when a student who is receiving Title IV, HEA program funds ceases attendance at the institution. This policy determines the amount of institutional charges that an institution has earned when a student withdraws, and the amount that was unearned and has to be returned.

The Return of Title IV Funds policy limits the student's responsibility for repayments of Federal grants to 50% of the total amount of Federal grants above institutional charges. The policy excludes Federal Work-Study from the calculation.

Return of Title IV processing is cross-enterprise functionality involving the Banner Financial Aid, Banner Student, and Banner Student Self-Service products, and the Accounts Receivable module.

## Return of Title IV Funds and Authorizations Handbook

For more information on Title IV Refunding, please refer to the *Return of Title IV Funds and Title IV Authorizations Handbook*, which contains information for the Banner Financial Aid and Banner Student products and the Accounts Receivable module.

## Terminology

The following terms are used to discuss Title IV processing.

<b>Term</b>	<b>Description</b>
Title IV Aid	Loans and grants funded by the Federal Government under regulations initially established by the Higher Education Act of 1965 and as amended.
Reauthorization	Periodic review, modification, continuation of a federal program. Title IV was last reauthorized in 1998 with significant changes to the required handling of aid if a student withdraws from all classes.
Break Period	A period of consecutive days during which no academic activity occurs, which may include weekends, holidays, vacations, etc.
Enrollment Period	The period of time (measured in days for Credit Hour programs and hours for Clock Hour programs) for which students who complete an academic program are enrolled. Excludes break periods of five or more consecutive days.

<b>Term</b>	<b>Description</b>
Leave of Absence	Periods in which a student is excused from attendance with prior approval. Regulations define criteria for approving a leave of absence.
Period of Attendance	The period of time a student actually attends prior to withdrawal, excluding approved leave of absence and break periods of five or more consecutive days.
Percent Completed	Period of Attendance/Enrollment Period as a percentage rounded to one decimal.
Institutional Charges	Assessments which are made to students as a requirement for attendance in an academic program (for example, Tuition, Fees, Room, Board).
Other Institutional Costs	Additional amounts not billed through Accounts Receivable which are considered as required for attendance (for example, required lab equipment which all students must purchase off campus).

## Calculations

Here is a summary of the steps involved in calculating the Return of Title IV Funds.

### 1. Determine the student's withdrawal date.

The student's withdrawal date can be determined by one of the following specifications:

#### 1.1. The withdrawal date as determined by the institution's attendance records.

An institution that is required by an outside entity to take attendance for only some of its students must use those attendance records for those students that withdraw to determine the withdrawal date.

#### 1.2. The date, as determined by the institution, that the student began the withdrawal process prescribed by the institution.

#### 1.3. The date, as determined by the institution, that the student provided official notification to the institution of his or her intent to withdraw.

A student has provided official notification to the institution of his or her intent to withdraw if the student indicates an intent orally or in writing.

#### 1.4. The period mid-point (50%) for institutions who do not take attendance and for which a student leaves the institution without reporting his or her withdrawal and for which the institution is unable to identify the actual date of withdrawal.

This step is accomplished by the Banner Student System. The Return of Title IV Funds process is dependent upon the entry of a withdrawal date. The following steps cannot occur until the withdrawal date is entered.

 **Note**

The Title IV Funds Return Calc Process (RPRTIVC) allows for the determination of the Return Title IV Funds in Audit Mode (Calculate and View) or Update Mode (Calculate and Save). The Audit Mode allows you to inform the student of the consequences of a withdrawal before the withdrawal process is completed without updating the Banner Financial Aid awards or the Accounts Receivable information. You also have the ability to print a summary of the Return of Title IV Funds calculation in Audit Mode or Update Mode.

Institutions are not required to use the Return of Title IV Funds calculation withdrawal date for their own institutional refund policies or for other purposes. Institutions may have a separate withdrawal date for their own purposes. The institutions' withdrawal date for registration fee assessment may differ from the Title IV withdrawal date. ■

2. Identify students who have had a withdrawal status code and date entered on their records.

The Return of Title IV Funds Recipient Withdrawn Status Report (RPRTIVR) allows you to print a listing of the students who have had a withdrawal status code entered on their accounts.

3. Identify students who are Title IV recipients.

The Title IV Recipient Withdrawn Report (RPRTIVR) identifies those students who are eligible Title IV recipients during the payment period of the withdrawal.

Title IV recipients are those students who have had Title IV funds disbursed to their accounts or who could have had Title IV funds disbursed to their accounts during the payment period in which the withdrawal occurred.

4. Calculate the Return of Title IV Funds.

The Title IV Funds Return Calc Process (RPRTIVC) will process the Return of Title IV Funds calculation in batch in two modes:

- Audit Mode (Calculate and View)
- Update Mode (Calculate and Save)

The Return of Title IV Fund Calculation Form (RPATIVC) also processes the Return of Title IV Funds calculation online in two modes:

- Audit Mode (Calculate and View)
- Update Mode (Calculate and Save)

**5. Determine the percentage earned.**

The percentage earned is calculated by taking the number of calendar days or clock hours completed in the period or period of enrollment divided by the total number of calendar days or clock hours in the payment period or period of enrollment. Scheduled breaks of at least five consecutive days, as well as approved leave of absences, are not included in the calculation of days in the payment period or period of enrollment.

This calculation is performed when RPATIVC is accessed or the Title IV Funds Return Calc Process (RPRTIVC) is run.

*Leaves of Absence*

- A leave of absence is not an approved leave of absence for the purposes of the Title IV program unless the institution explains at or prior to granting the leave of absence the effects that the student's failure to return from an approved leave of absence may have on the student loan repayment terms. This includes the exhaustion of some or all of the student's grace period.
- In accordance with the statute, the total number of days of all leaves of absence cannot exceed 180 days in any 12 month period.
- A Title IV program loan borrower who has been granted an approved leave of absence is considered to be enrolled in the institution for purposes of reporting the student's in-school status for Title IV program loans.

**Processing Notes**

The "period of enrollment" is defined as the academic period established by the institution for which institutional charges are generally assessed (for example, terms in Banner).

The percentage earned is defaulted to 100% whenever the calculated percentage of the period of enrollment completed is greater than 60%. No Return of Title IV Funds calculation is required to be completed when the calculated percentage of the period of enrollment completed is greater than 60%. The percentage unearned is calculated by subtracting the percentage earned from 100%.

The percentages earned and unearned are calculated based on the Return of Title IV rounding rules. Use three decimal places, rounding the third decimal place up one if the fourth decimal place is five or above (for example, 4486 would be rounded to .449 or 44.9%).

Institutions with term-based educational programs must determine the treatment of the student's Title IV, HEA program assistance on a payment period basis.

Institutions with non-term-based educational programs must choose either a payment period or period of enrollment and use that period consistently for all students in the program. Banner Financial Aid currently has a term-based structure.

Institutions are permitted to make a separate selection of payment period or period of enrollment for the return of unearned aid calculations for students who: transfer to the institution, re-enter the institution, or attend a non-term-based or a non-standard term-based educational program.

## Student Term Break Form (SOATBRK)

This form is used to provide a method for institutions to define break periods within the period of enrollment or term. A break period less than five calendar days is considered part of the period of enrollment. A break period that is equal to or more than five calendar days is not counted as part of the period of enrollment. Banner uses the break periods defined for the term to determine the percent attended when a student withdraws from the institution.

Break days will be determined as entered on SOATBRK and the SORTBRK table on a term basis. All consecutive calendar days (including weekends) must be entered within any vacation period for this feature to function correctly. (Example: Classes do not meet on weekends. Thanksgiving vacation days include Thursday, Friday, and the following Monday. A total of five calendar days – Thursday, Friday, Saturday, Sunday, and Monday – must be entered on SOATBRK.)

*The form will not:*

- permit an overlap in dates for break periods, (that is, the start date cannot be between start and end of another period),
  - allow consecutive break periods (records) to be entered, (that is, the start date cannot be end date plus one of another period),
- or*
- permit break days to be entered as start and end dates of term.

The Student Withdrawal Form (SFAWDRL), where the Title IV withdrawal date is entered, will display the appropriate break days (greater than or equal to five consecutive days), and this value will be used to calculate the attend percentage.

## Student Withdrawal Form (SFAWDRL)

Use this form to withdraw a student from enrollment for the term. When you withdraw a student from the term using this form, Banner begins the processing of the student's Title IV refund information.

You can also use this form to update information that Banner will use later to calculate the student's Title IV refund, such as:

- Record a Title IV effective withdrawal date and status, and a start date and end date of enrollment.

- Record any additional amount for allowable institutional costs not assessed via Accounts Receivable.
- Record any days for approved leave of absence. The percent of period attended will be calculated based on this data, the start and end of term as recorded in STVTERM or by part-of -term as indicated on SOATERM, and break periods of five or more days as recorded in the Student Term Break Form (SOATBRK) and the SORTBRK table.
- Be warned if the student still has active enrollment status when a withdrawal code is entered.
- Calculate the amount of original institutional charges for the term from the TBRACCD records for the term, which have the tbraccd\_orig\_charge\_ind set to Y on records with detail codes where the tbbdetc\_inst\_charge\_ind is set to Y. This form also displays all TBRACCD records for the term with detail codes where the tbbdetc\_inst\_charge\_ind is set to Y with an updatable checkbox for the tbraccd\_orig\_charge\_ind and totals for the sum of original institutional charges and of other institutional charges. If changes are made to the Original Charge Indicators, the new total will be taken back as the amount of original charges on the Title IV withdrawal record. All processing of the enrollment status, course status, and registration fee assessment must be completed before accessing SFAWDRL.
- View current course information (from SFRSTCR) similar to SFAREGQ, including:
  - CRN
  - Part-of term
  - Subject
  - Course number
  - Section
  - Enrollment status
  - Enrollment status date
  - Last date of attendance
- Maintain additional withdrawal information such as:
  - Enrollment start and end dates
  - Days in enrollment period as well as the days attended
  - The total institutional charges
  - Free form user withdrawal comments

## SFAWDRL and Status Changes

If status code, date, or original charges have changed, when accessing the Withdrawal Status Information block from the key, a pop-up window indicates that changes have occurred and displays the old/new values for all three.

1. If the status code/date have changed, the user has three options:

- 1.1. Create a new record.
- 1.2. Update the existing status code/date.
- 1.3. Exit.

If the user chooses to update an existing record, the new status code and date are defaulted into the SFRWDRL block. The user may update other fields only if the SFRWDRL\_PROCESSED\_IND = *N*.

2. If the original charges amount has changed, and if the SFRWDRL\_PROCESSED\_IND = *N*, the user has three options:

- 2.1. Create a new record.
- 2.2. Update the original charges amount.
- 2.3. Exit.

If a user chooses to update an existing record, the new amount will default in for the original charges. Other fields may be updated by the user, including the Institutional Charges Detail Information window, should the user choose to update the Original Charge Indicators.

3. If the SFRWDRL\_PROCESSED\_IND = *Y*, and if post-withdrawal disbursement is to occur, the user has three options:

- 3.1. Update the institutional charges amount.
- 3.2. Update the Original Charge Indicators to match institutional charges previously used in the calculation.
- 3.3. Exit.

4. If the SFRWDRL\_PROCESSED\_IND = *Y*, and if the return of funds is to occur, the user has three options:

- 4.1. Create a new record.
- 4.2. Update the Original Charge Indicators to match institutional charges.
- 4.3. Exit.

If the user chooses to update the institutional charges amount, the new amount will default in, and no other fields will be updatable.

If the user chooses to update the Original Charge Indicators, the form will go to the Institutional Charges Detail Information window where the user can update the **Original Charge** checkbox. Two totals will display:

- Locked original charges
- Current original charges

As the checkbox is changed, the **Original Charges** field will be updated. The user will be able to save changes only when the two amounts are equal. The user may exit without making changes.

5. After going from the key to the SFRWDRL block, the following is checked:

- 5.1. If the student's status code has changed (`KEY_BLOCK.ESTS_CODE` is different than the `SFRWDRL_ESTS_CODE`).
- 5.2. If the student's status date has changed (`KEY_BLOCK.ESTS_DATE` is different than the `SFRWDRL_ESTS_DATE`).
- 5.3. If the student's original charges amount has changed (`KEY_BLOCK.TOTAL_ORIG_CHGS` is different than the `SFRWDRL_ORIGINAL_CHARGES`).

If any of these three values has changed, a dialogue box stating which fields have changed appears and displays the new values of those fields. A user can compare current values on the form to the new values, to decide on a course of action. After the user responds to the dialogue box by selecting *OK*, the following happens:

For scenarios #1 and #2 above, an option window appears with the following options.

- Create new record
- Update status code and/or date
- Exit without changes

If the user chooses to update, the status code/date from the key default in.

For scenario #3 above, there are three different situations to check for, each having different options:

- 5.1. If `SFRWDRL_PROCESSED_IND = N`:
  - Create a new record.
  - Update the original charges amount.

- Exit without changes.

If the user chooses to update the original charges, the total original charges amount from the key will default in.

**5.2.** If SFRWDRL\_PROCESSED\_IND = Y and there is a post-withdrawal disbursement (check Banner Financial Aid tables for amount-earned > amount-disbursed):

- Update the original charges amount.
- Adjust the Original Charge Indicators to match institutional charges previously used in the calculation.
- Exit without changes.

If the user chooses to update the original charges, the total original charges amount from the key will default in.

If the user chooses to adjust the indicators, access the Institutional Charges Detail Information window.

**5.3.** If SFRWDRL\_PROCESSED\_IND = Y and there is a return of funds (check Banner Financial Aid tables for amount-disbursed > amount-earned):

- Create a new record.
- Adjust the Original Charge Indicators to match institutional charges previously used in the calculation.
- Exit without changes.

If the user chooses to adjust the indicators, access the Institutional Charges Detail Information window.

In any of the previous scenarios, if the user opts to “Create a new record”, the cursor is placed on **Withdrawal Code** field if null (and it will be null if the STVESTS\_WDRL\_CODE\_DEF is null). If the **Withdrawal Code** is not null (meaning STVESTS\_WDRL\_CODE\_DEF gave it a value), then the cursor is in the **Effective Withdrawal Date** field. If the user chooses to “Exit without changes”, a Rollback occurs. (This is the end of the discussion of the three scenarios listed above.)

If the SFRWDRL\_PROCESSED\_IND = Y, the user may not update any other fields on the form.

If the SFRWDRL\_PROCESSED\_IND = N, the user may update all updatable fields.

## Student Withdrawal Query Form (SFIWDRL)

Use this form to view and query withdrawal information about a student from SFAWDRL. You can view information for either a single term or all terms. Withdrawal records appear in descending order by term, and within each term, descending order by record sequence. This form is for query purposes only; you cannot make changes to any of the values on this form. You can access this form from SFAREGS using the Options Menu.

## Student Withdrawal Status Code Validation Form (STVWDRL)

This form is used to define Title IV withdrawal status codes. Use the indicators on the form to control whether Banner Financial Aid records are updated and whether refunds will be processed at 50%.

## Term Control Form (SOATERM)

Use the **Original Charge Cutoff Date** field in the Registration Fee Assessment section to reflect the date through which all assessments are considered original charges. This is not a null field and is defaulted to the `STVTERM_START_DATE` when creating a new record. The user can update the field.

The **TIV Date Source** section uses a radio group for **Term Date** or **Part of Term Dates**. The default is **Term Date**. Based on how the institution sets this, either the `STVTERM_START_DATE` and `END_DATE` will be used on SFAWDRL as the "Enrollment Start" and "Enrollment End" dates, *or* the `min (part-of-term) start_date` and `max (part-of-term) end_date` that go with the student's course registrations for the term will be used for "Enrollment Start" and "Enrollment End" dates.

## Housing Term Control Form (SLATERM)

Use the **Original Charge Cutoff Date** field to reflect the date through which all assessments are considered original charges. The housing fee assessment process will check this date to determine if the Original Charge Indicator should be set. This is a null field and is defaulted to the `STVTERM_HOUSING_START_DATE` when creating a new record. The user can update the field.

## Enrollment Status Code Validation Form (STVESTS)

The **Withdrawal Code** field is used as an optional crosswalk column, referencing STVWDRL codes if desired. Valid values may be selected from the List for Values derived from the Student Withdrawal Status Code Validation Form (STVWDRL).

The **Withdrawal Indicator** is used as a withdrawal indicator by the enrollment status code. An enrollment status code with this indicator checked will denote a withdrawal code and will then be able to be selected by the batch Withdrawn Student Report (SFRWDRL). This field is validated against the Student Withdrawal Status Code Validation Form (STVWDRL).

## Student Course Registration Form (SFAREGS)

SFAREGS is used in the Return of Title IV Funds processing:

- A non-fatal pop-up warning message is displayed whenever an attempt is made to reinstate a student's enrollment status on SFAREGS in a term for which a Title IV withdrawal record has been created.
- If the `SFBETRM_ESTS_CODE` is changed, and Title IV withdrawal records exist for the student, the following message is displayed: *Student has Title IV withdrawal record for this term.*
- The Student Withdrawal Information item in the Options Menu allows access to SFIWDRL.
- The form recalculates the student's tuition and fees to reflect the reduced charges resulting from the shortened period of attendance. This is handled by registration fee assessment processing to accommodate the correct calculation of the Banner Financial Aid refund by adding the update of the TBRACCD Original Charge Indicator or an original assessment.
- The online registration fee assessment process sets the `orig_chg_ind` in assessment if applicable.

## Room Assignment Form (SLARASG)

The TBRACCD Original Charge Indicator for room charges and the online housing fee assessment process set the `orig_chg_ind` in assessment if applicable. Source code *B* will be passed to Accounts Receivable.

## Meal Assignment Form (SLAMASG)

The TBRACCD Original Charge Indicator for meal charges and the online housing fee assessment process set the `orig_chg_ind` in assessment if applicable. Source code *V* will be passed to Accounts Receivable.

## Phone Assignment Form (SLAPASG)

The TBRACCD Original Charge Indicator for phone charges and the online housing fee assessment process set the `orig_chg_ind` in assessment if applicable. Source code *U* will be passed to Accounts Receivable.

## Class Attendance Roster Form (SFAALST)

The **Date Last Attended** field allows updates and queries on the last date of attendance in a particular class for a student. This can help institutions determine the last date of attendance for unofficial withdrawals

## Withdraw Pending Status Change Report (SFRNOWD)

This report is used to show which students have zero enrollment hours but have not officially withdrawn from the institution (in other words, students who have been enrolled in a term and whose status indicates they are eligible to enroll, but no longer have any active registration for a term, because there are no SFRSTCR records with a **Status Code** checked as **Count in Enrollment** on the Course Registration Status Code Validation Form (STVRSTS)).

### **Note**

The **Withdrawal Code** on STVESTS is used to show that the enrollment status code is also a withdrawn indicator for this reporting process. ■

You can display several different groups of students in the report output:

- those who have received or could have received Title IV financial aid,
- those who received only non-Title IV aid, or
- those with no financial aid.

The report also allows you to include those students who have enrollment for the term but no credit hours in academic history (all F's, for example).

Date parameters are included in this report so as not to include students previously identified as withdrawn if desired. Dates are based on activity date on SFRSTCA.

## Withdrawn Student Report (SFRWDRL)

This report is used to identify students who have withdrawn from the term and need to have a Title IV refund calculated (in other words, those students who have had a withdrawal status code with the **TIV Update Ind(icator)** checked on the Student Withdrawal Status Code Validation Form (STVWDRL) and entered on their student record). This report can also be used to record the student's withdrawal date for Title IV purposes, and to create a withdrawal record for those students who received Title IV funds.

The report allows you to:

- Select only those students who have been awarded Title IV funds or all students.
- Select only the withdrawal enrollment status codes requested. The default for the parameter is all withdrawal enrollment status codes. You have the option of selecting all withdrawal status codes, one withdrawal status code, or multiple withdrawal status codes.
- Review the student status date and Accounts Receivable institutional charge detail to determine if changes are required.

- Use population selection.
- Sort by activity date, ID, name, withdrawal status code, or level.

#### **Note**

Address type codes need to be set up on GTVSDAX to map to the home address type and campus address type if you want addresses to print on the report. The value in the **Internal Code** field is used to identify the GTVSDAX address hierarchy. ■

## Registration Fee Assessment Process (SFRFASC)

The process automatically populates the Original Indicator to *Y*, for the first time assessment occurs, for a specific detail code, for the student, for the term, and for all assessments prior to the cutoff dates established on SOATERM.

## Batch Room/Meal/Phone Assess Report (SLRFASM)

The process automatically populates the Original Indicator to *Y*, for the first time assessment occurs, for a specific detail code, for the student, for the term, and for all assessments prior to the cutoff dates established on SLATERM.

## Class Roster Report (SFRSLST)

The Last Date Attended column on SFRSTCR corresponds to the **Date Last Attended** field on SFAALST.

## Registered, Not Paid Process (SFRRNOP)

The process passes the value of TBRACCD\_ORIG\_CHG\_IND from the existing record into the new TBRACCD record being created for assessment reversals.

## Student Centric Period Processing

This section discusses using student centric periods with registration and academic history processing. Student centric periods are made up of multiple terms or groups of terms. A student centric period is assigned to a student using a cycle designator. When a cycle designator is associated with the student, that indicates the student is included in the student centric period.

Student centric cycles are inserted into the general student record during the admissions process. They can also be dynamically assigned during the registration process. The cycle code and term are used to determine the student centric period. Student centric periods use processing rules to determine time status, academic standing, and student type. Student centric periods are carried into academic history and are used for GPA calculations along with terms and student levels.

## Set Up and Use Student Centric Periods

Use these steps to set up and use student centric periods. This section assumes you have already set up your terms, as well as admissions, general student, registration, and academic history processing.

1. Create student centric period cycle codes on the Student Centric Period Cycle Validation Form (STVSCPC).
2. Create student centric period rules on the Student Centric Period Term Control Form (SOASCPT).
3. Associate the student centric period rules with term codes on SOASCPT.
4. Create continuant student centric period rules by term or by term and student type on the Continuant Student Centric Period Rule Form (SOACSCP).
5. Review continuant student centric periods by student type on the Continuant SCP Query Form (SOQCSCP).
6. Create time status rules for student centric periods on the Student Centric Time Status Rules Form (SFASTSR).
7. Associate time status levels with the time status rules on SFASTSR.
8. Admit students into student centric periods using the Admissions Form (SAAADMS) or the Quick Admit Form (SAAQUIK).
9. View cycle designator on the general student record on the General Student Form (SGASTDN).
10. Register students in courses in terms on the Student Course Registration Form (SFAREGS).
11. View the cycle designator on the student term record on SFAREGS.
12. Review registration history for student centric periods and for time status codes on the Student Centric Registration History Form (SFASCPR).
13. Set up student centric academic standing rules and GPA information on the Academic Standing Rules Form (SHAACST).
14. Assign a student centric period code to the term header record on the Term Course Maintenance Form (SHAINST).
15. Review student centric period hours and GPA information, as well as institutional and transfer course detail on the Term Sequence Course History Form (SHATERM).

16. Use the **Student Centric Period Statistics** checkbox on the Transcript Type Rules Form (SHATPRT) to include student centric period GPA totals on the transcript.

## Processing

This section discusses in detail how student centric period processing is used in registration and academic history. Processing is based on settings for rules on GTVSDAX. Data must also be built for validation, term rules, cycle designators, continuant rules, and time status rules.

## Terminology

Here are definitions of student centric period and cycle designator and an example of how student centric periods can be set up.

### *Student Centric Period*

A student centric period is a way of grouping multiple Banner terms into one period. It is a standard academic term that can begin at any point at which a student can enter courses and ends when the requirements for a standard term have been fulfilled. Courses that are offered in modules, mini-sessions, parts-of-term, with alternate start dates, and so on, can be grouped into a semester, quarter, or trimester on a student centric basis. A student centric period code has associated terms and a cycle designator.

### *Cycle Designator*

A cycle designator is an indicator assigned to a student and to a student centric period that is used to relate the one to the other. It is used to:

- calculate and maintain totals by student centric period
- display registration records and academic history courses associated with the student's student centric period
- facilitate evaluation, reporting, and extracts of enrollment or academic history data by student centric period

### *Mapping Example*

Here is an example of mapping student centric periods. There are two cycle codes, each with a group of terms and associated student centric periods.

#### **Cycle - T1**

<b>Terms:</b>	Sept - Oct	Nov - Dec	Jan - Feb	Mar - Apr	May - Jun	Jul - Aug
	200810	200820	200830	200840	200850	200860
<b>SCPs:</b>	2008A	2008A	2008C	2008C	2009E	2009E

## Cycle - T2

<b>Terms:</b>	Jul - Aug 200760	Sept - Oct 200810	Nov - Dec 200820	Jan - Feb 200830	Mar - Apr 200840	May - Jun 200850	Jul - Aug 200860	Sept - Oct 200910
<b>SCPs:</b>	2007F	2007F	2008B	2008B	2008D	2008D	2008F	2008F

### ***Enrollment Examples***

Some students may be enrolled in a student centric period throughout their college careers.

<b>Term</b>	<b>Associated Student Centric Period</b>	<b>Cycle on SGASTDN</b>	<b>Report on Transcript</b>
200810	2008A	T1	Student centric period data
200820	2008A	T1	Student centric period data
200830	2008C	T1	Student centric period data
200840	2008C	T1	Student centric period data
200850	2008E	T1	Student centric period data
200860	2008E	T1	Student centric period data

Some students may never be enrolled in a student centric period.

<b>Term</b>	<b>Associated Student Centric Period</b>	<b>Cycle on SGASTDN</b>	<b>Report on Transcript</b>
200810	2008A	None	Term data
200820	2008A	None	Term data
200830	2008C	None	Term data
200840	2008C	None	Term data
200850	2008E	None	Term data
200860	2008E	None	Term data

Some students may have a combination of enrollment in a student centric period and enrollment in standard terms.

For example, a student is enrolled in terms 200710-200760 with no student centric period. In term 200810, the institution offers enrollment using student centric periods, so from terms 200810-200860, the student is enrolled in student centric periods.

Term	Associated Student Centric Period	Cycle on SGASTDN	Report on Transcript
200710 - 200760	None	None	Term data
200810	2008A	T1	Student centric period data
200820	2008A	T1	Student centric period data
200830	2008C	T1	Student centric period data
200840	2008C	T1	Student centric period data
200850	2008E	T1	Student centric period data
200860	2008E	T1	Student centric period data

### Set Up GTVSDAX Rules

Three rules are delivered for the Crosswalk Validation Form (GTVSDAX) as controls for student centric period processing. Each has an internal group code of *CENTRICPERIODS*. These rules are delivered set to *N*.

- The *PROCESSSCP* rule turns on student centric period processing.
- The *AUTOASSIGN* rule automatically assigns a cycle designator code from SOASCPT during the admissions process.
- The *AUTOUPDATE* rule updates the cycle designator code on the general student record at registration for the first enrollment term.

When the *PROCESSSCP* rule is set to *Y*, you can use student centric processing. You can also choose to use or not use the *AUTOASSIGN* rule or the *AUTOUPDATE* rule with the *PROCESSSCP* rule. When the *PROCESSSCP* rule is set to *N*, student centric processing is not invoked, and baseline processing will take place as usual.

When the *AUTOASSIGN* rule is *Y*, the cycle designator will be automatically assigned based on the data on SOASCPT, when a student is admitted and the initial general learner record is created. When this rule is *N*, the cycle designator is not assigned during admissions.

When the *AUTOUPDATE* rule is *Y*, the cycle designator is validated for the student's first enrollment record at registration. When the first enrollment term has a different cycle designator than the one assigned during admissions, a new general student record is created, and the student's new cycle code is assigned. When this rule is *N*, the cycle designator is not automatically updated when a student enrolls for the first term.

Here is a summary of the rule settings on GTVSDAX.

External Code	Internal Code	Internal Code Sequence Number	Internal Code Group	Description	Activity Date
Y	PROCESSSCP	N/A	CENTRICPERIODS	Use Student Centric Periods	Sysdate
Y	AUTOASSIGN	N/A	CENTRICPERIODS	Automate cycle design at adm	Sysdate
Y	AUTOUPDATE	N/A	CENTRICPERIODS	Update cycle design for 1st enr	Sysdate

### ***PROCESSSCP Rule***

When the *PROCESSSCP* rule is set to *N*, institutions that are not using student centric periods can bypass all student centric period processing. The following conditions apply:

- No cycle designator is created on the general student record during admissions.
- When a general student record is copied forward, any cycle designator that existed in the previous record is copied forward to the new record. The cycle designator can be deleted from or updated in the new record.
- When the grade roll is performed, the student centric period code in the student's academic history term header record (SHRTTRM) is not populated, even if the student has a cycle designator in effect for the term.
- When time status is calculated, the student centric period time status history records (SFRSTSH) is not calculated, even if the student has a cycle designator in effect for the term.

If you enter *Y* in the Calculate SCP Time Status parameter in SFRTMST, the message *Calculate SCP Time Status must be N when GTVSDAX PROCESSSCP does not = Y* is displayed.

- When GPAs are calculated, the student centric period GPA records (SHRSGPA) are not calculated, even if the student has a student centric period code the SHRTTRM term header record.
- When academic standing is calculated, student centric period rules and processing are not used.

If you enter *Y* in the Process by Student Period parameter in SHRASTD, the message *Process by Student Period must be N when GTVSDAX PROCESSSCP does not = Y* is displayed.

- When student type updates are calculated using SHRTYPE, the continuant student centric period rules are not used.

The following conditions apply to reports and processes in general:

- All reports and processes with a Process by Student Period parameter generate an error message in the .log file when the *PROCESSSCP* rule is set to *N*, and the Process by Student Period parameter is set to *Y*. The message *Process by Student Period must be N when GTVSDAX PROCESSSCP does not = Y* is displayed in the .log file.
- Reports such as the baseline transcript and the Student Self-Service transcript ignore the setting of the **Student Centric Period Statistics** indicator on SHATPRT when the *PROCESSSCP* rule is set to *N*.

When student centric period processing rules are created at your institution, and student centric period processing is activated by setting *PROCESSSCP* rule to *Y*, reports and processes populate special values and/or create table records as follows:

- The cycle designator is populated in the general learner record (SGBSTDN).
- The student centric period code is populated in the academic history term header record (SHRTTRM) when the grade roll process is performed.
- Student centric period time status history records are created in the SFRSTSH table.
- Student centric period GPA records are created in the SHRSGPA table.

 **Warning**

If your institution later decides to turn off student centric period processing by changing the setting of the *PROCESSSCP* rule from *Y* to *N*, the data created by student centric period processing will already exist in the tables listed above and will not be automatically updated or deleted. This could cause inaccurate records to exist for the terms or period of time that student centric period processing was in effect. ■

Once the *PROCESSSCP* rule has been set to *Y*, it should not be changed to *N*, unless your institution first makes the following changes to student data.

- Set the SGBSTDN\_SCPC\_CODE value to *Null* in all general student records.
- Set the SHRTTRM\_SCPS\_CODE value to *Null* in all academic history term header records.
- Delete all student centric period time status history records from the SFRSTSH table.
- Delete all student centric period GPA records from the SHRSGPA table.

 **Note**

The student centric period time status history cannot be calculated retroactively for a term, since it is dependant on evaluation and calculation being performed as registration occurs. ■

## Build Validation

The Student Centric Period Cycle Validation Form (STVSCPC) is used to create student centric period cycle codes. Each cycle code designates a reporting period that is a collection of terms. This form uses the Student Centric Period Cycle Validation Table (STVSCPC).

## Define Terms Associated With Student Centric Periods

The Student Centric Period Term Control Form (SOASCPT) is used to define terms that are associated with student centric periods for a cycle. This form uses the Student Centric Periods Table (SOBSCPS) and the Student Centric Period Term Control Table (SORSCPT).

You can also query on existing rules by student centric period code or student centric period cycle code. Existing student centric period codes are displayed in the Data block in descending order. Each period is associated with a cycle code. The cycle codes come from the Student Centric Period Cycle Validation Form (STVSCPC).

A unique combination of student centric period code, cycle designator code, and term code must exist. You cannot associate a specific term to the same cycle in two different student centric periods.

The Associated Term Codes block displays the term codes associated with each record in ascending order. Multiple terms can be associated with a student centric period. You must save any changes in the Data block before navigating to the Associated Term Codes block. Each student centric period must have a unique earliest term code.

When students are associated with the cycle and term in general student (SGBSTDN) or academic history (SHRTTRM), and you attempt to change the cycle code in the Data block or delete a record from the Associated Term Codes block, an error will be displayed. The record cannot be changed or deleted.

### Note

Term codes *should* be numeric, in the format YYYYTT, and the codes *must* be constructed so that they maintain the appropriate sequence of terms. Term codes are displayed in descending order, with the highest term first.

The first four characters of student centric period codes should be numeric, in the format YYYYTT, and the codes must be constructed to maintain the appropriate sequence of periods. Student centric period codes are displayed in descending order, with the highest period shown first. ■

## Use Cycle Designators

Cycle designators are codes that reflect the cycle in which a student participates. These cycles, along with groups of terms, are used to determine the student centric periods associated with the student.

### *General Student Record*

The **Student Centric Cycle** field in the General Learner block on the General Student Form (SGASTDN) displays the cycle designator for the general student record. This value cannot be updated if registration records exist for the term. It must be updated through the Student Term window on SFAREGS. Other updates are allowed, but the user may receive warning messages that the associated data already exists in academic history.

This field is populated with the student centric period cycle designator when the general student record is created for a term for the primary curriculum during the admissions process or when the baseline quick admit process is completed and the decision is selected. The cycle designator identifies the student centric cycle by term in which the student is included. The value used is based on the rules set up for the term on the Student Centric Period Term Control Form (SOASCPT). When a cycle designator exists for the general student record that is created, that current cycle designator is used, and a new cycle designator is not calculated for the record.

The SGVCCUR, SGVSTDN, and SGVTEND Banner views use the student centric period cycle data.

### *Registration Record*

The **Student Centric Cycle** field in the Student Term window on the Student Course Registration Form (SFAREGS) displays the cycle designator for the registration record. This value can be updated, but the user may receive warning messages that the associated data already exists in academic history.

The cycle designator on the general student record can be updated automatically for the start term when the first registration enrollment occurs, where registration counts in enrollment. The process checks whether the current cycle designator is different than the one assigned at admissions. When it is different, a new general student record is created with a new cycle designator. When it is the same, the process does not create a new general student record or update the cycle designator. The cycle designator remains unchanged for the effective general student record. This includes when the student has existing registration enrollment records for any prior, current, or future term.

When a student has no other registration enrollment records for any term and is not registering for courses for the admissions term from the primary curriculum of the effective general student record, the cycle designator is updated to the one associated with the enrollment term, and a new general student record is created for the effective term.

Cycle designators can be maintained over terms so you can review a history of prior terms.

- When a cycle is changed for a current term, the cycle on the existing SBGSTDN record is updated, such as a *Null* cycle is changed to a cycle code value, or *CYCLE1* is changed to *CYCLE2*.
- When a cycle is changed for a future term, a new effective term record is created on SGASTDN.
- When a new general student record is created, the current cycle designator is copied forward whether the record is created manually or by a batch process. The cycle designator can be maintained on the new record.
- When the effective term is changed for the cycle designator, and the term does not match any existing general student records, a new record is created for the term. The data is copied forward, and the cycle designator can be maintained on the new record.
- When the student does not have a registration record for the term being updated, you can change the cycle designator on SGASTDN or SFAREGS.
- When registration records exist, but no academic history records exist, you can only change the cycle designator on SFAREGS.
- When an academic history term header record exists for the processing term or a future term, or when transfer term GPA records exist for the processing term or a future term, a warning message is displayed when you try to change the cycle designator on SGASTDN or SFAREGS. This warning notifies the user that existing academic history exists, and if the cycle designator is changed, the user may have additional updates to perform in academic history.

## Build Continuant Rules

The Continuant Student Centric Period Rule Form (SOACSCP) is used to view and maintain continuant student centric period rules by term and student type. The keys to the form are rule term and student type. This form uses the Continuant Student Centric Periods Repeating Table (SORCSCP).

These rules are used to process student type updates for student centric periods. When a cycle has been assigned to a student centric period, and that period is then assigned to a term on SOACSCP, the cycle cannot be changed on the Student Centric Period Term Control Form (SOASCPT). When a term has been assigned to a student centric period, and that period is then assigned to a student for the term header record, the term cannot be removed from SOACSCP.

Continuant student centric period rules should be defined for all student types that are updated by the Student Type Update Process (SHRTYPE). This includes student type codes that have a different value in the **Next Student Type** field than in the **Code** field on STVSTYP. Academic history must exist for a registered student in the period, in order for the student type updates to occur when SHRTYPE is run.

The Continuant SCP Query Form (SOQCSCP) is used to query on continuant student centric periods by student type. This form is accessed using a Count Query Hits function from the **Student Type** field in the Key Block of SOACSCP or by using the Continuant Student Centric Period Query (SOQCSCP) item on the Options Menu.

### **Build Time Status Rules**

The Student Centric Time Status Rules Form (SFASTSR) is used to view and maintain student centric period time status rules and time status levels associated with the rules. This form uses the Student Centric Time Status Levels Table (SFRSTSL) and the Student Centric Time Status Table (SFRSTST).

Rules are based on student centric periods rather than on terms. You can also query on data elements within the rule. When a rule is created, you must associate a time status level in order to save the record. Multiple levels can be associated with each rule and can be changed as needed. The time status levels associated with each rule are displayed in the Time Status Levels block as you scroll through the rules in the Student Centric Period Time Status Rules block.

### **View Time Status History**

The Student Centric Registration History Form (SFASCPH) is used to view a student's registration history and time status by student centric period. This form uses the Student Centric Time Status History Table (SFRSTSH).

Records can be displayed by terms or student centric periods based on the data entered in the Key Block, or you can enter the ID only and see all the records for the student. Records are displayed in descending order by student centric period and term. You can query on the fields in the Student Centric Registration block, such as performing a query by CRN. The totals for credit hours, billing hours, and continuing education hours are updated for each query. The totals are used to verify that the student has been enrolled for sufficient credits within the student centric period to qualify for financial aid or defer repayment of student loans.

### **Calculate Time Status**

The Time Status Calculation Update Process (SFRTMST) calculates the student centric period time status in addition to the existing term time status when the student has a cycle designator in effect for the registration term and CRNs being processed. A new student centric period time status history record is inserted in SFRSTSH if the time status for the student centric period has changed since the last update. If the time status has not changed, no additional record is created. When a student has a manually inserted time status record, no additional time status record is inserted.

The Calculate SCP Time Status parameter is used with student centric period processing. This parameter is required. Enter *Y* to calculate the student centric period time status for students assigned to a cycle designator for the term being processed or *N* to not calculate the student centric period time status. The default is *N*.

If the new student centric period time status is different from the previous one, and the Run Mode parameter is set to *U*, the new student centric period time status history record will be inserted into the database.

You can enter a student centric time status record manually on the Student Centric Registration History Form (SFASCPR). Time status can also be updated online using SFAREGS and in Banner Student Self-Service registration. This is automatically activated when the **Calculate Time Status** indicator is checked on SOATERM for the term in the Key Block.

## Track Student Centric Periods in Registration

The Student Centric Period Registration View (SFVSCPR) is used to track student centric periods in student registration records. This Banner view processes data that includes PIDM, student centric period, term, CRN, part-of-term, subject, course number, level, course registration status, credit hours, billing hours, hours attended, time status hours, grade, grade rolled indicator, and study path sequence number, and continuing education hours. The view uses the PIDM and term to determine whether the student has a cycle designator for the term on the general student record (SGBSTDN). If one exists, the process checks SOASCPT to find the student centric period for the term and cycle.

The following columns are in this view:

- SFVSCPR\_PIDM
- SFVSCPR\_SCP
- SFVSCPR\_TERM\_CODE
- SFVSCPR\_CRN
- SFVSCPR\_PTRM\_CODE
- SFVSCPR\_SUBJ\_CODE
- SFVSCPR\_CRSE\_NUMB
- SFVSCPR\_LEVL\_CODE
- SFVSCPR\_RSTS\_CODE
- SFVSCPR\_CREDIT\_HR
- SFVSCPR\_BILL\_HR
- SFVSCPR\_ATTENDED\_HR
- SFVSCPR\_TIME\_STATUS\_HR
- SFVSCPR\_GRDE\_CODE
- SFVSCPR\_GRDE\_ROLLED\_IND
- SFVSCPR\_STSP\_KEY\_SEQUENCE
- SFVSCPR\_CEU\_HR
- SFVSCPR\_NON\_CEU\_HR

## Calculate Academic Standing

Academic standing calculates academic standing by student centric period for students with an active student centric period for the term. The student is considered to have an active student centric period for the term when the **Student Centric Period** field on SHAINST (or the column in the SHRTRM table) has a valid value. The Academic

Difficulty Rules by Student Centric Period window on the Academic Standing Rules Form (SHAACST) is used to maintain academic standing hours and GPA rules by student centric period. This window uses the Student Centric Period Academic Standing Rules Table (SHRASSR).

When academic standing is evaluated for the student for the final term of the student centric period, the new standing is based on the institutional hours and GPA from all the terms associated with the student centric period. When academic standing is evaluated for the student for an earlier term in the student centric period, the most recent, previous academic standing calculated before the student centric period will be assigned as the new standing.

For a student, for all terms prior to the final term in a student centric period, the academic standing is rolled forward from the student's most recent term that is prior to the start of the current student centric period. This permits registration restrictions and maximum hours calculations to remain in effect throughout the student centric period.

When a student who has an active student centric period does not enroll in the final term of the student centric period, and academic standing is calculated for the final term, the student's standing is evaluated based on the student centric period GPA totals, but the academic standing is stored in the highest or maximum existing term header record for the student centric period.

When a student does not have an active student centric period assigned, the existing term-based rules from SHAACST are used for the evaluation of academic standing.

Two parameters on the Calculate Academic Standing Report (SHRASTD) are used with student centric period processing.

- The Process by Student Period parameter is required. Enter *Y* to calculate the academic standing for student centric periods or *N* to not calculate the academic standing. The default is *N*.
  - When this parameter is set to *Y*, the process considers students who are assigned to a cycle designator and student centric period using the rules for student centric period academic standing processing.
  - When this parameter is set to *Y*, any students who are not assigned to a cycle designator for the term are processed using baseline term academic standing processing.
  - When this parameter is set to *N*, only baseline term academic standing processing is performed.
- The SCPs to be Processed parameter is optional. Multiple values can be entered. Enter the student centric periods to be processed. Values should be valid for the term entered in the Term parameter. Valid values come from the Student Centric Period Term Control Form (SOASCPT). When the Process by Student Period parameter is set to *Y*, this parameter must be entered.

## Calculate GPA

GPA processing can calculate a student's GPA by student centric period for terms that are part of a student centric period. When a student changes his cycle (either retroactively or for the current, in-progress term), a warning is displayed that existing student centric period records will be deleted, and the GPA needs to be recalculated.

When the cycle designator is changed on SGASTDN or SFAREGS after the student has existing academic history records, the *Cycle Designator does not agree with existing Academic History* message is displayed. When the student centric period value is entered, altered, or deleted on SHAINST, the GPA and totals for the student centric period will be automatically recalculated, and the *GPA recalculation completed* message is displayed.

A student centric GPA is stored by level and type. The types include Institutional (*I*), Transfer Credit (*T*), and Overall (*O*). The transfer credit GPA is a combined GPA for all transfer work within the student centric period. Even though transfer work has been accepted for an effective term within the student centric period, it will only be included in the GPA by student centric period if the student has an institutional academic history term header record for that effective term.

The Calculate GPA Report (SHRCGPA) and the GPA Recalculation Report (SHRGPA) consider student centric periods when calculating the GPA for the student. When GPA calculation is called by SHATRNS or SHATCKN, or when recalculation is performed on SHAINST, the student's GPA will be calculated by student centric period, if the student centric period data element in the academic history term header record has a student centric period value.

## Track Student Centric Periods in History

The term header record on SHRTTRM includes the student centric period for the student's academic history term. The grade roll process (SHKROLL) populates the term header record (SHRTTRM) with the student centric period when the record is created during the roll process. When a student has a cycle designator in effect for the term, the student centric period associated with the process term and student's cycle designator will be inserted into the SHRTTRM table. This takes place when grades are rolled from the Class Attendance Roster Form (SFAALST) or the Class Roster Form (SFASLST), or using the Grade Roll Process (SHRROLL).

The student centric period can be viewed for the term header record on Term Course Maintenance Form (SHAINST). The student centric period code can only be entered or updated using a code that is valid for the term or is *Null*. Validation takes place against the rules on SOASCPT. If the student centric period is manually changed on SHAINST, the GPA will be automatically recalculated so that all totals and GPAs for student centric periods are adjusted to reflect the change.

The Term Sequence Course History Form (SHATERM) displays academic history by student centric period. The Student Centric Term GPA and Course Detail Information window is used to display student centric period hours and GPA totals, as well as

institutional and transfer course detail, for courses associated with a student centric period. This window uses the Student Centric Period GPA Table (SHRSGPA). Academic history information for the student is displayed for the term in the Key Block and other terms in ascending order. If no term is entered, all academic history records with associated student centric periods are displayed for the student.

When you scroll through the student centric period records in the Student Centric Period GPA block, the data in the bottom block of the window switches between the Transfer Courses information and the Institutional Courses information. This window can be accessed when the term header record (SHRTTRM) for the student has a student centric period or cycle designator for the term in the Key Block.

## Reporting

Reports and processes include student centric periods in the information that is processed and the calculations that are performed.

### Clearinghouse Extract

The Clearinghouse Extract Report (SFRNSLC) processes information based on terms that are part of a student centric period. Data comes from the SFASTSR and SFASCPR forms.

The Process by Student Period parameter is used with student centric period processing. This parameter is required. Enter *Y* to process student centric periods or *N* to not process student centric periods. The default is *N*.

### Student Right to Know

The Student Right to Know Report (SGRKNOW) processes information based on terms that are part of a student centric period.

The Process by Student Period parameter is used with student centric period processing. This parameter is required. Enter *Y* to process student centric periods for right to know reporting or *N* to not process student centric periods. The default is *N*.

### Enrollment Verification

The Enrollment Verification Request (SFRENRL) processes information based on terms that are part of student centric periods. Enrollment dates, attendance information, enrollment history, and course summary information are printed as student centric period data.

The Process by Student Period parameter is used with student centric period processing. This parameter is required. Enter *Y* to process enrollment by student centric periods or *N* to not process enrollment by student centric periods. The default is *N*.

## IPEDS

IPEDS processing uses student centric periods. The Web upload files for the IPEDS reports can process information based on terms that are part of a student centric period.

### *IPEDS Data Table (SHRIPDS)*

The SHRIPDS table collects data for multiple terms when the Process by Student Period parameter for the SHRIPDS process is set to *Y*, and the *PROCESSSCP* rule on GTVSDAX is set to *Y*. The process reports any students registered in a term that is included in the student centric period.

### *IPEDS File Generation Process (SHRIPDS)*

The IPEDS File Generation Process (SHRIPDS) processes information based on terms that are part of student centric periods.

The Process by Student Period parameter is used with student centric period processing. This parameter is required. Enter *Y* to include a student centric period in the process or *N* to not include a student centric period. When the parameter is set to *N*, existing term processing is used. The default is *N*.

SHRIPDS is run by term using the Process Term parameter. When the Process by Student Period parameter is also used, the process checks the rules on SOASCPT to determine which student centric period includes the value entered in the Process Term parameter as the last term. All term codes that are part of the student centric period are considered, as is the order in which the terms fall within the student centric period.

After the student centric period and the associated terms have been identified, each student record that shows enrollment in any term in the student centric period is read for reporting.

- If the student is registered in all terms of the student centric period, the following occurs:
  - Enrollment hours are summed from all terms in the student centric period in which the student is enrolled, using the existing rules in base SHRIPDS processing.
  - Student centric period rules for time status are used and combine the enrollment hours for all the terms in the student centric period.
  - The general student record is used for the lowest term in the student centric period in which the student has registration. The process reports the student's class, type, level, and category.
  - Registration records for all terms in the student centric period are used to determine remedial courses, foreign campus courses, off-campus courses, audit grade mode courses, and audit registration status courses.
  - Academic standing status rules are used. If the student is new, the system assumes a standing of *00*. For continuing students, the system pulls the standing from the previous term's academic standing in the **End of Term**

**Academic Standing** field in the Term Header block on SHAINST. (If there is no standing, the system assumes *00*.) If an override standing has been entered for the term on SGASTDN, the system will use the override standing.

- If the student is not registered in all terms of the student centric period, the student's registration records are reported for terms included in the student centric period using these rules:
  - The general student record is used for the lowest term in the student centric period in which the student has a registration record. This determines time status, student class, type, level, and category.
  - Student registration records are used for all terms of the student centric period. This determines remedial courses, foreign campus courses, off-campus courses, audit grade mode courses, and audit registration status courses. See the following example.

A student is registered in a term that falls within a student centric period.

- Student centric period 2009A is composed of terms 200910 and 200920.
- The student is not included in the student centric period, but is registered in two terms (terms 200910 and 200930), and term 200910 is included in student centric period 2009A.
- Registration is reported for term 200910, because term 200910 is included in student centric period 2009A.
- Registration in term 200930 is not reported, because term 200930 is not included in student centric period 2009A.

### ***IPEDS Total Activity Report (SHRIACT)***

You can enter multiple values in the Effective Terms of Fall Cohort parameter and the Retention Terms of Fall Cohort parameter. This allows your institution to process multiple effective terms and multiple retention terms by student centric period.

### ***Graduation Rate Survey Report (SHRIGRS)***

The term parameters on this report can be used with student centric periods.

- Start Term parameter  
Enter the minimum start term of the student centric period to be processed.
- End Term parameter  
Enter the maximum end term of the student centric period to be processed.
- Enrollment Terms parameter  
The maximum enrollment term is used to select students to be reported for the student centric period. Students enrolled in any terms up to the maximum enrollment term will be reported.

## Printed Transcripts

The Academic Transcript (SHRTRTC) displays course history information and GPA totals by term within student centric periods. All terms with a specific student centric period on the term header record (SHRTTRM) are grouped between a student centric header line and student centric GPA statistics section on the report output. This allows an institution to provide totals for both the student centric period and terms within the student centric period.

The **Student Centric Period Statistics** checkbox on the Transcript Type Rules Form (SHATPRT) is used to include student centric period GPA information on the transcript for the last term in the student centric period. This information appears on the paper transcript and the Banner Student Self-Service transcript.

## Self-Service Transcripts

The Academic Transcript (bwskotrn.P\_ViewTran) in Banner Student Self-Service displays course history information and GPA totals by student centric period for students included in student centric periods when the **Student Centric Period Statistics** checkbox is checked on SHATPRT.

## XML Transcripts

The PESC/XML Transcript Export Process (SHRPESE) can display courses and GPAs by student centric period without term details in the `.xml` output.

The student centric period is displayed as one continuous enrollment period that is not broken up by the terms contained in the student centric period. The term header is not displayed on the XML transcript for student centric periods. Terms are grouped within the student centric period for the student. After the last term with a student centric period has been printed, intervening terms without student centric periods are printed.

A term that is not associated with a student centric period is displayed chronologically in the `.xml` file after the end of the student centric period (which starts before that term begins) and the start of the next student centric period. For example, an intersession which is not part of a student centric period, which falls between the two terms that make up the student centric period, will be printed after that student centric period.

The student centric period data is substituted for the term data when the **Student Centric Period Statistics** checkbox is checked (set to *Y*) on SHATPRT. When the **Student Centric Period Statistics** checkbox is unchecked (set to *N*), data is processed using standard term functionality.

The XML transcript reports data in three scenarios when the **Student Centric Period Statistics** checkbox is checked.

- When all of a student's coursework belongs to a student centric period, data is reported by student centric period for all of the student's enrollment and/or academic history records.

- When some of a student's coursework belongs to a student centric period and some coursework does not belong to a student centric period, data is reported by student centric period *and* by standard terms (presented as if the term is a student centric period) for the student's enrollment and/or academic history records.
- When none of a student's coursework belongs to a student centric period and no student centric period exists, data is reported by standard terms (presented as if the term is a student centric period) for the student's enrollment and/or academic history records.

 **Note**

When the **Student Centric Period Statistics** checkbox is checked (set to Y) on SHATPRT, all information is presented as if it belongs to a student centric period header. Data is displayed as being in a "period". However, the data may actually reflect term data when student centric periods are not in use or when the term does not have an associated student centric period. ■

The process checks the term header record (SHRTTRM) for each term in the student's academic history. When the SHRTTRM\_SCPS\_CODE is *Null* for a term, the student does not have a student centric period associated with that term. In this case, the standard term information is displayed on the transcript for the academic history information.

When a student has a registration record for a term but no term header record exists, the student centric period to which that term is associated is determined by:

- finding the general student record (SGBSTDN) that is active for the registration term
- using the student centric period cycle code (SGBSTDN\_SCPC\_CODE) from that record
- finding the record for that registration term in the SORSCPT table where:
  - that registration term matches the SORSCPT\_TERM\_CODE
  - the cycle code (SGBSTDN\_SCPC\_CODE) from the SGBSTDN table matches the cycle code (SOBSCPS\_SCPC\_CODE) in the SOBSCPS table
  - the student centric period code from the SOBSCPS table matches the student centric period code from the SORSCPT table

When the SHRTTRM\_SCPS\_CODE has a student centric period value for the term, that code is used to group the terms that belong to each student centric period. It also populates the Academic Session data on the transcript. The GPA totals and GPA information for the student centric period are used to populate the Academic Summary data on the transcript. Data for standard term information for the Academic Session and Academic Summary comes from SHRTGPA.

When the student centric period is in effect for the term and student:

- Term comments for all terms are grouped together.
- The major that is effective for the first term of the student centric period is used.

- Term statistics data comes from SHRSGPA.
- Academic standing by term data comes from the highest term header record in the student centric period.
- In-progress courses are listed at the end with the associated student centric period.
- Coursework from academic history is displayed for the associated student centric period.

Transfer coursework is not associated with a student centric period. Transfer credit is displayed at the beginning of the transcript based on the transfer attendance period entered on SHATRNS.

## Student Type Updates

The Student Type Update Process (SHRTYPE) includes student centric periods in the update processing. This allows you to update student type based on a student's enrollment in a student centric period, instead of enrollment by term. The student type in effect on the student general record (SBGSTDN) for the first term in the student centric period will be used for reporting for the duration of the student centric period.

The Process by Student Period parameter is used with student centric period processing. This parameter is optional. Enter *Y* to use student centric period rules when determining the student type or *N* to not use student centric period rules. The default is *N*.

- When this parameter is set to *Y* and the student has a cycle designator (general student record) or student centric period (academic history record) in effect for the update term, the SOACSCP rules are used to evaluate whether the student type should be updated to the next student type defined on STVSTYP.
- When this parameter is set to *Y* and the student does not have a cycle designator or student centric period in effect for the update term, the SOACTRM rules are used to evaluate whether the student type should be updated to the next student type defined on STVSTYP.
- When this parameter is set to *N*, the current SOACTRM rules are used, even if the student has a cycle designator or student centric period in effect for the update term.

## Purge Processes

The following purge processes are part of the Registration module:

## sfpregs.pc - Registration Purge

This process purges the registration information for all students based on the user specified parameter of term. Courses which have not been graded or rolled to history will have a warning generated on the report.

### Note

Please be aware that all results of the student's course work will be deleted during the purge, and if no paper copy of this information is kept, this information will be lost. ■

## sfpwait.pc - Waitlist Enrollment Purge

This process removes the waitlist enrollment information for those students who could not be placed in the class section. It should be run after the end of the drop/add period after *all* enrollment data has been processed for the term. Multiple parts-of-term may be purged. Expired notifications can also be purged for the term or part-of-term and registration status.

The process uses the course statuses defined on the Course Status Code Validation Form (STVRSTS). Only these course statuses which have a checked **Waitlist Indicator** and unchecked **Count in Enrollment** and **Count in Assessment** boxes will be acceptable for processing. A report, sorted by student name, lists the waitlist enrollments which are purged. A total number of students processed and a total number of enrollments deleted is also provided on the report. Multiple parts of term may be purged. This process also adjusts the waitlist counts on the Schedule Form (SSASECT).

## SFPENRL.pc - Enrollment Verification Request Purge

This process purges the enrollment verification requests which were previously requested. Requests are purged by date and type. Request types are defined on the Enrollment Verification Type Code Validation Form (STVEPRT).

## Setting Up Sleep/Wake Processes

### Note

The following Banner systems and processes are valid for the sleep/wake processing described in this section: ■

### Banner Student

Report/Process	Description
SFRSCHD	Student Schedules
SHRTRTC	Academic Transcript

## Accounts Receivable Module

Report/Process	Description
TGRRcpt	Account Receipt
TSRCBIL	Student Billing Statement (Invoices)
TGRMISC	Miscellaneous Receipt

### Setting up Sleep/Wake Processing

1. Define printer and print command on the Printer Validation Form (GTVPRNT). In the **(Printer) Code** field, enter a name to reference each specific printer that may be used for printing output from sleep/wake processing. In the **Comment (Printer Command)** field, enter the correct operating system print command as it would normally be entered from the command line prompt, substituting an @ (at sign) as the place holder for the filename to be printed.

Operating System	Print Command
UNIX example:	<code>lp -d talaris1 @</code>
VMS example:	<code>print/queue=ln01 @</code>

2. On the appropriate System Distribution Initialization Information Form (SOADEST for Banner Student or TOADEST for Accounts Receivable), enter the printer code from GTVPRNT that should be identified with the collector table rows that will be inserted to the appropriate tables when online application forms create a request for output that can be generated by sleep/wake processing.

#### Note

The collector tables are as follows: ■

Process	Collector Table
SFRSCHED	SFRCBRQ
SHRTRTC	SHTTRAN
TGRMISC	TBRCMIS
TGRRcpt	TBRCRCP
TSRCBIL	TBRCBRQ

3. On the Process Submission Control Form (GJAPCTL), for the valid sleep/wake jobs listed previously, enter the correct response for the parameter that specifies that the job should be processed for collector table entries. Refer to the documentation for each specific process to determine the appropriate response in each case (correct responses may be *COLLECTOR*, *Y*, *%*, etc.). In addition, each sleep/wake job has a printer code parameter. You must specify exactly the same code for this parameter answer that was entered on either SOADEST or TOADEST. A value of *Y* should be

entered for the run in sleep/wake mode parameter, and a number of seconds should be specified for the sleep/wake interval (cycle) for each process.

 **Note**

Do not enter the printer code in the top section of GJAPCTL; only enter it in the parameter section of the form. ■

## Using SFRSCHD with Sleep/Wake Method One

You can run SFRSCHD using Sleep/Wake Method One. Please note that while SunGard Higher Education no longer supports the execution of processes from the command line, processes that run in sleep/wake, including SFRSCHD, are supported.

Please refer to the *Banner General Technical Reference Manual* for information about the various components of sleep/wake processing. Sleep/Wake Method One requires that the .dat response file must be constructed in the order in which the parameters are prompted for when running SFRSCHD from the command line. This order is different than the order of the parameters displayed in job submission (GJAPCTL).

Below is a sample .dat file for SFRSCHD using Sleep/Wake Method One:

<b>.dat File Value</b>	<b>Parameter Prompt (in order displayed using command line execution)</b>
<blank line>	Parameter Sequence Number
<blank line>	Selection Identifier (population selection is not valid for sleep/wake processing)
COLLECTOR	ID
%	Process Term (% for all terms, or a single term value such as 200510)
<blank line>	Address Selection Date (blank assumes today's date or enter a specific date)
1MA	Address Hierarchy 1
2PR	Address Hierarchy 2 (add more lines if additional address hierarchies are desired)
<blank line>	Include blank line to indicate end of Address Hierarchies
HPLAS1	Printer (printer schedules will print to; enter same value on SOADEST, and set up the printer with the correct print command string on GTVPRNT)
N	Process by Campus?

<b>.dat File Value</b>	<b>Parameter Prompt (in order displayed using command line execution)</b>
Y	Run in Sleep/Wake
300	Sleep/Wake Interval (value is number of seconds between sleep/wake cycles)
<blank line>	Start Range From Date
<blank line>	Start Range To Date
%	Schedule Type
%	Instructional Method
N	Print Long Section Title
N	Print Schedule Type
N	Print Instructional Method
N	Print Registration Start/End Dates
<blank line>	Number of Lines Printed Per Page (55)

The specific responses above will vary depending on your institution's codes and set-up.

 **Note**

Please note that SunGard Higher Education strongly recommends that institutions use the online forms (such as GJASWPT) for initiating and maintaining sleep/wake processes. Please refer to the *Banner General Technical Reference Manual* for more information. ■

## Registration Reports

---

This section contains a sample of each report in the Registration module. Parameter listings are also provided for your convenience.

The following reports are run through the Registration module:

Registration Fee Assessment Process	(SFRFASC)
Purge Fee Assessment Audit Process	(SFPFAUD)
Unduplicated Headcount Report	(SFRHCNT)
Registered, Not Paid Process	(SFRRNOP)
Student Schedule Report	(SFRSCHD)

Class Roster Report	(SFRSLST)
Enrollment Verification Report	(SFRENRL)
Enrollment Verification Request Purge	(SFPENRL)
Registration Purge	(SFPREGS)
Waitlist Enrollment Purge	(SFPWAIT)
Course Request Load Process	(SFPBLCK)
Unsatisfied Links Report	(SFRLINK)
Clearinghouse Extract Report	(SFRNSLC)
Time Status Calculation Update Process	(SFRTMST)
NSLDS SSCR Process	(SFRSSCR)
Compliance Listener Start Up Process	(SFRPINI)
Compliance Pipe Process	(SFRPIPE)
Withdraw Pending Status Change Report	(SFRNOWD)
Withdrawn Student Report	(SFRWDRL)
Auto Grade Assignment Process	(SFPAGRDR)
Registration Admin Messages Report	(SFRRGAM)
Fee Assessment Report	(SFRFEES)
Batch Waitlist Notification Process	(SFRBWLP)
Waitlist Priority Reorder Process	(SFPWLRO)

## Creating a Population Selection

To perform population selection, the application you will be working with must first be defined on the Application Definition Rules Form (GLRAPPL).

The second step is to enter the Population Selection Definition Rules Form (GLRSLCT), enter the **Application (Code)**, and create a **Selection ID (Identifier)** with a description.

In the Selection Definition section, define the **Select** and **From** portions of the SQL statement that the selection represents.

### **Example:**

```
Select:      SARADAP_PIDM
From:        SARADAP
```

Next, enter the Selection Rules for the population of records you would like to see.

### **Example:**

```
SARADAP_TERM_CODE_ENTRY = '200010'      AND
SARADAP_LEVL_CODE       = 'UG'
```

Save your data and exit. Your population selection rules will be compiled. If any errors are issued during the compilation process, resolve the errors before continuing. If you do not resolve all errors given during the compile process, you will not be able to use the population selection rules to extract a population.

You are now ready to extract the population of people. The Population Selection Extract (GLBDATA) is run from the Process Submission Control Form (GJAPCTL). At minimum, you will need to supply the parameters for Selection Identifier 1, Application, and Creator ID, which are the values that were in the Key Information of the Population Selection Definition Rules Form (GLRSLCT).

After extracting the population, you can use the Population Selection Extract Data Form (GLAEXTR) to view and/or modify the people in the population. You can add or delete people from the population using this form. The keys to the form are **Application**, **Selection ID**, and **Creator ID**. (**User ID** is also displayed in the Key Information.) You will be able to add or delete people only from populations that you selected.

After extracting the population, and modifying the people in it if necessary, you can use the population for a variety of purposes. Letters can be produced using Letter Generation, based upon a population, and many Banner reports and processes also can accept a population for processing.

For additional details on population selection, refer to the *Banner General User Guide*.

## Registration Fee Assessment Process (SFRFASC)

**Description** This process is used to run batch processing of registration fee assessments and to migrate from the old processing (SFRFASM or SFRFAS1). Running SFRFASC will provide the most recent assessment data for the audit history table. SFRFASC allows you to do the following:

- Use a population selection.
- Process assessments for a single ID or a list of IDs.
- Use an enrollment status (*E*) or collector mode (*C*).
- Print audit records (*A*), student accounting records (*T*), or both (*B*).
- Use separate date parameters for refunding by total versus effective dating of assessments.
- Run the process in audit or update mode.

### Note

When you are migrating from the old processing to the current processing, the Create Accounting Records parameter should be set to *N*, to not insert TBRACCD records into accounting. The Run Mode parameter should be set to *U* (Update) to update the database. ■

SFRFASC runs in conjunction with the settings of the **Registration Fee Assessment On-line (Indicator)** and the **Web Self-Service and Voice Response Assessment On-line (Radio Group)** on SOATERM.

- If registration records are processed through self- service as well as through SFAREGS, and the **Registration Fee Assessment On-line (Indicator)** is unchecked (set to *N*) and/or the **Web Self-Service and Voice Response Assessment On-line (Radio Group)** is set to *Not Available* (meaning no assessment information has been recorded), then this process should be run for all students within a term.
- If the **Registration Fee Assessment On-line (Indicator)** is checked (set to *Y*), indicating that online fee assessment is available, then this process should be run in collector mode, in case online assessment has been deferred due to the process option setting of the **Fees** field on SFAREGS being changed to *N* (Batch for Updates) or *B* (Batch Only), instead of using the default setting of *Y* (Immediate).
- Fee assessment can also be deferred using the Registration Mass Entry Form (SFAMREG).
- Once the **Registration Fee Assessment On-line (Indicator)** on SOATERM has been checked (set to *Y*), it should remain checked.

Batch fee assessment can be run in either update mode or audit mode. Use update mode to post the charges on the student's account (TBRACCD record) for the term. You may wish to use audit mode to print a report of what the assessment results would be if the process was run in update mode. SFRFASC uses assessment rules defined on the Registration Fee Assessment Rules Form (SFARGFE), as well as any fees posted through the Registration Additional Fees Control Form (SFAAFEE), to calculate registration-related charges.

The output from SFRFASC can be printed in either name or ID order and includes the detailed transactions that have been posted to the student's account record. If you have chosen to display the audit history records, that information will also be printed on the output. These printed charges result from the entries made in registration and show the effective dates and net change to the student's account. The audit history entries show the actual date of the assessment, not the effective date. Whenever fee assessment is run in update mode, information about the student's assessment is placed in the audit history table.

Before a student bill is produced using the Student Invoice/Billing Statement (TSRCBIL), you must have assessed registration fees either through batch or online processing. You have the option to create a schedule/bill collector record during batch fee assessment processing for any students with a change in fee assessment (either additional charges or credits). Collector records will not be written for students who do not have any changes. To create schedule/bill collector records, enter *Y* in the Add Invoice Collector Record parameter.

If you are running batch fee assessment from the command line, the error message *Invalid request; Update student account not requested* will not be displayed if you enter *N* in the Create Accounting Records parameter (displayed on the command line as Create Accounting Detail Records) but then enter *Y* for the Add Invoice Collector Record parameter. Since you are not creating any changes to the student's accounting records, the collector record for student bills is not populated. If schedule/bill collector records are needed, both the Create Accounting Records and Add Invoice Collector Record parameters must be set to *Y*.

If collector records are created, they may be used either for processing student bills in invoice mode or student schedule/bills via the Student Invoice/Billing Statement (TSRCBIL). If it is anticipated that the collector records will be processed by TSRCBIL in sleep/wake mode, an appropriate value should be entered for the Printer parameter. This value should be one of the valid printer selections from the Printer Validation Form (GTVPRNT) which has been specifically set up by your institution for use with sleep/wake processing. If you are not using sleep/wake processing, enter any valid printer code to populate the collector records. The same code should be entered for the Printer parameter in TSRCBIL.

Parameters	Name	Required?	Description	Values
	Term	Yes	Enter the registration term for which fee assessment is to be processed.	Term Code Validation Form (STVTERM)
	Assessment Date	No	Enter the date (in format MON-DD-YYYY) to be used as the effective date for all of the fee assessment transactions generated by this process.	
<p>The following hierarchy is used when assigning the effective date: first - the date in the <b>Registration Fee Assessment Effective Date</b> field on SOATERM, second - the date in this parameter, and third - the Banner system date.</p> <p>The date options are also affected by the settings of two fields on the Student Billing Control Form (TSACTRL): the <b>Effective Date</b> radio group <i>Current Date</i> or <i>Date of Charges</i> options and the <b>Accept Charges (Indicator)</b>. When the <b>Effective Date</b> field on TSACTRL is set to <i>Date of Charges</i> (C), and a future date exists in SOATERM or in this parameter, the future date will always be used. If the <b>Effective Date</b> field on TSACTRL is set to <i>Current Date</i> (T), and a future date is chosen, if the <b>Accept Charges (Indicator)</b> for the student is checked (set to Y), today's date will be used, even if this parameter is set to a future date or a future date exists on SOATERM.</p>				
	Student ID	No	Enter the student's ID when you are running the assessment process for a single ID.	
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Inquiry Form (GLISLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)

Parameters	Name	Required?	Description	Values
	Creator ID	No	Enter the user ID of the person creating the sub-population rules. The creator ID must have been specified when defining the selection identifier. All or none of the population selection parameters must be entered.	
	User ID	No	Enter the user ID for the population selection. This will match the creator ID and is the Banner logon user ID. All or none of the population selection parameters must be entered.	
	Batch Type	No	Enter <i>C</i> to process all entries from the SFRBTCH collector table. Enter <i>E</i> to define a group of students for assessment by enrollment status.	C Collector E Enrollment status
<p>Select the enrollment status code using the Enrollment Status parameter. Whenever an assessment is processed for a student and/or term, no matter how the assessment is invoked, maintenance is performed on the SFRBTCH collector table for the student and/or term being processed. If a collector record exists for the student and/or term being assessed, the collector record is deleted. (The purpose of the collector record is to make sure the student is assessed.) When assessment is run using a batch type of <i>C</i> (collector), all records in SFRBTCH for the term specified will be processed and subsequently deleted from the table.</p>				
	Enrollment Status	No	Enter the enrollment status code for the fee assessment or leave blank for all.	Enrollment Status Code Validation Form (STVESTS)
	Full or Part Time Indicator	Yes	Enter the student course load for the assessment. Enter <i>F</i> for full-time, <i>P</i> for part-time, or enter % for all. The default is %.  This parameter looks at the value in the SGBSTDN_FULL_PART_IND field.	F Full-time P Part-time % All
	Assessment Type Rule	Yes	Enter the rule type to use for the assessment. Enter <i>P</i> for a pre-registration bill or <i>R</i> for registration rules. The default is <i>R</i> .	P Pre-registration bill R Registration

Parameters	Name	Required?	Description	Values
	Accounting Detail to Print	Yes	Enter the student accounting detail to be printed on the assessment. Enter <i>C</i> to print the current student accounting only, <i>A</i> for all student accounting for the term, or <i>N</i> for no student accounting detail. The default is <i>C</i> .	<p><i>C</i> Current student accounting only</p> <p><i>A</i> All student accounting for term</p> <p><i>N</i> None</p>
	Report Type	Yes	Enter the report type for the assessment. Enter <i>A</i> for audit history records only, <i>T</i> for TBRACCD (student accounts receivable charges and payments) records, or <i>B</i> for both. The default is <i>T</i> .	<p><i>A</i> Audit history records only</p> <p><i>T</i> Student Accounts Receivable records</p> <p><i>B</i> Both</p>
	Sort Order	Yes	Enter the sort order for the report detail. Enter <i>N</i> to sort by name or <i>I</i> to sort by student ID. The default is <i>N</i> .	<p><i>N</i> Sort by name</p> <p><i>I</i> Sort by student ID</p>
	Add Invoice Collector Record	Yes	<p>Enter <i>Y</i> to create a TBRCBRQ (invoice collector) record or <i>N</i> to not create an invoice collector record. The default is <i>N</i>.</p> <p><b>Note:</b> No collector records for student schedule/bills will be created if the Create Accounting Records parameter is set to <i>N</i>.</p>	<p><i>Y</i> Add invoice collector record</p> <p><i>N</i> Do not add invoice collector record</p>
	Invoice Printer	No	Enter the code for the destination printer where the invoice is to be printed.	Printer Validation Form (GTVPRNT)
	Create Accounting Records	Yes	<p>Enter <i>Y</i> to create TBRACCD (student accounts receivable charges and payments) student accounting records or <i>N</i> to not determine the student accounting information based on the assessments. The default is <i>Y</i>.</p> <p><b>Note:</b> Schedule/bill collector records will <i>not</i> be created unless this parameter and the Add Invoice Collector Record parameter are both set to <i>Y</i>.</p>	<p><i>Y</i> Create student accounting records</p> <p><i>N</i> Do not create student accounting records</p>

Parameters	Name	Required?	Description	Values
	Refund by Total Refund Date	No	<p>Enter the date of the refund by total refund period in format MON-DD-YYYY. This date establishes the percent refund to be used for any dropped courses as determined by the SFARFND table.</p> <p><b>Note:</b> If you are using refund by total, and no date is provided here, and there are unprocessed dropped courses that qualify for refunds, the refunds will not be calculated.</p>	
	Run Mode	Yes	Enter <i>A</i> to run in audit mode and print an audit report for fee assessment. Enter <i>U</i> to update the database records. The default is <i>A</i> .	<p>A Audit</p> <p>U Update</p>

## Purge Fee Assessment Audit Process (SFPFAUD)

**Description** This process is used to purge audit history records from the database. SFPFAUD allows you to do the following:

- Run the purge process for range of dates for transactions, for a specific term, or for an ID.
- Keep only the last assessment records.
- Print summary or detail information.
- Run the purge in audit or update mode.

The last assessment should be kept when the current term is active and additional assessments are going to occur for that term. If all records are purged for a given term and section fees or other additional fees exist, fee assessment may need to be run twice to ensure accurate assessment.

This process prevents the intermediate assessment audit that is created to handle records with a status of *DD* from being purged. These interim records will not be purged until a flat charge rule qualification has re-occurred. This will ensure that future assessments will have accurate previous assessment records available for fee assessment processing.

The process deletes SFRFAUD rows for qualified students by assessment rule type (*STUDENT, LEVEL, CAMPUS, ATTR*). The process considers if a student has had prior flat rule qualification but has been reassessed due to having a drop/delete issued. Since the student's assessment in essence starts over when the drop/delete is realized by assessment, any prior assessment audit records that record prior flat charge rule qualification can be safely purged.

SFPFAUD first determines if a drop/delete scenario has been handled by assessment. If it has, any assessment audit prior to the drop/delete being handled can be purged. The process checks to see if a date is found for when a drop/delete was handled, and then goes on to delete all assessment audit prior to the drop/delete, making sure to retain the last assessment audit.

Parameters	Name	Required?	Description	Values
	Term Code	Yes	Enter the registration term code for which fee assessment audit history records are to be purged.	Term Code Validation Form (STVTERM)
	Transaction Start Date	No	Enter the date for the beginning of the range for which fee assessment audit history records are to be purged. Use format MON-DD-YYYY.	
	Transaction End Date	No	Enter the date for the end of the range for which fee assessment audit history records are to be purged. Use format MON-DD-YYYY.	
	Student ID	No	Enter the ID of the student for which fee assessment audit history records are to be purged.	
	Retain Last Assessment Audit	Yes	Enter <i>Y</i> to retain audit history records for the last assessment. Enter <i>N</i> to not retain audit history records for the last assessment. The default is <i>Y</i> .  <b>Warning:</b> <i>The last assessment audit history records are used by the fee assessment process to perform critical refund by total and refunding with flat and overload hour calculations. Purging all records may result in incorrect assessments when fee assessment is run again.</i>	Y Keep last assessment N Do not keep last assessment
	Report Type	Yes	Enter <i>D</i> for a detailed report with student ID and name, or enter <i>S</i> for a summary report (record count). The default is <i>S</i> .	D Detail report S Summary report
	Run Mode	Yes	Enter <i>A</i> to produce a listing of all selected purge data without affecting the database. Enter <i>U</i> to update the database after purging the selected data. The default is <i>A</i> .	A Audit U Update

# Unduplicated Headcount Report (SFRHCNT)

**Description** This report produces headcount totals by level and major for all students for the term who have a student registration status (STVESTS) with the **Affect Headcount** checkbox checked (set to *Y*). Other data for each level/major group includes campus, session residency, sex, ethnic code, and classification. A grand total of all enrolled students is also reflected.

**Note**

Student classification rules must exist for students of all levels. If classification rules do not exist for a certain level of students, they will *not* be reported in the Unduplicated Headcount Report (SFRHCNT).

Parameters	Name	Required?	Description	Values
	Term	Yes	Enter the term code representing the term for which the report is to be generated.	Term Code Validation Form (STVTERM)

## Registered, Not Paid Process (SFRRNOP)

**Description** This process permits the reporting or reporting and deletion of student registrations in a term for which financial arrangements/payments have not been made. The **Acceptance** field on the Student Course Registration Form (SFAREGS), defaults to *N* when a registration is first processed. This flag is changed from *N* to *Y* through the use of the Student Payment Form (TSASPAY), when a student makes payment, or arranges terms for payment. The flag can be changed on SFAREGS to *C*, for confirmed, to indicate that the student's pre-registration has been confirmed, but payment has not yet been made.

The Registered, Not Paid process deletes the registration records for the term (as well as ETRM records) for those students with an *N* or those with an *N* and a *C* in the **Acceptance** field of SFAREGS. To make sure no orphan records are created during the deletion process, the SFRAREG, SHRCMRK, SHRMKRS, and SHRSMRK records will be deleted with the SFRSTCR records.

The process can be run in audit or update mode. Students whose registration records are deleted through SFRRNOP are also dropped from the Class Roster Form (SFASLST). The report lists all students affected in alpha order along with their addresses. This process also posts adjusting entries to the student's account for any charges associated with the dropped registration and delete time status history records if they exist.

Parameters	Name	Required?	Description	Values
	Processing Term	Yes	Enter the term code representing the term for which the process is being run.	Term Code Validation Form (STVTERM)
	Update Database	Yes	<i>Y</i> deletes registrations from SFAREGS for students for the term (based on the Type parameter) as well as back out the registration charges for the term; <i>N</i> prints a report without deleting registrations or backing out charges.	<i>Y</i> Delete registrations <i>N</i> Do not delete
	Type (C or N)	Yes	Enter <i>N</i> to affect only those students with an <i>N</i> in the <b>Acceptance</b> field, or enter <i>C</i> to affect both students with an <i>N</i> and with a <i>C</i> in the <b>Acceptance</b> field.	<i>N</i> Accept Charges = <i>N</i> <i>C</i> Accept Charges = <i>N</i> or <i>C</i>

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Date for Census Processing	No	Enter date for which census enrollment information should be affected. If this date is less than or equal to either the census one or census two date for the course being dropped, the census enrollment counts will be reduced. If the date is greater than the census dates, the course will be dropped, but the student will not reduce the census enrollments. Leave blank for today; enter in date format DD-MON-YYYY.	
	Address Selection Date	No	Which address, effective on this date, do you want to print on the Registered Not Paid Report. Leave blank for today; enter in date format DD-MON-YYYY.	
	Address Hierarchy	Yes	Enter the address type to be printed on the Registered Not Paid report; multiple requests are permitted and must be entered in priority sequence.  For example, <i>IMA 2PR</i> will first print the mailing address, and if none is found, will print the permanent address. Enter each parameter then hit return for the next prompt.	Address Type Code Validation Form (STVATYP)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Third Party Exempt Indicator	Yes	When this indicator is set to <i>Y</i> , and third party contract memos exist for the student for the term, the student will be exempt from the deletion process. When this indicator is set to <i>N</i> , the student is not exempt and will be processed, even if potential payments exist.	Y Exempt N Not exempt
	Effective Date of Drop	No	Enter the date of the drop in DD-MON-YYYY format for the effective date that is to be recorded in TBRACCD. If this parameter is left blank, the original effective date on the transaction(s) being reversed will be used.  <b>Note:</b> If you want to use the system date for processing, you must enter that date.

# Student Schedule Report (SFRSCHD)

**Description** This process generates the student schedule for the term. It can be requested online through the Student Course Registration Form (SFAREGS) or in batch through this process. You may also print a student's schedule as part of the combined schedule/bill. Please see the *Banner Accounts Receivable User Guide* for information on the Student Invoice/Billing Statement (TSRCBIL).

## Note

If SFRSCHD is run directly from SFAREGS using sleep/wake processing, the open learning processing is not used. ■

Courses selected for printing in SFRSCHD are determined solely by the value of the **Print on Schedule** checkbox associated with course statuses on STVRSTS. Any course registration status codes (registered, dropped, withdrawn, etc.) where the **Print on Schedule** checkbox is checked will be printed.

- A student schedule will be printed if a registration term header record exists (SFBETRM), regardless of the student's enrollment status (STVESTS) or whether any course registration records exist. If no course registration records exist, the message \* \* *NO ENROLLMENT RECORDS EXIST FOR STUDENT* \* \* will be printed in the output.
- If a student has no course registration records, or if all of the existing course registration records for a student have course registration status codes that do not have the **Print on Schedule** checkbox checked on STVRSTS, then no schedule will be printed for the student if SFRSCHD is run with the ID Number parameter set to an individual student ID or set to *COLLECTOR*.
- A schedule will be printed for the student if all students are requested for a process term (the ID Number parameter is blank), or if the student is included in a population selection that is requested. In those cases, the message \* \* *NO ENROLLMENT RECORD EXISTS FOR STUDENT* \* \* will appear in the output.

The start and end dates are used to isolate all registration records in a range. For traditional courses (which are assigned to a part-of-term), the part-of-term start date associated with the section is used to determine inclusion. For open learning courses, the start date of the original SFRAREG record for the student is used.

Actual course dates for traditional sections are printed on the report as follows:

- The start date for a traditional section will print the SSRMEET\_START\_DATE(s) associated with the meeting time(s).
- The end date for a traditional section will print the SSRMEET\_END\_DATE(s) associated with the meeting time(s)

- If no meeting times are defined for a traditional section, the start date will print the SSBSECT\_PTRM\_START\_DATE, and the end date will print the SSBSECT\_PTRM\_END\_DATE. If those dates are NULL on SSBSECT, the SOBPTRM\_START\_DATE and the SOBPTM\_END\_DATE will be printed.

Actual course dates for open learning sections are printed on the report as follows:

- The start date for all open learning sections will print the SFRAREG\_START\_DATE from the “0” extension record.
- The end date for all open learning sections will print the SFRAREG\_COMPLETION\_DATE for the maximum extension records that exist.
- Dates associated with meeting time records, if they exist, are not printed for open learning courses.

If you need to isolate a portion of a term for processing, enter either a valid term or a wildcard (%) to search all terms. The wildcard feature is only permitted if start and end dates are also entered. In this instance, only registration records in a particular term matching the date range entered would be selected.

Term	Date Range	Results
Fall 1999		All registration records for the Fall 1999 term would be selected.
Fall 1999	01-SEP-1999 to 30-NOV-1999	All registration records with a registration start date between the date range (inclusive) for the Fall 1999 term would be selected.
%	01-SEP-1999 to 30-NOV-1999	All registration records with a registration start date between the date range (inclusive), regardless of term, would be selected.

You can run SFRSCHD using Sleep/Wake Method One. Please note that while SunGard Higher Education no longer supports the execution of processes from the command line, processes that run in sleep/wake, including SFRSCHD, are supported.

Refer to the *Banner General Technical Reference Manual* for information about the various components of sleep/wake processing. Sleep/Wake Method One requires that the .dat response file must be constructed in the order in which the parameters are prompted for when running SFRSCHD from the command line. This order is different than the order of the parameters displayed in job submission (GJAPCTL).

Refer to the topic “Setting Up Sleep/Wake Processes” in the “Procedures” section of this chapter to see a sample .dat file for SFRSCHD when using Sleep/Wake Method One.

### SFRSCHD Output Notes

- If the report is run for a single term, and the open learning parameters are set to *N*, the report prints in the one line per course format, unless there are multiple meeting times/instructors.
- If the report is run for multiple terms, (and the Process Term parameter is set to *%*, which requires a date range), or if any of the open learning parameters are set to *Y*, a second line is generated. The course title prints below the detail line.
- If the ID Number parameter is set to *COLLECTOR*, term is irrelevant. A single term code or a term value of *%* can be entered, and the date range is ignored, if entered. As mentioned above, if the open learning parameters are set to *N*, the report prints in the one line per course format.
- Meeting type (GTVMTYP) prints on all reports, except on the one line per course format. This includes running the report for multiple terms and using the open learning parameters.
  - If no meeting records (days, times, building, room) are defined for an open learning section, *N/A* is printed on the report output.
  - If meeting building and room information exists without start and end times, *TBD* will be printed under the *TIME* heading.
  - If meeting time information exists without building or room information, *TBD* will be printed under the *BUILD* and *ROOM* headings.
  - If meeting information exists without instructors, *STAFF* will be printed under the *INSTRUCTOR* heading.
- If the Print Long Section Title parameter is set to *Y*, the title wraps in chunks of 40 characters (40, 40, 20).

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	ID Number	No	To request a specific schedule, enter that person's ID number, enter a NULL value to request all IDs, or enter the word <i>COLLECTOR</i> to process all students in the collector file.	
	Process Term	Yes	<p>Enter the term code representing the term for which schedules are to be printed, or enter % to process schedules for multiple terms. Term records are stored in the SFRCBRQ collector table.</p> <p>You can print schedules for multiple terms using a single sleep/wake process by entering % in this parameter and entering <i>COLLECTOR</i> in the ID Number parameter.</p>	Term Code Validation Form (STVTERM)
	Start Range From Date	No	<p>Enter the start date for which registration records are to be processed.</p> <p>The term is displayed on the report for the registration record for use with the registration start date information.</p>	
	Start Range To Date	No	Enter the end date for which registration records are to be processed.	
	Schedule Type (% for all)	Yes	<p>Enter the schedule type code or codes for the sections to be processed, or enter % for all. The default is %.</p> <p>For example, you could select all sections with a schedule type of self-paced.</p>	Schedule Type Code Validation Form (STVSCHD)

Parameters	Name	Required?	Description	Values
	Instructional Method (% for all)	No	Enter the instructional method or methods for the sections to be processed, or enter % for all. The default is %.  For example, you could select all sections with an instructional method of Web-based.	Instructional Method Validation Form (GTVINSM)
	Address Selection Date	No	Which address, effective on this date, do you want to print on the student schedules. Leave blank for today; enter in date format DD-MON-YYYY.	
	Address Hierarchy	Yes	Enter the address type to be printed on the student schedules; multiple requests are permitted and must be entered in priority sequence.  For example, <i>IMA 2PR</i> will first print the mailing address, and if none is found, will print the permanent address. Enter each parameter, then hit Return for the next prompt. Returning with a null value will move you on to the next parameter.	Address Type Code Validation Form (STVATYP)
	Printer	No	Enter the printer destination for schedules.  <b>Note:</b> This field is required when you are running this report for the collector file.	
	Campus Processing Indicator	Yes	Enter <i>Y</i> to process specific campuses. Enter <i>N</i> to process all campuses.	Y Print specific campuses N Print all campuses
	Campus	No	Enter the course campus for which the student schedules are to be produced.  <b>Note:</b> If the Campus Processing Indicator parameter is set to <i>Y</i> , then the Campus parameter is required.	Campus Code Validation Form (STVCAMP)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	Run in Sleep/Wake Mode	No	Enter <i>Y</i> to start sleep/wake cycling for this process and printer.	Y Use sleep/wake processing N Do not use sleep/wake processing
	Sleep Interval	No	Enter the time in seconds to process pauses before resuming execution. The lowest enterable value is 1. The highest enterable value is 999999.	
	Print Long Section Title	Yes	Enter <i>Y</i> to print the long section title from the syllabus (SSRSYLN) or <i>N</i> to print the existing course title from the section (SSBSECT) or from SCBCRSE if the section title is null. The default is <i>N</i> .	Y Print long section title N Print existing course title

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Print Schedule Type	Yes	Enter <i>Y</i> to print the schedule type code for the section on the output or <i>N</i> to not print the code. The default is <i>N</i> .  This parameter allows institutions using pre-printed forms to control the presentation of the data on the report.	Y Print schedule type N Do not print schedule type
	Print Instructional Method	Yes	Enter <i>Y</i> to print the instructional method code for the section on the output or <i>N</i> to not print the code. The default is <i>N</i> .  This parameter allows institutions using pre-printed forms to control the presentation of the data on the report.	Y Print instructional method N Do not print instructional method
	Print Reg Start/End Dates	Yes	Enter <i>Y</i> to print the registration start and end dates (the original registration start date and the most current expected completion date) for the section on the output or <i>N</i> to not print the dates. The default is <i>N</i> .  This parameter allows institutions using pre-printed forms to control the presentation of the data on the report.	Y Print registration start and end dates N Do not print dates
	Print Control Report	Yes	Enter <i>Y</i> to print a control report page or <i>N</i> to not print a control report page. The default is <i>N</i> .	Y Print control page N Do not print control page

## Class Roster Report (SFRSLST)

**Description** This process produces a hard copy of the class roster which is used as a class list representing all students in a section who have a course registration status for the section with the **Count in Enrollment** checkbox checked (set to *Y*), the **Gradable Indicator** checkbox checked (set to *Y*), and if you have a default grade on the Course Registration Status Code Validation Form (STVRSTS) with the **Gradable Indicator** checkbox checked (set to *Y*), or the student is waitlisted (has a registration status with the **Waitlist Indicator** checkbox checked on STVRSTS). Waitlisted students are displayed separately from students who are actually enrolled.

When run with the Run Mode parameter set to *U* (Update), the names displayed online on SFASLST will be re-sequenced alphabetically. Students registering after the Class Roster is run will appear at the bottom of the list until the next time this process is run with the Run Mode parameter set to *U* (Update). When run with the Run Mode parameter set to *R* (Report), Class Roster reports can be produced during periods of heavy system usage without impacting performance, because this option does not update SFRSTCR.

The Class Roster is also used as the grade collecting and recording mechanism. Mid-term and final grades can be collected on the Class Roster and then must be entered into Banner through the Class Roster Form (SFASLST) in order to be rolled into academic history.

The start from and to dates are used to isolate all registration records in a range. For traditional courses (which are assigned to a part-of-term), the part-of-term start date associated with the section is used to determine inclusion. For open learning courses, the start date of the original SFRAREG record for the student is used.

If you need to isolate a portion of a term for processing, enter either a valid term or a wildcard (%) to search all terms. The wildcard feature is only permitted if start from and to dates are also entered. In this instance, only registration records in a particular term matching the date range entered would be selected. Also, if a specific part-of-term is entered, records meeting the date requirements are selected. A valid term must be entered in order to also have the associated part-of-term.

Term	Part-of-Term	Date Range	Results
Fall 2002			All registration records with a registration start date between the date range (inclusive) for the Fall 2002 term would be selected.
Fall 2002	1		All registration records for the Fall 2002 term for sections assigned a part-of-term code of 1 would be selected.
Fall 2002	%	01-SEP-2002 to 30-NOV-2002	All registration records with a registration start date between the date range (inclusive), for the Fall 2002 term, would be selected.
%	1	01-SEP-2002 to 30-NOV-2002	Not permitted.
Fall 2002	1	01-SEP-2002 to 30-NOV-2002	All registration records for the Fall 2002 term for sections assigned a part-of-term code of 1 with a registration start date between the date range (inclusive) would be selected.
%	%	01-SEP-2002 to 30-NOV-2002	Not permitted.

**Note**

If no meeting records (days, times, building, room) are defined for an open learning section, *N/A* is printed on the report output. ■

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Report Title Override	No	The report title defaults to <i>Class Roster</i> , but it can be overridden by another title such as <i>Final Grade Roster</i> , for example. If a specific title is desirable, key the appropriate title, up to 30 characters.	
	Term	Yes	Enter the term code representing the term for which rosters are to be produced.	Term Code Validation Form (STVTERM)
	Part-of-Term	Yes	Enter the value representing the part of term for which rosters are to be produced (single entry) or % for all.	Part of Term Code Validation Form (STVPTRM)
	Start Range From Date	No	<p>Enter the start date for which registration records are to be processed.</p> <p>For traditional registration records, this corresponds to a part-of-term start date housed on the additional registration record on SFRAREG.</p> <p>For open learning registration records, this corresponds to the student-selected start date housed on the additional registration record on SFRAREG.</p> <p>The term is displayed for the registration record for use with the registration start date information.</p>	
	Start Range To Date	No	<p>Enter the end date for which registration records are to be processed.</p> <p>For traditional registration records, this corresponds to a part-of-term start date housed on the additional registration record on SFRAREG.</p> <p>For open learning registration records, this corresponds to the student-selected start date housed on the additional registration record on SFRAREG.</p>	

Parameters	Name	Required?	Description	Values
	CRN	Yes	Enter the CRN number of the section for which a roster is to be produced (single requests only); enter % for all sections for the term.	
	No Grade Report Option	Yes	If a Y is entered, a class roster will be printed only for the CRNs that have missing grades.	
	Sort Option	Yes	Enter <i>I</i> to print rosters in instructor name order, or <i>C</i> to print rosters in college, division, department order.	I Instructor name order C College, Division, Department order
	Campus	Yes	Enter the campus for which the class roster is to be printed, or enter % to select all campuses.	Campus Code Validation Form (STVCAMP).
	Schedule Type (% for all)	Yes	Enter the schedule type code or codes for the sections to be processed, or enter % for all. The default is %. For example, you could select all sections with a schedule type of self-paced.	Schedule Type Code Validation Form (STVSCHD)
	Instructional Method (% for all)	No	Enter the instructional method or methods for the sections to be processed, or enter % for all. The default is %. For example, you could select all sections with an instructional method of Web-based.	Instructional Method Validation Form (GTVINSM)
	Registration Codes (% for all)	Yes	Enter the registration code or codes to be processed, or enter % for all.  For example, if the report should include students with a status of <i>RE</i> , as well as waitlisted students, you would use this parameter. It is also possible to run this report for all dropped or withdrawn students or for any specialty status codes defined at your institution.	Course Registration Status Code Validation Form (STVRSTS)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Degree Status Award Indicator	Yes	Enter the degree status for which the class roster is to be printed. Valid values are <i>P</i> for Pending, <i>A</i> for Awarded, or <i>%</i> for All.	<i>P</i> Pending <i>A</i> Awarded <i>%</i> All
	Combine Cross-listed Sections	Yes	This parameter allows you to specify if all cross-listed courses should display on a single roster. Enter <i>Y</i> to print combined rosters of cross-listed sections. Enter <i>N</i> to individually print each section belonging to a cross list.	<i>Y</i> Combined cross-lists <i>N</i> Individual sections
	Print Student Addresses	Yes	Enter <i>A</i> to print the student's address on the class roster. Enter <i>P</i> to print the student's address and the primary phone number associated with the address on the class roster. Enter <i>N</i> to print neither the student's address nor telephone number on the class roster.	<i>A</i> Address <i>P</i> Address and primary phone <i>N</i> Neither
	Address Selection Date	No	Enter the effective date for the address to be printed on the class roster for address selection. Enter the date in DD-MON-YYYY format. If left blank, the system date will be the default.	
	Address Priority and Type(s)	No	<p>Enter the address priority and type to be printed on the class roster. Multiple requests are permitted and must be entered in priority sequence.</p> <p>For example, <i>IMA 2PR</i> will first print the mailing address, and if none is found, will print the permanent address. Enter each parameter, then hit Return for the next prompt. Returning with a null value will move you to the next parameter.</p>	Address Type Code Validation Form (STVATYP)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Primary Instructors Only	No	<p>Enter <i>Y</i> to produce a single class roster listing the names of all instructors. Enter <i>N</i> or a null value to produce a class roster for each of the instructors who is assigned to teach the class. An <i>N</i> will also print rosters with no instructors assigned. This will produce multiple copies of the class roster. Instructors will print in alphabetical order.</p> <p><b>Note:</b> If no instructors are associated with a course, and a <i>Y</i> is entered, you will not receive a roster.</p>	<p><i>Y</i> Single class roster of instructors</p> <p><i>N</i> Roster of instructors assigned to teach class or roster of classes when no instructors assigned</p>
	Print Long Section Title	Yes	<p>Enter <i>Y</i> to print the long section title from the syllabus (SSRSYLN) or <i>N</i> to print the existing course title from the section (SSBSECT) or from SCBCRSE if the section title is null. The default is <i>N</i>.</p>	
	Run Mode	Yes	<p>Enter <i>U</i> to produce a Class Roster report and to update the class sort key for the CRN on SFRSTCR or <i>R</i> to create a Class Roster report that does not update SFRSTCR. The default is <i>U</i>.</p>	<p><i>U</i> Create roster and update SFRSTCR</p> <p><i>R</i> Create roster but do not update SFRSTCR</p>

## Enrollment Verification Report (SFRENRL)

**Description** This process produces the enrollment verification reports which were processed using the Enrollment Verification Request Form (SFARQST) or selected using the population selection parameters. You can specify the number of copies of the enrollment verification that are to be printed on SFARQST. Term, registration date, or academic year information from SFARQST is used to determine the term information that is included in the report.

The report processes information based on terms that are part of student centric periods. Enrollment dates, attendance information, enrollment history, and course summary information are printed as student centric period data.

### Note

If an academic year is entered in SFARQST, the enrollment verification process examines the terms in the academic year specified in the request to find the earliest term record for the learner in which any records exist (SGBSTDN - general student, SFBETRM - student registration, or SHRTCKN - institutional term course maintenance), and begins printing the terms for the report commencing with that term and including only the terms within that academic year.

If no such data exists within the specified academic year, then no enrollment verification report will be printed.

If no academic year is entered in SFARQST, the enrollment verification will be produced only for the term entered in the Key Block, which will be the term used to process the request. ■

Parameters	Name	Required?	Description	Values
	Student ID	Yes	To request that the verification on a specific student be processed, enter that person's ID number, or enter % to request all IDs which are in the collector file.	
	Enrollment Request Type	No	Enter the enrollment request type for which the verification is to be processed. If all types are to be processed, enter a NULL value.	Enrollment Verification Type Code Validation Form (STVEPRT)
	Address Type	Yes	Enter the address type for which the verification is to be processed.	Address Type Code Validation Form (STVATYP)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Select Credit Type to Print	Yes	Enter the credit hours type, (E)arned or (A)ttempted, to be printed on the report.	E Earned A Attempted
	Print Enrollment Request Type	No	Enter <i>Y</i> to have the enrollment request type printed on the report. Enter a NULL value or <i>N</i> to prevent the enrollment request type from printing.	Y Print enrollment request type N Do not print enrollment request type
	Printer	No	Enter the printer destination for the enrollment verifications.	
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	Time Status Calc Credit Type	Yes	Enter the credit hours type (E)arned or (A)ttempted, to be used for the enrollment history time status calculation.	E Earned A Attempted

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Print Birth Date	Yes	Enter <i>Y</i> to print the student's birth date or <i>N</i> to not print the birth date. The default is <i>N</i> . This parameter allows you to keep this information confidential, unless the student gives you permission to distribute it.	Y Print birth date N Do not print birth date
	Print Long Section Title	Yes	Enter <i>Y</i> to print the long section title from the syllabus (SSRSYLN) or <i>N</i> to print the existing course title from the section (SSBSECT) or from SCBCRSE if the section title is null. The default is <i>N</i> .	Y Print long section title N Do not print long section title
	Print Reg Start/End Dates	Yes	Enter <i>Y</i> to print the registration start and end dates (the original registration start date and the most current expected completion date) for the student or <i>N</i> to not print the dates. The default is <i>N</i> .	Y Print registration start/end dates N Do not print registration start/end dates
	Web Self-Service Options	No	Enter the Web self-service option codes to be used to process the request.	Web Self Service Options Validation Form (STVWSSO)
	Web Payment Options	No	Enter the Web payment option codes to be used to process the request.	Web Payment Options Validation Form (STVWPYO)
	Use Request Cutoff Term	Yes	Enter <i>Y</i> to request that a cutoff term be used or <i>N</i> to not request that a cutoff term be used. The default is <i>N</i> .	Y Use cutoff term N Do not use cutoff term

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Request Cutoff Term	No	<p>When the Use Request Cutoff Term parameter is set to <i>Y</i>, enter the term to be used as the cutoff term for processing.</p> <p>If the Use Request Cutoff Term parameter is set to <i>Y</i>, and a cutoff term is specified, only learners with registration terms (or terms where academic year is specified) that are less than the specified cutoff term will be printed.</p> <p>For example, when a registration drop or add has been completed, you can redefine the cutoff term, or you can set the Use Request Cutoff Term parameter to <i>N</i>, and remove the term from the Request Cutoff Term parameter.</p>	Term Code Validation Form (STVTERM)
	Process by Student Period	Yes	Enter <i>Y</i> to process enrollment by student centric periods or <i>N</i> to not process enrollment by student centric periods. The default is <i>N</i> .	<p><b>Y</b> Use student centric periods</p> <p><b>N</b> Do not use student centric periods</p>

## Enrollment Verification Request Purge (SFPENRL)

**Description** This process purges the enrollment verification requests which were previously requested.

Parameters	Name	Required?	Description	Values
	Date requested	Yes	Enter the date for which the enrollment verification purge is to take place.	
	Request Type	No	Enter the enrollment request type for which the purge is to be processed.	Enrollment Verification Type Code Validation Form (STVEPRT)
	Run Mode	Yes	Enter an <i>A</i> to indicate that the process is to be run in audit mode. Running in audit mode produces an audit report without updating the database. Enter a <i>U</i> to indicate that the process is to be run in update mode. Running in update mode removes the information from the database and produces the report.	A Audit U Update

## Registration Purge (SFPREGS)

**Description** This process, sorted by student name, lists registrations, and optionally time status history records, which are purged. A total number of students processed and a total number of registrations and class roster records deleted is also provided on the report. The process may be run in either Audit mode for review, or Update mode to purge eligible records. When the SFRSTCR records are purged, the associated SFRAREG records are also deleted. This prevents the creation of orphan records.

Registration and time status history records will not be purged if an outstanding fee assessment record exists in the Batch Fee Assessment Collector Table (SFRBTCH) for the student for the purge term. If a student's information cannot be purged because fee assessment is pending, the message *OUTSTANDING FEE ASSESSMENT PREVENTS DELETE* will print in the report output. Run the Batch Fee Assessment Process (SFRFASC) with the Batch Type parameter set to *C* (Collector) to process outstanding registration assessments.

Registration and time status history records will be deleted in Update mode even if the following conditions exist: a gradable section has not been graded, a non-gradable section has a grade, the student has a course with a non-gradable status, a grade has not been rolled to history, or the registration fee has not been accepted. The process should be run in Audit mode prior to Update, to review these errors and take any necessary action prior to purging the records. *Please be aware that all results of the student's coursework will be deleted during the purge, and if no paper copy of this information is kept, this information will be lost.*

### Note

If registrations are purged, but time status history records are not purged, time status records will no longer be accessible to display online in the Student Course Registration Form (SFAREGS). ■

Component and sub-component records should only be purged for those registration records that are eligible to be purged as a result of existing logic (not graded and not rolled to academic history). This processing prevents the existence of orphaned component and sub-component records. Component records should not be purged if it is required that sub-components records be kept.

- The Purge Component Records parameter is required and can be set to *Y* to purge component records or *N* to not purge component records. The default value is *N*.
- The Purge Sub-Component Records parameter is required and can be set to *Y* to purge sub-component records or *N* to not purge sub-component records. The default value is *N*.

- When both parameters are set to *Y*, component and sub-component records are purged. Messages are displayed on the report for the student (*Component Information* and *Sub-Component Information*), as well as the number of records purged for components or sub-components.
- When both parameters are set to *N*, neither component nor sub-component records are purged. A message is displayed on the report for the student: *NO COMPONENT/SUB-COMPONENT RECORDS PURGED*.
- When the Purge Component Records parameter is *Y* and the Purge Sub-Component Records parameter is *N*, component records are purged. A message is displayed on the report for the student (*Component Information*), as well as the number of records purged for components.
- When the Purge Component Records parameter is *N* and the Purge Sub-Component Records parameter is *Y*, sub-component records are purged. A message is displayed on the report for the student (*Sub-Component Information*), as well as the number of records purged for sub-components.

The start from and to dates are used to isolate all registration records in a range. For traditional courses (which are assigned to a part-of-term), the part-of-term start date associated with the section is used to determine inclusion. For open learning courses, the start date of the original SFRAREG record for the student is used.

If you need to isolate a portion of a term for processing, enter either a valid term or a wildcard (%) to search all terms. The wildcard feature is only permitted if start from and to dates are also entered. In this instance, only registration records in a particular term matching the date range entered would be purged.

Term	Date Range	Results
Fall 1999		All registration records for the Fall 1999 term would be purged.
Fall 1999	01-SEP-1999 to 30-NOV-1999	All registration records with a registration start date between the date range (inclusive) for the Fall 1999 term would be purged.
%	01-SEP-1999 to 30-NOV-1999	All registration records with a registration start date between the date range (inclusive), regardless of term, would be purged.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Purge Term	Yes	Enter the term code which is to be purged of registration information.	Term Code Validation Form (STVTERM)
	Start Range From Date	Yes	Enter the start date for which registration records are to be purged.	
	Start Range To Date	Yes	Enter the end date for which registration records are to be purged.	
	Report Type	No	Enter the type of purge to be processed. Either students with errors will be purged, or all students will be purged.	
	Run Mode	Yes	Enter an <i>A</i> to indicate that the process is to be run in audit mode, which purges no records. Enter a <i>U</i> to run in update mode, which purges the registration data.	A Audit U Update
	Purge Time Status History	Yes	Enter <i>Y</i> to purge time status history records. Enter <i>N</i> to bypass the purge of time status history records.	Y Purge time status history records N Bypass purge
	Purge Component Records	Yes	Enter <i>Y</i> to purge component records. Enter <i>N</i> to bypass the purge of component records. The default value is <i>N</i> .	Y Purge component records N Bypass purge
	Purge Sub-Component Records	Yes	Enter <i>Y</i> to purge sub-component records. Enter <i>N</i> to bypass the purge of sub-component records. The default value is <i>N</i> .	Y Purge sub-component records N Bypass purge
	Purge Audit Records	Yes	Enter <i>Y</i> to purge registration audit trail records or <i>N</i> to not purge the records. The default is <i>N</i> .	Y Purge registration audit trail records N Bypass purge

## Waitlist Enrollment Purge (SFPWAIT)

**Description** This process removes the waitlist enrollment information for those students who could not be placed in the class section. It also adjusts the waitlist counts on the Schedule Form (SSASECT). It should be run after the end of the drop/add period after *all* enrollment data has been processed for the term. A report, sorted by student name, will list the waitlist enrollments which are purged. A total number of students processed and a total number of enrollments deleted is also provided on the report. Multiple parts-of-term may be purged. Expired notifications can also be purged for the term or part-of-term and registration status.

The process uses the course statuses defined on the Course Registration Status Code Validation Form (STVRSTS). Only those course statuses with the **Waitlist Indicator** checkbox checked (set to *Y*) and the **Count in Enrollment** and **Count in Assessment** checkboxes unchecked (set to *N*) will be acceptable for processing.

Parameters	Name	Required?	Description	Values
	Purge Term	Yes	Enter the term code for which waitlist enrollments are to be purged.	Term Code Validation Form (STVTERM)
	Part-of-Term	Yes	Enter the part of term code for which the waitlist enrollments are to be purged. Multiple parts of term codes can be entered or a % can be used to indicate that all parts of term within the purge term are to be processed.	Part of Term Code Validation Form (STVPTRM)
	Status	Yes	Enter the waitlist status codes to be deleted. Only those statuses with the <b>Waitlist Indicator</b> checked (set to <i>Y</i> ) and the <b>Count in Enrollment</b> and <b>Count in Assessment</b> checkboxes unchecked (set to <i>N</i> ) on the Course Registration Status Code Validation Form (STVRSTS) are available for processing. Multiple waitlist status may be entered. % is not a valid selection parameter.	

Parameters	Name	Required?	Description	Values
	Audit or Update Option	Yes	Enter an <i>A</i> to indicate that the process is to be run in audit mode. Running in audit mode produces an audit report without updating the database. Enter a <i>U</i> to indicate that the process is to be run in update mode. Running in update mode removes the information from the database and produces the report.	A Audit U Update
	Purge All Expired Notifications	Yes	Enter <i>Y</i> to purge all expired waitlist notifications for the term or part-of-term or <i>N</i> to not purge expired notifications. The default is <i>N</i> .  The Audit or Update Option parameter must set to <i>Update</i> to use this option.

## Course Request Load Process (SFPBLCK)

**Description** This process defaults the CRNs of a student's block code to the selected student's record on the Student Course Request Form (SFACREQ) for the effective term and tracks student populations by block schedule codes for effective and report terms.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	Report Term	Yes	Enter the code representing the term for which the report is to be run. This is the term that will be used in headers and student selection.	Term Code Validation Form (STVTERM)
	Effective Term	Yes	Enter the effective term of the general student record to be scanned to a matching block code.	Term Code Validation Form (STVTERM)
	Block Schedule Code	Yes	Enter the block schedule code to be used to create sections as input to batch scheduling.	Block Schedule Code Validation Form (STVBLCK)

# Unsatisfied Links Report (SFRLINK)

**Description** This report produces a list of students who have unsatisfied or missing section links for a term.

This report will find sections with missing links only if links were not checked at the time of registration, when *No Check* is selected for the **Links** radio group on the Registration Error Checking window of the Term Control Form (SOATERM).

Parameters	Name	Required?	Description	Values
	Term	Yes	Enter the term code representing the term for which the unsatisfied linking is to be checked.	Term Code Validation Form (STVTERM)

## Clearinghouse Extract Report (SFRNSLC)

This report extracts student enrollment information for the purpose of reporting to the National Student Clearinghouse (NSC). The report should first be run in the Report of Missing/Invalid Data mode, and then run in either the EDI or EDI.Smart mode to create the extract file. All errors must be corrected, and the Report of Missing/Invalid Data may be run as many times as needed, to diagnose and resolve problems with the data. When all data problems have been resolved, the message *No invalid or missing student data found for the <term code> term.* will print on the report output. Some informational messages may appear on the report output when all missing/invalid data has been corrected or resolved. Only institutions that have licensed EDI.Smart and have made arrangements with the Clearinghouse to transmit the extract file with EDI.Smart should select that run mode option.

The report processes information based on terms that are part of a student centric period. Data comes from the SFASTSR and SFASCPR forms.

The report uses the **Third Party Withdrawal Indicator** on STVESTS to determine students who have withdrawn. When the **Third Party Withdrawal Indicator** is checked for the student's enrollment status code, the student will be reported as a withdrawn student to the NSLDS through the NSLDS SSCR Process (SFRSSCR) or the NSC through the Clearinghouse Extract Report (SFRNSLC). When the indicator is unchecked, the SFRNSLC report will not consider the student as withdrawn and will report the last time status for the student.

The report uses the **Third Party Report Indicator** on STVLEAV to select the leave of absence codes for the student. When the indicator is checked, the report will select leave of absence codes from the general student record to report the leaves to third parties.

The Create Summary parameter is used to produce a summary report/overview of the data to be transmitted to the NCS. This summary can be used to easily view student information such as: names, Banner IDs, SSNs, dates of birth, enrollment statuses, term start and end dates, and graduation dates. This file is created in addition to the pipe-delimited files and the missing/invalid data report that are produced by SFRNSLC.

The files created by SFRNSLC are handled as follows:

- When SFRNSLC is run through job submission (GJAPCTL), three files are created and stored in the job submission directory:
  - sfrnslc\_oneup#.log
  - sfrnslc\_oneup#.lis
  - sfrnslc\_oneup#.txt

- The `sfrnslc_oneup#.log` and `sfrnslc_oneup#.lis` files are viewable on the GJIREVO form.
- The `sfrnslc_oneup#.txt` file can be found in the job submission directory.

When the Run Mode parameter is set to *1* (Report of Missing/Invalid Data), no output is created for the pipe-delimited data file (`.txt`). Only the error report (`.lis`) is created with a control page and a `.log` file.

When the Run Mode parameter is set to *2* (EDI TS190) or *3* (EDI.Smart TS190), and the Create Summary Report parameter is set to *Y*, (create a summary report for Run Modes *2* (EDI TS190) and *3* (EDI.Smart TS190)), the summary report is created (`.lis`) with a control page. The pipe-delimited file is created (`.txt`), and a `.log` file is created.

When the Run Mode parameter is set to *2* (EDI TS190) or *3* (EDI.Smart TS190), and the Create Summary Report parameter is set to *N*, (do not create a summary report for Run Modes *2* (EDI TS190) and *3* (EDI.Smart TS190)), the summary report is created (`.lis`) with the message: *Summary Report Not Requested*, and a control page is printed. The pipe-delimited file is created (`.txt`), and a `.log` file is created.

Parameters	Name	Required?	Description	Values
	Term Code	Yes	Enter the registration enrollment term for the report/extract.	Term Code Validation Form (STVTERM)
	Student Attributes to Exclude	No	<p>Enter the student attributes that will identify enrolled (registered) students for the term who should not be included in reporting to the Clearinghouse.</p> <p>If specific students who have registration term header records for the term of the report should not be included in the extract, a specific student attribute (Student Attribute Validation Form (STVATTS)) should be assigned to those students on the Additional Student Information Form (SGASADD).</p> <p>The Clearinghouse reporting term should fall between the effective term start and end range for the attribute.</p>	Student Attribute Validation Form (STVATTS)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Report Flag	Yes	<p>Enter <i>Y</i> to select a standard report. Enter <i>N</i> to select a non-standard report.</p> <p><b>Note:</b> Non-standard reports are submitted only for specific occasions, such as a summer term or a graduation report.</p>	<p>Y Standard report</p> <p>N Non-standard report</p>
	Address Hierarchy	Yes	Enter the address types for reporting address information for enrolled (registered) students.	Address Type Code Validation Form (STVATYP)
	Report Date	Yes	<p>Enter the certification date for the report/extract. This is the date that will be used to determine the enrollment status for registered students to be reported to the Clearinghouse.</p> <p>This date is used to find each student's time status on the certification date by selecting the maximum time status record less than or equal to the report date. Hours and minutes are stored with this date. If the current date default is overridden with a prior date, the current hours and minutes will be appended to the date. This date is also used in subsequent reports for the same term as the basis of determining whether a student's enrollment status has changed to a lower status from the last report submitted.</p>	

Parameters	Name	Required?	Description	Values
	Run Mode	Yes	<p>Enter the appropriate run mode. Enter 1 for Report of Missing/Invalid Data, 2 for EDI TS190 output, or 3 for EDI.Smart TS190 output.</p> <p>Run Mode 1 must be selected first, when preparing to report to the Clearinghouse and to print a report of missing/invalid data. After correcting all missing/invalid data, select either Run Mode 2 or 3 to produce the extract file that is submitted to the Clearinghouse.</p> <p><b>Note:</b> Only institutions that have licensed EDI.Smart and have made arrangements directly with the Clearinghouse to transmit an EDI.Smart file should select Run Mode 3.</p>	<p>1 Report of Missing/Invalid Data</p> <p>2 EDI TS190</p> <p>3 EDI.Smart TS190</p>
	Graduate Level Code	No	Enter the code for graduate level courses. For example, <i>GR</i> . Multiple codes may be entered.	Level Code Validation Form (STVLEVL)
	Application Code	No	<p>Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.</p> <p>The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.</p>	Application Inquiry Form (GLIAPPL)
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	

Parameters	Name	Required?	Description	Values
	User ID	No	Enter the user ID for the population selection. This is the ID of the user who selected the population of people. This may or may not be the same as the Creator ID. All or none of the population selection parameters must be entered.	
	Effective Withdrawal Date	Yes	Enter <i>Y</i> to select the effective withdrawal date from the student withdrawal record (SFRWDRL_EFF_WDRL_DATE) if one exists for term, otherwise the date from the enrollment record (SFBETRM_ESTS_DATE) will be used. Enter <i>N</i> to select the date from the enrollment record (SFBETRM_ESTS_DATE). The default is <i>N</i> .	Y Use date from SFRWDRL N Use date from SFBETRM
	Branch Code	No	Enter the two digit numeric branch code to be associated with the header record and individual records when transmitted in the file to third party agencies. If left blank, 00 will default.	
	Create Summary Report	Yes	<p>This parameter allows you to produce a summary of the data being transmitted.</p> <p>Enter <i>Y</i> to create a Summary Report for Run Modes 2 (EDI TS190) and 3 (EDI.Smart TS190). Enter <i>N</i> to not create a summary report. The default is <i>Y</i>.</p> <p>This summary output shows all students included in the EDI output file and has a suffix of .lis.</p> <p>Run Mode 1 will produce the Report of Missing/Invalid Data, regardless of the value selected for this parameter.</p>	Y Summary for Run Modes 2 and 3 N No summary report

Parameters	Name	Required?	Description	Values
	FICE Code	No	<p>Enter the institutional FICE code to be associated with the header record and individual records when transmitted in the file to third party agencies. If no code is entered, the institutional FICE code from SHACTRL will be used. If no code exists on SHACTRL, 000000 will default.</p> <p><b>Note:</b> When the Run Mode parameter is set to 2 or 3, the FICE code must exist on SHACTRL when SFRNSLC is run, or it must be entered here. If no FICE code is provided for Run Modes 2 or 3, the value will default to 000000, and the process will terminate with an error.</p>	
	Major 1 and CIP Code	No	<p>Enter <i>Y</i> to include the Major 1 and CIP code in the extract. Leave blank to not include this data. The default is <i>Null</i>.</p> <p>The primary major comes from the concurrent curricula tables. The CIP code comes from STVMAJR and STVCIPC.</p> <p>Used with Run Mode 2 or 3.</p>	<p>Y Include Major 1 and CIP code</p> <p>Null Do not include</p>
	Major 2 and CIP Code	No	<p>Enter <i>Y</i> to include the Major 2 and CIP code in the extract. Leave blank to not include this data. The default is <i>Null</i>.</p> <p>The secondary major (field of study) comes from the concurrent curricula tables. The CIP code comes from STVMAJR and STVCIPC.</p> <p>Used with Run Mode 2 or 3.</p>	<p>Y Include Major 2 and CIP code</p> <p>Null Do not include</p>

Parameters	Name	Required?	Description	Values
	Email Address	No	<p>Enter <i>Y</i> to include the email address in the extract. Leave blank to not include this data. The default is <i>Null</i>.</p> <p>The email address reported is determined by the following criteria:</p> <ul style="list-style-type: none"> <li>• If one email address exists, it is reported.</li> <li>• If multiple email addresses exist, the preferred email address is reported. (The <b>Preferred</b> checkbox is checked on SPAIDEN.)</li> <li>• If multiple email addresses exist, and none are designated as preferred, no email address is reported.</li> </ul> <p>Used with Run Mode 2 or 3.</p>	<p>Y Include email address</p> <p>Null Do not include</p>
	Gender	No	<p>Enter <i>Y</i> to include the gender in the extract. Leave blank to not include this data. The default is <i>Null</i>.</p> <p>Used with Run Mode 2 or 3.</p>	<p>Y Include gender</p> <p>Null Do not include</p>
	Race	No	<p>Enter <i>Y</i> to include the race in the extract. Leave blank to not include this data. The default is <i>Null</i>.</p> <p>Used with Run Mode 2 or 3.</p>	<p>Y Include race</p> <p>Null Do not include</p>
	Class Level	No	<p>Enter <i>Y</i> to include the class level in the extract. Leave blank to not include this data. The default is <i>Null</i>.</p> <p>An NSC class level translation equivalent must be set up for each class level code on STVCLAS using the <b>NSC Class Level Translation</b> field.</p> <p>Used with Run Mode 2 or 3.</p>	<p>Y Include class level</p> <p>Null Do not include</p>

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Banner ID	No	Enter <i>Y</i> to include the Banner ID in the extract. Leave blank to not include this data. The default is <i>Null</i> .  Used with Run Mode 2 or 3.	Y Include Banner ID Null Do not include
	SSN	No	Enter <i>Y</i> to include the SSN in the extract. Leave blank to not include this data. The default is <i>Y</i> .  <b>Note:</b> The SSN data is required by the NSC for federal compliance reporting. Questions concerning whether the SSN is required by your institution should be submitted to the NSC.  Used with Run Mode 2 or 3.	Y Include SSN Null Do not include
	Report Start and End Dates	No	Enter <i>Y</i> to report the enrollment start and end dates by student for the term. Leave blank to not include this data. The default is <i>Null</i> .  The process looks at the registration record for the student and reports the minimum start date and the maximum end date from all enrolled courses.  Courses must have the <b>Count in Enrollment</b> indicator checked on STVRSTS for the course registration status code, and the student cannot be withdrawn.  Used with Run Mode 2 or 3.	Y Report enrollment dates Null Do not report dates
	Process by Student Period	Yes	Enter <i>Y</i> to process enrollment by a student centric period for the extract or <i>N</i> to not process enrollment by a student centric period. The default is <i>N</i> .	Y Use student centric period N Do not use student centric period

## Report Sample—Clearinghouse Extract Report (SFRNSLC)

\* \* \* REPORT CONTROL INFORMATION - SFRNSLC - Release 8.4 \* \* \*

TERM: 202011  
STUDENT EXCLUDE ATTRIBUTES: None entered.  
REPORT FLAG: Y  
REPORT DATE: 03-MAR-2010  
ADDRESS HIERARCHY: IMA 2PR  
RUN MODE: 3  
CODE FOR GRAD LEVEL: GR  
APPLICATION CODE:  
SELECTION IDENTIFIER:  
CREATOR ID:  
USER ID:  
BRANCH: 00  
FICE: SCTXML  
EFFECTIVE WITHDRAWAL DATE: Y  
CREATE SUMMARY REPORT: Y  
MAJOR 1 AND CIPC CODE: Y  
MAJOR 2 AND CIPC CODE: Y  
EMAIL ADDRESS: Y  
GENDER: Y  
RACE: Y  
CLASS LEVEL: Y  
BANNER ID: Y  
SSN: Y  
REPORT START AND END DATES: Y  
PROCESS BY STUDENT CENTRIC PERIOD: Y  
RECORD COUNT: 22  
Please see .txt file for NSC flat file.

*This sample shows the extract file that is produced when Run Mode 3, EDI.Smart TS190 output, is selected, and the parameters from Major 1 and CIP Code through Process by Student Centric Period are set to Y. There are no gaps (page breaks) in the actual extract file.*

*The EDI.Smart TS190 extract file is a subset of the EDI TS190 extract file that can be produced using Run Mode 2.*

## Time Status Calculation Update Process (SFRTMST)

**Description** This process calculates student enrollment time statuses in batch mode and updates/inserts time status history records in preparation for reporting student enrollment data to the National Student Clearinghouse (NSC). Students are selected for processing only if the current time status calculated by this process is different from the most recent existing time status that is stored in the database. This process should be run if the **Calculate Time Status (Indicator)** on the Term Control Form (SOATERM) has been unchecked (set to *N*) during any period of registration processing for a term.

This process uses the **Count in Time Status (Indicator)** on STVRSTS for each course registration status code on each CRN to determine which sections are included in the time status calculation. The time status calculation will use the sum of the credit hour hold values (SFRSTCR\_CREDIT\_HR\_HOLD) where the **Count in Time Status (Indicator)** is set to *Y*. Therefore, if the **Count in Time Status (Indicator)** is checked for a course registration status code on STVRSTS, the SFRSTCR\_CREDIT\_HR\_HOLD value will be used. Otherwise, time status hours will default to zero for the course. This allows an institution to set the **Count in Enrollment (Indicator)** to any value needed for institutional processing and without creating any processing issues for the time status calculation.

The process should initially be run in Audit Mode to allow messages to be reviewed. Any messages that reflect errors in the database must be corrected. The process can be run in Audit Mode as many times as needed prior to being run in Update Mode. If no records need to be updated, the message *No Time Status Records to be Updated* will print on the report output. This process can also be used as an additional error detection process in conjunction with the of running the Clearinghouse Extract Process (SFRNSLC) in the Report of Missing/Invalid Data Mode.

The process calculates the student centric period time status in addition to the existing term time status when the student has a cycle designator in effect for the registration term and CRNs being processed. A new student centric period time status history record is inserted in SFRSTSH if the time status for the student centric period has changed since the last update. If the time status has not changed, no additional record is created. When a student has a manually inserted time status record, no additional time status record is inserted.

Parameters	Name	Required?	Description	Values
	Run Sequence Number	No	System-generated by Job Submission.	
	Term Code	Yes	Enter the registration enrollment term for the time status update.	Term Code Validation Form (STVTERM)
	Campus Code	Yes	Enter the single campus to be processed, or enter % for all.	Campus Code Validation Form (STVCAMP)

<i>Parameters</i> (cont)	Name	Required?	Description	Values
	Level Code	Yes	Enter the single level to be processed, or enter % for all.	Level Code Validation Form (STVLEVL)
	Run Mode (A=Audit or U=Update)	Yes	A or audit mode will print a report of the calculated student enrollment time statuses, without actually updating the database. U or update mode will update/insert time status history records.	A Audit U Update
	Calculate SCP Time Status	Yes	Enter Y to calculate the student centric period time status for students assigned to a cycle designator for the term being processed or N to not calculate the student centric period time status. The default is N.  If the new student centric period time status is different from the previous one, and the Run Mode parameter is set to U, the new student centric period time status history record will be inserted into the database.	Y Calculate student centric period time status N Do not calculate student centric period time status

## NSLDS SSCR Process (SFRSSCR)

### Description

This process is used to read and process the NSLDS Student Status Confirmation Report (SSCR) Roster and Error Notification Files. The Roster File is the first file that is received, and should be run in Audit mode, then Create flat file mode. All errors identified in Audit mode must be corrected, and Audit mode may be run as many times as needed, to diagnose and resolve problems with the data. When all data problems have been resolved, no errors will appear under either the Matched Records heading or the New Students Added to SSCR File heading on the report output. Any records listed under the Unmatched Records heading will be reported as unknown to your institution when the process is run in Create flat file mode. The process should be run in Create flat file mode to produce the Submittal File that is returned to NSLDS. The Create flat file mode report should be reviewed for any errors that would cause invalid or missing data to be submitted.

After NSLDS processes the Submittal File, and Error Notification File will be returned. That file should be processed in Error listing mode. The report information will indicate if the Submittal File was accepted without errors, or if errors exist that need correction. If errors exist, both Audit and Create flat file modes should be used to review the data and create an Error Correction File that is submitted to NSLDS.

Two output files are created when the Roster file or Error Notification file is processed in Create flat file mode. The two output files are: 1) the report control information listing, which includes appropriate messages about the data and/or processing of the file, and 2) the data file with updates that would be transmitted back to NSLDS. The name of the report listing will conform to existing standards for job submission processing or command line (host) execution. The name of the data file produced from the Roster file will be `sfrsubm.dat` (Submittal file), and the name of the data file produced from the Error Notification file will be `sfrserrc.dat` (Error Correction file), regardless if executed from job submission or the command line. Only a report control information listing is produced when the Roster file is processed in Audit mode, and the Error Notification file is processed in Audit or Error listing mode.

This process uses the **Third Party Withdrawal Indicator** on STVESTS to report students as withdrawn to the NSLDS. When the indicator is not checked, the process will not consider the student as withdrawn and will report the last time status for the student.

The process also uses the **Third Party Report Indicator** on STVLEAV to select leave of absence codes for the student. The process will select leave of absence codes from the general student record to be reported as valid leaves when the indicator is checked.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Term Code	Yes	Enter the registration enrollment term for processing.  Time status for enrolled students for this term is used to update enrollment status, if a change has occurred.	Term Code Validation Form (STVTERM)
	SSCR File to Process	Yes	Enter the path and file name for the SSCR Roster or Error file to process. The path and file name entered must not exceed 30 characters. If no extension for the file name is supplied, an extension of .dat is assumed.	
	SSCR File Type	Yes	Enter <i>R</i> for a Roster File or <i>E</i> for an Error Notification File.	R Roster file E Error Notification file
	Run Mode	Yes	Enter <i>A</i> to create an audit file, <i>C</i> to create a flat file, or <i>E</i> to create an error listing. Only <i>A</i> and <i>C</i> are valid run modes for processing a Roster File. If <i>E</i> is entered, Audit mode will default. <i>A</i> , <i>C</i> , and <i>E</i> are valid modes for processing an Error Notification File.	A Audit C Create flat file E Error listing
	Address Hierarchy	Yes	Enter the address type and hierarchy for reporting permanent address information. For example, 1MA. Multiple values may be entered.  This parameter will not be used when the Error Notification File is processed in Error listing mode.	Address Type Code Validation Form (STVATYP)

Parameters	Name	Required?	Description	Values
	Aid Year Code(s)	No	<p>Enter the aid year code(s) to select the students with new loans.</p> <p>This parameter allows you to run the process in Audit mode and provide a report for matched and unmatched students only. When one or more aid year codes are entered in both Audit and Create flat file modes, the report control information will include a listing of the new students that are reported.</p> <p>This parameter will not be used when the Error Notification File is processed in Error listing mode.</p>	Aid Year Inquiry Form (ROIADY)
	Level Code for New Students	No	Enter the level code(s) to select students with new loans. The default value for this parameter is % for all levels.	Level Code Validation Form (STVLEVL)
	College Code for New Students	No	Enter the college code(s) to select students with new loans. The default value for this parameter is % for all colleges.	College Code Validation Form (STV_COLL)
	Campus Code for New Students	No	Enter the campus code(s) to select students with new loans. The default value for this parameter is % for all campuses.	Campus Code Validation Form (STV_CAMP)
	Match on ID Only	No	Enter <i>Y</i> to match on ID/SSN only or <i>N</i> to match on ID/SSN and last name. The default is <i>N</i> .	<p>Y Match on ID/SSN</p> <p>N Match on ID/SSN and last name</p>
	Effective Withdrawal Date	Yes	Enter <i>Y</i> to select the effective withdrawal date from the student withdrawal record (SFRWDRL_EFF_WDRL_DATE) if one exists for term, otherwise the date from the enrollment record (SFBETRM_ESTS_DATE) will be used. Enter <i>N</i> to select the date from the enrollment record (SFBETRM_ESTS_DATE). The default is <i>N</i> .	<p>Y Use date from SFRWDRL</p> <p>N Use date from SFBETRM</p>

## Compliance Listener Start Up Process (SFRPINI)

**Description** This process is used to initialize the SFRPIPE process to run in the background, listening for Oracle pipe calls to execute the compliance process for registration prerequisite processing with CAPP. Run SFRPINI from the host. There are no job submission parameters for this process.

The terminal displays the following when the process is run:

```
This program starts the SFKREG servers to service requests to handle
compliance from the Banner System. It reads the SFBPIPE table,
and then starts an SFKPIPE process for each pipe in the table.

The userid and password used need privileges to read and update
the SFBPIPE table and access the SFKPIPE named pipes.

Starting pipe with command: sfrpipe plawler/u_pick_it SFKPIPE01 &
Starting pipe with command: sfrpipe plawler/u_pick_it SFKPIPE02 &
Starting pipe with command: sfrpipe plawler/u_pick_it SFKPIPE03 &

Servers started.
Connected.
Connected.
Connected.
```

There is no hardcopy output from this process.

## Compliance Pipe Process (SFRPIPE)

**Description** This process is used as a listening agent for Oracle pipes, to initiate the compliance process to perform registration prerequisite processing with CAPP. Run SFRPIPE from the host. There are no job submission parameters for this process.

The terminal displays the following when the process is run:

```
Waiting for work on pipename...
```

There is no hardcopy output from this process.

### GTVSDAX Rules

These GTVSDAX rules can be used with pipes processing for debugging purposes.

Internal Code	Internal Group Code	External Code	Description
PIPETIME	PIPETIMEOUT	300	SFRPIPE timeout in seconds
PIPESIZE	PREREQUISITES	4048	SFRPIPE pipe size
PREREGDEBG	PREREQUISITES	FALSE	Debug Msg in PreReg

The *PIPETIME* rule allows you to change the timeout period for the pipe process. The default timeout period is 300 seconds or five minutes. The SFKPREL and SFKPIP1 packages are used by this rule.

The *PIPESIZE* rule allows you to change the size of the `dbms_pipe` used for the pipe process. The default pipe size is the Oracle default of 4048.

#### **Warning**

This value should not be changed unless specified by a SunGard Higher Education technician. ■

The *PREREGDEBG* rule allows you to perform testing and debugging for pipe processing.

 **Warning**

It is strongly advised that this rule only be set to *FALSE* when pipe process testing is taking place. Numerous calls to the *dbms\_output* item are performed, which could affect system performance in a production environment. ■

## Queue Initialization Process (SFRQINI)

**Description** This process initializes the SFRADVQ listener process to be run in the background, where it listens for Oracle advanced queue calls to execute the compliance process. It can be run from job submission. SFRQINI can be compared to the SFRPINI pipe initialization process.

Parameters	Name	Required?	Description	Values
	Number of Listeners to Start	Yes	Enter the number of advanced queue listeners to be started from SFRADVQ. The default is 10.	

### Report Sample—Queue Initialization Process (SFRQINI)

The control report displays the following when the process is run:

```
10-SEP-2010      SUNGARD UNIVERSITY of BANNER
                  Compliance Listener Start Up Log          SFRQINI

This program starts the listener service(s) to handle
Compliance from the Banner System(all of webcapp, and
CAPP area prereqs for both web and INB).

Attempting to Purging Queues.
Attempting to stop any existing sfradvq listeners.

Starting queue with command: echo client_password | sfradvq client_username 1 &

Server Started

                          Sessionid: 3457207
```

## Compliance Advanced Queue Process (SFRADVQ)

**Description** This process is a listening agent for Oracle advanced queue processing. It tells advanced queuing to perform compliance processing. Run the SFRQINI process to start the SFRADVQ process. SFRADVQ can be compared to the SFRPIPE pipe listener process. There are no job submission parameters for this process.

### GTVSDAX Rules

These GTVSDAX rules can be used with advanced queue processing.

Internal Code	Internal Group Code	External Code	Description
AQ4PIPES	CAPP	Y	All CAPP Processing
QUEUETIME	QUEUETIMEOUT	300	SFRADVQ timeout in seconds

The *AQ4PIPES* rule for the internal group code of *CAPP* is used to toggle between pipes processing (SFRPINI and SFRPIPE) and advanced queue processing (SFRQINI and SFRADVQ).

The *QUEUETIME* rule is used to change the timeout period for the advanced queue process. The delivered default timeout period is 300 seconds (five minutes). You need to set the rule to the timeout value you choose for the queue to work with the advanced queuing. The SFKCOMM package uses the *AQ4PIPES* rule to determine the transmission protocol, while the SOKADVQ package uses the *QUEUETIME* rule.

The *QUEUETIME* rule is equivalent to the *PIPETIME* GTVSDAX rule. The *QUEUETIME* rule states the amount of time the user is willing to wait for a response for compliance processing while using the advanced queuing option, while the *PIPETIME* rule denotes the amount of time the user is willing to wait for a response for the compliance processing while using pipes processing.

Advanced queuing can be used in place of pipes processing, but using advance queuing is not required for communication protocol. The GTVSDAX rules are delivered with a value of *N*, you can continue to use pipes processing.

### Report Sample—Compliance Advanced Queue Process (SFRADVQ)

The control report displays the following when the process is run:

18-AUG-2010 SUNGARD UNIVERSITY of BANNER

## Withdraw Pending Status Change Report (SFRNOWD)

**Description** This report is used to show which students have zero enrollment hours but have not officially withdrawn from the institution (in other words, students who have been enrolled in a term and whose status indicates they are eligible to enroll, but no longer have any active registration for a term, because there are no SFRSTCR records with a **Status Code** checked as **Count in Enrollment** on the Course Registration Status Code Validation Form (STVRSTS)).

### Note

The **Withdrawal Code** on STVESTS is used to show that the enrollment status code is also a withdrawn indicator for this reporting process. ■

You can display several different groups of students in the report output:

- those who have received or could have received Title IV financial aid,
- those who received only non-Title IV aid, or
- those with no financial aid.

The report also allows you to include those students who have enrollment for the term but no credit hours in academic history (all F's, for example).

Date parameters are included in this report so as not to include students previously identified as withdrawn if desired. Dates are based on activity date on SFRSTCA.

Parameters	Name	Required?	Description	Values						
	Term Code	Yes	Enter the code of the term for which you want to run the report.	Term Code Validation Form (STVTERM)						
	Student Level(s)	Yes	Enter the student level or levels (such as undergraduate or graduate) for which you want to run the report. Multiple levels may be entered.	Level Code Validation Form (STVLEVL)						
	Financial Aid Selection	Yes	Enter the type of financial aid recipient. Enter <i>T</i> for Title IV recipients only, <i>F</i> for Financial Aid recipients, or <i>A</i> for all students. The default is <i>T</i> .	<table> <tr> <td>T</td> <td>Title IV recipients</td> </tr> <tr> <td>F</td> <td>Financial Aid recipients</td> </tr> <tr> <td>A</td> <td>All students</td> </tr> </table>	T	Title IV recipients	F	Financial Aid recipients	A	All students
T	Title IV recipients									
F	Financial Aid recipients									
A	All students									

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Verify Enrollment	Yes	Enter <i>Y</i> to verify enrollment or <i>N</i> to not verify enrollment. The default is <i>Y</i> .	Y Verify enrollment N Do not verify enrollment
	Start Date	No	Enter the start date in DD-MON-YYYY format. Use this parameter to exclude students previously identified as withdrawn. Dates are based on the activity date on SFRSTCA.	
	End Date	No	Enter the end date in DD-MON-YYYY format. Use this parameter to exclude students previously identified as withdrawn. Dates are based on the activity date on SFRSTCA.	
	Verify History	Yes	Enter <i>Y</i> to verify history or <i>N</i> to not verify history. The default is <i>Y</i> .  Use this parameter to include those students who have enrollment for the term but no credit hours in academic history (all F's, for example).	Y Verify history N Do not verify history
	Grade Which Reflects Drop	No	Enter any grades which may reflect a drop.	
	Campus Selection	Yes	Enter the campus for which you wish to run the report, or % for all. The default is %.	Campus Code Validation Form (STVCAMP)
	Sort Order	Yes	Enter the sort order for the report output. Enter <i>I</i> to sort on Student ID, <i>N</i> to sort on Name, <i>L</i> to sort on Level.	I Student ID N Name L Level

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Application Code	No	<p>Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.</p> <p>The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.</p>	Application Inquiry Form (GLIAPPL)
	Selection Identifier	No	<p>Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.</p>	Population Selection Inquiry Form (GLISLCT)
	Creator ID	No	<p>Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.</p>	
	User ID	No	<p>Enter the user ID for the population selection. This is the ID of the user who selected the population of people. This may or may not be the same as the Creator ID. All or none of the population selection parameters must be entered.</p>

## Withdrawn Student Report (SFRWDRL)

**Description** This report is used to identify students who have withdrawn from the term and need to have a Title IV refund calculated (in other words, those students who have had a withdrawal status code with the **TIV Update Ind(icator)** checked on the Student Withdrawal Status Code Validation Form (STVWDRL) and entered on their student record). This report can also be used to record the student's withdrawal date for Title IV purposes and to create a withdrawal record for those students who received Title IV funds.

The report allows you to:

- Select only those students who have been awarded Title IV funds or all students.
- Select only the withdrawal enrollment status codes requested. The default for the parameter is all withdrawal enrollment status codes. You have the option of selecting all withdrawal status codes, one withdrawal status code, or multiple withdrawal status codes.
- Review the student status date and Accounts Receivable institutional charge detail to determine if changes are required.
- Use population selection.
- Sort by activity date, ID, name, withdrawal status code, and level.

### Note

Address type codes need to be set up on the Crosswalk Validation Form (GTVSDAX) to map to the home address type and campus address type if you want addresses to print on the report. The value in the **Internal Code** field is used to identify the GTVSDAX address hierarchy.

Parameters	Name	Required?	Description	Values
	Audit or Update Mode	Yes	Enter <i>A</i> for audit or <i>U</i> for update. Update mode will update the database records by creating a withdrawal record for those students who received Title IV funds.	A Audit U Update
	Term Code	Yes	Enter the code of the term for which you want to run the report.	Term Code Validation Form (STVTERM)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Student Level	Yes	Enter the student level or levels (such as undergraduate or graduate) for which you want to run the report. Multiple levels may be entered.	Level Code Validation Form (STVLEVL)
	Campus Code (% for all)	Yes	Enter the code of the campus for which you want to run the report, or enter % for all. The default is %.	Campus Code Validation Form (STVCAMP)
	Title IV Recipients Only	No	Enter <i>Y</i> to include only Title IV recipients or <i>N</i> to include all students.	Y Title IV recipients only N All students
	Enrollment Status Code (% for all)	Yes	Enter the enrollment status code for the type of enrollment status to be included in the report or % for all enrollment codes. Multiple values may be entered.	Enrollment Status Code Validation Form (STVESTS)
	Default WDRL Code	Yes	Enter the withdrawal code to be used for records that do not have an associated withdrawal code on STVESTS.	Withdrawal Code Validation Form (STVWDRL)
	Major Sort Sequence	Yes	Enter the sort sequence for the primary sort order: <i>I</i> for ID, <i>N</i> for Name, <i>S</i> for Status Code, <i>D</i> for Date, or <i>L</i> for Level.  Sorting is performed by calendar date, using the SFBETRM_ESTS_DATE value and the DATE format.	I ID N Name S Status code D Date L Level
	Minor Sort Sequence	No	Enter the sort sequence for the secondary sort order: <i>I</i> for ID or <i>N</i> for Name, when the Major Sort Sequence parameter is set to <i>S</i> , <i>D</i> , or <i>L</i> .	I ID N Name
	Home Address SDAX Code	Yes	Enter the address type to be used as the home address for Title IV processing. This code must be defined on the Crosswalk Validation Form (GTVSDAX).	Crosswalk Validation Form (GTVSDAX)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Campus Address SDAX Code	Yes	Enter the address type to be used as the campus address for Title IV processing. This code must be defined on the Crosswalk Validation Form (GTVSDAX).	Crosswalk Validation Form (GTVSDAX)
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	User ID	No	Enter the user ID for the population selection. This is the ID of the user who selected the population of people. This may or may not be the same as the Creator ID. All or none of the population selection parameters must be entered.

## Auto Grade Assignment Process (SFPAGR)

**Description** This process is used to assign an incomplete or institutionally defined letter grade to long-standing, ungraded, open learning registration records. If a student has passed their expected completion date by a defined period of time (as defined in the report parameters), then the registration record will given the specified grade, thereby closing the record. The information displayed on the report comes from the student and section registration information in the SFRSTCR and SFRAREG records.

### Note

After you run the Auto Grade Assignment Process (SFPAGR), you need to run the Grade Roll to Academic History (SHRROLL).

Parameters	Name	Required?	Description	Values
	Processing Term	No	Enter the term code or codes for the terms to be checked for incomplete registration records.	Term Code Validation Form (STVTERM)
	Start Range From Date	No	Enter the start date for which registration records are to be processed.	
	Start Range To Date	No	Enter the end date for which registration records are to be processed.	
	CRN	No	Enter the CRN or CRNs for the sections to be processed, or enter % for all sections. The default is %.	
	Schedule Type	No	Enter the schedule type code or codes for the sections to be processed, or enter % for all. The default is %. For example, you could select all sections with a schedule type of self-paced.	Schedule Type Code Validation Form (STVSCHD)
	Instructional Method	No	Enter the instructional method or methods for the sections to be processed, or enter % for all. The default is %. For example, you could select all sections with an instructional method of Web-based.	Instructional Method Validation Form (GTVINSM)

Parameters	Name	Required?	Description	Values
	Instructor	No	Enter the ID of the instructor for the sections to be processed. You may only enter one instructor in this parameter.	
	Grade Deadline Grace Period	No	Enter the number of calendar days for the grace period deadline. The default is 45. The number of calendar days is added to the most recent expected completion date. If the derived date is less than or equal to the current date, i.e., the registration record has passed the grade period for which a grade can be entered, then the record will be updated.	
	Grade	Yes	Enter the grade code to be assigned to the registration record. The default is <i>I</i> (Incomplete). Make sure the grade code is defined for each existing grading mode so SHRROLL will run correctly.	Grade Code Maintenance Form (SHAGRDE)
	Run Mode	Yes	Enter <i>R</i> to produce a report of those students still without grades or <i>U</i> to update the database. The default is <i>R</i> .	R Audit U Update
	Report Sequence	Yes	Enter <i>S</i> to sort the report output by student name or <i>C</i> to sort the report by CRN within term. The default is <i>S</i> .	S Sort by student name C Sort by CRN within term

## Registration Admin Messages Report (SFRRGAM)

**Description** This report is used to track registration errors for administrative purposes, check for in-progress prerequisites errors, view any potential schedule conflicts due to changes in class schedule, or find students who took in-progress prerequisites that may have not met the requirements. You can use the error checking settings for registration restrictions on SOATERM when the report is run, or you can define the error checking settings using individual parameters. This report reruns the edit checking based on the settings entered by the user. These errors are not stored anywhere in the database, as this information can change constantly.

### Note

When DegreeWorks prerequisite checking is in use, the report displays DegreeWorks prerequisite error messages. ■

If a single term is entered in the Term Code parameter, both date parameters (Start Date From Date and Start Date To Date) will be set to NULL for the running of the report, even if valid dates have been entered in these two parameters. The control report will display NULL for these two fields, even though they contain the user-entered values in Banner job submission (GJAPCTL).

If a date range is used for the report (i.e., the Term Code parameter is set to %), the Use SOATERM Error Check Flags parameter will be set to *N* for this running of the report, even though it may have been set to *Y* on GJAPCTL. The field value will be displayed on the control report as *N*, indicating that the SOATERM error checking values were not used for this specific running of the report. The values that exist on GJAPCTL for all the error checking parameters will be used for this specific running of the report, and they will be displayed on the control report.

If an individual course is entered in the CRN parameter, the process will operate only on that CRN. It is important to remember that a CRN may be involved in an error condition, even though no error is reported against that CRN. For example, if a student registers for CRN 1 and CRN 2, and a time conflict exists between the two sections, only the latter, based on the date and time it was added to the student's schedule, is assigned an error message. Therefore, if the report is run for CRN 1, no error will be generated. If the report is run for CRN 2, the time status error will be generated.

### Note

If CAPP prerequisites are being processed and the pipes (SFRPINI and SFRPIPE) are not being run, the report will display an error such as *CAPP pipes error* or *CAPP processing error*.

The *Active Registration Cannot Process* error means that another user was in the record at the time this report was run, and it will need to be run against that student at a later time. ■

<b>Parameters</b>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Term Code	No	<p>Enter the registration term for which administrative messages are to be processed. Enter % when using a date range.</p> <p>If % is entered in the Term Code parameter, a date range must be entered.</p>	Term Code Validation Form (STVTERM)
	Start Date From Date	No	<p>Enter the start date from which registration records should be selected. Enter in MON-DD-YYYY format.</p> <p>If a date is entered in this parameter, the value of % must have been entered in the Term Code parameter.</p>	
	Start Date To Date	No	<p>Enter the start date to which registration records should be selected. Enter in MON-DD-YYYY.</p> <p>If a date is entered in this parameter, the value of % must have been entered in the Term Code parameter.</p>	
	Application Code	No	<p>Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.</p> <p>The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.</p>	Application Inquiry Form (GLIAPPL)
	Selection Identifier	No	<p>Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.</p>	Population Selection Inquiry Form (GLISLCT)

Parameters	Name	Required?	Description	Values
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	User ID	No	Enter the user ID for the population selection. This is the ID of the user who selected the population of people. This may or may not be the same as the Creator ID. All or none of the population selection parameters must be entered.	
	Student ID	No	Enter the ID of the student for which administrative messages are to be reported. Multiple IDs may be entered.	
	CRN	No	Enter the CRNs for which administrative messages are to be reported. Multiple CRNs may be entered.	
	Report Option	Yes	Enter <i>P</i> to report failed in-progress prerequisite messages. This option is valid <i>only</i> if prerequisite checking was turned on during registration. Enter <i>A</i> to report all messages. The default is <i>A</i> .	<p><b>P</b> Failed in-progress prerequisites</p> <p><b>A</b> All messages</p>
	Registration Access Errors	Yes	Enter <i>I</i> to include the reporting of students whose courses could not be evaluated because they had an active registration session in progress at the time the report was run. Enter <i>E</i> to exclude the reporting of these students. The default is <i>I</i> .	<p><b>I</b> Include</p> <p><b>E</b> Exclude</p>
	Use SOATERM Error Check Flags	No	Use this parameter when the Report Option parameter is set to <i>A</i> . Enter <i>Y</i> to use the error checking flags for registration restrictions on SOATERM. Enter <i>N</i> to use the parameters which follow for error checking. The default is <i>Y</i> .	<p><b>Y</b> Use SOATERM flags</p> <p><b>N</b> Use parameters</p>
			If dates have been entered in the Start Date From Date and Start Date To Dates parameters, this parameter must be set to <i>N</i> .	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>	
	Duplicates	No	Use this parameter instead of the error checking flag on SOATERM to check for duplicates errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Links	No	Use this parameter instead of the error checking flag on SOATERM to check for links errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Corequisites	No	Use this parameter instead of the error checking flag on SOATERM to check for corequisite errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Prerequisites	No	Use this parameter instead of the error checking flag on SOATERM to check for prerequisite errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Max Hours	No	Use this parameter instead of the error checking flag on SOATERM to check for maximum hours errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Time	No	Use this parameter instead of the error checking flag on SOATERM to check for time errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Approval	No	Use this parameter instead of the error checking flag on SOATERM to check for approval errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>	
	Field of Study	No	Use this parameter instead of the error checking flag on SOATERM to check for field of study/major errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	College	No	Use this parameter instead of the error checking flag on SOATERM to check for college errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Level	No	Use this parameter instead of the error checking flag on SOATERM to check for level errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Class	No	Use this parameter instead of the error checking flag on SOATERM to check for class errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Repeat Hours	No	Use this parameter instead of the error checking flag on SOATERM to check for repeat hours errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Repeat Limit	No	Use this parameter instead of the error checking flag on SOATERM to check for repeat limit errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Campus	No	Use this parameter instead of the error checking flag on SOATERM to check for campus errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>	
	Degree	No	Use this parameter instead of the error checking flag on SOATERM to check for degree errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Program	No	Use this parameter instead of the error checking flag on SOATERM to check for program errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Department	No	Use this parameter instead of the error checking flag on SOATERM to check for department errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Student Attribute	No	Use this parameter instead of the error checking flag on SOATERM to check for student attribute errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Cohort	No	Use this parameter instead of the error checking flag on SOATERM to check for cohort errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking
	Mutual Exclusion	No	Use this parameter instead of the error checking flag on SOATERM to check for mutual exclusion errors. Enter <i>F</i> to check for fatal errors or <i>N</i> to not check for errors. The default is <i>N</i> .	F	Fatal
				N	No checking

## Fee Assessment Report (SFRFEES)

**Description** This report is used to assist in troubleshooting and debugging fee assessment processing. It is intended to be an efficient way to gather needed information when a question on arises on fee assessment. The report will be the primary method for the ActionLine to obtain contact data, (along with additional delivered SQL\*Plus scripts).

This report lists various data values stored for a student that have the potential to meet registration assessment rule criteria. The values displayed are for enrollment data, student data, curriculum data, course registration data, optional mock fee assessment data, previous and current fee assessment, and accounts receivable records. The report processes a single ID or a population selection for a term. The report also lists a basic summary of learner data that may be used for assessment verification and can be helpful when troubleshooting assessment results. The supported parameters will be expanded in later releases to assist with reviewing assessment information.

This report can also be used as a tool for institutions to evaluate their processing rules or check on a specific group of students. For example, an institution may want to update a rule. They could take a sample population selection, and then compare the current assessment with a mock assessment to determine if this change would be appropriate. Another potential use would be if a user wanted to review assessment results for students who have a specific drop registration status (i.e., *DD*). They would create a population selection containing these students, and run the report. This allows them to easily compare the current assessment to the previous one, and determine if the refund was performed correctly.

Parameters	Name	Required?	Description	Values
	Term	Yes	Enter the registration term for which fee assessment is to be reported.	Term Code Validation Form (STVTERM)
	Student ID	No	Enter the ID of the student for which fee assessment is to be reported.	
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	User ID	No	Enter the user ID for the population selection. This is the ID of the user who selected the population of people. This may or may not be the same as the Creator ID. All or none of the population selection parameters must be entered.	
	Mock Assessment Indicator	Yes	Enter <i>Y</i> to process mock fee assessment or <i>N</i> to not process mock fee assessment. The default is <i>N</i> .	Y Mock assessment N No mock assessment
	Mock Assessment Effective Date	No	Enter the date for the mock fee assessment in DD-MON-YYYY format.  This parameter is the equivalent of the Assessment Date parameter in Registration Fee Assessment Process (SFRFASC). This parameter could be used to expand on the details of accounting transactions.	
	Assessment Detail Indicator	Yes	Enter a value to select the level of report detail. Enter <i>C</i> for current detail, <i>P</i> for previous detail, or <i>B</i> for both kinds of information. The default is <i>B</i> .	C Current P Previous B Both
	Sort Order	Yes	Enter a value to select the sort order for the output. Enter <i>N</i> for name order or <i>I</i> for student ID order. The default is <i>N</i> .	N Order by name I Order by student ID

## Batch Waitlist Notification Process (SFRBWLP)

**Description** This process is used to produce waitlist notifications by term for new available seats based on entries in the SFRCOLW collector table. It will search the waitlisted sections for entries that are pending or expired (SFRWLNT) and remove those students from the waitlist. The waitlist enrollment count will then be updated for the CRN. Sleep/wake processing is used with batch waitlist notification, and the results can be sent to a specific printer.

Parameters	Name	Required?	Description	Values
	Term	Yes	Enter the term for which waitlist notifications are to be processed.	Term Code Validation Form (STVTERM)
	Printer ID	Yes	Enter the ID of the printer to be used with sleep/wake processing.	Printer Validation Form (GTVPRNT)
	Run in sleep/wake mode (Y/N)	No	Enter <i>Y</i> to use sleep/wake processing or <i>N</i> to not use sleep/wake cycling. The default is <i>N</i> .  Sleep/wake mode does not produce any printed output.	Y Use sleep/wake N Do not use sleep/wake
	Sleep Interval	No	Enter the time in seconds that the process should pause before running the job. Use values from 1 to 999999.	
	Print Control Report (Y/N)	Yes	Enter <i>Y</i> to print the control report in the output or <i>N</i> to not print the control report. The default is <i>N</i> .	Y Print control report N Do not print control report

## Waitlist Priority Reorder Process (SFPWLRO)

**Description** This process is used to reorder positions in the waitlist queue based on the rules defined on SOAWLTC. Waitlists are sorted by waitlist priority order and the timestamp for the course registration status code (STVRSTS). Reordering can be performed by term and CRN or by term and cross list group. Manual overrides can be included in the reordering process. If an entry has a manually assigned waitlist priority that is not overridden, it will not be processed.

Reordering is only applied to sections that fit the selection criteria and is done on a first come, first served basis within each rule. Waitlists for cross-listed courses are consolidated and reordered as a single waitlist for the group. Waitlists for courses with reserved seats and overflow allowances are consolidated and reordered as a single waitlist. Waitlists for courses with reserved seats but without overflow allowances are treated as a single waitlist.

Parameters	Name	Required?	Description	Values
	Term	Yes	Enter the term code for which waitlist priorities are to be reordered.	Term Code Validation Form (STVTERM)
	CRN	No	Enter one or more CRNs for which waitlist priorities are to be reordered. If a value is entered in this parameter, the Cross List Group parameter cannot be used.	
	Cross List Group	No	Enter the cross list group (SSAXLST) to be used to process specific cross-listed CRNs. This parameter cannot be used when a value is entered in the CRN parameter.	
	Manual Override	Yes	Enter <i>Y</i> to include manual overrides in the reordering process or <i>N</i> to not include the overrides.	Y Include manual overrides N Do not include manual overrides

# 13 Academic History

## Academic History Procedures

---

### Enter Pre-Banner Data

Any academic history records that are not currently computerized may be entered into Banner® as bulk hours if the institution is not doing a detail conversion. The hours are entered on the Pre-Banner Summary Hours and GPA Form (SHAPCMP) by student level. The **(GPA) Type** field is used to indicate Institutional (*I*) or Transfer (*T*) pre-Banner information. The GPA is recalculated when information is deleted from this form. The **Campus** field is used when calculating a Campus GPA. Campus may only be entered on institutional information.

### Concurrent Curricula Processing

Concurrent curricula processing allows an institution to record and use multiple curricula for a person who is moved through the student cycle. This functionality is used by the Recruiting, Admissions, General Student, Registration, and Academic History modules.

Please refer to “Appendix C - Concurrent Curricula Processing” for detailed information on using concurrent curricula in Banner Student.

### Mass Entry Processing

Mass entry processing is used with Admissions, General Student, Registration, Academic History graduation, and athletic compliance processing. Mass entry forms are used to search on data, perform updates, and then display the results. Search and update criteria are user-defined and include student and curriculum elements where appropriate. The selected students can be reviewed and their updates processed immediately, or the updates can be held for later processing in job submission using a batch process. An audit form is used to view processing results for the mass entry forms.

Please refer to “Appendix D - Mass Entry Processing” for detailed information on using mass entry in Banner Student.

## Study Path Processing

Study path processing is used with the Admissions, General Student, Registration, and Academic History modules. Study paths provide a means by which a learner can associate specific course registration records to learner curriculum records during registration. The study path records allow the institution to track separate student status codes and academic standings (along with various other data) based on the student's curriculum. Likewise, a study path term enrollment record permits the tracking of enrollment eligibility that is separate from a student's overall enrollment status. The grade roll uses study paths to keep courses with an associated study path within the degree sequence created for that study path.

Please refer to “Appendix E - Study Path Processing” for detailed information on using study paths in Banner Student.

## Manual Curriculum Roll Processing

Manual curriculum roll processing allows an institution to select a single student's curriculum and create a degree record and an outcome curriculum record. The outcome curriculum record is referenced on transcripts when a degree is awarded. Outcome refers to a completion of a course of study, which could be a degree. However, not all courses of study result in a degree. Some can result in a certificate or license, for example.

A separate process is used to control the creation of the outcome records. This streamlines processing and assists with manual corrections on the final degree record. This process can be initiated at any point, in baseline and self-service, without running a batch process or rolling grades for an entire class. This avoids the creation of unnecessary records in the SHRDGMR table, as the degree sequence number is only created for the final curriculum and the intended degree. A job submission process can be used to select groups of learners and create degree records when your institution decides to do so.

Self-service graduation application processing can also be used to create degree records for outcome curricula and to update current outcome records with learner curriculum changes.

### Roll to Outcome Process Flow

Here is a process flow for the roll to outcome process. This process rolls the learner curriculum record to the outcome. It assumes that the incoming learner curriculum record has been selected to be rolled. The parameters include the entire learner curriculum record that will be rolled, so the record does not have to be re-read. The process validates setting of the **Rolled to Outcome (Indicator)**.

1. The process determines whether a degree with a sought or pending status exists that has the same college, degree, level, and program that are on the learner curriculum record.

2. The process validates: that the learner curriculum record is current and active, that the learner curriculum term is greater than or equal to the processing term, whether the learner curriculum record was previously rolled but the outcome curriculum no longer exists (it was deleted), and that the learner curriculum term is less than the processing term.

The system only processes learner curriculum records that are current to the processing term, as well as learner curriculum records from previous terms if the outcome records have been deleted. The process then inserts the curriculum records and updates/inserts the degree records based on the following:

- 2.1. whether the rolled sequence number for the learner curriculum record is null or whether the degree was deleted, and
- 2.2. if the learner curriculum record is current and active for the processing term. If the record is current and active, the process then checks:
  - 2.2.1. whether a matching degree record exists with the same learner curriculum level, program, degree, and college. If no match is found, the degree record is inserted.
  - 2.2.1. whether a degree exists for the same learner curriculum level, program, degree, and college, and if that degree has been awarded. If so, a new degree record is inserted.
- 2.3. If the curriculum is not current or active, the process then checks for a previously rolled curriculum record with the same priority.
  - 2.3.1. If no record exists, the curriculum record is not rolled.
  - 2.3.2. If a record exists, the process looks for the degree record for the previously rolled curriculum with the same priority. If that degree was awarded, the curriculum record is not rolled. If it was awarded, the next validation check takes place.
- 2.4. If the curriculum is not current and a degree exists, the process checks for another current, active outcome curriculum record for the degree that has a different priority. If one is found, the non-current curriculum record can be rolled, as it will not leave the outcome record without a current and active curriculum.
- 2.5. If the previous check does not result in the roll of the curriculum record, the process checks for another learner curriculum record that can be rolled that has a different priority, but has the same college, degree, level, and program. This results in the curriculum record being rolled to the same degree, and the degree record will then have at least one current, active curriculum.

3. A final check is made before the curriculum record is rolled to verify that one current, active curriculum will exist on the outcome record.
  - 3.1. Previous checks are performed again, to ascertain that one active outcome curriculum with the same priority exists for the degree, or that other learner curriculum records are ready to be rolled with the same level, degree, college, and program.
  - 3.1. If the learner curriculum has already been rolled, and the degree exists and has not been awarded, the process updates the degree and updates any field of study changes.
4. The backfill process is executed.

## Roll Curriculum Records from Job Submission

You can roll learner curriculum records to outcome manually or from job submission. The Roll Learner to Outcome Report (SHRROUT) allows you to roll one or more Banner IDs or a population selection using Audit and Update Mode. This process is independent of the end of term grade roll (SHRROLL). It allows you to define which student's learner records are selected and inserted or updated in the SHRDGMR table and to create outcome curriculum records. Record selection can be based on graduation application elements. If the graduation application data includes a diploma name and address that have been submitted using the self-service graduation application process, the report will update the appropriate diploma record with that data.

When the report is run in Update Mode, it uses functionality that is similar to SHRROLL. It checks for an existing degree record where the current, active, outcome curriculum associated with the record matches the level, college, degree, or program of the current, active, learner curriculum for the ID that has been selected for update. If no matching current, active curriculum record is found, the process creates a new degree record in the SHRDGMR table, copies the selected learner curriculum data, and creates a curriculum record with the module of *OUTCOME*. The previous outcome curriculum record is inactivated when the new degree and the outcome curriculum record are inserted. If the curriculum record matches an existing active outcome curriculum, other data elements submitted from the graduation application will be inserted, unless that outcome curriculum record has an active graduation application associated with it. In this case, a new degree sequence is created. The existence of different majors, minors, and concentrations does not constitute the need for a new degree record and the inactivation of the previously existing curriculum record, unless an active graduation application exists. Learner field of study records will be inactivated, and new active records will be inserted.

The curriculum record that is selected based on the parameters entered in job submission is read using the term that is associated with that curriculum. The SORLCUR table is read, and the highest sequence number row for each priority is selected, beginning with the lowest priority number row first. All rows are selected where the term code on SORLCUR is less than the to term of the selected SGBSTDN record.

A new record is created on SHADEGR when the learner record on SORLCUR is active, and no outcome SORLCUR row exists with the same college, degree, level, and program. A new record is also created when an outcome record on SORLCUR exists with the same college, degree, level, and program and a degree status of *AW* (awarded).

An existing record on SHADEGR is updated when an outcome record on SORLCUR exists with the same college, degree, level, and program and a degree status that is not equal to *AW* (awarded). When the learner record on SORLCUR is active, the SHRDGMR\_KEY\_SEQNO field on the matched outcome record is used to determine which outcome record can be updated. (This applies when a curriculum record was created, inactivated, then reactivated.)

When the learner record on SORLCUR is inactive, the process checks for the last rolled learner record that has the same priority. (The SORLCUR\_ROLLED\_SEQNO field is not null.) The SHRDGMR\_LCUR\_SEQNO value is selected from the ROLLED\_SEQNO field of the last rolled learner record to determine which outcome record should be updated. If no rolled learner SORLCUR record exists for that priority, the SORLCUR record is not processed. (Only inactive records need to be rolled, if records were previously rolled to history while they were active.)

Diploma data collected in the Graduation Application Form (SHAGAPP) is inserted if the data has been submitted through self-service, or if you have manually entered or edited the data in the form. When diploma data exists in SHAGAPP and is rolled manually or through job submission, the data is moved to SHADIPL.

When the manual roll is processed, the setting of the SORLCUR\_ROLL\_IND is ignored. This occurs in the following conditions:

- when SHRROUT is run.
- when the **Roll to Outcome** button is used in the Curriculum window on SGASTDN or SFAREGS.
- when the **Create/Update Degree Record** button is used on SHAGAPP.
- when the **Submit Request** button is used on the Graduation Application Summary page (bwsckgrad.p\_disp\_confirm) in Self-Service (and the **Create/Update Degree** checkbox is checked on SHAGADR).

Consider the following conditions when manual roll processing is used with graduation application functionality.

- If a graduation application exists for a learner curriculum record, that curriculum will not be displayed for selection on the Graduation Application page in Banner Student Self-Service.
- If a learner curriculum record has been rolled:
  - you cannot create a graduation application from that learner curriculum record in the Curriculum window;
  - you can create an application from the degree record on SHADEGR;

- the learner curriculum record will not be displayed for selection in self-service.
- If a learner curriculum record is rolled that has an associated graduation application, the outcome curriculum record is associated with the graduation application.
- If a learner curriculum record has been rolled and an associated graduation application exists, neither the learner curriculum record nor the outcome curriculum record will be displayed for selection in self-service.
- If a graduation application does not exist on a learner curriculum record, when the curriculum is rolled and matched to a degree with an existing graduation application, the graduation application from that degree is added to the newly rolled learner curriculum record. (The curriculum matches the level, college, program, and degree.)
- If a graduation application does exist on an unrolled learner curriculum record, when the record is rolled, a new degree will always be created, even if it is matched to an existing degree by level, college, degree, and program. This prevents the process from charging a student twice for the same degree sequence, when graduation charges are in use for self-service graduation applications.
- If a current and active outcome curriculum has an active graduation application derived from a rolled learner curriculum record, that curriculum record cannot be deleted without acknowledging a warning message.
- If a learner curriculum record is copied, you have the option to associate the graduation application to the new curriculum record that is created.
- If the graduation application is created from an outcome curriculum record, the graduation application is not attached to the original learner curriculum record. Since that learner curriculum record was already rolled, you cannot use that record to create a graduation application.
- If an outcome curriculum record is copied, the graduation application is always associated to the new curriculum record that is created.

## Manually Roll Records from Forms

You can manually roll and update learner curriculum records using the **Roll to Outcome** button in the Curriculum windows on SFAREGS and SGASTDN. The **Roll to Outcome** button creates and updates Academic History records and outcome curriculum records for changes made to curriculum records. This button can be masked if you do not wish to use it. It is masked in the Curriculum window on SOILCUR.

The SHKROLS procedure behind the button works independently of SHRROLL. The courses in the curriculum record can be rolled when the rolled sequence number is null and the curriculum record is active and current. The button is disabled when a new curriculum record is inserted, but it is enabled when the record has been saved. The setting of the **Roll Learner** radio group is not considered when the roll is initiated using the **Roll**

**to Outcome** button. The curriculum record will be rolled, even when the **Roll Learner** radio group is set to *No*.

This functionality allows users to make changes to curriculum records from the General Student and Registration modules, for students who are preparing to graduate or complete outcome requirements. The degree record is populated immediately without waiting for SHRROUT or SHRROLL to be run through job submission.

The **Create/Update Degree Record** button on the Graduation Application Status Form (SHAGAPP) is used to create a degree record and an outcome curriculum record when the graduation application has been submitted from self-service. You can activate the manual roll, collect graduation applications, review the data on SHAGAPP, and then immediately update degree sequence records with the graduation and diploma information. The current, active curriculum record is checked for an active graduation application and an unawarded degree, based on the module code (*LEARNER* or *OUTCOME*).

This button triggers the graduation application roll process. It inserts the degree and diploma records when the curriculum attached to the graduation application is from the *LEARNER* module and has not been rolled. This in turn creates the degree record and rolls the learner curriculum record to the outcome. Then the diploma information is inserted from the graduation application information.

The degree is updated and the diploma information is inserted when the curriculum record is from the *OUTCOME* module, when the curriculum record is from the *LEARNER* module and has not been rolled, or when the diploma exists on the graduation application but does not exist for the degree on SHADIPL.

An error is displayed in the following conditions: when the form is running in query-only mode, when the Graduation Application Information block has been modified, when the graduation status is inactive, and when the data returned from the graduation application roll process has an error.

### **Roll to Outcome from SGASTDN and SFAREGS**

The **Roll to Outcome** button on SGASTDN and SFAREGS is active when the **Graduation Sequence** field (rolled sequence number) is null, the curriculum is current and active, and no graduation application exists. The button is not active when a new curriculum record is inserted, but it is enabled with the record is saved.

This button triggers the roll to outcome process, sends the curriculum sequence number, and refreshes the data that is rolled to the outcome. When the button is used to initiate the roll, the setting of the **Roll Learner** radio group is not considered. The curriculum record will be rolled, even when the **Roll Learner** radio group is set to *N*.

The values for the **Graduation Date**, **Graduation Term**, **Graduation Year** fields and the **Fee** radio group are pulled from the graduation application. If no application exists, the graduation date, term, and year information is taken from SGASTDN and from the next

learner curriculum record. If a graduation status code exists in the graduation application for the curriculum, that is also copied into the degree sequence.

Courses are applied to the new degree based on the setting of the **Apply Graded Courses to New Degrees** checkbox on SHACTRL. When the checkbox is checked (set to *Y*), all courses that have not been previously applied to an awarded degree will be applied to the new degree.

## Apply Courses to Degrees

The **Apply Graded Courses to New Degrees** checkbox on SHACTRL is used to determine if previously graded courses (from the learner curriculum) with the same level should be applied to the new degrees created during the manual roll process, when the roll is initiated from SGASTDN or SFAREGS and not from job submission. This checkbox is used in place of the Apply Courses parameter in SHRROUT.

- When this field is checked (set to *Y*), the SHRROUT roll process will award all previously graded courses in which the course has the same level as the degree to the new outcome record. Previously rolled courses which have not been applied to an awarded degree will also be applied.
- If unchecked (set to *N*), previously graded courses will not be awarded to the new degree.

The process to award courses to the new degree will not occur if the degree is created during the SHRROLL grade roll process. That process will apply only the course being rolled to the new degree.

When changes are made to a learner curriculum record before SHRROLL is run, that record may not be available for selection using the graduation application process, as it only exists for the *LEARNER* module, and the last SHRTRM record would be for the prior term. In this case, the changes need to be rolled to the outcome.

Courses are applied or not applied to a degree as follows:

- Courses previously applied to an awarded degree will not be applied to the new degree.
- Courses previously applied to a pending or sought degree will be applied to the new degree.
- Courses not applied to any other degree will be applied to the new degree.

## Delete Learner Curriculum Records

The **Delete Learner Curriculum** checkbox in the Error Severity controls of the Curriculum Rules window on SOACTRL is used to automatically delete the learner curriculum record with the same term as the general student record (SGBSTDN) effective term, when the SGBSTDN record with that effective term is deleted. When this checkbox

is checked (set to *Y*), the error severity message level is set to *Fatal*, and the user can only delete or view the current, active learner curriculum record. The user cannot delete the general student record when a curriculum record exists with the same term and effective term, that is also current for a future general student effective term.

**Example:**

Effective Term	SORLCUR Term	SORLCUR Sequence and Curriculum	Current	Active
200443	200443	1 BA-HISTORY	Y	Y
200520	none exists			

You cannot delete the SGBSTDN record for term 200443, because the curriculum record is also current for term 200520.

An alert is shown if the SGBSTDN record being deleted is not the last general student record. This allows the user to delete the curriculum record as well as the learner curriculum record, or not. The message *Warning: Curriculum data may exist for term. Review curricula and delete if necessary* displays three buttons: **Delete Learner and Curricula**, **Delete Learner**, and **Show Curricula and Cancel**.

When the **Delete Learner Curriculum** checkbox is checked, the **Delete Learner** button is not displayed in the warning message. The user must select either **Delete Learner and Curricula** or **Show Curricula and Cancel**. When the **Delete Learner and Curricula** button is selected, and one of the existing curriculum records is current for a future SGBSTDN effective term, a warning will be displayed, and the user can cancel the delete action.

You cannot delete a general student record (SGBSTDN) if a current, unrolled, curriculum record exists for the term, and it has an associated graduation application that is active. You must delete the graduation application, and then delete the general student record. If the SGBSTDN record is the last record being deleted, it cannot be deleted if it has any associated curriculum records with unrolled graduation applications (existing graduation application sequence numbers).

## Manually Create Graduation Applications

The **Apply to Graduate** button is used to create graduation applications from learner and outcome curriculum records on SGASTDN, SFAREGS, and SHADEGR. This button is masked on SOILCUR. This button is active on learner curriculum records in SGASTDN and SFAREGS when the graduation application sequence number is null for the curriculum record. When a previous graduation application exists for a curriculum record (whether the record is active or inactive), that application must be deleted before the button can be enabled. Just inactivating the application will not allow you to create a new application.

Only one active graduation application can exist for a curriculum record, but multiple curriculum records may have the same graduation application. This can only occur on the outcome curriculum record, which groups primary and secondary curricula together when an application is created for a degree sequence where more than one outcome curriculum record has been associated with it.

The process behind the button used to create the graduation application executes the Graduation Application API (`sb_gradapp`) and updates the graduation sequence number on SORLCUR. The user can then update the graduation application information on SHAGAPP. The graduation application can be created using the graduation application selection display rule code from self-service. However, not all graduation applications are created using self-service. The process that creates applications from baseline does not check any selection rules. Only self-service graduation applications use the selection display rule codes. When a baseline application is created, the user needs to fill in all the graduation application data manually on SHAGAPP.

 **Note**

You can navigate to the Graduation Application Display Rule Selection Form (SHAGADS) and the Self-Service Graduation Application Display Rules Form (SHAGADR) from SHAGAPP to review existing rule information. ■

Outcome curriculum records are created as follows when all significant curriculum elements match the graduation application. When multiple, current, active learner curriculum records exist with same level, college, degree, and program, and the **Apply to Graduate** button is selected, or the application is submitted through self-service, all the curriculum records with the same level, college, degree, and program are grouped together with that single application and graduation application sequence number. This takes place because only one degree is ever created with the same level, college, degree, and program when the learner curriculum records are rolled to the outcome record.

The exception to this scenario is when a graduation application already exists for the matching degree sequence, and then a new degree record is created. It is possible that an institution has already applied a graduation fee to a degree sequence. In order to prevent adding another graduation fee for the same degree sequence, a new degree sequence will be created, even when the college, level, program, and degree match. Users are cautioned about creating graduation charges from self-service when learner curriculum elements may change for the student, such as when only the major is changed (college, level, degree, and program are not changed), after graduation fees have already been applied to the degree sequence.

In the case where a student has applied to graduate and a degree sequence with that graduation application is created, that outcome curriculum record (and learner curriculum record if it was rolled) will not be available for selection from the self-service graduation pages, since the application exists and is active.

If the student changes majors for the same degree (college, level, degree, and program are unchanged), when the user attempts to duplicate or update the learner curriculum record to add the new major, the system asks if the graduation application should be copied to the

new curriculum. (See the “Archiving, Duplicating, and Deleting Curriculum Records with Graduation Application Sequence Numbers” section below.) If no, then the new graduation application needs to be created using the **Apply to Graduate** button. The new curriculum record will not be eligible for application through self-service until the student registers, is graded, and grades are rolled to history. Therefore, it is recommended that graduation applications are copied and updated if necessary at the time the major change is processed. This may occur if a student changes a major in the term that is closest to the intended graduation term, but after the degree sequence and graduation application already exist.

When it is necessary to remove one of the curriculum records from the application, the user needs to delete the existing graduation application with the two matching curriculum records, and inactivate the learner curriculum record on SGASTDN or SFAREGS. Another option is to modify one of the significant elements on the curriculum record (level, college, degree, program), so the two curriculum records are no longer a match. Then the application can be created. The user can delete the degree record and the associated outcome curriculum record where the two matching curricula existed and can use the manual roll process to create the correct degree record with only one rolled curriculum record per degree.

### **Apply to Graduate on SGASTDN and SFAREGS**

The **Apply to Graduate** button in the Curriculum window of SGASTDN and SFAREGS is used as follows. This button triggers the Graduation Application API (`sb_gradapp`), updates the graduation application sequence number on SORLCUR, and opens SHAGAPP so additional data can be entered. Curriculum data is copied from the curriculum record (including **Admission Term, Matriculation Term, Graduation Date, Graduation Term, Graduation Year** values). If that data does not exist, data from SGBSTDN is used.

The button does not insert diploma information into the graduation application. This button is only enabled if the learner curriculum record is current and active. The button is not enabled when the learner curriculum record has been rolled to history, when the graduation application is attached to an awarded degree, or when the graduation application is inactive. When a graduation application exists, the button opens SHAGAPP in update mode for that graduation application.

### **Apply to Graduate on SHADEGR**

The **Apply to Graduate** button is used on SHADEGR to create a graduation application from an outcome record with an **Outcome Status** of *SO (Sought)*. All current and active curriculum records for the outcome will be included in the graduation application, when that application is created. When outcome curriculum is copied, the graduation application sequence is copied to the new record.

This button triggers the Graduation Application API (`sb_gradapp`) to create the application, updates the graduation application sequence number on the outcome curriculum records, and opens SHAGAPP so additional data can be entered. The values

for the **Graduation Date**, **Graduation Term**, **Graduation Year**, **Graduation Status** fields and the **Fee** radio group are inserted into the new graduation application from SHADEGR. The current date is always used as the graduation application date when the new graduation application is created using the **Apply to Graduate** button on SHADEGR. This date can be modified in SHAGAPP. If the graduation application already exists, and the outcome degree status is still *SO* (sought) and the button is enabled, but the user is taken to the existing graduation application.

The button does not insert diploma information into the graduation application. This button is only enabled if the learner curriculum record is current and active. The button is not enabled when the graduation application is attached to an awarded degree or when the graduation application is inactive. When a graduation application exists, the button opens SHAGAPP in update mode for that graduation application.

## Use Graduation Application Sequence Numbers

The **Graduation Sequence** field on SGASTDN, SFAREGS, SHADEGR, and SOIHCUR and the **Graduation Application Sequence** field on SHAGAPP are used to display the graduation application sequence number on the curriculum record for the learner (SGASTDN, SFAREGS) and outcome (SHADEGR) curriculum records.

Graduation application sequence numbering works with the Banner Student Self-Service graduation application processing. It tracks the graduation application sequence number for the learner and outcome curriculum records. When a graduation application is submitted, the application number is generated as a one-up number and is stored with the curriculum record (SORLCUR) that was used to generate the application.

Only one active graduation application can exist for a curriculum. However, multiple curriculum records may be associated with the same graduation application. This situation occurs because a degree has multiple curriculum records associated with it, but that degree record was generated by the same application where the learner curriculum records have matching elements such as level, college, degree, and program.

## Inactivate, Reactivate, and Delete Graduation Applications

Graduation applications can be inactivated and deleted but cannot be reactivated.

### Inactivate

An existing graduation application is inactivated when an inactive graduation application status code is assigned to it. (The **Active Indicator** is unchecked on the Graduation Application Status Validation Form (STVGAST) for that status code.) No further updates to that application are permitted, and that application is not viewable from the View Graduation Applications link on the self-service menu. The graduation application sequence number may be populated, but will appear null when it is displayed, because the graduation application is marked as inactive.

## Reactivate

An inactivated graduation application cannot be reactivated. Once the application is inactive, the user needs to create a new application, either from SGASTDN, SFAREGS, or SHADEGR, or by using the Apply to Graduate option on the Student Records menu in self-service.

## Delete

When a graduation application is deleted, the application number is removed from the curriculum record. The sequence number is deleted, and the history of that application no longer exists. If the application number was *I*, and no other application numbers higher than *I* exist, creating a new application will begin again with the sequence number *I*.

## Archive, Duplicate, and Delete Curriculum Records with Graduation Application Sequence Numbers

Archiving, duplicating, and deleting curriculum records with graduation application sequence numbers can be performed for manual curriculum roll processing.

### Archive

When a curriculum record has been archived, no updates can be made to the graduation application. Curriculum records cannot be archived if a graduation application exists.

### Duplicate

When a curriculum record is created using the Duplicate Record function or any of the non-destructive update functions, the graduation application sequence number will be reset to null. If a user inserts or duplicates records while in the Curriculum window of SGASTDN, SFAREGS, or SHADEGR, a message is displayed with the options to copy the graduation application from the previous curriculum record, inactivate the graduation application from the previous curriculum record, or assign a new priority to the new curriculum record. Assigning a new priority means the graduation application is not copied with the new curriculum record.

### Delete

When a degree record is deleted and a graduation application exists, that graduation application is also deleted. If the curriculum records associated with the graduation application are from the *LEARNER* module, the graduation application sequence number is removed from the learner curriculum record. Otherwise, the outcome curriculum record is deleted along with the associated degree. Curriculum records cannot be deleted if a graduation application exists.

The graduation application sequence number is removed from the learner or outcome curriculum records if the graduation application is deleted. The graduation application

sequence number can be reused after it has been deleted, if it was the maximum application number for the student.

## Use Graduation Application Sequencing Rules

Graduation application sequence numbering functions with curriculum processing as follows. The SHAGAPP record must always have at least one associated curriculum record that is active and current. If all the curriculum records associated with that graduation application are not current, the graduation application status must be inactive, unless the curriculum record was already rolled to the outcome or is already an outcome curriculum, and the degree has been awarded.

- Using the **Replace** button in the Curriculum window will automatically inactivate the STVGAST code for the graduation application, unless the learner curriculum record has been rolled and the degree awarded for that curriculum.

A warning message is displayed that the function will cause the graduation application to be made inactive. You can choose to continue or not continue.

- Using the **Update** and **Duplicate** buttons in the Curriculum window will display a message with the option to copy the graduation application sequence number to the new learner curriculum record, inactivate the existing graduation application, or create a new priority and then inactivate the graduation application. If the graduation application is not to be copied, that graduation application status code is inactivated on STVGAST, as a curriculum record cannot be deleted when a graduation application exists.
- Using the **Replace**, **Duplicate**, and **Update** buttons on SHADEGR will automatically copy the graduation application sequence number to the new curriculum record. If the curriculum record has been rolled to the outcome, and the degree it is associated with has been awarded, the graduation application sequence number is not copied to the new curriculum record, and the prompt is not displayed.

### Replace Functionality on SGASTDN

When the graduation application sequence number is populated for an unrolled learner curriculum record, a message is displayed that the graduation application will be inactivated. The user can then choose to continue or cancel the replacement process. If you continue, the new curriculum record is created with the graduation sequence number set to null, and the previous graduation application is made inactive. If you do not continue, the replacement process is cancelled.

The delete process for SGBSTDN uses the SOBCTRL processing that determines if the learner curriculum record with the same term must be deleted. An alert is shown if the SGBSTDN record being deleted is not the last general person record. This allows the user to delete the curriculum record as well as the learner curriculum record, or not. The message *Warning: Curriculum data may exist for term. Review curricula and delete if*

*necessary* displays three buttons: **Delete Learner and Curricula**, **Delete Learner**, and **Show Curricula and Cancel**.

When the **Delete Learner Curriculum** checkbox is checked in the Curriculum Rules window on SOACTRL, the **Delete Learner** button is not displayed in the warning message. The user must select either **Delete Learner and Curricula** or **Show Curricula and Cancel**. When the **Delete Learner and Curricula** button is selected, and one of the existing curriculum records is current for a future SGBSTDN effective term, a warning will be displayed, and the user can cancel the delete action.

You cannot delete an SGBSTDN record if a current curriculum record exists for the term, and it has an unrolled graduation application. If the SGBSTDN record is the last record being deleted, it cannot be deleted if it has any associated curriculum records with unrolled graduation applications (existing graduation application sequence numbers).

### Replace Functionality on SHADEGR

The **Replace** button works differently on SHADEGR than on SGASTDN. When the **Replace** button is used for an outcome curriculum record that has a graduation application associated with the degree sequence, the new curriculum record will automatically replace the old curriculum record for the graduation application. The outcome delete process will delete the graduation application. If a learner curriculum record exists for a graduation application, the outcome delete process will not delete the graduation application. When an outcome curriculum record is copied, the graduation application sequence number is copied to the new record. This includes processing for the **Update** and **Duplicate** buttons in the Curriculum window.

### Delete and Purge General Student Records

You cannot delete the general student record (SGBSTDN) if the current curriculum record has a graduation application sequence number, and the curriculum record is also being deleted. When an outcome record is deleted, the graduation application is also deleted.

The General Student Purge Process (SGPSTDN) checks whether the SGBSTDN record is the last record for the PIDM and has a curriculum record with an associated graduation application that has not been rolled. In this case, the record will not be deleted. If the SGBSTDN record is not the last record for the PIDM, it still cannot be deleted if it has a current curriculum record with a graduation application that has not been rolled.

### Update and Inactivate Curriculum Records

When the Student Type Update Report (SHRTYPE) is run, the graduation application sequence number is copied to the new learner curriculum record when the student type is changed, unless that curriculum record has already been rolled, and the associated degree has been awarded.

The admissions decision process (SAKDCSN package) inactivates the existing graduation application, when the curriculum record is inactivated as a result of the admit replace

process, unless that curriculum has been rolled to history, and the associated degree has been awarded.

When the student status (STVSTST) is changed on SGASTDN or SHADEGR, the process copies the graduation application sequence number to the new curriculum record with the status change, unless that curriculum has been rolled to history, and the associated degree has been awarded.

## Purge Curriculum Records

You cannot purge curriculum records using SOPLCPV when a graduation application sequence number exists, and the SHAGAPP record exists. The Curriculum API (sb\_curriculum) cannot be purged when a graduation application sequence number exists, and the SHAGAPP record exists. SHAGAPP will display the only current curriculum record in the Curricula Summary block when the graduation application status code is active. It will display all curriculum records when the graduation application status code is inactive.

The Learner Curriculum Purge Process (SOPLCPG) checks whether the curriculum record has an associated graduation application. The curriculum record will not be deleted if the graduation application exists, the module code for the record is *LEARNER*, and the record is not the only curriculum record that is attached to the graduation application.

## Open Learning Registration and Academic History

Open learning allows you to do the following in the Academic History module:

- Run reports (such as student transcripts and grade rolls) using date ranges in place of term.
- Roll open learning registration data to academic history.
- Run transcripts by start date in addition to traditional terms.

For more information on how to set up and use open learning registration, please refer the “Procedures” sections of the “Catalog”, “Class Schedule”, and “Registration” chapters.

## Build Grades

The institution's grading policy is identified to the system on the Grade Code Maintenance Form (SHAGRDE). The grade is defined on this form with information to determine what hours that grade counts in: hours earned, attempted, passed, and whether it is used in a GPA calculation. A grade is also identified with valid grading modes. Any grade that will be entered on a student's record must first be defined on this form. If the Repeat/Equivalent Course Repeat Process (SHRRPTS) will be used, all grades *must* be assigned a numeric value on this form.

A substitute grading policy may also be built using the Grade Code Substitution Form (SHAGRDS). This form is used to set up rules to allow one grade to be substituted for another based on the grading mode of the class. For example, if a student gets a 'B' grade in a class being taken as pass/fail, that *B* may be substituted by a *P*. The substitution rules are used when grades are rolled to academic history in either online or batch methods.

## Enter Grades

Grades for course sections submitted by the faculty are entered on the Class Roster Form (SFASLST). This form allows the grades to be entered for each student in the section. The grades are not validated against the grading mode at the time of entry on SFASLST or on the Web. Validation against grade mode occurs during the roll process, at which time grade substitution rules are also checked. After grades have been rolled to Academic History, they may no longer be changed on the Class Roster Form (SFASLST). Any modification to a student's grade must be done through the Term Course Maintenance Form (SHAINST).

## Roll Grades

All grades entered on the Class Roster Form (SFASLST) or the Class Attendance Roster Form (SFAALST) may be rolled online to Academic History by checking the **Roll (Indicator)** box in the Key Information, and then saving the grades. This process creates a record on the Term Course Maintenance Form (SHAINST) for each student with the grade in the course section. The grade roll process also flags the system that a grade mailer needs to be produced. A batch process may also be run to roll all grades on SFASLST to Academic History.

When information is rolled to academic history either online using the Class Roster Form (SFASLST) or the Class Attendance Roster Form (SFAALST) or in batch using the Grade Roll Process (SHRROLL), the section start and end dates are rolled. If the schedule type of the section permits assignment of a CRN to a co-op activity, and the CRN is assigned to a co-op for the term, the start and end dates for the co-op are rolled. If no co-op exists or the section's type does not permit the assignment of a CRN to a co-op activity, then the section dates are rolled.

The shared SHKROLS package is used to perform all grade roll functionality. It works in conjunction with the Grade Roll Process (SHRROLL) batch program and the online roll process performed on the Class Roster Form (SFASLST) and the Class Attendance Roster Form (SFAALST). SHKROLS package can roll attempted hours for individual courses into Academic History with grade roll processing.

SHKROLS will also populate the term header record with the student centric period when the record is created during the roll process. When a student has a cycle designator in effect for the term, the student centric period associated with the process term and student's cycle designator will be inserted into the SHRTTRM table. This will take place

when grades are rolled from the Class Attendance Roster Form (SFAALST), the Class Roster Form (SFASLST), or the Grade Roll Process (SHRROLL).

You can drop or withdraw a student from a course but retain the original hours for that course for use in Academic History using the **Count in Attempted (Hours Indicator)** on STVRSTS. When this indicator is checked for a course registration status code, the attempted hours rolled will be the hours that existed on the course prior to the dropped or withdrawn status being recorded.

When the **Count in Attempted (Hours Indicator)** is checked on STVRSTS for the course registration status code, the attempted hours displayed on SFAREGS for that CRN will be rolled to the SHRTCKG\_HOURS\_ATTEMPTED column and will be displayed on SHATCKN in the **Attempted Hours** field in the Grades block. If the **Count in Attempted (Hours Indicator)** is unchecked, zero attempted hours will be rolled for the course.

The process will only roll components and sub-components when there is no value for the grade date. The grade update restrictions also apply to components and sub-components.

When a final grade is entered against an individual registration record, the grade date (SFRSTCR\_GRDE\_DATE) is not, as yet, updated. When SHRROLL is run in batch mode, those registration records containing a value in the **Final Grade** field (SFRSTCR\_GRDE\_CODE) and no value in the **(Grade) Date** are rolled to academic history. The existence of a date in this field prevents the batch grade roll process from performing any subsequent rolls to academic history. The presence of this date also prevents the final grade from being updated in either SFASLST or SFAALST.

The same grade update restriction is required for component and sub-component marks. Therefore, when the registration is rolled, the same date that is entered in the registration date field is also used to populate the roll date in the SHRMRKS, SHRCMRK, and SHRSMRK tables for the applicable student.

## Process Flow

Here is a process flow for the logic used by the grade roll process. This process manages the insert of all parts of the course in Academic History, and then inserts or updates the degree and the outcome curriculum record. Finally, it applies the course to the degree.

1. The learner curriculum is selected for the PIDM in which the term code is less than the end term for the student's current learner record.

For example, the student has a general student record for terms Fall2007 and Spring2008. The end term of the Fall2007 record is the term of the next general student record, which is Spring2008. The end term for the Spring2008 term is the end of time.

2. The system checks the setting of the **Rolled to Outcome (Indicator)** for the curriculum record. If it is *Y*, the record is not processed.
  - 2.1. For each record that is selected, the setting of the **Current** checkbox is retrieved.
  - 2.2. The roll to outcome process is called for the curriculum.
  - 2.3. If the degree that is returned from the curriculum record has not been awarded, the course being rolled to history is applied to the degree.

## How Degree Attributes Are Rolled from Catalog to Academic History

1. Degree attributes are entered in the Catalog module (SCAETL).
2. A new schedule record is created in the Class Schedule module, and the catalog attributes populate the schedule attributes (SSAETL).

### **Note**

This is the reason that degree attributes exist on the catalog record, so they can be defaulted into the schedule record. ■

3. A student registers for the section, and the section is graded and rolled to history.
4. For the first student that is rolled in the section, the schedule degree attributes are used to populate the history degree attributes (SHRATTC).
5. The History Course Section Attribute Table (SHRATTR), which is used in CAPP, is populated from SHRATTC.
6. Other students register for the section and have grades rolled. The contents of SHRATTC are used to populate the student's degree attributes.
7. You can view the rolled section degree attributes (SHRATTC) on SHADEGR and SHATCKN, although they are not updateable.
8. To customize the degree attributes on a student's record (SHRATTR), you can insert and/or delete data from the SHRATTR block.

## Grade Roll and Concurrent Curricula Processing

The following processing is used to roll learner (General Student) information from SBGSTDN to the learner outcome (Academic History) and update records on SHADEGR via the Grade Roll Process (SHRROLL).

1. The most current SGBSTDN record for the person is read. This is determined by checking for the maximum learner effective term record that is less than or equal to the term on the course.
2. The SORLCUR table is read beginning with the lowest priority number row first. All rows are selected where the term code on SORLCUR is less than the To Term of the selected SGBSTDN record. All previous term records are read to capture any non-destructive updates on the learner record and to re-roll missing outcome curriculum records.
3. If the SORLCUR\_ROLL\_IND is set to *N*, processing will end. Otherwise, continue to the next step.
4. If the SORLCUR\_ROLL\_SEQNO is *Y*, the following may occur.
  - 4.1. A new SHADEGR record is created if the learner SORLCUR row is active and,  
  
No outcome SORLCUR row exists with the same college, degree, level, and program.  
  
*or*  
  
An outcome SORLCUR row exists with the same college, degree, level, and program with status of *AW* (awarded).  
  
*or*  
  
A graduation record already exists for a degree sequence with the same college, level, degree, and program.
  - 4.2. An existing SHADEGR record is updated if:  
  
An outcome SORLCUR row exists with the same college, degree, level and program with status that is not equal to *AW* (awarded).
    - If the learner SORLCUR row is active, use the SHRDGMR\_KEY\_SEQNO field on the matched outcome row to determine which outcome row can be updated. (This is used if a curriculum was started, inactivated, and then re-started).  
  
The learner SORLCUR row is not rolled during the grade roll process when the term for the row is earlier than the term on the existing degree record (SHADEGR) for the current and active SORLCUR record.
    - If the learner SORLCUR row is inactive, check for the last rolled learner SORLCUR row for the same priority (i.e., the SORLCUR\_ROLLED\_SEQNO field

will not be null). Select the SHRDGMR\_LCUR\_SEQNO value from the ROLLED\_SEQNO field of the last rolled learner record to determine which outcome row is to be updated. If no rolled learner SORLCUR row exists for that priority, do not process the SORLCUR record. (You only need to roll an inactive record, if the record was previously rolled to academic history while it was active).

**4.3.** The copy process for a new or updated SHRDGMR record is as follows.

The learner SORLCUR row is copied, and the module is changed to *OUTCOME*.

The SORLCUR\_ROLLED\_SEQNO field on the learner SORLCUR row is updated to that of the SORLCUR sequence number of the new SORLCUR row for the *OUTCOME* module.

All the active SORLFOS rows attached to the rolled learner SORLCUR row (the highest sequence number for each priority) are read and copied to the new outcome curriculum.

The SORLFOS rolled sequence number (SORLFOS\_ROLLED\_SEQNO) is updated with the new outcome SORLFOS sequence number.

The curriculum status on the newly created SORLFOS outcome rows is defaulted from STVDEGS. If none exists there, the delivered defaults are used.

**5.** If the SORLCUR\_ROLLED\_SEQNO is not blank (i.e., it was previously rolled), the following may occur.

**5.1.** The SORLCUR rows' corresponding SORLFOS rows are read to find rows with blank rolled sequence numbers, and the highest sequence number per priority is selected.

**5.2.** If the selected SORLFOS row is inactive, then it is not rolled if the same field of study type and priority were not previously rolled. (You can determine if the row was previously rolled by selecting the last rolled learner SORLFOS row for the same SORLCUR priority. If none exists, it was not previously rolled.)

**5.3.** Copy all other SORLFOS rows to the outcome SORLFOS rows for the outcomes curriculum previously rolled, (using the SORLCUR\_ROLLED\_SEQNO value of the learner SORLCUR row to which this SORLFOR row is attached). Update the SORLFOS\_ROLLED\_SEQNO field with the new outcome SORLFOS\_SEQNO value. The curriculum status on the newly created SORLFOS outcome rows is defaulted from STVDEGS. If none exists there, the delivered defaults are used.

*Example:*

Here is an example of how the SORLCUR\_ROLLED\_SEQNO and SORLFOS\_ROLLED\_SEQNO fields are used when grade roll processing is run.

A student has an English major in the BA\_UG program:

Table	Curriculum Record
SORLCUR	200510, BA_UG, ACTIVE, ROLLED_SEQNO field is <i>NULL</i>
SORLFOS	200510, ENGL, ACTIVE, INPROGRESS, ROLLED_SEQNO field is <i>NULL</i>

Grades are rolled at end of first semester.

*For the student:*

Table	Curriculum Record
SORLCUR	200510, BA_UG, ACTIVE, ROLLED_SEQNO field is <i>1</i>
SORLFOS	200510, ENGL, ACTIVE, INPROGRESS, ROLLED_SEQNO field is <i>1</i>

*For academic history:*

Table	Curriculum Record
SORLCUR	200510, BA_UG, ACTIVE, LCUR_SEQ field is <i>1</i>
SORLFOS	200510, ENGL, ACTIVE, SOUGHT, LFOS_SEQ field is <i>1</i>

The student changes their major to Art:

*For the student:*

Table	Curriculum Record
SORLCUR	200510, BA_UG, ACTIVE, ROLLED_SEQNO field is <i>1</i>
SORLFOS	200510, ENGL, ACTIVE, INPROGRESS, ROLLED_SEQNO field is <i>1</i>
SORLFOS	200510, ENGL, INACTIVE, CHANGED, ROLLED_SEQNO field is <i>NULL</i>
SORLFOS	200510, ART, ACTIVE, INPROGRESS, ROLLED_SEQNO field is <i>NULL</i>

The next time SHRROLL is run, the process will take into account the newly duplicated SORLFOS row for English (activity status is *INACTIVE*) with a ROLLED\_SEQNO field that is *NULL*.

It will check the corresponding SORLCUR row (to find its rolled sequence number value - 1), and it will use that value to insert an SORLFOS row with a learner module

of *OUTCOME* and an activity status of *INACTIVE*, and in so doing will inactivate the existing active ENGL row in Academic History for sequence number 1.

It will then take into account the next LEARNER row in SORLFOS for ART, which also has a ROLLED\_SEQNO field that is *NULL*. It will check that this SORLFOS row also has an associated SORLCUR row with a ROLLED\_SEQNO field that is 1, and it will now insert a new SORLFOS row with a learner module of *OUTCOME* for a major of ART with a status of *ACTIVE*.

The activity status on the newly created *OUTCOME* rows will be set to *ACTIVE* or *INACTIVE* depending on the curriculum status of the corresponding General Student row which had the ROLLED\_SEQNO field set to *NULL*.

*For academic history:*

Table	Curriculum Record
SORLCUR	200510, BA_UG, ACTIVE, LCUR_SEQ field is 1
SORLFOS	200510, ENGL, ACTIVE, SOUGHT, LFOS_SEQ field is 1
SORLFOS	200510, ENGL, INACTIVE, CHANGED, LFOS_SEQ field is 2
SORLFOS	200510, ART, ACTIVE, SOUGHT, LFOS_SEQ field is 3

*For the student:*

Table	Curriculum Record
SORLCUR	200510, BA_UG, ACTIVE, ROLLED_SEQNO field is 1
SORLFOS	200510, ENGL, ACTIVE, SOUGHT, ROLLED_SEQNO field is 1
SORLFOS	200510, ENGL, INACTIVE, CHANGED, ROLLED_SEQNO field is 2
SORLFOS	200510, ART, ACTIVE, SOUGHT, ROLLED_SEQNO field is 3

## Grade Roll Package (SHKROLS) Processing

The Grade Roll Package (SHKROLS) is used to pull the graduation values from the curriculum table. The graduation information entered on the curriculum, if present, will populate the SHRDGMR record.

**Example:**

Graduation data exist on SGBSTDN	Graduation data exist on SORLCUR	What is rolled to SHRDGMR
Y	Y	Graduation data on SORLCUR
N	Y	Graduation data on SORLCUR
Y	N	Graduation data on SGBSTDN
N	N	No graduation data will be rolled

The following table describes how the roll process works if the learner has two active and current learner curriculum records with the same level, college, degree, and program, and both are set to roll to academic history.

Graduation data exist on SGBSTDN	Graduation data exist on SORLCUR 1	Graduation data exist on SORLCUR 2	What is rolled to SHRDGMR
Y	Y	N	Graduation data on SORLCUR 1
Y	N	Y	Graduation data on SORLCUR 2
Y	N	N	Graduation data on SGBSTDN
Y	Y	Y	<p>If the graduation data associated with the two SORLCUR records are identical, one SHRDGMR record will be created with the SORLCUR graduation data and both curricula attached to it.</p> <p>If the graduation data associated with the SORLCUR records are different, two separate SHRDGMR records will be created, each populated with the graduation data from one of the SORLCUR records.</p>

Graduation data exist on SGBSTDN	Graduation data exist on SORLCUR 1	Graduation data exist on SORLCUR 2	What is rolled to SHRDGMR
N	Y	Y	<p>If the graduation data associated with the two SORLCUR records are identical, one SHRDGMR record will be created with the SORLCUR graduation data and both curricula attached to it.</p> <p>If the graduation data associated with the SORLCUR records are different, two separate SHRDGMR records will be created, each populated with the graduation data from one of the SORLCUR records.</p>
N	Y	N	Graduation data on SORLCUR 1
N	N	Y	Graduation data on SORLCUR 2
N	N	N	It will be blank on the degree record.

The insert degree procedure in SHKROLS is called before the first curriculum record is created. It uses the curriculum values or the SGBSTDN record if the curriculum is null. The generate API procedure is used to insert API-reported errors into the SOTPRNT table, so that SHRROLL will list all API errors on the report and continue processing the remaining grades. The SOTPRNT\_ERR\_MSG column stores the API error message.

## Build/Change Term Header

Term header information needs to be created for each term of the student's career at the institution. This header information is created using the Term Course Maintenance Form (SHAINST). This form provides information on when grade mailers were sent and is where term GPA information is maintained. The header information is automatically created during the grade roll process using the Class Roster Form (SFASLST), the Class Attendance Roster Form (SFAALST), or during the batch Grade Roll (SHRROLL).

## Change/Maintain Grades

After the term header information has been created, each course that has been rolled from the Class Roster Form (SFASLST) may be accessed through the Term Course Maintenance Form (SHAINST). This form maintains access to all of a student's rolled courses and grades for a specific term. Any grade changes are made here. This course and grade information will print on the student's transcript.

A grade change may also be made by accessing the Term Course Summary Form (SHACRSE). When the course that needs to be changed is flagged, the Term Course Maintenance Form (SHAINST) is used to make the change.

## Automated Incomplete Grade Processing

This processing allows an institution to automatically assign an incomplete grade code for a course when a student has not completed the coursework in the designated timeframe. This processing assumes a course has been extended to help the student finish the assignments. Extensions can be varied in length due to level (undergraduate or graduate), circumstances (illness or family emergency), research opportunities, or institution policy. Regardless of the nature of the extension, grades that are incomplete require closure.

When an incomplete grade has been assigned, it indicates that the course has not been finished. However, a final grade may need to be assigned as a default final grade. The default final grade is a replacement grade for the incomplete grade that is assigned if no manual intervention occurs by the time the extension end date is reached. This processing recognizes incomplete grade code values and automates the conversion of the final grades.

This processing contains three main components: the grade collection process and the corresponding rules, the automated processing of unreconciled, incomplete grades, and the display of the incomplete grades.

### Processing Overview

To use this processing, your institution should review any existing policies regarding the automation of incomplete grades or plan to define such policies. The Incomplete Grade Rules Form (SHAINCG) is used to create incomplete grade rules, and other forms are used to track default (replacement) grade and extension date information. Those forms are: SFAALST, SFASLST, SOATERM, SHAGRDE, and SHATCKN.

The Incomplete Grade Process (SHRCINC) is used to automatically change the grade from incomplete to the default, final grade on the assigned date. This process examines the date on which the incomplete grade is set to expire, and if that date has been reached or exceeded makes the appropriate grade change. If the incomplete work has been made up and the incomplete grade has been changed through normal Banner grade change processes, the default final grade would have been deactivated as part of the grade change, and no further action is taken.

The Grade Roll Process (SHRROLL) rolls the incomplete final grade and the extension date from the class roster to history. The process also validates that the incomplete grade is an active grade code for the same level as the final grade for which it is being substituted as an incomplete grade.

The self-service grade lookup displays the default, incomplete, final (replacement) grade, the expiration date, and potentially an associated comment when the student has an incomplete grade in any course. The comment, if one exists, identifies whether the

extension date is constrained to be less than or equal to, or greater than or equal to the system default extension date.

When an incomplete grade is assigned as the grade for a student in any course, the system will:

- Default and require a replacement grade that the incomplete grade will be converted to on a specified future date, if the incomplete is not changed, and a new grade has not been assigned through normal grade change processes.
- Default and require the date on which the incomplete grade will expire and the default, replacement, final grade will be assigned. (A default expiration date is needed if a date has not been entered for the default replacement grade. Default grades and dates are populated automatically by the new process and can be changed by instructors, if the grade rule values are set to grant that permission.)

The **Incomplete Final Grade** and **Extension Date** fields on SFASLST and SFAALST are also used in automated incomplete grade processing, as are the **Incomplete Grade Ind** and **Incomplete Grade Default** fields on SHAGRDE, and the **Incomplete Final Grade** field on SHATCKN. The **Incomplete Final Grade** field is enabled for input based on the setting of the **Override Grade** field on SHAINCG. The value displayed is the default from the SHRGRDE table. It can be overridden by the instructor, if that permission has been granted on the incomplete grade rule. A value is required for the **Incomplete Final Grade** field when an incomplete grade is entered for a student.

The **Extension Date** field determines the expiration date, after which the replacement grade is eligible to become the final grade. This field always displays a value, based on the part-of-term data for the term on SOATERM. An extension date can be defined for a part-of-term, the full term, or neither. If no extension date has been defined for the part-of-term that matches the course, the process checks for an extension date for the full term, and if that is not found, then the end date for the full term is used. The extension date for a student can only be changed or overridden when the **Override Grade Date** radio group is set to allow that on the incomplete grade rule. The **Override Grade Date** radio group can be set to: allow any date, not allow any date override, restrict the date to on or before the default extension date, or restrict the date to on or after the default extension date.

Processing for incomplete grade entries requires that:

- A grade code value has been entered which passes the checks for being a legitimate grade and grade mode for the course.
- The entered grade code cannot be another incomplete grade type.
- The date is valid and complies with the value set for the incomplete grade rule.

## Grade Collection

Grade code values that are identified as incomplete grade types are maintained within the Grade Code Maintenance Table (SHRGRDE). Multiple grade code values may be defined as incomplete, such as “incomplete-passing” and “incomplete-failing”. Grades are entered

in SFASLST, SFAALST, or in Banner Faculty and Advisor Self-Service. When final grades have been entered, the incomplete grade rules need to be checked, as well as the grade code values. The automated process checks the effective term records to see if incomplete grade processing is active for the term.

The process first searches for the most current rule on or before the grading term with a matching level. If none is found, then it searches for the most current rule on or before the grading term where no level is specified. That rule will be the determining processing rule. If the **Incomplete Grade Processing** checkbox is not checked (*N*), then incomplete grade processing is inactive (turned off), and all grades function as non-incomplete grades.

A default term rule can be set up for automated incomplete grade processing. You can also define multiple default rules within the effective term that differ by level. When incomplete grade processing is active (turned on) and incomplete grades have been assigned and rolled to history, the default final grade will be substituted as the final grade during the automated process, in the case that the coursework has not been completed and the grade has not been manually updated by the instructor. The instructor can override the default final grade when it has been assigned and before it is rolled, if override permission has been granted.

Even if grade codes have been defined on SHAGRDE as incomplete grades, along with default, incomplete, final grades, those default, incomplete, final grades and extension dates will not be implemented on student grade records when incomplete grade processing is inactive (turned off) for the effective rule. Only final grade codes will be recorded. Automated incomplete grade processing checks to see if an incomplete grade has been entered on a student's record (an incomplete grade is in the **Final Grade** field on SFAALST). The grade is determined to be incomplete when the **Incomplete Grade Ind** on SHAGRDE is checked (set to *Y*) for the grade code attribute. The processing checks the term and level of the student for the course to see if they match the rule on SHAINCG for the effective term.

When incomplete grade processing is active for a rule for one or more levels in a term, it may not necessarily be active for all levels. Therefore, the process checks the student's level for the course. When incomplete grade processing is inactive for a rule that governs the term and course level for the student, then the fields for incomplete grade processing are skipped. When the rule record is found to be active, the additional fields for incomplete grade processing are processed along with the grade code, if it has a type of incomplete in SHRGRDE.

If the grade code is incomplete, the process checks the part-of-term dates for the term in which the work is to be completed by the student. Extension expiration dates can be selected on SOATERM for a part-of-term. If the extension date is not set for the matching part-of-term, then processing will search for an extension date for the full term (where part-of-term is 01). If an extension date is not set for the full term, the end date for the full term will be used. Instructors can override the default date extension and shorten or lengthen it as needed, if override permission has been granted.

## Identify Incomplete Grades

Incomplete grades are identified on SHAGRDE using two fields. The **Incomplete Grade Ind** checkbox is used to specify that the grade code is an incomplete grade. The **Incomplete Grade Default** field displays the default, replacement, final grade for the incomplete grade. The **Incomplete Grade Ind** checkbox should always be checked (set to *Y*) when a default final grade exists. If the **Incomplete Grade Ind** checkbox is set without the entry of a default final grade, faculty members need to have override capabilities to enter the incomplete final grades. The **Incomplete Grade Default** field can be NULL, so an instructor can enter those values.

When a grade record is removed or inactivated, the system checks that the grade is not in use as a default, incomplete, final grade on another active grade record. When a user attempts to delete, remove, or inactivate any grade record on SHAGRDE, a verification check takes place. The check ensures that:

- the grade code is not used as a default final grade on any other active grade code record within SHAGRDE (SHRGRDE) for the same level, and
- the grade code is not used as an incomplete final grade on any Academic History record for its greatest sequence number for current, active grades.

If the check finds that one of these conditions exists, an error message is displayed.

When the user attempts to populate the incomplete final grade code, it validates that:

- the grade code already exists in the SHRGRDE table,
- it is active for the level of the incomplete grade for which it is being defined,
- it is not the same grade code for which it is being defined, and
- it is not another incomplete grade code.

This criteria controls the pulldown list for the **Incomplete Grade Default** field. The grade code must be:

- active as of the most recent effective term relative to the grade code entry,
- for the same level as defined on the existing record,
- it cannot be the same grade code value as the grade code value for this record, and
- it cannot be an incomplete grade. (The **Incomplete Grade Ind** must be unchecked or set to *N*.)

If these conditions are not met, errors will be displayed:

- If you enter a grade code value for the incomplete grade default that is not defined within SHAGRDE as an active grade code for the same level as the final grade code, an error is displayed.

- If you enter the a grade code value for the incomplete grade default that is the same as the final grade code, an error is displayed.

## Assign Incomplete Grades

Default final grades can be entered or defaulted at the time an incomplete grade code is assigned. If the outstanding coursework is not completed, then the default or replacement final grade will be applied at a point after the expiration date. The defaulted grade does not take into account the effort to date made by the student for the course. The instructor can override the default final grade, if institution policy allows. This capability is maintained in the new SHAINCG rules form and the SHRINCG rules table.

For example, if the coursework has not been completed, then a default grade of “failing” can be assigned. This is an institutional default from the SHRGRDE table. However, at the time grades are entered, the instructor can acknowledge that an individual's efforts to date already meet the criteria for a passing grade, such as a “C”, but that this student has not successfully completed all the required work. Consequently, the instructor can override the default, incomplete, final grade from “failing” to a different valid grade code, such as “C”, and allow for the completion of the remaining work. Alternatively, institutional preference can be to assign different defaults for different incomplete grade codes within a level, such as incomplete-passing and incomplete-failing.

## Assign Extension Dates

A date is needed at the time an incomplete grade is assigned, at which point the default final grade is eligible to become the final grade, as the remaining work has not been completed by the extension date expiration. The default extension date is stored with the term setup date for terms and parts-of-term on SOATERM. (Extensions dates can be set at the part-of-term level.)

If there is no extension date for the matching part-of-term, the process checks for a full term value designated as part-of-term 1. If part-of-term 1 has no specified extension date, the process uses the end date for the full term. The rules on SHAINCG determine if the instructor can change the extension date for the incomplete grade.

The **Incomplete Extension Date** field in the Base Part of Term block on SOATERM works as follows:

- When the process determines that the student is to be included, it checks the extension date using the part-of-term for the CRN. The course part-of-term (SSBSECT\_PTRM\_CODE) needs to match the part-of-term for the rule (SOBPTRM\_PTRM\_CODE). The corresponding term (SSASECT\_TERM\_CODE) needs to match the term for the rule (SOBPTRM\_TERM\_CODE).
- If an extension date (SOBPTRM\_INC\_EXTENSION DATE) exists for the part-of-term that matches the CRN, the process uses it as the default extension date. If no extension date exists for the matching part-of-term, then the process checks for an extension date on the full term. If no extension date exists, the end date (SOBPTRM\_END\_DATE) of the full term is used as the expiration date. If the part-of-

term for the CRN is null, as for open learning courses, a value of *I* is substituted which reverts to the full term value.

## Assign Comments for Incomplete Grades

Grade comment codes can be entered on SFASLST and SFAALST for any grade code using the list of valid values from STVGCMT. Comments can also be entered for incomplete grades with associated comment codes on STVGCMT to justify the incomplete status. The grade comment code on STVGCMT can be up to seven characters, and the accompanying description can be up to 200 characters. Generic situations can be defined here for things such as family leave, illness, or other events.

## Build Processing Rules

Rules for grade collection are determined by term and level. If your institution has not used incomplete grade automation, a delivered effective term value of *000000* can be used. Multiple rules can be established for a term, using different levels for each rule. If your rules have always been the same for all levels, then only one rule is needed for each effective term. When rules vary by level, a separate rule is needed to distinguish that rule from the default setting for all unspecified levels. The level is NULL when the rule pertains to all unspecified levels.

### Example:

- The initial overall (default) rule for the institution has a term value of *000000* and a level value of NULL. Automated incomplete grade processing has been inactive.
- A single processing rule exists for term 200810.
- Term 200910 has a rule for *GR* (graduate level), and no other new rules.
- Term 200930 has a rule for *DOC* (doctorate level), and no other rules. Other rules will revert to the rule for the most recent effective date that includes the associated level.

Rule	Effective Term (required)	Level (required)	Active/Inactive	Override Grade
1	000000	NULL	Inactive	
2	200810	NULL		
3	200910	GR		
4	200930	DOC		
5	201010	NULL		

### Example 1

All processing for term 200720 reverts to record 1, as no entry exists for 200720, and no entries have been added since the seed data rule for 000000. No distinct rules by level exist. Incomplete grade processing remains inactivated.

### **Example 2**

All processing for term 200810 reverts to record 2, as a rule exists that takes effect in 200810. No distinct rules by level exist. Therefore, all levels in 200810 are governed by record 2.

### **Example 3**

All processing for term 200820 reverts to record 2, as no entry exists for 200820. No distinct rules by level exist, so all levels revert to the rule for 200810, which is the last effective rule.

### **Example 4**

All processing for the graduate level of GR, starting in term 200910, reverts to record 3. However, all processing for non-graduates in term 200910 reverts to record 2, as no prior rules by level exist, so all levels revert to the rule for 200810, which is the last effective rule.

### **Example 5**

All processing for the doctoral level of DOC, starting in Term 200930, reverts to record 4. All processing for graduate level GR continues to revert to record 3, and all other levels in term 200930 revert to record 2.

### **Example 6**

All processing for all levels except DOC and GR, starting in Term 201010, reverts to record 5. DOC continues to revert to record 4, which is the most recent record for that level, and GR continues to revert to record 3, which is the most recent record for that level.

### **Note**

If a rule entry is set so that incomplete grade processing is inactive, then the **Override Grade** and **Override Grade Date** fields will have no effect, as incomplete grades within SHAGRDE will be treated as non-incompletes. However, the **Web Display** field on SHAINCG may still pertain to coursework that could have been completed for a different level or in a different time period during which incomplete grade processing may have been active. ■

## Automate Grade Changes

An automated process is used to update grade changes in Academic History, once extension dates for the completion of coursework have expired. The Incomplete Grade Process (SHRCINC) works with grade roll processing. Grades are posted to the class roster or the attendance roster and are then rolled to history, including any incomplete grade codes. The roll process can be performed manually on SFASLST or SFAALST or automatically by running SHRROLL. When the grades are rolled to history, the grade code values cannot be modified, as they could on SFASLST (class attendance roster) and

SFAALST (class roster) before they were rolled. The **Incomplete Final Grade** and **Extension Date** fields are rolled to history with incomplete grades.

Grades are entered in baseline or in self-service, and grade changes may be made until the grades are rolled. After grades are rolled, grade changes can only be recorded in Academic History on SHATCKN. Incomplete grades are captured along with default final grades and extension dates on the class roster (SFAALST) and are then rolled to history with the courses. The incomplete final grade and extension date can then be maintained on SHATCKN, and those changes are not restricted by the override permissions on the grade rule, (as SHATCKN is for restricted administrative override users).

SHRCINC can be run as needed to update default replacement grades for incomplete courses with expired extensions to final grades for those courses. It is run by term, and/or level, and/or CRN. Multiple terms can be used. Reason codes (STVGCHG) can be entered to show why the grade was changed, and the reason is added to each grade entry. Grade comment codes (STVGCMT) can also be added to each grade entry. The process checks for incomplete grades (default, incomplete, final grades) and compares the system date to the grade extension date to find the expired records. You have the option of running this process in Audit Mode and then Update Mode. You can also use a future date option in Audit Mode to check the extension dates that are on file.

When a grade change is needed (SHRCINC is run in Update Mode), a new grade entry is made for the course in Academic History for the final grade. A second grade entry is automatically created after the first new entry, if grade substitution is necessary. For example, an instructor assigns a student a final grade of “Incomplete” and a default, replacement, final grade of “C”. However, the student is taking the course as “Pass/Fail”. The process checks the grade and the extension expiration date, and then creates a new grade change entry with a final grade of “C”. It checks whether a grade substitution needs to take place. If so, then a second grade change entry is created with the final grade of “P” and a reason code of “SG”. The reason code of “SG” must be used for the grade substitution, as it is hardcoded. No grade comment code is attached for the grade substitution entry.

When SHRCINC is run in Update Mode, you can recalculate the GPA. (You can also defer recalculating the GPA and perform that task as needed after checking grades on SHATCKN and then running the Calculate GPA Report (SHRCGPA) in Collector Mode.) When the GPA is recalculated, you may need to send out revised grade mailers (SHRGRDE). Check that a grade mailer entry exists in the collector table with a request type of *R* (revised) and a print status of NULL for each student with grade changes.

When the GPA is recalculated using SHRCINC, only students that have been selected for an automated grade change resulting from an incomplete grade will be processed. The students that are processed will have their entire GPAs updated, not just the grades that are changing due to default grades. If any uncalculated grades exist for those students, those graded will be updated during the process.

SHRCINC also populates the SHRCGPA collector table used by SHRCGPA report. When SHRCGPA is run in Collector Mode, it selects records that have been defined for processing whether table entries have been populated by SHRRPTS or SHRCINC.

## Display Grades in Self-Service

Grades are displayed in Banner Student Self-Service in the Final Grades page. When the **Web Display (Indicator)** on SHAINCG is checked (set to *Y*) for the rule, incomplete grades are displayed in self-service within a separate data block with the associated extension dates and the default, replacement, final grades. In Banner Faculty and Advisor Self-Service, instructors can also enter and override the incomplete final grade for the incomplete grade, as well as override the default date, if permission has been granted on the governing incomplete grade processing rule.

## Processing Results

Grades posted to the class roster (SFAALST) are stored in the SFRSTCR table prior to being rolled to history. This table handles the incomplete final (replacement) grade and the incomplete grade extension date. The existing grade comment code (STVGCMT) can be used for grade comments for incomplete grades. If a final grade is changed and posted on the class roster (SFAALST), and the prior grade was an incomplete grade, the incomplete final grade (SFRSTCR\_GRDE\_CODE\_INCMP\_FINAL) and extension date (SFRSTCR\_INCOMPLETE\_EXT\_DATE) values will be removed. These fields can be repopulated with the entry of a new incomplete grade code. The incomplete final grade can be changed before the roll takes place, if the rule allows for this (the SHAINCG\_INCMP\_GRDE\_OVER\_IND is set to *Y*).

Once the grades have been rolled to history, no changes can be made outside of Academic History, except for updating the grade code comment. If a grade is rolled as an incomplete grade, the associated fields cannot be maintained in Banner Faculty and Advisor Self-Service or on SFASLST (class attendance roster) and SFAALST (class roster).

The SHRTCKG table also includes the incomplete final (replacement) grade. The existing extension date will be used for incomplete grade date extensions, as well as the existing grade comment code (STVGCMT) for grade comments for incomplete grades. Comments can also be entered on SFASLST (class attendance roster) and SFAALST (class roster) and are rolled to history.

When an incomplete grade is rolled to and stored in Academic History, the associated incomplete final grade and extension date values will remain intact on SFRSTCR, and are transferred to history along with other data. SHATCKN also includes a field for the incomplete final grade.

The incomplete final grade and the extension date (as well as grade comment code) can be maintained on the Academic History record for the most current grade entry. However, the incomplete final grades and extension dates are protected or disabled for all records that are not the most current. Since the extension date triggers the automated processing, this

preserves an audit history. Changes to incomplete final grades can be tracked by adding a change reason (STVGCHG) and entering a new replacement grade code. The final grade entry cannot be changed, unless a new grade change entry is created.

## Steps to Implement Incomplete Grades

Use the following steps to implement automated incomplete grade processing.

1. Set up rules by effective term or effective term and level on the Incomplete Grade Rules Form (SHAINCG).

2. Set up incomplete grading extension expiration dates on SOATERM for parts-of-term.

If you only define an extension date for the full term, the other parts-of-term will revert to that date.

3. Define incomplete grades on SHAGRDE.

- 3.1. Set the **Incomplete Grade Ind(icator)** to checked (Y) for existing grade code values to be used with the automated process.

*or*

Insert new grade code entries for the effective term in which they will be active as automated incomplete grades.

*or*

Define new grade code values.

- 3.2. Define default final grades for the incomplete grades, unless instructors are required to enter the replacement final grades and override privileges have been set up on SHAINCG.

4. Assign incomplete grades on SFASLST or SFAALST in baseline or using Banner Faculty and Advisor Self-Service (Final Grades page and Incomplete Final Grades page) before grades are rolled.
5. Review and revise grades before they are rolled, using SFASLST or SFAALST in baseline or Banner Faculty and Advisor Self-Service (Final Grades page and Incomplete Grades Summary page).
6. Roll the grades, including incomplete grades, using SHRROLL, SFASLST, or SFAALST.
7. Review and update incomplete final grades and extension dates on SHATCKN for any grade changes.

Grade changes are limited to only the most recent grade sequence numbers.

Changes to the final grade require the insertion of a new grade sequence entry, which will supersede prior entries.

8. Run the Incomplete Grade Process (SHRCINC) to automate the grade changes.
  - 8.1. Run the process in Audit Mode.
  - 8.2. Review the results for grade changes.
  - 8.3. Run the process in Update Mode to commit the changes to the database.

 **Note**

If the GPAs are not calculated when SHRCINC is in Update Mode, then SHRCGPA should be run in a timely manner to reflect the grade change updates and any other updates that may be pending a recalculation. ■

## Forms Used with Processing

### Incomplete Grade Rules Form (SHAINCG)

This form is used to set up the rules used for automated incomplete grade processing. Unique rules can be created by effective term and level. The system-required term value of *000000* is delivered to reflect that incomplete grade processing is inactive (turned off) as of any prior time period. This record with this term value should exist to indicate that incomplete grading is turned off for all levels.

You can query on the following fields: **Effective Term**, **Level**, **Incomplete Grade Processing**, **Override Grade**, **Override Grade Date**, and **Web Display**. If a level is not specified, all records for the term will be retrieved. When the form is entered in query mode, you need to reset the checkbox fields, even if that means resetting them back to their original display states, or the query will not consider those fields. Setting the checkbox fields indicates that the fields are intended to restrict the query selection. The fields can be used in combination for a query.

For example, if all the checkbox fields are checked (set to *Y*) when query mode is entered, and you do not want to use those fields in the query, you can leave the settings as they are. If you want to restrict the query selection to all records for which incomplete grade processing is active (turned on), uncheck (set to *N*) the **Incomplete Grade Processing** checkbox, then recheck (set to *Y*) the field, leave the other field settings as they are, and execute the query.

Overrides can be set up on this form. Use the **Override Grade** checkbox to allow faculty members to override the default, incomplete, final grade for a student. Instructors can also override the default extension date based on the setting of the **Override Grade Date** field for the rule. Dates can be shortened, extended, both (all), or no date override can be allowed.

The system-required term value is delivered for use with SHAINCG.

Code	Description	System Required
000000	Term for incomplete grade processing not yet activated	Yes

Effective Term	Level	Incomplete Grade Processing	Override Grade	Override Grade Date	Web Display	User	Activity Date	System Required
000000	NULL	N	Y	A (All)	Y	NOT NULL	NOT NULL	Y

### Term Control Form (SOATERM)

This form is used with automated incomplete grade processing. The **Incomplete Extension Date** field in the Base Part of Term block is the extension/expiration date when incomplete final grades become eligible to replace final grades during automated processing. The date you use can vary by part-of-term. It is optional and can remain null. The date will be null for old term records and can be left null for all terms when automated incomplete grade processing is not in use.

When the rules on SHAINCG indicate that automated incomplete grade processing is active for a term, with default grades for incomplete grades on SHAGRDE that can be entered or overridden by faculty members, the extension date is also defaulted.

### Class Roster Form (SFASLST)

This form is used with automated incomplete grade processing. The **Incomplete Final Grade** field is used to replace a final grade after the extension date to complete coursework has expired. The **Extension Date** field displays the date when the incomplete final grade is eligible to replace the final grade. This date must be less than or equal to the default date when the **Override Grade Date** radio group on SHAINCG is set to *Shorten* for the rule. This date must be greater than or equal to the default date when the **Override Grade Date** radio group on SHAINCG is set to *Lengthen* for the rule. The extension date must meet the date restrictions for the rule when restrictions apply. These restrictions are relative to the default date.

These fields are activated when a grade code value for an incomplete grade is entered in the **Final Grade** field. Overrides are also permitted if the rule on SHAINCG allows overrides. The **Incomplete Final Grade** field is populated with the system value for the incomplete grade. You can enter a value in this field when the **Incomplete Grade Processing** field on SHAINCG is checked (Y). The **Extension Date** field is also populated and can be entered when the **Override Grade** field on SHAINCG is checked (Y). When the value in the **Final Grade** field is one that is other than incomplete, the **Incomplete Final Grade** and **Extension Date** fields are not active. All incomplete grades must have

an associated incomplete final grade and extension date. Once the grade has been rolled to history, the incomplete final grade and the extension date cannot be changed using these fields.

The **Grade Comment** field (STVGCMT) can be used to add comments that pertain to incomplete grades.

### **Class Attendance Roster Form (SFAALST)**

This form is used with automated incomplete grade processing. The **Incomplete Final Grade** field is used to replace a final grade after the extension date to complete coursework has expired. The **Extension Date** field displays the date when the incomplete final grade is eligible to replace the final grade. This date must be less than or equal to the default date when the **Override Grade Date** radio group on SHAINCG is set to *Shorten* for the rule. This date must be greater than or equal to the default date when the **Override Grade Date** radio group on SHAINCG is set to *Lengthen* for the rule. The extension date must meet the date restrictions for the rule when restrictions apply. These restrictions are relative to the default date.

These fields are activated when a grade code value for an incomplete grade is entered in the **Final Grade** field. Overrides are also permitted if the rule on SHAINCG allows overrides. The **Incomplete Final Grade** field is populated with the system value for the incomplete grade. You can enter a value in this field when the **Incomplete Grade Processing** field on SHAINCG is checked (*Y*). The **Extension Date** field is also populated and can be entered when the **Override Grade** field on SHAINCG is checked (*Y*). When the value in the **Final Grade** field is one that is other than incomplete, the **Incomplete Final Grade** and **Extension Date** fields are not active. All incomplete grades must have an associated incomplete final grade and extension date. Once the grade has been rolled to history, the incomplete final grade and the extension date cannot be changed using these fields.

The **Grade Comment** field (STVGCMT) can be used to add comments that pertain to incomplete grades.

### **Grade Code Maintenance Form (SHAGRDE)**

This form is used with automated incomplete grade processing and accommodates incomplete grades and default, replacement, final grades. The **Incomplete Grade Ind** checkbox is used to specify when checked (set to *Y*) that the grade code is for an incomplete grade. The **Incomplete Grade Default** field displays the default, replacement, final grade for the incomplete grade. The **Incomplete Grade Ind** field will always be checked (set to *Y*) when a default final grade exists. When a grade record is removed or inactivated, the system checks that the grade is not in use as a default, incomplete, final grade on another active grade record.

If the **Incomplete Grade Ind** checkbox is set for the grade code when the incomplete grade is entered, and a default final grade is not entered at that time, faculty members can use override capabilities to change the final grades. Prior entries for grade values on

SHAGRDE will automatically have the **Incomplete Grade Ind** unchecked (set to *N*), indicating there are no default final grades, as those entries would not have been processed as incompletes. Default, incomplete, final grades can be null for grade codes where the **Incomplete Grade Ind** is checked, and an instructor can enter a replacement final grade when the incomplete grade is assigned.

### Course Maintenance Form (SHATCKN)

This form is used with automated incomplete grade processing. The **Incomplete Final Grade** field is used to replace a final grade after the extension date by which the coursework should be completed has expired. The **Extension Date** field displays the date when the incomplete final grade is eligible to replace the final grade. (SHATCKN is an administrative override form, expected to have limited user access, and consequently it is not limited by the override restrictions set on the incomplete grade rule.)

The **Incomplete Final Grade** field is activated when an incomplete grade code is entered in the **Final Grade** field and incomplete grade processing is active (turned on). The **Extension Date** field is updatable for a new entry or for the most current existing entry. When a new grade sequence record is entered, the **Incomplete Final Grade** field is populated with the system default value for the incomplete grade. All incomplete, default, final grades must have associated extension dates. When the value in the **Final Grade** field is not an incomplete grade, the **Incomplete Final Grade** field is not active.

Incomplete final grades and extension dates can be changed on SHATCKN, regardless of the override setting on SHAINCG. However, after grade changes have been made, the **Extension Date** and **Incomplete Final Grade** fields will be protected for all entries except the most current entry (the entry with the highest sequence number), as these entries reflect the student's prior history. If you do not use automated incomplete grade processing, you can continue to use the **Extension Date** field.

When a final grade is entered, the system checks to see whether the grade is an incomplete grade and whether incomplete grade processing is active (turned on). The following occurs:

- When an incomplete grade is found, the **Incomplete Final Grade** field is activated, populated by default, or if populated already, that value is displayed. Also, the **Extension Date** field is populated by default if the value has not been entered.
- When the grade is not an incomplete grade, the **Incomplete Final Grade** field remains inactive.

The **Grade Comment** field (STVGCMT) can be used to add comments that pertain to incomplete grades.

## Incomplete Grade Process (SHRCINC)

This process is used to automatically update incomplete grades to final grades. If an incomplete grade is found in Academic History for any course within the specified terms, and its grade extension date is less than or equal to the current system date, it is selected for processing.

### Note

The process scans only Academic History records. All grades on the class roster that have not yet been rolled are still considered to be in-process.

The grade code values that are displayed on SFAALST, SFASLST, and in Banner Faculty and Advisor Self-Service are only those grade codes that were last entered on the class roster. Any grades that have been subsequently updated in history are not reflected in the roster. ■

This process can be run by term in either Audit or Update Mode and includes reason codes for the grade changes, as well as grade comments for the grade entries. You can restrict the process selection by level and/or CRN. You can include student IDs on the output and calculate GPAs in Update Mode if you wish to do so. The incomplete grade code value that is selected and the final replacement grade are also printed in the output. If grade substitution is needed, you can choose to have the grade substitution grade code printed on the report.

The grade extension date for incomplete grades is compared against the system date to determine whether a grade change needs to occur. If a grade change is needed, a new grade entry is created for the course in the student's academic history. If the system date is greater than the incomplete extension date, then a new grade entry is inserted, but with the final grade code changed from the incomplete grade entry to the replacement final grade. The process also performs checking for grade substitution. Grade substitution can replace the updated grade with a substitute grade, based upon the grade mode associated with the student that was taking the course. A GPA recalculation is then performed when the Calculate GPA parameter is set to Y, and the process is run in Update Mode.

The process can be run in Audit Mode to forecast automated grade change results for upcoming grade conversions. The Future Date parameter can be used to forecast future results. No GPA calculation is performed in Audit Mode.

### Note

This process does not use sleep wake processing. ■

## Grade Conversion and Substitution

The process creates a new grade revision entry in the SHRTCKG table. The existing, current, incomplete entry is maintained in Academic History. This update is processed as a non-destructive grade change. The new entry is added as the next sequence number, and the final grade code is extracted from the incomplete final grade of the prior entry. The extension date is cleared for the new entry. The reason code comes from the Reasons Code

parameter, and the current system date is used as the grade date. If a grade code comment is specified, it will be added to the new grade entry.

The default, incomplete, final grade is the assigned final grade of the new grade change entry. That may cause a second grade change entry to be posted for the grade substitution. The processing for the grade substitution is automatically invoked at the time the first grade change is posted. The reason code on the grade substitution entry (if one is needed) uses *SG* (substitute grade) as the reason code, and no grade comment code will appear on that entry. *SG* is a system-defined reason code used for substituted grade change entries. A second entry will be printed on the report output for the substitute grade change (by default) unless the Print Grade Substitutions parameter is set to *N*.

If grade substitution is needed for the incomplete final grade, then the substitution grade value must be reconciled to exist before the first grade change entry is posted. A final grade cannot be changed to a grade value that is inconsistent with the grade mode for which the student is taking the course, except when the grade is immediately replaced with a substitute grade value. If grade substitution is required and a substitute grade is not on file, then neither grade change will be posted, and an error message will be displayed in the output. Once the grade substitution is complete, the GPA recalculation can take place, if the Calculate GPA parameter is set to *Y*.

## Build Academic Standing Rules

The institution's policies regarding probation and Dean's List are set up as a series of rules on the Academic Standing Rules Form (SHAACST). Rules may be set up to place students on probation, to take them off probation, to continue probation, or to indicate suspension or dismissal. Rules are set up using minimum hour and GPA requirements. Dean's List rules are also set up using minimum hour and GPA requirements for the term.

## Calculate Academic Standing

The calculation of academic standing and dean's list eligibility are performed using the Calculate Academic Standing Process (SHRASTD). The rules are defined using the Academic Standing Rules Form (SHAACST). The process permits calculation of academic standing and Dean's List eligibility independently (each has its own Y/N parameter). The process uses the highest hours that apply to a student when calculating dean's list status, thus allowing an institution to calculate various honors for full-time and part-time students. The process also checks a student's course information for excluded grades only at the level for which the dean's list rule is created. The process can be run in either update or audit mode. First time students are retrieved, and pre-Banner hours are included. Results are displayed for a person in the Term Header information of the Term Course Maintenance Form (SHAINST) or can be viewed for selected groups of students within a term on the Academic Standing Query Form (SHASTAT).

### Note

The academic standing process uses a student's displayed GPA rather than the stored GPA when determining their academic standing.

For example, if a student's GPA is calculated to be 1.987821, that is the value that will be stored. However, if the institution's GPA display rules are set up to round the GPA to three digits, the displayed GPA would be 2.000, and that is the value the SHRASTD process will use to evaluate the student's academic standing. ■

Academic standing on SHAACST is based on the level of the student and the GPA of those courses where the level matches that of the student when determining which rule to use.

**Example: Rules for Undergraduate Students**

Current Standing						Next Standing
G1	0-999.99	E	0-999.99	0.00	1.00	G1
G1	0-999.99	E	0-999.99	1.01	2.99	G2
G1	0-999.99	E	0-999.99	3.00	3.50	G3
G1	0-999.99	E	0-999.99	3.51	4.00	G4

Level	Grade
1 Undergraduate Level Course	A
1 Undergraduate Level Course	D
1 Graduate Level Course	B

**Term GPA** **2.39**  
 Academic Standing Calculated = G2

The Calculate Academic Standing Process (SHRASTD) differentiates between a zero (0.00) GPA attained as a result of receiving grades which *do not* count in GPA and a zero (0.00) GPA received as a result of receiving grades which *do* count in GPA.

**Example: Academic Standing Rule (SHAACST)**

Current Standing					Next Standing
00 (Good)	Term GPA	0.00	-	1.99	P1 (Probation)
	Cumulative GPA	0.00	-	1.99	

Student A:

Course	Credits		Grade		
ENGL 100	3		P (Pass)	Count in GPA = N	
HIST 100	3		AU (Audit)	Count in GPA = N	
	<i>Attempted</i>	<i>Passed</i>	<i>Earned</i>	<i>GPA Hrs</i>	<i>GPA</i>
Term	3.00	3.00	3.00	0.00	0.00
Cum	3.00	3.00	3.00	0.00	0.00

Student B:

Course	Credits		Grade		
ENGL 100	3		P (Pass)	Count in GPA = N	
HIST 100	3		F (Failure)	Count in GPA = Y	
	<i>Attempted</i>	<i>Passed</i>	<i>Earned</i>	<i>GPA Hrs</i>	<i>GPA</i>
Term	6.00	3.00	3.00	3.00	0.00
Cum	6.00	3.00	3.00	3.00	0.00

- When academic standing is calculated, Student A will be placed on 00 (Good), and Student B will be placed on P1 (Probation).
- In summary, the process looks for at least one course with a grade which counts in GPA when processing students with 0.00 GPAs.

The Calculate Academic Standing Process (SHRASTD) calculates term honors based upon the Dean's List rules defined on the Academic Standing Rules Form (SHAACST). The process compares the student (using the student's term hours and term GPA) against all rules for which the student has exceeded or met both the minimum hours and minimum GPA set for the rule. If multiple rules are selected, the process chooses the rule which is a best fit (closest to but *not* less than) the term hours and term GPA of the student.

**Example:**

\* All use institutional GPA and earned hours.

Rules *	Minimum Term Hours	Minimum Term GPA	Status
#1	12	3.75	DL (Dean's List)
#2	12	3.50	HL (Honor's List)
#3	12	3.00	ML (Merit List)
#4	9	3.50	DL (Dean's List)
#5	6	3.25	HL (Honor's List)

Student	Hours/GPA	Status
<i>Student A</i>	15 earned hours for the term 3.29 term GPA	ML
<i>Student B</i>	12 earned hours for the term 3.75 term GPA	DL
<i>Student C</i>	11 earned hours for the term 3.35 term GPA	HL

- *Student A* will be compared against rules #3 and #5. He qualifies for rule #3 based upon his term GPA of 3.29 being greater than or equal to the minimum of 3.00 set for the rule, and his term hours being closest to but not less than the minimum of 12 on rule #3.
- *Student B* will be compared against rules #1, #2, #3, #4, and #5. She qualifies for rule #1 based upon her term GPA of 3.75 being greater than or equal to the minimum of 3.75 set for the rule, and her term hours being closest to but not less than the minimum of 12 on rule #1.
- *Student C* will only be compared against rule #5, since his earned hours for the term (11) are closest to but not less than the minimum hours (6) set for the rule, and his term GPA of 3.35 being greater than or equal to the minimum of 3.25 set for the rule.

When a student matches the criteria for an academic standing rule, but has no hours which count in GPA calculation for the term (for example, the student has withdrawn from all hours or audited all hours), the academic standing from the most recent past term will be carried forward into the new term. Note that this processing requires that an existing academic standing rule be found which matches the student's information at that point in time. If no academic standing rule would otherwise apply to the student, the student's standing for the term is updated to the detail "00" standing code. The pass-through of the academic standing from the previous term occurs only when a rule applies to a student, but the student has no hours for the term which count in the GPA.

The maximum hours in the SFBETRM record, as displayed on the Student Course Registration Form (SFAREGS), are not updated at all if the maximum hours value on the Academic Standing Code Validation Form (STVASTD) is null (blank) for the calculated academic standing and the Calculate Maximum Registration Hours parameter option in the Calculate Academic Standing Process (SHRASTD) is used. The SFBETRM record for the student must also exist in the pre-registration future term entered in the Pre-registration Future Term parameter. No graded registration may exist for this term.

If this option is used and the calculated academic standing has a value in the **Max(imum) Hours** field on STVASTD, the value from STVASTD will overlay any value already contained in the SFBETRM record. If there is no maximum hours value for the academic standing code on STVASTD, no update will be made to the data in the SFBETRM record. Specifically, if no value is present in the **Max(imum) Hours** field on STVASTD for a new academic standing, the SFBETRM maximum hours will not be updated to "0.00".

If no value is present in the **Min(imum) Hours** field on STVASTD for a new academic standing, the SFBETRM minimum hours will be updated to zero if all other selection criteria have been met. If the value is for the pre-registration future term, and the SFBETRM minimum and maximum hours are equal to the value in STVASTD for the academic standing, the SFBETRM record will not be updated. The report will display new minimum and maximum hours values only when the SFBETRM record is updated. The academic standing code may be updated, regardless of the whether the SFBETRM record minimum and maximum hours are updated.

## Calculate Academic Standing by Student Centric Period

SHRASTD also calculates academic standing by student centric period for students with an active student centric period for the term. The student is considered to have an active student centric period for the term when the **Student Centric Period** field on SHAINST (or the column in the SHRTTRM table) has a valid value. The Academic Difficulty Rules by Student Centric Period window on SHAACST is used to maintain academic standing hours and GPA rules by student centric period.

When academic standing is evaluated for the student for the final term of the student centric period, the new standing is based on the institutional hours and GPA from all the terms associated with the student centric period. When academic standing is evaluated for the student for an earlier term in the student centric period, the most recent, previous academic standing calculated before the student centric period will be assigned as the new standing.

For a student, for all terms prior to the final term in a student centric period, the academic standing is rolled forward from the student's most recent term that is prior to the start of the current student centric period. This permits registration restrictions and maximum hours calculations to remain in effect throughout the student centric period. When a student who has an active student centric period does not enroll in the final term of the student centric period, and academic standing is calculated for the final term, the student's standing is evaluated based on the student centric period GPA totals, but the academic standing is stored in the highest or maximum existing term header record for the student centric period.

### Note

When a student does not have an active student centric period assigned, the existing term-based rules from SHAACST are used for the evaluation of academic standing. ■

Use the Process by Student Period parameter to calculate the academic standing for student centric periods.

- When this parameter is set to *Y*, the process considers students who are assigned to a cycle designator and student centric period using the rules for student centric period academic standing processing.

- When this parameter is set to *Y*, any students who are not assigned to a cycle designator for the term are processed using baseline term academic standing processing.
- When this parameter is set to *N*, only baseline term academic standing processing is performed.

Use the SCPs to be Processed parameter to process specific student centric periods. Values should be valid for the term entered in the Term parameter. Valid values come from the Student Centric Period Term Control Form (SOASCPT). When the Process by Student Period parameter is set to *Y*, this parameter must be entered.

## Produce Grade Mailers

Grade mailers are produced by course level using the Grade Mailer Report (SHRGRDE) for students who have had grades rolled to academic history. Revised grade mailers may also be produced when grade changes are made on the Course Summary Form (SHACRSE). Duplicate grade mailers are produced, when requested, on the Term Course Maintenance Form (SHAINST). The grade mailer lists the courses taken, credits, quality points, and grades received, as well as transfer GPAs and term descriptions for each student.

Courses which are flagged as non-gradable (**Gradable Indicator** is unchecked) on the Course Registration Status Code Validation Form (STVRSTS) will not be given the user-supplied default grade when running the Grade Mailer. Courses flagged as non-gradable (**Gradable Indicator** is unchecked) which have no grades entered and exist in registration will not appear on the Grade Mailer.

The grade mailer may be created for only those courses associated with a selected campus. This is done when the campus GPA is being calculated via the Academic History Control Form (SHACTRL). The Grade Mailer Status/Error Correction Form (SHAGCOL) is used to view the status of grade mailers and to allow mailers to be re-run if there is a printer problem or other reason to re-run the job.

The hold logic for the process is such that if a person had a hold which prevented a grade mailer from being produced, and the hold has been removed, or is no longer active, the subsequent run of the grade mailer will remove the grade mailer hold information for the previous request and produce the grade mailer.

The selection of registration records for grade mailers prints those rows where the section is gradable according to the Schedule Form (SSASECT) and a combination of the following is true:

- The `SFRSTCR_ERROR_FLAG` must either be null or not *D*, which means the record counts in enrollment.

*or*

- The SFRSTCR\_ERROR\_FLAG is *D* (does not count in enrollment), but the record has already been graded (via auto grade on the stvrsts record matching the sfrstcr\_rsts\_code).

*or*

- The SFRSTCR\_ERROR\_FLAG is *D* (does not count in enrollment), but the STVRSTS\_GRADEABLE\_IND on the STVRSTS record matching the SFRSTCR\_RSTS\_CODE is set to *Y*.

The report will check for grade mailer type holds that are effective for a date greater than the system date and then suppress the associated grade mailer. If the hold is effective for a date less than or equal to the system date, the grade mailer may be printed. The **Grade (Hold Indicator)** is located on the Hold Type Code Validation Form (STVHLDD).

## Add/Change Degrees

Information concerning each student's degree and certificate history is entered on the Degrees and Other Formal Awards Form (SHADEGR). This form allows you to enter the degree, college, majors, minors, status, honors, and dual degrees associated with the degree for a student. The degree information, specified as part of the student's record on the General Student Form (SGASTDN), defaults to this form. Any institutional and transfer course work taken by the student may be indicated as applying to the degree. Any courses that apply to the degree may be used to calculate degree hour and GPA data. Degree information is automatically created for each student during the initial grade roll process. Subsequent grade rolls may create or modify degree information in academic history depending upon changes made to that information on the General Student Form (SGASTDN).

On the Degrees and Other Formal Awards Form (SHADEGR), the Institutional Course Attributes information and the Transfer Course Attributes information, may be used to view any attribute information associated with the student's course work. An indicator (\*) exists as an addition to the Institutional Course information and Transfer Course information to indicate the course for which the attributes are being displayed.

### Note

A subsequent degree record is created when there is a change in the college, degree, level, or program code. If there is a change on SGASTDN in any other curriculum data (i.e., Major 1), the current degree record is updated. ■

## National Student Clearinghouse (NSC) Degree Verification Reporting

The National Student Clearinghouse (NSC) uses reporting to collect degree information for use in a national repository to aid in the verification of student educational achievement.

This reporting provides the following benefits:

- Reduce the administrative workload and constant interruptions that verifications cause in the registrar's office.
- Make it so easy and inexpensive for employers to verify educational achievements so that misrepresentation of college credentials is virtually eliminated.
- Allow all schools, even those that may need to process only a small number of verification requests during the year, to obtain the benefits of out-sourced degree verifications.
- Allow schools to share in revenues that may be generated without having to enter into long-term, exclusive contracts.
- Help institutions more accurately measure their performance in preparing their students to obtain degrees and certificates from other institutions.

Use the Degree Verification Process (SHRDEGV) to collect data relating to the degrees a student has completed at an institution and supply the information to the clearinghouse.

## Enter/Maintain Transfer Course Work

Information related to a student's transfer work may be entered on the Transfer Course Form (SHATRNS). This form allows for the recording of all previously attended institutions, the level of course work, and the term in which it applies. Detail course work is entered as your institutional course equivalent and may be tied to the student's original transcript work. Transfer Hour and GPA data may be calculated on this form. The **Title** field defaults from the Catalog information if the subject and course number exist on the Catalog for the effective term entered.

The Transfer Articulation Module may also be used to enter transfer work. See the Transfer Articulation Procedures for more information.

## Add/Change Transcript Events and Comments

Significant events and narrative comments unique to a particular student are entered on the Transcript Event and Comment Form (SHATCMT). Events will print on the student's transcript if they are so designated. Comments will print on the transcript. The comments may be specific to the level of the student or may be term specific. If term specific, they will print next to that term on the transcript.

## Enter Qualifying Papers

All original research papers or projects authorized for students as part of their degree requirements are entered using the Qualifying Paper Form (SHAQPNO). The title of the paper and any comments or text are maintained. The paper will print on the transcript

only if the paper type is so designated on the Qualifying Paper Type Code Validation Form (STVQPTP).

Several conditions must be true in order for qualifying paper titles and/or comments to print:

- The **Transcript Print** checkbox for the qualifying paper type must be checked on the Qualifying Paper Type Code Validation Form (STVQPTP).
- A value must be present in the **Acceptance Date** field on the Qualifying Paper Form (SHAQPNO) for the paper.
- The paper must be applied to an awarded degree on the Academic Non-Course Form (SHANCRS).
- The **Qualifying Papers** checkbox must be checked on the Transcript Type Rules Form (SHATPRT) for the transcript type being produced. If paper comments should also print for the transcript type, the **Qualifying Papers Text** checkbox must also be checked.

## Review Academic History Online

The Term Sequence Course History Form (SHATERM) displays summary information for a student for each term with cumulative hour and GPA totals. Both institutional and transfer work are displayed.

The Subject Sequence History Form (SHASUBJ) displays summary information for a student for each subject area with hour and GPA totals by subject. Both institutional and transfer work display.

## Print Transcript

A request to print a transcript is made on the Transcript Request Form (SHARQTC). This form allows you to specify the level of the transcript, who it will be sent to, and whether to print it immediately, to defer printing, or to send it electronically via EDI or XML.

The Academic Transcript Process (SHRTRTC) allows you to print various transcript types, each of which may include different sections of information. Future term information will print on this transcript, even if no institution data is present. The Transcript Population Process (SHRTPOP) allows production of the academic transcript for an entire population of students, without entering individual requests. The academic transcript may also be produced to allow those institutions requiring only the courses associated with a particular campus to be printed. This is done when the campus GPA is being calculated via the Academic History Control Form (SHACTRL).

Codes and descriptions of transcript types are defined on the Transcript Type Code Validation Form (STVTPRT). The specific sections of information to be printed for each transcript are defined on the Transcript Type Rules Form (SHATPRT). For example,

Internal Transcripts may include all possible information, but External Transcripts may not include academic standing, term comments, and qualifying paper information. Examples of sections of information which print depending on transcript type include: transfer course detail, academic events, level comments, qualifying paper information, committee information, and college, major, and student type by term.

 **Note**

SHRTRTC checks the value in the `SHTTRAN_TYPE` field. A *Null* value indicates the paper transcript should be printed. Values of *E* (EDI) or *P* (XML) are ignored, and a transcript is not printed if those electronic values exist. ■

The transcript also displays course history information and GPA totals by term within student centric periods. All terms with a specific student centric period on the term header record (SHRTTRM) are grouped between a student centric header line and student centric GPA statistics section on the report output. This allows an institution to provide totals for both the student centric period and terms within the student centric period. This information is displayed when the **Student Centric Period Statistics** checkbox is selected on the Transcript Type Rules Form (SHATPRT).

## Selection of Concurrent Curricula Transcript Data

Concurrent curricula data can be selected from the concurrent curricula tables and printed on the Academic Transcript (SHRTRTC), the Electronic Data Interchange Extract (SHREDIY) or EDI transcript, and the Self-Service Transcript Page (BWSKOTRN.P\_ViewTran). Parameters are used to allow the printing of all or parts of the primary and secondary curriculum records.

The transcript displays detailed information for curriculum records, based on the options selected on SHATPRT. The SOVLCUR and SOVLFOS views are referenced by SHRTRTC. Curriculum records can be printed by term, learner primary and secondary curriculum records can be printed, degrees awarded for primary and secondary curriculum records can be printed, and data can be sorted by department, college, and major. Primary and secondary curriculum records are printed based on the number of current and active records allowed for the module. You can use options on SHATPRT to include and exclude the printing of parts of the primary and/or secondary curriculum as needed.

Curriculum labels can be customized using SHATPRT. If no labels are specified in those options, the default labels used will be “Current Program” and “Secondary”. An option also exists to print the program on the transcript. You can also print the campus for the primary curriculum.

The maximum number of fields of study that can be printed on the transcript is based on the allowable current maximum established for the module. This includes field of study types that are outside of the major, minor, or concentration. Options on SHATPRT (**Major** and **Major Concentration**) are used to control the printing of concentrations, both base and those attached to majors. Concentrations attached to the major are printed under the

major with a label of “Maj/Concentration”. Those concentrations attached to the base curriculum are printed after the minors and have a label of “Concentration”.

## Print Options

You can print the transcript type description without the transcript type code. You can still select the option to print the transcript type code value if you choose.

Four sets of curriculum print options exist on SHATPRT:

- Primary Learner Curriculum
- Secondary Learner Curriculum
- Primary Outcome Curriculum
- Secondary Outcome Curriculum

The print options for all four sections are the same and include the following data:

- title or label that appears above the curriculum section
- program
- degree (only available for the Learner module and does not display for the outcome)
- college
- campus
- major
- major concentrations
- minor
- concentration
- other fields of study

Please note that the primary curriculum degree for an outcome is printed with the awarded label. If the learner has multiple curriculum records on a single outcome, only the degree from the primary curriculum will be displayed.

Other print options that pertain to curriculum data, specifically the learner's primary curriculum, are the options to print the admissions term and the matriculation term.

The fields of study will always be printed in priority order within the field of study grouping. Please note that the placement of the concentrations differs from the display of fields of study on the forms that have Curriculum windows. On those forms, the concentrations attached to a major show the major but are displayed after the minors. In this setting, the “Attached to Major” label is not visible.

The following order facilitates identifying concentrations that are attached to majors:

- majors
- concentrations attached to majors will follow each major
- minors
- concentrations attached to the base curriculum
- other field of study types

**Example:**

*Learner's Primary Curriculum*

Program: BA-HISTORY BA History

Level: UG Undergraduate

Degree: BA Bachelor of Arts

Campus: MAI Main

College: AS Arts and Sciences

Major 1: HIST History

Concentration Attached to HIST: AMER American History

Major 2: ECON Economics

Minor 1: ACCT Accounting

Concentration Attached to Base: MEDI Medieval History

Other Field of Study INTERN: USGV US Federal Government Internship (The description of *INTERN* on GTVLFST is *Internship*.)

If all print options are selected, the following data will be displayed on the transcript:

*Current Program:*

Bachelor of Arts

Program: BA History

College: Arts and Sciences

Campus: Main

Major: History

Maj/Concentration: American History

Major: Economics

Minor: Accounting

Concentration: Medieval History

Internship: US Federal Government Internship

The paper transcript (SHRTRTC) will print the primary curriculum and awarded degree curriculum if the level matches the course level that is being reported. The college and major that are printed by term come from the primary current and active curriculum. If the level does not match the course level being printed, college and “Major by Term” will not be printed.

The difference between the self-service and paper transcripts when the level of *AL* is selected is apparent in how the curriculum is printed. For the self-service transcript, all curriculum records are printed at the beginning of the document, but for the paper transcript, the current, active, primary curriculum record is printed at the beginning of the output pages that are reporting the courses for that level. If the degree is awarded, and the primary and secondary outcome curriculum records are at two different levels (both in the same degree sequence number), both the primary and secondary outcome curriculum records will be printed on the page with the level that matches the primary outcome curriculum. The self-service transcript reports all courses together, but the paper transcript produces separate output pages for each level.

## Using SORLMFS for Maximum Field of Study Counts

Maximum counts for all types of fields of study are recorded, not just the fields of study for the major, minor, and concentration. The maximum current and active fields of study allowed are coded for each module on SOACTRL for any field of study type.

The SORLMFS table is used to store the maximum counts per field of study type and module. The keys to the table are the module code (LMOD\_CODE) and the field of study type (LFST\_CODE). The types for *MAJOR*, *MINOR*, and *CONCENTRATION* are required. The table allows a count of zero, which means none are allowed for that field of study type. A value of one (1) is required for the major type, because the curriculum currently requires at least one major.

### Note

An SOBLMOD record which defines the learner module and number of curriculum allowed *must* exist prior to defining fields of study counts on SORLMFS. ■

## Execution of Curriculum Conversions

Curriculum conversions can be executed from transcript requests (SHRTRTC) and self-service view pages where curriculum data can be printed before any processing occurs, so that all curriculum data appears on the hardcopy output or online. All objects in which

concurrent curriculum processing is implemented will attempt to convert the learner and outcome curriculum data from the original host tables to the concurrent curricula tables. The concurrent curricula conversion will automatically be executed when SHRTRTC begins to process a transcript for a student. If the curriculum data has already been converted, the conversion process will end without completing any activity.

## Using Levels with Self-Service and Paper Transcripts

The paper transcript prints the current, active, primary learner curriculum records and/or the current, active, outcome primary or secondary curriculum (if it is awarded), if the level for the curriculum matches the course level that is being reported on the transcripts.

The self service transcript displays the primary and secondary learner curriculum records and the outcome primary or secondary curriculum, if the level for the curriculum matches the course level that is being reported on the transcripts. When all levels are selected in self-service, all current, active, primary and secondary curriculum records for all levels are displayed at the top of the transcript pages, before the coursework for all levels is reported.

### **Example:**

#### *Learner Primary Curriculum*

Program: BA History  
Level: Undergraduate  
Degree: Bachelor of Arts  
College: Arts and Sciences  
Campus: Main  
Major: History

#### *Learner Secondary Curriculum*

Program: CE Arts  
Level: Continuing Education  
Degree: Art Certificate  
College: Continuing Education  
Campus: Main  
Major: Drawing

The transcript pages that print the Undergraduate Courses report just the learner primary curriculum. The pages that print the Continuing Education courses print the learner secondary curriculum.

The undergraduate curriculum for the awarded degree is printed on the pages that report the Undergraduate Courses course level. All curriculum records for an awarded degree are printed together. In the above example, the Continuing Education curriculum is listed as a secondary curriculum to the undergraduate outcome curriculum, and it will be reported with the undergraduate outcome curriculum.

## College and Major by Term

The college that is printed for each term is taken from the curriculum that is active and current for that term, has the lowest priority, and has a level code that matches the course level reported. The major printed is the one that is primary, active, and current for that curriculum.

## Transcript Requests

Transcript requests are entered or displayed by ID on SHARQTC, and transcript requests may not be entered without an override for a person who has holds in effect which prevent transcript production. The **Holds Exist** field displays whether transcript holds exist, allows use of a List function to display holds on the Holds Query-Only Form (SOQHOLD) and is where an override can be entered. Academic standing, enrollment terms, accumulated credits, and cumulative GPA data displays by level in the Current Student Status window.

Transcript requests are displayed and can be entered in the Transcript Request section. When the section of the form is accessed, existing transcript requests will be displayed in reverse date order. Unprinted requests will display first, followed by printed requests. A transcript may be produced for a student with no graded coursework in academic history. Please note that a student still must have history to be selected by the Transcript Population Process (SHRTPop). Transcripts can be printed using Sleep-Wake processing or through user-initiated runs of the Academic Transcript Process (SHRTRTC).

When processing an electronic transcript, enter a valid level, a request date, the transcript type, and the number of copies. You may check the **Official (Indicator)**, or if an EDI or XML capable institution code is used, you will receive a warning when you save the record, and this indicator will be updated for you.

Electronic transcripts require the entry of a valid outside institution code for an institution that is capable of receiving electronic transcripts. Institutions are noted as being EDI or XML capable using the setting of the **Electronic** field on STVSBGI. This field determines the mode in which the transcript is to be sent. When the institution code is entered in the Transcript Destination block of the Issue Information window, the system will check to see if that institution is EDI or capable and then default in the appropriate **Output Type** value (*E*, *P*, *NULL*).

The **Output Type** field will always be blank unless an external institution code has been entered and that institution is capable of receiving transcripts electronically using the EDI or XML file formats. When this field is *NULL*, the transcript will be printed on paper. If the institution is EDI capable, the system will set the **Output Type** to *E* in the Transcript Destination block of the Issue Information window. If the institution is XML capable, the system will set the **Output Type** to *P* in the Transcript Destination block of the Issue Information window.

The **Output Type** value can then be overridden by the user in the following situations:

- If the **Electronic** field on STVSBGI is not null for the corresponding **External Institution Code** value, then the user can change the **Output Type** value to *NULL*. The override is only valid for that transcript request.
  - The value of *E* can only be entered for those institution codes that are marked as EDI capable on STVSBGI.
  - The value of *P* can only be entered for those institution codes that are marked as XML capable on STVSBGI.
- If the **Electronic** field on STVSBGI is null for the corresponding **External Institution Code** value, then the **Output Type** value cannot be overridden.

The student's academic transcript is associated with committee information and academic events for graduate student tracking. First, committee information may be printed on the transcript if the **Print On Transcript (Indicator)** on the Committee/Service Form (SHACOMI) is checked for a specific committee *and* the Transcript Type Rules Form (SHATPRT), for the type of transcript being requested, also has the **Committees (Indicator)** checked. Second, decision and/or event grade may be printed along with the event on the transcript if the **Transcript Print (Indicator)** on the Academic History Event Code Validation Form (STVEVEN) is checked *and* the Transcript Type Rules Form (SHATPRT), for the type of transcript being requested, also has checked print indicators for **Academic Events, Academic Event Decision, and Academic Event Grade**.

All majors and concentrations within a student's degree record print in the degree awarded section, based upon the value for the **Degree Major** field on the Transcript Type Rules Form (SHATPRT). When **Degree Major** is checked (set to *Y*), all majors and concentrations in the degree record will be printed. Printing of minors is controlled by the **Degree Minor** field. When **Degree Minor** is checked (set to *Y*), all minors in the degree record will print. The order and format of majors, minors and concentrations is as follows:

Major	Description of Major 1, Primary Curriculum
Concentration(s)	Description of Concentration 1, Major 1, Primary Description of Concentration 2, Major 1, Primary Description of Concentration 3, Major 1, Primary
Major	Description of Major 2, Primary Curriculum
Concentration(s)	Description of Concentration 1, Major 2, Primary Description of Concentration 2, Major 2, Primary Description of Concentration 3, Major 2, Primary
Minor(s)	Description of Minor 1, Primary Curriculum Description of Minor 2, Primary Curriculum
Major	Description of Major 1, Secondary Curriculum
Concentration(s)	Description of Concentration 1, Major 1, Secondary Description of Concentration 2, Major 1, Secondary Description of Concentration 3, Major 1, Secondary
Major	Description of Major 2, Secondary Curriculum

Concentration(s)	Description of Concentration 1, Major 2, Secondary Description of Concentration 2, Major 2, Secondary Description of Concentration 3, Major 2, Secondary
Minor(s)	Description of Minor 1, Secondary Curriculum Description of Minor 2, Secondary Curriculum

## Name Type Hierarchy on Transcript Request

You have the option to use a name type hierarchy on a transcript request. You can print a name on a transcript that is not the current name found on the identification record (SPRIDEN). You can identify a hierarchy of names in Banner that can be used to populate the “record of” name on the paper transcript. The Banner names that can be considered include:

- any name in the Person Identification/Name Repeating Table (SPRIDEN) that is identified by a name type
- general person legal name
- student diploma name

Two levels can be defined for the transcript name hierarchy. The top level is for the transcript type. The second level is for a person's request. If no matches are found in either of these data sources, the current identification name will be used.

Special rules processing is required for EDI transcripts (SHREDIY). That process requires that a first and last name exist. The diploma name and legal name cannot be used for the EDI transcript, since those records do not split the first and last names.

### Note

Name hierarchy selection can only be used for EDI transcripts if the transcript type selected allows an EDI transcript to be produced. ■

The STVTRNS validation table is used to identify the name sources, and required values are delivered with the supported name sources. SHATPRT (transcript type) stores the name hierarchy. SHARQTC (transcript request) also stores a name hierarchy specific to the individual.

When completing a transcript request, the Options Menu provides access to SHADEGR where the degree sequences can be queried (SHADGMQ), and the diploma name can be viewed, allowing the user to select the correct degree sequence number for the diploma name in the hierarchy rules.

## SSN/SIN/TIN, ID, and Birth Date Format Masks

You have the option to select the birth date, SSN/SIN/TIN, Banner ID, or none of those to be printed on the paper and/or EDI transcripts. (EDI does not transmit the SSN/SIN/TIN. It always uses the Banner ID.) (The birth date can be masked on the self-service transcript,

but the SSN does not display on the self-service transcript.) Use the checkboxes in the Personalization Print Options block on SHATRPT to choose the data you wish to include. You can change how the SSN/SIN/TIN or Banner ID appear on the transcript using format masks. You can also change the birth date format for the paper or self-service transcript to any valid date format using the pulldown list of format masks.

## SSN/SIN/TIN and ID

The rules for adding in a character mask to the SSN/ID values are as follows:

- Use the character X to display data and the character \* to conceal data.
- This can be used only for display-only columns.
- This cannot be used when there is data entry involved on the column.

The following describes valid format masks for character strings such as the SSN or ID number:

Element	Example	Description
*	****	Characters are displayed as asterisks.
X	XXXXXX	Characters are displayed as normal value.

Two examples of format masks and the SSN would be:

- Value 123456789 and mask \*\*\*\*\*XXX will print as \*\*\*\*\*789.
- Value 123456789 and mask \*\*\*XXX\*\*\* will print as \*\*\*456\*\*\*.

## Dates/Birth Dates and Times

The following describes valid format masks for dates, such as the birth date, and times, and can be used to change how the date appears on the transcript:

Element	Example	Description
YYYY	2003	four-digit year
YYY	003	three-digit year
YY	03	two-digit year
Y	3	one-digit year
SYYYY	-2003	S adds a prefix of a - to a BC date.
Y,YYY	2,003	Year with comma in this position
BC or AD	2003AD	BC/AD indicator
B.C. or A.D.	2003A.D.	BC/AD indicator with periods

Element	Example	Description
RR		Defaults to correct century. Calculates the century from a date entered by comparing the two -digit year entered with the year and century to which the computer's internal clock is set. Years 00 - 49 will be given the 21st century (the year 2000), and years from 50 - 99 will be given the 20th century (the year 1900).
MM	January = 01	two-digit month
MONTH	JANUARY	Name of month, padded with blanks to a length of nine characters
MON	JAN	Name of month, three letter abbreviation
DDD		Day of year (1 - 366)
DD		Day of month (1 - 31)
D		Day of week (1 - 7; Sunday = 1)
DAY	SUNDAY	Name of day, padded with blanks to a length of nine characters
DY	SUN	Name of day, three letter abbreviation
J		Julian day, the number of days since January 1, 4712 BC
AM or PM		Meridian indicator
A.M. or P.M.		Meridian indicator with periods
HH or HH12	1100	Hour of the day (1 - 12)
HH24	2300	Hour of the day (0 - 23)
MI		Minute (0 - 59)
SS		Second (0 - 59)
SSSSS		Seconds past midnight (0 - 86399)
/.		Punctuation is produced in the result.
"..."		Quoted string is produced in the result.

Element	Example	Description
FM		Fill mode: assumes implied characters such as O or space, displays significant characters left justified. Allows end user's input to be shorter than the format mask. (Use in conjunction with FX to require specific delimiters.)
FX		All date literals must match the format mask exactly, including delimiters.

Two examples of format masks and for dates and times would be:

- Birth date value 01-JAN-1980 and mask 'DD-MON' will display as 01-JAN.
- Birth date value 01-JAN-1980 and mask 'Month DD' will display as January 01.

## Self-Service Request and Payment Options

Records are inserted into Accounts Receivable when charge amounts exist that are greater than \$0.00. When an available payment option has been set up in STVWPYO that requires a self-service credit card charge and/or payment, both the charge and the credit will be inserted into the appropriate Accounts Receivable table when the self-service request has been completed. That insert can occur whether the charge type is *M* (record is inserted into TBRMISD) or *S* (record is inserted into TBRACCD).

- If the charge type is *M*, then the payment option must be a credit card type, because that is the only way to ensure that payment has been collected. By definition, TBRMISD requires a payment at the same time it posts a charge.
- If the charge type is *S*, and the payment option is not a credit card type, then any charges set up for the services are not inserted into the student's account from self-service. An example of this could be "Bill My Account."
- Charges of type *S* (that are not credit card charges) are inserted into TBRACCD when you run SHRTRTC for transcript requests.

The following four conditions affect the information that is displayed on self-service request pages, based on the settings in the Self-Service Print Options window for SHATPRT.

Conditions in Self-Service Print Options Window	Data/Message Displayed to the Student in Banner Self-Service Request Pages
1 <ul style="list-style-type: none"> <li>• Service level type is <i>M</i></li> <li>• Charge is greater than \$0.00</li> <li>• Payment options exist, both credit card and non-credit card types</li> </ul>	Display only those payment options where the <b>Credit Card Indicator</b> is <i>Y</i> in STVWPYO
2 <ul style="list-style-type: none"> <li>• Service level type is <i>M</i></li> <li>• Charge is greater than \$0.00</li> <li>• Payment options exist, but none is a credit card type</li> </ul>	Display Infotext error message:  <i>There is no credit card payment option available, so we cannot complete your request. Please contact the Bursar or Registrar for assistance.</i>
3 <ul style="list-style-type: none"> <li>• Service level type is <i>S</i></li> <li>• Charge is greater than \$0.00</li> <li>• Payment options exist that are credit card and/or non-credit card types</li> </ul>	Display all payment options
4 <ul style="list-style-type: none"> <li>• Service level type is <i>S</i> or <i>M</i></li> <li>• Charge is greater than \$0.00</li> <li>• No payment options exist</li> </ul>	Display Infotext error message:  <i>There are no payment options available, so we cannot complete your request. Please contact the Bursar or Registrar for assistance.</i>

## Transcript Population Process

The Transcript Population Process (SHRTPOP), which produces transcript requests for a selected population, may be used for the Academic Transcript, Electronic EDI Transcript, and XML Transcript, based upon user-specified parameters.

Selection parameters include Term, ID, Level, Advisor, Degree, Degree Status, Degree Graduation Date, College and Major. These parameters, with the exception of Term, allow multiple values. In order to have a transcript request produced, a student must have courses in academic history for some term and must have courses either in academic history or registration for the specified term.

Other parameters function differently depending upon the use of the Degree parameter. When this parameter is used, requests will be produced for only those persons who have a degree record (displayed on the Degrees and Other Formal Awards Form (SHADEGR)) and who meet other criteria. For example, when a degree code is specified and college and/or major are also specified, the process selects only students who have a degree record which matches on degree, college and/or major. When no degree code is specified, all selection is performed based upon the information contained in the person's general student record. For example, when no degree is specified, but a college or major is

specified, college and major are compared with the curriculum information maintained for the student, rather than degree information which may exist.

In addition to the selection parameters, other parameters are provided to specify the type of transcript to be produced and the issued-to information to be used on the transcripts. A single transcript type must be specified for each run of the Transcript Population Process. Charges may be posted to the Accounts Receivable Module by specifying Billing Term, Billing Detail Code and Billing Amount. A final parameter allows specification of the latest term for which In-progress Courses will be printed, if the transcript type selected includes printing of in-progress work.

The Transcript Population Process populates data in a temporary table, SHTTRTC. The Academic Transcript (SHRTRTC) must be run to produce the actual transcripts and update the transcript requests, or the EDI Transcript Extract must be run to generate the transcripts for electronic transfer. Only one set of results from a run of the Transcript Population can be stored in the temporary table. If existing entries already exist in the temporary table, they must be purged before a new population can be extracted. Purges are performed by a parameter option in the process.

## Transcript Request Purge

The Academic Transcript Request Purge Process (SHPTRTC) will only purge the requests generated out of the Transcript Request Form (SHARQTC). The only requests which will be processed are those requests whose date printed or EDI or XML send date is not null. This request process contains the following parameter selections which can further qualify the requests to be purged.

<b>Parameter</b>	<b>Description</b>
Request Date	All requests equal to or less than date entered.
Level	All requests for a particular level or all levels.
Official/Unofficial	Purge just official or unofficial or all request.
Type	Purge just a specific transcript request type or purge all types.
EDI Complete	Purge EDI transcript requests only if the EDI status is complete.

## EDI Transcript Download Processing

EDI transcript processing with EDI.Smart allows requests to be processed for all levels (AL) on the Transcript Request Form (SHARQTC). Multiple future in-progress terms and corresponding coursework are retrieved for transcripts being downloaded out of Banner.

## Electronic Data Interchange Extract (SHREDIY)

There are a number of Banner Student validation tables that use an EDI Equivalent column when a downloaded EDI transcript is created in the Banner system through the SHREDIY process. SPEEDE/ExPRESS standards require specific values to be transmitted for these elements. EDI equivalent columns are used on the corresponding forms. As part of the implementation process for preparing to send electronic transcripts from Banner, the EDI Equivalent column in these forms should be populated with EDI values as indicated in *A Guide to the Implementation of the SPEEDE/ExPRESS Electronic Transcript*.

If no EDI equivalent value is specified for any institution specific entries in the forms listed in the table that follows (in the *Using the Transcript Download* section), then no value will be transmitted for that element in the transcript. Please note that no validation or case sensitivity checking is performed for entries that are made in the EDI equivalent columns. This is because EDI standards may change at times that do not correspond with software releases.

For an up-to-date listing of all valid EDI values in the TS 130 Transaction Set (Electronic Academic Transcript), you may also consult the POSTSECONDARY Electronic Standards Council (PESC) website [www.pesc.org](http://www.pesc.org), where a link is provided to EDI Implementation Guides.

### Note

Not all of the expanded grade codes, credit hours, and GPA data used in Banner can be transmitted through EDI.Smart. Please refer to *A Guide to the Implementation of the SPEEDE/ExPRESS Electronic Transcript* for acceptable field lengths.

In particular, only a three position grade code can be transmitted from Banner to EDI.Smart. Any grade code that is larger than three positions will not be transmitted. ■

The SHREDIY program converts Banner values for gender and Banner values for the **Repeat** field for courses to the required EDI values.

Banner values for gender are converted as follows (refer to Data Element 1068):

Banner	Gender	EDI
F	female	F
M	male	M
Blank or Null	unknown	U

Banner values for the **Repeat** field for courses are converted as follows (refer to Data Element 66):

Banner	Repeat Indicator	EDI
I	Include	R
E	Exclude	N
A	Include GPA	R

On the online transcript, a duplicate indicator is used to identify duplicate courses (same subject and course number) in the same transcript. The first occurrence of the course will not be flagged, however, any additional occurrences of the same subject and course number will display a "D" for duplicate.

 **Note**

If the transcript is uploaded to the Transfer Articulation Evaluation Form (SHATAEQ), the processing of duplicate courses will be handled as required by SHATAEQ; that is, a numeric value (0 - 9) will be inserted into the **Duplicate** field in the Transfer information for all duplicates. ■

The **Repeat** field is used to identify repeated courses. The field may have the following values for institutional-based work:

Value	Description
<i>Include</i>	Include in GPA, saved to the database as <i>I</i>
<i>Exclude</i>	Exclude from GPA, but include only in attempted hours, saved to the database as <i>E</i>
<i>Include GPA</i>	Include in attempted hours and GPA, but exclude from earned hours, saved to the database as <i>A</i>
<i>(None)</i>	Not processed, saved to the database as <i>Null</i>

The following shows the mapping between the ANSI and Banner defined values:

**Mapping based upon ANSI and Banner definitions**

ANSI	Banner
N	E
R	I
X	E

 **Note**

A value of zero (0) is inserted for credit hours earned for in-progresses courses which would later be uploaded to SHATAEQ. This occurs because the field in the database is not null (SHRTRTK\_CRED\_HOURS). ■

## Using the Transcript Download

The following are the procedural steps needed to use EDI Transcript Download Processing:

1. Update the following existing validation forms with the appropriate EDI equivalent values. These values can be found in the third party *EDI SPEEDE/ExPRESS Implementation Guide* under the data element numbers which are listed below.

Validation Form	Code	Data Element Number
Academic Standing Code Validation Form (STVASTD)	academic standing codes	#641
Citizen Type Code Validation Form (STVCITZ)	citizen type codes	#1066
Class Code Validation Form (STVCLAS)	class codes	#1131
Diploma Type Code Validation Form (STVDPLM)	diploma type codes	#641
Ethnic Code Validation Form (STVETHN)	ethnic codes	#1109
Institutional Honors Code Validation Form (STVHONR)	institutional honors codes	#641
Level Code Validation Form (STVLEVL)	level codes	#1142
Marital Status Code Validation Form (STVMRTL)	marital status codes	#1067
Nation Code Validation Form (STVNATN)	nation codes	#26
Residence Code Validation Form (STVRESO)	residency codes	#1073
State/Province Code Validation Form (STVSTAT)	state/province codes	#156
Term Type Validation Form (STVTRMT)	term codes	#1139

2. Create the values in the Term Type Validation Form (STVTRMT) which are appropriate for your institution. This field uses the third party *EDI SPEEDE/ExPRESS Implementation Guide* for data element #1139.
3. Review the Transcript Type Code Validation Form (STVTPRT) to determine if a new code for EDI Transactions should be created or whether an existing code will be used.

4. Review the Transcript Type Rules From (SHATPRT) for the Transcript Type which will be designated as the EDI Transcript type.

 **Note**

The following information is *not* sent on an EDI transcript even if the boxes are checked. The EDI file layout does not support these elements: ■

- Issued Address
- CEU Dates
- Contact Hours
- Campus
- Term Admitted
- Term Matriculated
- Deans List
- Current College
- Current Minor
- Current Major
- Current Student Type
- Student Type By Term
- College By Term
- Transcript Type
- Student Centric Period Statistics

 **Note**

Major by term is always sent. The major code value is converted to the CIPC code value maintained on the Major, Minor, Concentration Code Validation Form (STVMAJR). ■

5. Set the **Electronic (Indicator)** field to *Y* on the Source/Background Institution Code Validation Form (STVSBGI) for those institutions which are able to receive transcripts electronically. If your institution is not using the FICE code as your source/background institution code on STVSBGI, then you will also need to load the FICE code into the **FICE (Code)** field on STVSBGI. If the source background code is the FICE code, then no value needs to be maintained in the **FICE (Code)** field.
6. Using the Academic History Control Form (SHACTRL), create a default term type and a default EDI transcript request type. These fields are both required for the production of EDI transcripts.
7. Using the values in the Term Type Validation Form (STVTRMT), update the **Term Type** field on the Term Code Validation Form (STVTERM). Only those terms whose term type values are different than the default value on SHACTRL need to be

updated. For example, if a code of "1- Full Semester" is created on SHACTRL, then only those terms which are not Full Semester need to be updated on STVTERM.

 **Note**

Your institution may want to write a script to update these values. ■

8. Using the EDI Academic Grade Qualifier Form (SHAGEDI) and the third party *EDI SPEEDE/ExPRESS Implementation Guide*, translate your institution's grading scheme into the required EDI format.

Prior to creating an EDI transcript for a student, you may want to review the student's honors information on the Degrees and Other Formal Awards Form (SHADEGR). If no EDI default has been specified, then the first institutional honor that appears will be sent for the degree.

9. Review the changes made to the Transcript Request Form (SHARQTC), and create transcript requests for institutions which have been designated as EDI institutions, and then create requests for non-EDI institutions.
10. Run the Academic Transcript (SHRTRTC) for all of the requests which have been entered.

 **Note**

No printed transcript should be generated for the EDI institutions. ■

11. Create transcript populations using the Transcript Population Creation Process (SHRTPOP) for non-EDI transcripts, and then generate transcripts using the Academic Transcript (SHRTRTC).
12. Run the Electronic Data Interchange Extract (SHREDIY), which is used to convert the transcript information into the flat file to be read by EDI.
13. Using EDI.Smart, process the electronic transcript. Refer to the EDI.Smart documentation for further information.
14. Create transcript populations using the Transcript Population Creation Process (SHRTPOP) for EDI transcripts, then generate transcripts using the Academic Transcript (SHRTRTC).

 **Note**

No printed transcript should be generated for EDI requests. ■

15. Run the Electronic Data Interchange Extract (SHREDIY) for the transcript population created in step #14.
16. Using EDI.Smart, process the electronic transcript.
17. An upload file will be generated from EDI.Smart, which will be used in the Reconciliation of Electronic Transcripts (SHREDIR) in the next step.

18. Run the Reconciliation of Electronic Transcripts (SHREDIR). This process will update the **Status** field in the EDI Request Details section of the Transcript Request Form (SHARQTC) with the EDI transmission status.
19. Create additional EDI transcript requests and non-EDI requests.
20. Purge transcript requests using the Transcript Request Purge Process (SHPTRTC).

 **Note**

The EDI transcript requests which have not been generated should remain on the database. ■

## EDI Transcript Upload Processing

### Overview

EDI (Electronic Data Interchange) is used to upload post-secondary transcripts into the Banner Student System for transfer articulation, in the SPEEDE/ExPRESS (Standardization of Post-Secondary Education Electronic Data Exchange) format which is received and processed by the EDI.Smart PC application. You need to have EDI.Smart installed and configured and the appropriate Transfer Articulation definitions completed to use this processing.

 **Note**

If you are licensed for the EDI.Smart product, you should install the most current release, prior to implementing EDI Transcript Upload Processing. ■

### Processing Transcripts

When the EDI.Smart PC application has received a transcript from the sending institution that is ready for printing on the local printer, it is also ready for upload to the host. The process on EDI.Smart that accomplishes this upload is called FLATUPLD. It produces a file known as FLAT130. This file must be moved (copied) to a destination on the host where Banner resides which you specify. This file is then parsed by the Pro\*C program SHREDIP (Upload of EDI Transcript). The parsing process scans the flat file and puts the data into interim Oracle tables in Banner.

You may review the electronic transcript activity (EDI and XML) from within Banner on the Online Transcripts Activity List Form (SHAEDIS). From this form, the ID of the student must be either matched to an existing Banner ID, or a new ID must be created to associate with the transcript. Once the ID has been verified, you may establish internal tasks and/or processes which apply to that transcript. In addition, you may optionally send a message to another Banner user indicating actions are required in regard to that transcript. It is also possible to view the transcript as received online. The view of the transcript contains the original EDI codes transmitted for such values as student level, and

dates in the format in which they were received, along with the corresponding SPEEDE/ExPRESS date qualifier.

After completing required institution-specific procedures for transcript review, and if appropriate, you may flag the transcript as ready for transfer articulation processing. You will be alerted if an EDI or XML transcript exists for a student in the Transfer Articulation Form (SHATAEQ). If an electronic transcript exists for the ID and transfer institution in the Key Information, you will be presented with the option to load the transcript. If transfer work already exists in academic history for the student, you must unroll (delete) the work from academic history before proceeding. You may elect to load the transcript into one attendance period or multiple attendance periods for that transfer institution. If multiple attendance periods are selected, the process will create the appropriate terms and attendance periods based on either the existing Term Code Validation Form (STVTERM) or transfer institution-specific term information created in the Transfer Effective Term Code Maintenance Form (SHADRMT). If a single attendance period is selected, you must build the transfer institution header record with an attendance period of one (1) on the Transfer Course Form (SHATRNS) prior to loading. After loading the transcript data, existing procedures should be used for transfer articulation evaluation and the roll to academic history.

## Concurrent Curricula and EDI Processing

The conversion of the *MAJOR*, *MINOR*, *CONCENTRATION*, and other field of study type codes to the EDI field of study identifier requires an external reference code on SOAXREF. The *GTVLFST* code and the values for *MAJOR*, *MINOR*, and *CONCENTRATION* are delivered as seed data.

### Note

You *must* add non-major, minor, and concentration field of study types at your institution and associate them with one of the EDI codes. ■

The concurrent curricula conversion will automatically be executed when SHREDIY begins to process a transcript for a student. If the curriculum data has already been converted, the conversion process will end without completing any activity.

The EDI transcript does not include all items that are part of the learner's current curriculum. The OPS loop includes only the primary major from the primary curriculum. The DEG loop includes the degree and fields of study from the outcome record and allows multiples be included in the output file.

## Name Type Hierarchy on Transcript Request

You have the option to use a name type hierarchy on a transcript request. You can print a name on a transcript that is not the current name found on the identification record (SPRIDEN). You can identify a hierarchy of names in Banner that can be used to populate the “record of” name on the paper transcript. The Banner names that can be considered include:

- any name in the Person Identification/Name Repeating Table (SPRIDEN) that is identified by a name type
- general person legal name
- student diploma name

Two levels can be defined for the transcript name hierarchy. The top level is for the transcript type. The second level is for a person's request. If no matches are found in either of these data sources, the current identification name will be used.

Special rules processing is required for EDI transcripts (SHREDIY). That process requires that a first and last name exist. The diploma name and legal name cannot be used for the EDI transcript, since those records do not split the first and last names.

 **Note**

Name hierarchy selection can only be used for EDI transcripts if the transcript type selected allows an EDI transcript to be produced. ■

The STVTRNS validation table is used to identify the name sources, and required values are delivered with the supported name sources. SHATPRT (transcript type) stores the name hierarchy. SHARQTC (transcript request) also stores a name hierarchy specific to the individual.

When completing a transcript request, the Options Menu provides access to SHADEGR where the degree sequences can be queried (SHADGMQ), and the diploma name can be viewed, allowing the user to select the correct degree sequence number for the diploma name in the hierarchy rules.

## Overall Data Requirements

The following are setup requirements which must be completed before processing the upload of EDI transcripts. Maintenance may be needed in some of these forms, particularly as an institution develops EDI trading partnerships with additional institutions.

### Term Type Validation Form (STVTRMT)

The Term Type Validation Form (STVTRMT) must contain the full set of valid EDI term types as defined in the third party *EDI SPEEDE/EXPRESS Implementation Guide* (Data Element 1139 - Session Code). These required codes and descriptions are listed below:

Code	Description
1	Full Year
2	Semester
3	Trimester

Code	Description
4	Quarter
5	Quinmester
6	Mini--term
7	Summer
8	Intersession
9	Long Session

### Level Code Validation Form (STVLEVL)

Use the **EDI Equiv(alent)** field on STVLEVL to allow institution specific level codes to be mapped to the values that may be transmitted on a transcript for the level of the coursework which is reflected in the GPA and hours. The valid levels as defined in the third party *EDI SPEEDE/ExPRESS Implementation Guide* (Data Element 1142 - Academic Grade of Course Level Code) that would be appropriate for post-secondary transcripts are:

Code	Description
G	Graduate
P	Professional
U	Undergraduate

Each of the above levels, if appropriate at your institution, should be mapped to only one STVLEVL code. Additional values exist for Data Element 1142 in the third party *EDI SPEEDE/ExPRESS Implementation Guide*, but they are not relevant to this processing.

#### Note

The EDI Equivalent column used for transcript upload processing, may also be used to translate institution level codes to the appropriate EDI value(s) for level code for the transcript download. A list of the valid values can be found in the third party *EDI SPEEDE/ExPRESS Implementation Guide*. ■

### Loading SPEEDE Transcripts into Banner

After the FLAT130 file produced by EDI.Smart has been uploaded to the host where Banner resides, the Upload of EDI Transcript (SHREDIP) must be executed to load the transcript data into interim Oracle tables in Banner. The SHREDIP process can be

executed through job submission or the host. To execute SHREDIP from the host, follow the instructions below.

Execute SHREDIP from the host command line using the following four parameters (which must be passed for successful execution).

The general form of the command line syntax is as follows:

Host	Command Line
UNIX	shredip <file to process> <log flag> <student RAP flag> <course RAP flag>  <userid/password>
VAX	runproc shredip <file to process> <log flag> <student RAP flag> <course RAP flag>  <userid/password>

The location and name of the data file to process will depend on where the EDI.Smart FLAT130 file was uploaded to the host system and the filename that was specified. It may be necessary to consult with technical staff at your institution to specify the location and name of the data file with the syntax that is appropriate for your operating system. The log flag may have a value of *Y* or *N*. A value of *Y* or *N* will result in some informational messages being displayed to your screen during SHREDIP processing. A value of *Y* will produce more extensive messages in the log file that is created during processing.

The student RAP and course RAP parameters, like the log file parameter, are specified as Y/N (Yes/No) flags on the command line. A value of *Y* in the Student RAP flag will process RAP segments associated with the student. A value of *Y* for the Course RAP flag will upload the RAP segments associated with the courses. A value of *N* for the Student or Course RAP flag will not process/upload the respective RAP segments.

*A specific example is:*

Host	Command Line
UNIX	shredip flat130.dat Y Y Y saisusr/u_pick_it
VAX	runproc shredip flat130.dat Y Y Y saisusr/u_pick_it

The SHREDIP process will produce a log file named EDI01.LOG. Note that the name is uppercase. This log file contains processing messages which can be reviewed, particularly for errors. Errors which may be encountered include:

- *\*ERROR\* Cannot open log file*
- *\*ERROR\* Cannot open input file*

- *\*ERROR\* Unknown type*
- *\*ERROR\* Internal ID has changed from <xxx> to <yyy> without a HEAD record*
- *\*ERROR\* Line processing error*
- *\*ERROR\* ??Bad parms?? Too many or too few parms*
- *\*ERROR\* Unprocessable line: <nnnn>*
- *\*ERROR\* Error occurred in processing*

You may receive multiple ASUM and SSUM segments created by EDI.Smart's Banner FLAT130 processing within the same transcript document.

You can process transcripts without an ASUM record, or transcripts without an SSUM record. The level associated with the course work in the transcript is derived from the ASUM record. If no ASUM record is present, the level is then derived from the SSUM record. If neither an ASUM or SSUM record is present, the records will be rolled back, and no transcript data will be inserted to the tables. An informational message will be written to the log file if the level cannot be derived.

*For example:*

```
()**LEVEL ERROR: No ASUM or SSUM record exists to obtain level
()Student SSN: EDI000001 Student Name: Editest, Sarah M
()**** Transcript NOT processed ****
```

#### **Note**

The long data type display of the transcript document image displays the value of the cum/sum indicator associated with the SSUM record, to accommodate the possible receipt of multiple SSUM records. ■

Use the following tables and indexes:

#### **SHRSUMA table**

- Column SHRSUMA\_GPA\_SEQNO is used to handle multiple ASUM records from EDI.Smart's Banner FLAT130 processing.
- Primary key index is on the SHRSUMA\_DCMT\_SEQNO and SHRSUMA\_GPA\_SEQNO columns.

#### **SHRSUMS table**

- Columns SHRSUMS\_GPA\_SEQNO and SHRSUMS\_CUM\_SUM are used to handle multiple SSUM records from EDI.Smart's Banner FLAT130 processing.
- Primary key index is on the SHRSUMS\_DCMT\_SEQNO, SHRSUMS\_ASES\_SEQNO, and SHRSUMS\_GPA\_SEQNO columns.

Processing prevents a partial save of records processed in an individual transcript if fatal errors are encountered. If a fatal error is encountered, informational messages will be

written to the log file to assist in identifying the document. No parts of the transcript processed will be saved, and processing will continue to the next transcript in the file. All records associated with a single transcript are committed only when they have all been successfully processed.

The size of the `ACKKEY_T` variable is 10 characters. This accommodates the maximum length that may be received for the corresponding EDI segment and element `BGN02`. This is a reference number which must have a minimum length of 4 and a maximum length of 9.

The size of the `HOME_CNTRY` variable is 3 characters. This accommodates the maximum length that may be received for the corresponding EDI segment and element - `DMG07`. This is the country of citizenship which must have a minimum length of 2 and a maximum length of 3.

 **Note**

In the database, the columns in the `SHBHEAD` table accommodate the maximum values that may be transmitted as follows: ■

Column	Value
<code>SHBHEAD_ID_EDT_KEY</code>	9
<code>SHBHEAD_ACKKEY_T</code>	9
<code>SHBHEAD_HOME_CNTRY</code>	3

Error checking handling displays informational messages to the screen device as well as writes them to the log file. Additional information to assist in problem identification and resolution is provided particularly when a record cannot be inserted into the database. A message is also included indicating that the transcript was not processed. Although a fatal error may be encountered prior to the complete processing of the transcript, the `SHREDIP` program will continue to read and process all the remaining records, and will report any additional errors detected, both fatal and non-fatal.

Error checking is used to validate incoming dates. Dates are examined to ensure that they can be successfully inserted into tables, where required. All invalid dates (invalid by Oracle date format requirements) will cause an error/informational message to be written to the log file.

Non-critical dates will be replaced by nulls when inserted into the tables. Invalid critical dates, on which Banner processing of the transcripts depends, will result in the transcript data being rolled back, and an appropriate informational message written to the log file.

Non-critical date error informational messages (transcript processed):

*Invalid HEAD dob date*

*Invalid SSUM rank date*

*Invalid ASUM rank date*

*Invalid ASES start date*

Critical date error informational messages (transcript not processed):

*\*\*\*\* Transcript NOT processed \*\*\*\* Invalid date qualifier or ASES begin date format*

*\*\*\*\* Transcript NOT processed \*\*\*\* Invalid date qualifier or ASES end date format*

In each case, these messages would be followed by additional detail to assist in identifying the transcript with the problem:

*Example of non-critical (non-fatal) error:*

```
()**DATE ERROR #-1839: Invalid HEAD dob date  
()Student SSN: EDI000001 Student Name: ,  
()ORA-01839: date not valid for month specified
```

 **Note**

In the above example, SHREDIP processing has not yet reached the record which identifies the student's name, and that is why no name is displayed in this particular error message. For other date error messages that occur after the name is processed, the name will be included in the message. ■

Logic is used to accommodate the receipt and processing of additional Banner FLAT130 record codes created from the EDI transcript segments. Processing is successful when the following record codes may be transmitted:

Banner FLAT130 record	Corresponding TS 130 Segments(s)
ACAD **	SST, N1, N3, N4
SNTE	NTE
DFOS	FOS
HDR3	NTE
HDR2	PCL
ANTE	NTE
IMMS	IMM
HCND	HC
SPED	SP

Banner FLAT130 record	Corresponding TS 130 Segments(s)
OPRG	OP
CREF	REF
CCSU	CSU
CNTE	NTE
COIN	N1
DEGR	DEG
DSUM	SUM
DNTE	NTE

 **Note**

\*\* The above records, with the exception of the ACAD record, are written to the log file only. Selected information from the ACAD record is written to the long data type display. Data for all of the above tables is not currently stored in Banner Oracle tables. ■

Although the transcript record will no longer be displayed, the data is not deleted from the database tables. It may be desirable to periodically purge transcript data from the tables populated by SHREDIP after the transcripts have been successfully uploaded to transfer articulation, and the status code for archiving the transcript has been updated to a status of complete. You may use the Electronic Transcript Upload Purge Process (SHRETRP) to delete this information.

## Note and RAP Segments

The EDI Transcript Upload Parser is used to upload Note segments and optionally, RAP segments. Note segments identify transfer institution student information with regard to General Education Certification, repeated course work policies, credit through examination, credit for prior experiential learning, and advanced placement, as well as additional data needed to accurately evaluate a student's transcript and determine student standing, class level, and eligibility. RAP segments identify requirements, attributes, and proficiencies of students and/or individual courses.

Both the Note and RAP segments are included in the long data type view of the transcript available in SHAEDIS. To make these segments easily identifiable visually, each will be preceded by a single asterisk (\*) followed by the segment name as in the following examples:

\* Notes:                    Course Note One  
                                 Course Note Two  
                                 Course Note Three (etc.)

\* RAP:                        General Educ Certification

The process allows you to specify whether student-specific RAP segments and/or course-specific RAP segments should be uploaded with the transcript data. Although RAP segments include free format alphanumeric fields for transmitting this information, academic agencies or consortiums may establish defined and approved specific field coding structures and schemes to transmit specific meanings as they relate to the student or courses. The usefulness and interpretation of RAP segment data will depend on agreements that have been established with your trading partners.

The transcript document image includes the display of all Note segments, if transmitted, and RAP segments, if selected for upload.

The command line structure for submitting SHREDIP for processing is:

```
shredip <file to process> <log flag> <student RAP flag>  
<course RAP flag> <userid/password>
```

The student RAP and course RAP parameters, like the log file parameter, are specified as Y/N (Yes/No) flags on the command line. A specific example is:

```
shredip flat130.dat Y Y Y saisusr/u_pick_it
```

 **Note**

The values of the flags passed on the command line for the log file, upload student RAP segments, and upload course RAP segments are interpreted on specific platforms as uppercase or lowercase. Entry of either lower or uppercase values for the flags is forced to uppercase for purposes of program processing. ■

SHREDIP processing extracts prior college information from the transcript and includes the display of that information in the view of the transcript document image. (These are HDR2 and HDR3 records in the Banner130 file created by EDI.Smart.)

The data displayed in the long data type view of the transcript available in the Online Transcripts Activity List Form (SHAEDIS) displays "attempted hours" as opposed to credit hours or earned hours. The Transfer Articulation Evaluation Form (SHATAEQ) shows the uploaded attempted hours in the Transfer Courses scroll box for articulation according to the rules established on the Transfer Grade Code Maintenance Form (SHATGRD) and calculation of Transfer GPA.

## Establishing Crosswalks to Banner Values for Incoming EDI Transcript Data (TS130)

SHREDIP processing allows several TS130 coded data elements to be translated into the appropriate Banner Student values for each institution. A description of this logic, and the set-up required to build the crosswalk translations are described in the following sections.

Here is the strategy for processing and uploading electronic data from multiple sources (Web and EDI) into the Banner Student System. The EDI Cross-Reference Rules Form (SOAXREF) supports Web and electronic admissions application processing (TS189). One of the purposes of SOAXREF is to define how incoming EDI data will be translated into Banner values. A number of scripts are used to make building the SOAXREF underlying table easier, including a script which populates EDI code sets for every current valid EDI value for any field which can be used in Web admissions application processing or received in an EDI TS 189 transaction set. Further information about these scripts is included below.

Although several EDI standard data elements are transmitted in an electronic transcript, only a selected number of these elements require a translation or a crosswalk to a Banner value. The elements that require a crosswalk translation to be established on SOAXREF for transcript upload processing are:

- high school code \*
- high school graduation type
- prior college code \*, including the trading partner sending a transcript and other postsecondary work identified within a transcript
- degree code
- degree honors
- academic summary, degree, and course levels
- field of study types \*

\* Both the high school, prior college, and field of study type codes will require a qualifier to be specified in the rule on SOAXREF.

The above values are used in EDI application processing. A number of existing validation forms include EDI values, such as STVLEVL, and some of the values listed above are also used in Web and EDI admissions application processing. To assist you in creating and maintaining some of these values, scripts have been provided. These scripts extract data from existing tables and populate SOAXREF. They are designed to be able to be run as often as necessary, so that if you make changes or add additional data in validation forms, you can re-populate SOAXREF with the entire set of new values.

### **Note**

You are not required to populate the EDI values in other validation tables or to use the sample scripts, but appropriate values must exist in

SOAXREF before EDI transcript upload processing can begin. If you do not use the scripts, you must populate SOAXREF using other means (manual update or locally developed scripts). ■

If you choose to add records to SOAXREF manually, you must first add the appropriate label and description to the EDI Verification Label Validation Form (STVXLBL). These labels are normally inserted by the scripts described in the following sections. If you must add labels manually, use the label codes provided. Be careful to build the label codes exactly as listed in the chart which appears in the next section, after the instructions for Defining EDI Cross-reference Values for High Schools and College.

## Define EDI Cross-reference Values for High Schools and College

Four scripts are used to assist in building the cross-reference values for high schools and colleges. The scripts `xrefhsch.sql` and `xrefcol1.sql` use the value in the **FICE (Code)** field of the Source/Background Institution Code Validation Form (STVSBGI) as the EDI value in SOAXREF. The scripts `xrefhsc2.sql` and `xrefcol2.sql` use the value in the **Source or Background Institution (Code)** field of STVSBGI as the EDI value in SOAXREF. You can use one or the other set of scripts to populate high school and prior college values in SOAXREF, depending upon the choices you wish to make available to applicants.

For Web use, the web page requests a “school type” code and “school code type”. The school type code must be a valid value in SOAXREF for the label *SBGIQLFR*, and the values for this qualifier should be EDI-standard qualifiers for various code sets (like FICE or ACT). The school code entered must be a valid value in SOAXREF for the label *STVSBGIC* or *STVSBGIH* which is valid for the entered school code type.

If your institution chooses to use the value in the **FICE (Code)** field of STVSBGI as the code which students should use to identify a high school or college, follow the four bulleted steps below (and use the scripts `xrefhsch.sql` and `xrefcol1.sql` to populate high school and college values in SOAXREF). If your institution has used a standard code set (like ACT or ETS codes) for school codes in STVSBGI, no additional set-up steps are required, and you can use the scripts `xrefhsc2.sql` and `xrefcol2.sql` to populate high school and college values in SOAXREF.

- Review the values in the **FICE (Code)** field on the Source/Background Institution Code Validation Form (STVSBGI).
- For US institutions, values used should be actual FICE codes. For institutions in other countries, a different code set (like Stats Canada codes) might be used. Determine the code set used for this field. Verify that value for the Label *DFLTPCOLQLFR* in Group Code *PCOL* on the Electronic Admissions Application Rules Form (SAAERUL) contains the EDI qualifier for this code set.

(If FICE Codes are used in the **FICE (Code)** field on STVSBGI, the EDI value for this group and label should be 73.)

For a complete, current set of EDI values, consult the POSTSECONDARY Electronic Standards Council (PESC) website [www.pesc.org](http://www.pesc.org), where a link is provided to EDI Implementation Guides.

 **Note**

If you use FICE codes for STVSBGI institution codes, you have not previously been required to repeat this value in the **FICE (Code)** field. For the purposes of this script, the FICE code must be in the **FICE (Code)** field. ■

- If FICE codes (or the values from another appropriate code set) are not present on STVSBGI, update the rows with appropriate values.
- Have your Information Services representative run the scripts `xrefcoll.sql` and `xrefhsch.sql`, which are used to create a row in the table SORXREF for each row in STVSBGI which has a value in the **FICE (Code)** field and either *H* (High School) or *C* (College) in the **Type** field. These scripts can also use the school's city, state/province, and nation, which are maintained on the Source or Background Institution Base Form (SOASBGI) in creating the SOAXREF description which will display on the Web. Review the scripts and their options with your Information Services representative before running them. Complete instructions for customizing the scripts to reflect that your local choices are included in the comments of the scripts, which your Information Services representative can review with you. Review the results in SOAXREF for the labels *STVSBGIC* and *STVSBGIH* to see if the Descriptions appear in the way you want them to display on the Web. If not, re-run the scripts, selecting a different option for creating the Description, or update the descriptions manually.

 **Note**

These scripts can be run whenever values are added to or changed on STVSBGI. All values will always be deleted from SOAXREF (table SORXREF), and the table/form is then re-populated with the current values from STVSBGI. ■

Several scripts were automatically executed as part of the installation process to insert rows into SOAXREF for degree level-degree codes (*STVDEGC*), high school graduation types (*HSCHRSN*), honor level codes (*HONRLEVL*), and grade or course level codes (*GRCRLEVL*). \*\* The entries that were created represented the listing of known EDI values for those data elements at that time. To update the Banner code translations for these data elements, enter the appropriate label in the key of SOAXREF, and perform a Next Block function. For each individual value, enter the appropriate Banner code in the Banner Value field on the form. Please keep in mind that additional values may be added for any of these elements, and manual updates to reflect these additions would be required on SOAXREF.

For a complete, current set of EDI values, consult the POSTSECONDARY Electronic Standards Council (PESC) website [www.pesc.org](http://www.pesc.org), where a link is provided to EDI Implementation Guides.

\*\* The actual scripts executed are as follows:

Label	Script
STVDEGC	ixref18.sql
GRCRLEVEL	ixref31.sql
HONRLEVEL	ixref32.sql
HCHRSON	ixref33.sql

### Using Field of Study Types

The conversion of the *MAJOR*, *MINOR*, *CONCENTRATION*, and other field of study type codes to the EDI field of study identifier requires an external reference code on SOAXREF. The *GTVLFST* code and the values for *MAJOR*, *MINOR*, and *CONCENTRATION* are delivered as seed data.

#### Note

You *must* add non-major, minor, and concentration field of study types at your institution and associate them with one of the EDI codes. ■

EDI Label	EDI Qualifier	EDI Value	Standard	Web	Banner Value
GTVLFST	MAJOR	M	Y	N	MAJOR
GTVLFST	MINOR	N	Y	N	MINOR
GTVLFST	CONCENTR	C	Y	N	CONCENTRATION

All other field of study types need to be included on SOAXREF and identified by one of the following EDI values:

Value	Description
C	Concentration
E	Endorsement
G	Graduate Non-degree
L	Licensing
M	Major

Value	Description
N	Minor
S	Concentration
T	Teaching
V	Visiting Scholar

The following labels are used on SOAXREF for EDI processing.

Label	Description	Processing Notes
GTVLFST	Field of Study Types	Values in the Field of Study Types label are used to translate EDI field of study codes into appropriate Banner codes. Both the field of study types and their qualifiers must be specified.
STVSBGIC	EDI College Codes	Values in the EDI College Codes label are used to translate EDI college codes for postsecondary work completed at other institutions into appropriate Banner codes and to specify the college codes and their qualifier that you expect to receive from your trading partner. You must have an entry for each trading partner, and the Source/Background Institution record (SOASBGI) must exist. Both the college codes and their qualifier must be specific.
STVSBGIH	EDI High School Codes	Values in the EDI High School Codes label are used to translate EDI high school codes into appropriate Banner codes. Both the high school codes and their qualifier must be specified.
STVDEGC	Degree Level-Degree Code	Values in the Degree Level-Degree Codes label are used to translate EDI degree level codes into valid Banner codes found in the Degree Code Validation Form (STVDEGC). These values will be used only in translating prior college degrees to Banner degrees in TS130 processing. EDI Degree Level codes represent generic degree levels, (for example, Baccalaureate Degree instead of Bachelor of Arts and Bachelor of Science). To translate EDI values to Banner values, you will need generic degrees codes in STVDEGC.

Label	Description	Processing Notes
HSCHRSON	High School Graduation Type Codes	Values in the High School Graduation Type Codes label are used to translate the EDI type of high school diploma or certificate the student was awarded into valid Banner codes found in the Diploma Type Code Validation Form (STVDPLM). These values will be used only in translating high school graduation type to Banner diploma types in TS130 processing.
HONRLEVL	Honor Level Codes	Values in the Honor Level Codes label are used to translate Honors Level of the degree into valid Banner codes found in the Institutional Honors Code Validation Form (STVHONR). These values will be used only in translating prior college degree honors to Banner honors in TS130 processing.
GRCRLEVL	Grade or Course Level Codes	Values in the Grade or Course Level Codes label are used to translate academic grade or course level codes into valid Banner level codes found in the Level Code Validation Form (STVLEVL). These values will be used only in translating level of work for the overall academic summary, each individual academic session summary, each individual course taken, and awarded degrees.

Both the EDI College Codes and High School Codes require qualifiers to be specified in the rules established on SOAXREF. An EDI qualifier is used to identify the content of an associated data element. For example, college codes can be transmitted using a variety of coding structures, such as FICE codes, IPEDS codes, or ETS codes, etc. When a qualifier is associated with an incoming code, it identifies the type of code being transmitted. High school and college codes transmitted via EDI always require a qualifier to be able to identify the institution. As an example, your trading partner may indicate that their FICE code will be transmitted for their institution identification. However, in your Banner Student database, you may have built Source/Background Institution Codes using the IPEDS coding structure. To upload the FICE code for your trading partner, and have it crosswalked or translated to the IPEDS code used in your Banner database, you would manually build the SOAXREF rule with the following format:

Label	Qualifier	Code	Disp Std	Disp Web	Description	Banner Value
STVSBGIC	73	123456	Y	N	Central Univ	654321

 **Note**

73 is the qualifier code that indicates a FICE code is being transmitted. ■

Before processing EDI transcripts, you must enter or update SOAXREF rules for the Labels specified in the chart above. To assist in building these rules, the following chart identifies the TS 130 segments and elements that will be translated by the SOAXREF rule,

some of the expected EDI values, and the previous source in Banner used to perform the translation.

For a complete, current set of EDI values, consult the POSTSECONDARY Electronic Standards Council (PESC) website [www.pesc.org](http://www.pesc.org), where a link is provided to EDI Implementation Guides.

<b>TS 130 Segment</b>	<b>Data Element</b>	<b>EDI Qualifiers (not inclusive)</b>	<b>SOAXREF Label</b>	<b>EDI Values</b>	<b>Previous Banner Source</b>
N1	N103 - Institutional Code Qualifier	See Data Element 66 71 - IPEDS 72 - ETS 73 - FICE CS - Stats Canada (Canadian University) ZZ - Mutually Defined	STVSBGIC	Example - Georgia State University ETS code is 2851; FICE code is 001574	STVSBGI_CODE
N1	N104 - Institution Code	See Data Element 66 71 - IPEDS 72 - ETS 73 - FICE CS - Stats Canada (Canadian University) ZZ - Mutually Defined	STVSBGIC	Example - Georgia State University ETS code is 2851; FICE code is 001574	STVSBGI_CODE
N1	N103 - Institutional Code Qualifier	See N1 above	STVSBGIH	Similar to above	
N1	N104 - Institution Code	See N1 above	STVSBGIH	Similar to above	
SST	SST01 - Status Reason Code	N/A	HSCRSON	See data element 641 B18 - Standard High School Diploma B24 - General Education Development Diploma (GED) B25 - Other High School Equivalency	
PCL	PCL01 - Institutional Code Qualifier	See N1 above	STVSBGIC	See N1 above	

TS 130 Segment	Data Element	EDI Qualifiers (not inclusive)	SOAXREF Label	EDI Values	Previous Banner Source
PCL	PCL02 - Institution Code	See N1 above	STVSBGIC	See N1 above	
PCL	PCL05 - Academic Degree Code (Highest Degree Received)	N/A	STVDEGC	See data element 1126 2.3 Associate Degree 2.4 Baccalaureate Degree 4.2 Master's Degree	
DEG	DEG05 - Status Reason Code (Honors Level of Degree)	N/A	HONRLEVEL	See data element 641 B35 - Highest Honors B36 - Second Highest Honors B37 - Third Highest Honors	
SUM	SUM02 - Academic Grade or Course Level Code	N/A	GRCRLEVEL	See data element 1142 U - Undergraduate G - Graduate P - Professional	STVLEVEL EDI Equiv column

If an SOAXREF crosswalk rule has not been established for one of the elements identified above, an error message will display and will be written to the log file similar to this example:

*Missing record of value on SOAXREF:*

Label: *STVSBGIC*

Institution: *001118*

Qualifier: *73*

No translation for LEVEL exists on SOAXREF

Missing record or value on SOAXREF

Scripts were provided in the installation process to assist in populating the SOAXREF form. These scripts are also provided in support of Banner Student Self-Service. The same scripts can also assist in populating the SOAXREF form for EDI transcript processing.

# XML Transcript Processing

This section describes XML transcript processing.

## Overview

You can transfer transcript data electronically from one institution to another, using XML formatted files with Postsecondary Electronic Standards Council (PESC) XML Transcript standards. XML transcripts can be sent, as well as received. This functionality gives users a choice to print paper transcripts, use electronic transcript exchange through EDI Smart, use self-service transcripts online, or use the electronic XML transcript. For more information about the PESC/XML transcript, please visit this Website: [www.pesc.org](http://www.pesc.org) and use the link for Standards.

XML transcript processing is similar to EDI transcript processing. You need to set up supporting validation and rules, set up translation values on SOAXREF, and then you can either send a transcript by creating a transcript request or receive a transcript using sleep/wake or batch processing. The **Electronic (Indicator)** on the Source/Background Institution Validation Form (STVSBGI) can be set for each record to specify whether the institution can receive electronic transcripts, and if so, whether they should be sent via EDI or as XML formatted transcripts.

Transcript files can be produced in XML format according to the PESC/XML transcript schema. Two processes are used to import (SHRPESI) and export (SHRPESE) transcript data files between institutions in XML format. Cross-reference values to support these processes are available on SOAXREF. User-Defined Extensions (UDE) indicators on STVDSTS are used to further define the information that is to be included on the transcript. A UDE is an institutionally defined piece of the XML transcript.

### Note

*A shell is delivered for user-defined extensions, but the contents of the shell are determined and developed by your institution.* ■

The XML document can be encrypted and authenticated. SHACTRL is used to store default FTP location information for where the XML transcript should be sent, as well as transmission information for host name, remote directory, username, and password. The password information will be encrypted upon entry and will not be accessible unless it is unencrypted. The Source/Background Access Form (SOASBGA) is used to create institution-specific information that includes host name, remote directory, username, and password information for transcript transmission. The form also includes the **Use Default Location** indicator that is used to determine whether the specific information on SOASBGA or the default information on SHACTRL should be used.

Your institution can execute a process from within Banner to create an XML transcript, rather than use a separate application. The following can be performed in Banner.

- The PESC/XML Transcript Export Process (SHRPESE) is used to read the XML transcript requests from the collector file and generate the XML file for the transcripts, along with control and log file entries.
- SHARQTC is used to request XML transcripts for those institutions that are XML capable.
- SHRTPOP is used to process XML transcripts for a population selection.
- SHRETRP is used to purge XML transcript data from the appropriate tables, along with EDI transcript data.
- The PESC/XML Transcript Import Process (SHRPESI) is used to bring into an institution XML transcript files that have been received from another institution.

XML transcript processing contains the functionality to notify users of the encryption and file transfer status. The success or failure of the file encryption can be tracked. The PESC/XML Export Document Status Form (SHIEPTD) is used to track the status of XML transcripts sent by the institution. The PESC/XML Import Document Status Form (SHIIPD) is used to track the status of XML transcripts received by the institution. You can use SHARQTC to verify whether a transcript has been generated. You can view (via SHAEDIS) and print XML transcripts to preview the data.

### Process Test Scores and GPA Information

Test score data can be included in the XML transcript. The **Test Scores (Indicator)** on SHATPRT allows you to specify whether a transcript type is to have test scores included in its output. You can *only* include test score data when using an XML transcript.

GPA information can also be included in the XML transcript in rounded or truncated format. You can request an XML transcript for a specific level or for all levels per student via SHARQTC and SHRTPOP.

### Process Immunization Records

Immunization data can be included in the XML transcript. The **Immunization Data (Indicator)** on SHATPRT allows you to specify whether a transcript type is to have immunization records included in its output. You can *only* include immunization data when using an XML transcript.

Use the following forms in Banner General to set up immunization information.

- The Immunization Code Validation Form (GTVIMMU) is used to store immunization codes, such as *90701, DTP Immunization*.
- The Immunization Status Code Validation Form (GTVIMST) is used to store immunization status codes, such as *1, First Inoculation*.

- The Immunization Information Form (GOAIMMU) is used to maintain immunization status information for an ID, such as the immunization code and description, immunization status, immunization date, and any comments that are needed.

XML transcript processing uses the Banner Student EDI label codes from STVXLBL and the cross-reference labels and rules from SOAXREF that are also used with EDI immunization processing.

STVXLBL EDI Label Code	Description	System Required
IMMZSTAT	Immunization Status Codes	Y
IMMZTYPE	Immunization Type Codes	Y

Data for immunization records can be added manually on GTVIMMU and cross-referenced on SOAXREF. Please refer to the “Export Crosswalk Values on SOAXREF” section for a list of values that can be used on GTVIMMU.

### XML Transcripts in Banner Student Self-Service

Banner Student Self-Service can also process XML transcripts. The Transcript Request Summary page checks the transcript request. If a student selects an institution that has been identified on STVSBGI as being able to process electronic transcripts via XML or EDI, the student has the option to request that the transcript be sent electronically or by paper. If the student chooses the electronic transcript option, and the institution is set up for XML transcripts, a type value of *P* is inserted into the Transcript Request Table (SHTTRAN).

### Security for XML Transcripts

Pretty Good Privacy (PGP) software can be used for security with XML transcripts. To use PGP, there are tasks you need to complete.

- Download the freeware for PGP at [www.pgpi.org/products/pgp/versions/freeware/](http://www.pgpi.org/products/pgp/versions/freeware/). (Version 6.5.8 of PGP supports RSA keys.)
- If your version includes encryption steps, update the `pgp.properties` file in both the export (SHRPESE) and import (SHRPESI) processes to use PGP encryption.
- If your version includes encryption steps, exchange the key for your institution with the key for the institution where the server is located. You need to exchange (register) keys with any institution to which you are directly transmitting files.

## XML Transcript Data Selection Using SHATPRT

The following fields on SHATPRT can be used to select data for inclusion on the XML transcript.

Under the Print Options in the main window:

- **Student Address**
- **High School**
- **Academic Events**
- **Degree GPA**
- **Qualifying Papers**
- **Qualifying Papers Text**
- **Level Comments**
- **Term Comments**
- **Course Comments**
- **Major by Term**
- **Transfer Detail**
- **GPA Statistics**
- **Academic Standing by Term**
- **Institution Totals**
- **Transfer Totals**
- **Overall Totals**
- **Test Scores \***
- **Immunization Data \***
- **College Transcript (User-Defined Extensions) \***
- **Student (User-Defined Extensions) \***
- **Academic Record (User-Defined Extensions) \***
- **Course (User-Defined Extensions) \***
- **Birth Date**

\* These fields are used *only* with XML transcripts. They are not available for paper, EDI, or self-service transcripts.

Under the Primary Outcome Curriculum in the Curriculum Print Options window:

- **Major**
- **Major Concentration**
- **Minor**
- **Concentration**
- **Other Fields Of Study**

## Use the Export and Import Processes

This section describes the import and export processes used in Banner.

### **PESC/XML Transcript Export Process (SHRPESE)**

This Java process is used to create electronic transcripts in XML format by producing a `.xml` file that can be read by the receiving institution. It also produces `.lis` and `.log` file entries. It uses the file transfer protocol information on SOASBGA to send the transcript to an institution. The process reads XML transcript requests from the collector records and extracts those with a transcript type of *P* (*PESC/XML*) from the **Electronic** field on STVSBGI and a transcript type of *XML* on SHATPRT.

To use this process, a transcript must have been requested through SHARQTC or SHRTPOP (using population selection), or online using self-service. SHRPESE reads the requests from the collector file and generates the XML for the transcripts along with control and log file entries. Only official transcript requests with a send type of *P* will be processed. Transcripts may be produced for an individual with a pending request or for all requests which have been sent to the collector file. When each transcript is generated, SHRPESE will update the **Status** and **Status Date** fields in the Electronic Transcript Status information on SHARQTC. If no errors have occurred, the **Run Date** value will also be populated.

The electronic transcript status codes from STVEDIS are listed below.

<b>Electronic Status Code</b>	<b>Description</b>
P0	XML Request Received
P1	XML Transcript Exported
P2	XML Export had errors
P4	XML Export held for final grades
P5	XML Export held for awarded degree

The process allows for the use of multiple commands for SFTP and FTP when XML files are exchanged. The `shrpese.jar` file contains the option to break out and issue an operating system command. Institutions will maintain their own shell scripts to perform the SFTP or alternate transmission protocol.

This process also provides a baseline view of transmitted data that is printable in the PESC standard template format. You can view the output on the Saved Output Review Form (GJIVERO). While imported XML transcripts can be viewed on SHAEDIS, this view truncates files to 31880 characters, which does not provide readable, formatted versions of the XML file (input or output). The SHRPESE process produces an HTML readable version of the XML file contents.

### PESC/XML Transcript Import Process (SHRPESI)

This Java process is used to import XML transcript files into an institution from other institutions. It reads files from a server, loads them to a temporary table, renames the files (`.old`), and then loads the data to Banner using rules set up on STVDSTS.

The process checks for duplicate records in Banner. The duplicate records will be noted in the `.lis` file by file name, document ID, Banner document sequence number, and the message: *Document has already been processed*. New records will be loaded with the same information as above, but the message will read: *Transcript Document Imported*.

New records can be viewed and routed on SHAEDIS before they are imported. Matched records can be processed and verified using GOAMTCH and then articulated using SHATAEQ. The decision to load transcripts can also be made on SHATAEQ.

#### Note

Data is imported into existing Banner EDI tables. Additional UDE data is imported into new tables based on code written by the institution. ■

## Set Up XML Transcripts

Use the following steps to set up processing (sending and receiving) for XML transcripts.

1. Set up crosswalk values on SOAXREF with the **XML (Indicator)** checked (set to Y).

Please see the delivered seed data for crosswalk values.

2. Make sure an appropriate transcript type for electronic submission exists on STVTPRT.
3. Make sure the source/background code for your institution also has an FICE or CEEBACT code on STVSBGI.

4. Make sure the institution codes for PESC/XML capable colleges or high schools have an **Electronic** value of *P* on STVSBGI.

 **Note**

PESC/XML transcript processing does not currently support high school transcripts. ■

5. Create codes on STVHLWK to indicate the highest level of work to be accepted from PESC/XML capable institutions.
6. Create codes on STVTLVL to indicate the highest level of transfer work to be accepted from PESC/XML capable institutions.
7. Make sure term codes on STVTERM have assigned term type codes for any terms that are different than the default term type code in SHACTRL.
8. Set up electronic document status codes on STVDSTS.
  - *Verification of ID* - Create a status code with a priority of *I*. All other indicators must be set to *N*.
  - *Transfer Articulation* - Create a status code with a priority that is higher than *I*. Ensure that the **Transfer Articulation Indicator** is set to *Y*.
  - *Test Scores* - Create a status code with a priority that is higher than *I*. Ensure that the **Tests (Indicator)** is set to *Y*.
  - *Immunizations* - Create a status code with a priority that is higher than *I*. Ensure that the **Immunizations (Indicator)** is set to *Y*.
  - *User-Defined Extensions* - Create a status code (or codes) with a priority that is higher than *I*. Ensure that the appropriate user-defined extension indicators are set to *Y*.  
  
User-defined extensions on STVDSTS are: **Main, Student, Academic Record,** and **Course**.
  - *Archive Status* - Create a status code with the highest priority. Ensure that the **Archive Status Indicator** is set to *Y*. All other indicators must be set to *N*.
9. Define attendance periods for sending institutions on SHADRTM.

Each start and end date must be equated to a valid term code from STVTERM.

 **Note**

Data should only be entered on SHADRTM if you want to limit the terms to be accepted from the transfer institution. If records are built on SHADRTM, only the imported student coursework that falls within those transfer session date ranges will be loaded into SHATRNS. Any terms that do not fall within the transfer session date ranges defined for the institution on SHADRTM will not be loaded. If you want to load all terms

from a transcript that are defined in the STVTERM table, do not define rules for the institution in SHADRTM. ■

10. Select the transcript type, and set up the desired print options on SHATPRT.

SHATPRT also contains the following options for user-defined extensions. They are: **College Transcript, Student, Academic Record, and Course**.

11. Enter the default term type code and the FICE code for your institution on SHACTRL.

Also enter the FTP information, if your institution will be using a common XML exchange system, that may be used for XML transcript exchanges. An example is the University of Texas - Austin server in Austin, TX.

The default term type code causes the session type to be created in the XML document for any term codes that do not have a term type (STVTRMT).

12. Enter the characteristics for transfer institutions on SOABGTA.
13. Define grades to be accepted from transfer institutions on SHATGRD.
14. Enter source/background and FTP information for XML transcript eligible schools on SOASBGA.  
  
If you want to use the default server that was set up on SHACTRL, check the **Use Default Location** checkbox on SOASBGA.
15. Make sure address information for your institution and any schools to which you are sending transcripts is defined in SOASBGI.
16. If you are using test score data, define test codes on STVTEESC.
17. If you are using immunization data, define immunization codes on GTVIMMU.
18. If you are using immunization data, define immunization status codes on GTVIMST.

## Send (Export) XML Transcripts

Use the following steps to create XML transcripts for export to a receiving institution.

1. Create an *official* transcript request on SHARQTC, or use SHRTPOP to create a transcript population selection to process multiple requests. SHRPESE will only process official requests, even if the request type is *P*.
  - 1.1. In the main window of SHARQTC, select a transcript type, number of copies, and check the **Official** box. You may also enter other appropriate information for the request.

- 1.2.** In the Issue Information window, enter an external institution code. The output type will default from STVSBGI.

*or*

- 1.3.** Run SHRTPOP with appropriate values in the population selection, issued to institution, and student-related transcript value parameters.

- 2.** Run the SHRPESE export process to create an XML file for the receiving institution.

You can run this process in batch or in sleep/wake mode.

The process polls the transcript request table, reads the collector file, and selects records with an output type of *P* to be extracted as XML files and mapped to the PESC/XML standard.

The process then checks SOASBGA for the FTP information. The XML formatted files are stored on a central server.

## Receive (Import) XML Transcripts

Use the following steps to import XML transcripts from sending institutions.

- 1.** Run the SHRPESE import process to read the XML file from the sending server.

You can run this process in batch or in sleep/wake mode.

This process will read each file in the designated location, load the data to a temporary table, rename the file to preserve it, and then load the data to Banner using the rules set up on STVDSTS.

Once the system has checked the incoming record for a match in Banner, it will be loaded. If a matching record is found, use SHAEDIS to process the file.

- 2.** Use SHAEDIS to match the record or create a new record.

*To match the record:*

- 2.1.** Enter the document status code associated with the ID verification for XML transcript types (STVDSTS) in the Key Block.

- 2.2.** Enter *P* in the **Pending or Complete Indicator** field to select all pending requests.

- 2.3.** Use Next Block to view the electronic transcript records.

- 2.4.** To match a record, select the record and use Next Block to access GOAMTCH.

To create a new record:

- 2.1. Use the Options Menu and select View Transcript to view the XML file data before it is imported into Banner.

New records have an asterisk ( \* ) in the untitled field to the left of the **Last Name** field.

- 2.2. Once the ID has been verified as matched or new, use the Route Transcript item in the Options Menu to access the Route Transcript window.

- 2.3. Enter *C* in the **Pending or Complete Indicator** for the document routing status code that is associated with the ID verification.

- 2.4. Enter a new record and the document routing status code for your next task, such as routing the transcript for transfer articulation.

The code must exist on STVDSTS with the **Transfer Articulation Indicator** set to *Y*.

3. Load the transcript into the Banner tables using the Electronic Transcript Load Decision Window on SHATAEQ.
  - 3.1. Select the Transfer Articulation Detail (SHATAEQ) item from the Options Menu on SHAEDIS.
  - 3.2. Once you have accessed SHATAEQ, use Next Block to access the Electronic Transcript Load Decision window.
  - 3.3. Check the **Electronic Version** checkbox to upload the electronic transcript, and check the **Create Multiple Attendance Periods** checkbox to load transfer work for multiple attendance periods.
  - 3.4. Select one of all of the **Override Edit, Successful, No Equivalent, and Manual** status indicators to retain articulation statuses (whether set manually or by the system) when transcripts are loaded, for records where the **Articulate Ind(icator)** is set to *Override Edit, Successful, No Equivalent, and Manual*.
  - 3.5. Select Load Transcript Detail from the Options Menu, or use the **Load Transcript** button to initiate the upload of transcript data.
4. Once the transcript has been loaded, perform transfer articulation on SHATAEQ.
5. Once articulation has been completed, return to SHAEDIS.
6. Go to the Route Transcript window and create your next transcript status code to load user-defined extensions, test scores, etc., or to archive that status code information based on the setting of the **Archive Status Indicator** on STVDSTS.

 **Note**

Please refer to this guide for more information on loading transcripts and transfer articulation. Please refer to the online help for more information on STVDSTS, SHATEAQ, and SHAEDIS. ■

## Export Crosswalk Values on SOAXREF

Labels are used during the XML transcript export process to determine values used within the document to be sent to the receiving institution. The values to be included must be cross-referenced on SOAXREF with the **XML** field checked. Some of these cross-references are also used for the import process.

 **Note**

Values that are delivered and automatically loaded are not associated with a validation table for the crosswalk. ■

The **Banner Value** field on SOAXREF will only display a List of Values when the value in the **Label** field is a validation table. The other non-validation table labels equate to values in existing Banner validation tables and *must* be populated on SOAXREF. The Banner values *must* be valid values on the associated validation table or translation will not take place.

If a value has been crosswalked to multiple Banner values, then the Banner code with the lowest sequence number will be used on the imported file. For example, if multiple level codes are crosswalked to *UnderGraduate*, the lowest sequence number will be used for the imported data to translate an *UnderGraduate* level to a Banner level. The Banner value is used first, then the electronic value is used. There is no actual sequence number on SOAXREF.

Because PESC does not use qualifier codes (like EDI processing or Banner Student Self-Service Admissions processing), a one-to-one relationship will work best for XML transcript processing. However, if a one-to-many or many-to-one relationship is set up on SOAXREF, then the process will select the translated value for the export process by Banner value and then by electronic value. The import process does not have the same issue, as the PESC or electronic values would not be duplicated.

For example, on SOAXREF, the Banner value *UG* is crosswalked to the electronic values of *LowerDivision* and *Undergraduate*.

*For the export process*, the Banner value would be translated to the electronic value. If the student had a course with a level of *UG*, it would be translated to the *LowerDivision* value.

*For the import process*, the electronic value would be translated to the Banner value. If the student had a translated level of *LowerDivision*, it would be imported into Banner as *UG*. If the student had courses that also had the *UG* value associated with them, they would be translated into Banner as *UG* as well.

The following labels are used during the XML transcript export process to determine values used within the document to be sent to the receiving institution.

EDI Label Code (STVXLBL)	Transcript Element	Comments

## Import Crosswalk Values on SOAXREF

Labels are used during the XML transcript import process to determine values to be imported into the system from the transcript that was received. The values to be included must be crosswalked on SOAXREF with the **XML** field checked. Some of these crosswalks are used for the export process.

### Note

Values that are delivered and automatically loaded are not associated with a validation table for the crosswalk. ■

The **Banner Value** field on SOAXREF will only display a List of Values when the value in the **Label** field is a validation table. The other non-validation table labels equate to values in existing Banner validation tables and *must* be populated on SOAXREF. The Banner values *must* be valid values on the associated validation table or translation will not take place.

If a value has been crosswalked to multiple Banner values, then the Banner code with the lowest sequence number will be used on the imported file. For example, if multiple level codes are crosswalked to *UnderGraduate*, the lowest sequence number will be used for the imported data to translate an *UnderGraduate* level to a Banner level. The Banner value is used first, then the electronic value is used. There is no actual sequence number on SOAXREF.

Because PESC does not use qualifier codes (like EDI processing or Banner Student Self-Service Admissions processing), a one-to-one relationship will work best for XML transcript processing. However, if a one-to-many or many-to-one relationship is set up on SOAXREF, then the process will select the translated value for the export process by Banner value and then by electronic value. The import process does not have the same issue, as the PESC or electronic values would not be duplicated.

For example, on SOAXREF, the Banner value *UG* is crosswalked to the electronic values of *LowerDivision* and *Undergraduate*.

*For the export process*, the Banner value would be translated to the electronic value. If the student had a course with a level of *UG*, it would be translated to the *LowerDivision* value.

*For the import process*, the electronic value would be translated to the Banner value. If the student had a translated level of *LowerDivision*, it would be imported into Banner as *UG*. If the student had courses that also had the *UG* value associated with them, they would be translated into Banner as *UG* as well.

The following labels are used during the XML transcript import process to determine values to be imported into the system from the transcript that was received.

## Use an Alternate Transmission Protocol

SHRPESE can be run using SFTP or an alternate transmission protocol. Users are not limited to only FTP processing.

### Note

If you choose to use the scripting method of FTP processing, you will need to create and support your own shell file for the SFTP processing of XML transcript files. ■

Use the following steps to set up an alternate transmission protocol.

1. Extract the `send.properties` files from the `shrpese.jar` file using the following command:

```
jar -xvf shrpese.jar send.properties
```

2. Set the following two control settings in this file:

```
send.UseAlternate=N  
send.Command=sh /export/home/xmluser/sftp.shl
```

The `send.UseAlternate` variable is the switch that will determine whether to use the embedded, regular FTP transmission protocol within the `shrpese.jar` process (`general/transporter.jar`) or to use an alternate method of transmission protocol.

This flag is delivered with a default value of *N* (No), meaning the extract process will use the embedded, standard FTP process.

When the `send.UseAlternate` variable is set to *Y* (Yes), this indicates that your institution wants to use a transmission protocol other than the delivered FTP methodology.

The process will then use the second variable, `send.Command`, to run the transmission protocol of your choice. The `send.Command` variable represents the operating system path and file that will be used execute the transmission protocol of your choice.

3. Once the `send.properties` file is updated with the desired settings, save the file.
4. Update the `shrpese.jar` process with the newly updated file and settings using the following command:

```
Jar -uvf shrpese.jar send.properties
```

When the `shrpese.jar` export process is run and reaches the point of transferring a file, it reads the `send.properties` file to determine which course of action to take. If the `send.UseAlternate` variable is set to *Y*, the process will break out from the `shrpese.jar` process and issue the following operating system command.

```

sendCommand + " " + pgpFileName + " "
              + ThisJobNumber + " "
              + fileOutPath + " "
              + hostName + " "
              + userName + " "
              + passWord + " "
              + RemoteDirectory;

```

The `sendCommand` value is equal to the `send.Command` value in the `send.properties` file that was updated.

In this example, the exact values would be:

```

sh /export/home/xmluser/sftp.shl + pgpFileName + " "
                                  + ThisJobNumber + " "
                                  + fileOutPath + " "
                                  + hostName + " "
                                  + userName + " "
                                  + passWord + " "
                                  + RemoteDirectory;

```

The parameters descriptions are as follows:

Parameter	Description
<code>sendCommand</code>	Value in <code>send.properties</code> file <code>send.Command</code> variable
<code>pgpFileName</code>	XML/PGP file being sent via (S)FTP
<code>ThisJobNumber</code>	Job submission oneup number
<code>fileOutPath</code>	Path that maps where the <code>*.lis</code> files are written; the shell file can write the <code>ftp_oneup.log</code> file to same output directory as the <code>shrpese.lis/log, pescxml*.xml</code> files, etc.
<code>hostname</code>	Hostname from SOASBGA/SHACTRL
<code>username</code>	Username from SOASBGA/SHACTRL
<code>password</code>	Password from SOASBGA/SHACTRL
<code>RemoteDirectory</code>	Remote Directory from SOASBGA/SHACTRL

## Create Readable Output From the \*.xml File

XML files produced by SHRPESE and SHRPESEI can be transformed into alternate forms of output using an XSLT engine. This provides readable, formatted versions of the input or output files, such as HTML.

### Note

If you choose to use the scripting method of XSLT processing, you will need to create and support your own shell file for the XSLT processing of XML transcript files. ■

Use the following steps to create readable output from the XML file.

### Perform XSLT Transformation

1. Extract the following `xslt.properties` files from the `shrpese.jar` and `shrpesi.jar` files using the following commands:

```
jar -xvf shrpese.jar xslt.properties
jar -xvf shrpesi.jar xslt.properties
```

2. Set the following four control settings in this file:

```
xslt.Transform=Y
xslt.UseInternalXSLT=Y
xslt.XSLFileName=bwcktran.xsl
xslt.Command=sh /export/home/xmluser/input/xalan.shl
```

- The `xslt.Transform` variable is the overall indicator that determines if XSLT transformation is performed, so the XML data file is transformed into an alternate, readable form.

If the `xslt.Transform` variable is set to *N*, no transformation will take place.

If the `xslt.Transform` variable is set to *Y*, then the transformation will take place, but the method of transformation is determined by the second variable, `xslt.UseInternalXSLT`.

- The `xslt.UseInternalXSLT` variable determines if the internal transformation process, `PESCXMLTransformer.java`, or an external transformation process is used to perform the transformation of the XML data file into another readable form of output.

If `xslt.UseInternalXSLT` variable is set to *Y*, then the `shrpese.jar` and `shrpesi.jar` files will use the internal XSLT engine, `PESCXMLTransformer.java`, to transform the XML data file into an HTML formatted output file. This method is *only* available to produce HTML formatted output.

If `xslt.UseInternalXSLT` variable is set to *N*, then the `shrpese.jar` and `shrpesi.jar` files will issue an operating system command (i.e., a shell file) that is

used to perform the XSLT transformation using the XSLT engine and stylesheet of your choice.

 **Note**

The `xslt.Transform` variable must be set to *Y* for any of the remaining variables to be used. ■

- The `xslt.XSLFileName` variable is optional. It will only be used if the `xslt.UseInternalXSLT` variable is set to *N*, (using an external XSLT process to perform the transformation instead of the internal method).

If the `xslt.UseInternalXSLT` variable is set to *N*, then the `xslt.XSLFileName` variable is passed to the shell file that is responsible for performing the transformation. The variable must have a value if the `xslt.UseInternalXSLT` variable is set to *N*, but whether the shell file responsible for performing the transformation uses this value is up to the logic within the shell file itself.

The locally created shell file used to perform the XSLT transformation might have a hardcoded stylesheet value that performs the transformation, instead of using this passed parameter as the stylesheet. This value is passed to provide flexibility in the creation of locally owned XSLT shell file.

If the internal transformation process is used (`xslt.UseInternalXSLT` is set to *Y*), then the transformation process will *always* use the file name `bwcktran.xml` for the stylesheet used to perform the transformation.

- The `xslt.command` variable is only used if the `xslt.UseInternalXSLT` variable is set to *N*. When the `shrpese.jar` and `shrpesi.jar` files reach the point in process where the transformation is to be performed, the process first reads the `xslt.Transform` variable.

If this value is *N*, then no other processing takes place with regard to XSLT. If this value is *Y*, the process then reads the `xslt.UseInternalXSLT` variable to determine if the internal XSLT engine or an external XSLT engine is used to perform the transformation.

If `xslt.UseInternalXSLT` variable is set to *N*, then the `xslt.command` variable is used. The `shrpese.jar` and `shrpesi.jar` processes will “break out” from processing and issue the following operating system command:

```
xsltcommand + " " + xmlFileName + " " +  
XSLTJobNumber + " " + xsltFileName;
```

The `xsltcommand` value is equal to the `xslt.command` value in the `xslt.properties` file that was updated.

In this example, the exact values would be:

```
sh /export/home/xmluser/input/xalan.shl + " " + xmlFileName  
+ " " + XSLTJobNumber  
+ " " + xsltFileName;
```

The parameters descriptions are as follows:

Parameter	Description
xmlFileName	XML file you are transforming
XSLTJobNumber	Job submission oneup number
xsltFileName	Filename that maps to the <code>xslt.XSLTFileName</code> variable in the <code>xslt.properties</code> file

Two methods can be used to accomplish the XSLT transformation, the internal method and the external method. The internal method will only produce an HTML formatted version of the XML data file. The external method allows you to produce alternate output file formats. If you want to create a `.pdf`, `.doc`, `.txt`, or `.xls` file format for the XML transcript as opposed to a `.html` version, you can use the external XSLT process, accompanied by your `XSL:F0` stylesheet, to produce the desired output.

### Modify the `bwcktran.xsl` File

The delivered `bwcktran.xsl` stylesheet is an example or starter stylesheet used to produce a readable version of the XML transcript. Stylesheets are meant to be altered and adjusted to render the chosen output format.

Use the following steps to modify the `bwcktran.xsl` stylesheet file.

1. Extract the `bwcktran.xsl` file from the `shrpese.jar` and the `shrpesi.jar` files using the following commands:

```
jar -xvf shrpese.jar bwcktran.xsl
jar -xvf shrpesi.jar bwcktran.xsl
```

The `bwcktran.xsl` stylesheet contains an embedded `*.css` file within the stylesheet, as denoted in the comments section of the `bwcktran.xsl` file. The `bwcktran.xsl` stylesheet contains the `web_defaultapp.css` file that is found in the `$BANNER_HOME/wtlweb/htm` directory.

The stylesheet is embedded, as opposed to being linked, to provide portability. For example, the final HTML file can be mailed to the user running the process. Therefore, any linking that is done to a `*.css` file, as opposed to embedding the file, causes any styles associated with the final HTML document to be lost.

2. Cut the existing stylesheet out of the `bwcktran.xsl` file, located between the `<STYLE>` tags, and replace it with the contents of your customized `web_defaultapp.css` code.

This will produce a final HTML document that is consistent with the self-service products running at your institution.

 **Note**

For more information on specific modifications or customizations of the stylesheet to render adjusted HTML output and about using the XSL programming language, please refer to the following resource:

[www.w3.org/Style/XSL/](http://www.w3.org/Style/XSL/). ■

3. Load the new or altered `bwcktran.xml` file back into the import and export processes so that when the processes are run, the stylesheet will transform the output to your new format.

Use the following commands to upload the new `bwcktran.xml` stylesheet into the processes:

```
jar -uvf shrpese.jar bwcktran.xml
jar -uvf shrpesi.jar bwcktran.xml
```

### View Formatted Output

The XML transcript process can produce a readable version of the XML data file. If the XSLT process is used to produce the formatted output file, the SHRPESE and SHRPESI batch files used to launch the programs, as well as any `*.lis` and `*.log` files produced by those processes, are then converted to HTML files.

The HTML formatted files can be viewed on the Saved Output Review Form (GJIREVO) by selecting the HTML file for the process and opening that output in a separate browser. To ensure the process produces output that can be reviewed on GJIREVO, keep the following in mind when entering job submission data on the Process Submission Control Form (GJAPCTL):

- The job or report that creates the output must be a Pro\*C program.
- It must be run under your user ID with `DATABASE` entered in the **Printer** field on GJAPCTL.

Use the following steps to view the XML transcript output on GJIREVO:

1. Enter the name of the process that created the output in the **Process** field.
2. Enter the sequence number that identifies the specific job or report in the **Number** field.
3. Enter the file name of the output file in the **File Name** field.

Use the format `jobname_jobnumber.extension`.

Use a `.html` extension for HTML formatted output.

4. Use Next Block to view the output in the Saved Output block.

- or -

5. Select the Show Document item from the Options Menu to display the output in HTML format in a browser.
6. Click *Yes* to continue when prompted to show the file in a browser.

## Use Student Centric Periods on the XML Transcript

The PESC/XML Transcript Export Process (SHRPESE) can display courses and GPAs by student centric period without term details in the `.xml` output.

### Note

For more information on setting up and using student centric period processing, please see the “Student Centric Period Processing” procedure topic in Chapter 12, “Registration”.

The student centric period is displayed as one continuous enrollment period that is not broken up by the terms contained in the student centric period. The term header is not displayed on the XML transcript for student centric periods. Terms are grouped within the student centric period for the student. After the last term with a student centric period has been printed, intervening terms without student centric periods are printed.

A term that is not associated with a student centric period is displayed chronologically in the `.xml` file after the end of the student centric period (which starts before that term begins) and the start of the next student centric period. For example, an intersession which is not part of a student centric period, which falls between the two terms that make up the student centric period, will be printed after that student centric period.

The student centric period data is substituted for the term data when the **Student Centric Period Statistics** checkbox is checked (set to *Y*) on SHATPRT. When the **Student Centric Period Statistics** checkbox is unchecked (set to *N*), data is processed using standard term functionality.

The XML transcript reports data in three scenarios when the **Student Centric Period Statistics** checkbox is checked.

- When all of a student's coursework belongs to a student centric period, data is reported by student centric period for all of the student's enrollment and/or academic history records.
- When some of a student's coursework belongs to a student centric period and some coursework does not belong to a student centric period, data is reported by student centric period *and* by standard terms (presented as if the term is a student centric period) for the student's enrollment and/or academic history records.
- When none of a student's coursework belongs to a student centric period and no student centric period exists, data is reported by standard terms (presented as if the

term is a student centric period) for the student's enrollment and/or academic history records.

 **Note**

When the **Student Centric Period Statistics** checkbox is checked (set to Y) on SHATPRT, all information is presented as if it belongs to a student centric period header. Data is displayed as being in a "period". However, the data may actually reflect term data when student centric periods are not in use or when the term does not have an associated student centric period. ■

The process checks the term header record (SHRTTRM) for each term in the student's academic history. When the SHRTTRM\_SCPS\_CODE is *Null* for a term, the student does not have a student centric period associated with that term. In this case, the standard term information is displayed on the transcript for the academic history information.

When a student has a registration record for a term but no term header record exists, the student centric period to which that term is associated is determined by:

- finding the general student record (SGBSTDN) that is active for the registration term
- using the student centric period cycle code (SGBSTDN\_SCPC\_CODE) from that record
- finding the record for that registration term in the SORSCPT table where:
  - that registration term matches the SORSCPT\_TERM\_CODE
  - the cycle code (SGBSTDN\_SCPC\_CODE) from the SGBSTDN table matches the cycle code (SOBSCPS\_SCPC\_CODE) in the SOBSCPS table
  - the student centric period code from the SOBSCPS table matches the student centric period code from the SORSCPT table

When the SHRTTRM\_SCPS\_CODE has a student centric period value for the term, that code is used to group the terms that belong to each student centric period. It also populates the Academic Session data on the transcript. The GPA totals and GPA information for the student centric period are used to populate the Academic Summary data on the transcript. Data for standard term information for the Academic Session and Academic Summary comes from SHRTGPA.

When the student centric period is in effect for the term and student:

- Term comments for all terms are grouped together.
- The major that is effective for the first term of the student centric period is used.
- Term statistics data comes from SHRSGPA.
- Academic standing by term data comes from the highest term header record in the student centric period.

- In-progress courses are listed at the end with the associated student centric period.
- Coursework from academic history is displayed for the associated student centric period.

Transfer coursework is not associated with a student centric period. Transfer credit is displayed at the beginning of the transcript based on the transfer attendance period entered on SHATRNS.

## Web Transcript Request Processing Set-Up

### Overview

Web Transcript Request processing allows students to request official and/or any type of printed transcripts via the Web using Banner Student Self-Service. The Web Transcript Request changes a manual process into a self-service function and that benefits your institution's Student Records office. The Student Records office can service exceptions and the processing of the transcripts.

Transcript requests are not created if the learner has a hold defined on SOAHOLD with a hold type that prevents transcript processing. Learners who have these types of holds will receive a message indicating as such and what action needs to be taken to clear the hold.

Please refer to the *Banner Student Self-Service User Guide* for more detailed information describing the Web processing used with this functionality.

### Instructions

Use the following steps to set up Web Transcript Request processing.

1. *Transcript Type Codes* – On STVTPRT, check the **Web Request Indicator** checkbox for the transcript type code(s) your institution wishes to make available to students to create requests via the self-service applications.
2. *Electronic Letter Codes* – On GTVLETR, create the letter code(s) that will be used to confirm that the Web-generated transcript request was successfully entered. You may define a separate letter code for each transcript type with the **Web Request Indicator** checkbox checked, or you may use the same letter code for all transcript types.
3. *HTML Letter Assignment* – On SOAELTL, add the letter code(s) created in the previous step, and associate the module value *T* with each.
4. *Email Letter* – On SOAELTR, create the confirmation message that will be displayed upon the successful creation of a transcript request. A customized message, which may include data from the transcript request itself, should be created for each electronic letter code entered in GTVLETR.

5. *Web Self-Service Options* – On STVWSSO, create the code(s) and associated description(s) for each type of service level a student may request via the Web. For example, you may want to set up a code for standard turn-around/standard delivery and a different code for expedited turn-around using an express delivery service. Also, you may optionally associate a charge, an issued to comment, and/or a printer code with each self-service option code.
  - 5.1. Charges entered on this validation form will default into the appropriate field when the self-service option code is associated with a transcript type; however, it can be updated if necessary.
  - 5.2. Any text entered into the **Issued To** comment field will display in the Issued To line on the printed transcript. Your institution can use this feature to provide instructions to the persons who handle the transcript after it has been printed.
  - 5.3. A printer code associated with a self-service option code will enable the persons responsible for generating transcripts to direct all transcript requests created with that self-service option code to print on a specific printer when running SHRTRTC in sleep/wake mode.
6. *Web Payment Request Options* – On STVWPYO, create the code(s) and associated description(s) for each type of payment method your institution wishes to make available to students using this functionality.
  - 6.1. Check the **Credit Card Indicator** check box to indicate that this payment option, when selected, should invoke the Web credit card payment process.
  - 6.2. Enter the detail code(s) that should be associated with this type of transaction when records are written to the appropriate type of account (student or miscellaneous).
7. *Web Transcript Request Rules* – On SHAWTRR, adjust the default values on the fields to meet your institution's transcript request policies. On this form, you may place limits on:
  - the number of requests a student may make per day,
  - the number of transcripts (copies) that a student can ask for per request,
  - the number of transcripts (copies) a student can request per day, and
  - the number of free transcripts (copies) the student may request before incurring any charges.Finally, your institution can ensure that all transcript requests will include all course levels for each student by checking the **Default course level to ALL on transcript** checkbox.
8. *Transcript Type Rules* – On SHATPRT, for each transcript type that you checked the **Web Request Indicator** checkbox on STVTPRT, turn on or off certain options, and associate the appropriate Web self-service option and Web payment option codes. In

the Self-Service Print Options window, there are three blocks that control Web request options.

**8.1.** The Web Transcript Controls block has the following options:

- **Allow Hold for End of Term Processing** – Check the checkbox if you want to allow students to indicate that they would like their transcript request(s) to be processed after final grades have been processed.
- **Allow EDI Transcripts on the Web** – Check the checkbox if you want to allow students to generate EDI transcript requests on the Web. Check this checkbox only if your institution is set up to send transcripts electronically. When this checkbox is checked, and the student wishes to send a transcript to another institution that is set up to receive electronic transcripts, then an option will display to generate that sort of request.
- **Allow Hold for Degree Processing** – Check the checkbox if you want to allow students to indicate that they would like their transcript request(s) to be processed after a pending degree has been awarded.
- **Electronic Letter Code** – Enter the electronic letter code created in Step 2 that you want to display on the Web upon successful creation of a transcript request.

**8.2.** The Service Level block has the following options:

Use this block to associate Web self-service options with specific transcript types. When you enter a Web self-service option code in the **Code** field, the description and charge will default from STVWSSO. The description is display only, but the charge amount may be updated if desired. The other items that can be adjusted for each code are:

- **Type** – Use this field to determine where charges will be written in the Banner Finance system. A value of *M* results in records being written to a miscellaneous type of account. A value of *S* results in records being written to the student accounts.
- **Per** – Use this field to determine whether charges will be incurred per request (*R*) or per copy (*C*). Per request charges will always be incurred and should be associated with those service options that the institution would never waive (e.g., express delivery services). Per copy charges will only be incurred once the student has reached the limit of free copies allowed before charging begins, as defined on the Web Transcript Request Rules Form (SHAWTRR).

**8.3.** The Payment Options block is where you associate Web payment options with specific transcript types. Enter as many Web payment options per transcript type as needed.

## SHVTRE1 Banner View

This Banner view allows you to develop customized reports of transcript request data to track usage of Web transcript processing.

The key attributes of this view are:

- **Personal ID Master:** PIDM\_KEY
- **Request Sequence Number:** SEQ\_NO

Since the PIDM is an internal ID number unique to each student, the view returns one row of information for each student per request sequence number.

The following rows are in this view.

SHVTRE1\_ACTIVITY\_DATE  
SHVTRE1\_ADDR\_NAME  
SHVTRE1\_CITY  
SHVTRE1\_COLL\_CODE

## Credits and Notations on Permanent Record

The following is a list of credits and notations, other than regular coursework, that need to be posted to a student's transcript record and suggestions as to the best place to record this information in the Academic History module.

- Removal of incompletes and changes of grade notations to an *F*.

*Suggestion:* Any grade change made via the Term Course Maintenance Form (SHAINST) may be done using the Course Maintenance item in the Options Menu, a Duplicate Record function, or Next Block functions until the Course Maintenance Form (SHATCKN) is accessed. A grade change will always be added as a new grade with a grade change reason code, with the original grade maintained as an audit trail. An incomplete or *I* grade would be maintained as the original grade, the actual grade would then be added with a grade change reason code. The most recent grade is the grade that will be used for all GPA and hour calculations, print on the transcript, and be used to determine academic standing and dean's list eligibility. You may choose to reflect the original *I* grade in the actual grade by creating a new grade on the Grade Code Maintenance Form (SHAGRDE), for

example: *I/A*. The *I/A* grade would then show on the transcript to reflect that the grade had originally been incomplete.

Incompletes or other grades may be changed to *F* using the same procedure described above. An automated procedure may also be written using the Oracle tools to change *Is* to *Fs* based on certain date parameters.

- Study abroad or other outside program where the course numbers match the institution's course catalog.

*Suggestion:* Courses may be input onto a student's record directly in Academic History on the Term Course Maintenance Form (SHAINST). When entering courses for a term where there is an existing class schedule in Banner, a Course Reference Number (CRN) must exist in the Schedule Module for each course being entered on the student's record. If no class schedule exists, but the catalog exists in Banner for the term courses are being recorded for, a valid subject and course number from the Catalog Module must be entered.

- Study abroad or other outside program where the course numbers do not match institution's course catalog.

*Suggestion:* Courses may be entered directly in Academic History on the Term Course Maintenance Form (SHAINST) if they can be converted to actual courses at the institution. This may be done using the Course Maintenance item in the Options Menu, a Duplicate Record function, or Next Block functions until the Course Maintenance Form (SHATCKN) is accessed. If they cannot be converted to actual courses at the institution, it would be best to enter the courses as transfer credit on the Transfer Course Form (SHATRNS), because transfer work does not validate against the course catalog. The subject code, however, has to be a valid subject on the Subject Code Validation Form (STVSUBJ).

- Prior Learning Experience - no grades, earned hours only.

*Suggestion:* Prior learning experience could be entered as either course specific work at the institution or as transfer credit. If it is entered as course specific work on the Term Course Maintenance Form (SHAINST), it would have to be converted to an existing course, or a dummy course and section may be set up in the Class Schedule Module. A grade must be entered, but the grade could be set up on the Grade Code Maintenance Form (SHAGRDE) as a special grade that only counts in earned hours and not in GPA hours. If the prior learning experience is entered as transfer work a valid subject would have to exist on the Subject Code Validation Form (STVSUBJ), but the course number and title would be free format. As in institutional course work a grade must be entered, but the same procedure could be followed.

- Academic Bankruptcy - GPA adjusted but course work stays on the record.

*Suggestion:* This process could be accommodated by doing a grade change on the courses that are being excused, so that the new grade does not count toward GPA hours but the course will stay on the student's record.

Course specific comments may be entered associated with each course and will print on the transcript with the course. This comment may be entered on the

Course Maintenance Form (SHATCKN). This form can be accessed from the Term Course Maintenance Form (SHAINST) or the Academic History Course Summary Form (SHACRSE).

- Notations to a student's academic record - Readmitted on Academic Probation, Denied Readmission, etc.

*Suggestion:* Any notations or comments to a student's academic record may be made on the Transcript Event and Comments Form (SHATCMT). Free form comments or notations may be entered as level specific comments that will print on the student's transcript before any course work, or as term specific comments that will print with the associated term after the term header information and before the detail coursework. Coded comments may be entered as events. Events are first established on the Academic History Event Code Validation Form (STVEVEN) and may be coded, Yes (checked) or No (unchecked), to print on the transcript. If the event is set to print on the transcript, it will print before the level specific comments.

- Degrees posted with honors (cum laude, etc.), and departmental honors (certified by American Chemical Society, etc.).

*Suggestion:* Honors for a degree are entered on the Degrees and Other Formal Awards Form (SHADEGR) in the Institution Honors section and/or the Departmental Honors section. Institutional honors, such as cum laude, are first set up on the Institutional Honors Code Validation Form (STVHONR). Departmental honors are established on the Departmental Honors Code Validation Form (STVHOND). Honors may only be entered for a degree that has a degree status in the Degree Information, with a type of *awarded* (A) or *pending* (P) on the Degree Status Code Validation Form (STVDEGS).

- Education certification sticker or papers (with degrees).

*Suggestion:* The Qualifying Paper Form (SHAQPNO) may be used to enter the type of paper or certification which is set up on the Qualifying Paper Code Type Validation Form (STVQPTP). A title of up to four lines must be entered and unlimited text may also be associated with the paper or certification. This text may then optionally print on the student's transcript when a degree has been awarded.

- Complete withdrawal date.

*Suggestion:* This information and date may be entered as a term specific comment on the Transcript Event and Comments Form (SHATCMT).

- Exemption from writing or speech requirements.

*Suggestion:* Any type of exemption or waiver from specific degree requirements may be done in the Degree Audit Module. If degree audit is not in production, a level specific comment on the Transcript Event and Comments Form (SHATCMT) would be the best method to record this notation.

- Advanced Placement and CLEP.

*Suggestion:* Advanced Placement and CLEP credit may be entered on the Transfer Course Form (SHATRNS). A transfer institution code may be set up on the

Source/Background Institution Code Validation Form (STVSBGI) for advanced placement and CLEP, or a code of 999999 with a free form description may be entered directly on the Transfer Course Form (SHATRNS). The course equivalents may be entered associated with the advanced placement or CLEP, or special subjects may be set up on the Subject Code Validation Form (STVSUBJ) and the courses may be entered for those special subjects. Grade and hour information must also be entered. Special grades or regular pass grades may be set up on the Grade Code Maintenance Form (SHAGRDE) to indicate how the advance placement and CLEP credit should be counted.

- Credit by examination.

*Suggestion:* The course for which the student is receiving credit should be entered on the Term Course Maintenance Form (SHAINST) or the Course Maintenance Form (SHATCKN), along with the grade and level applied information.

SHATCKN may be accessed from the Term Course Maintenance Form (SHAINST) or the Academic History Course Summary Form (SHACRSE). A course specific comment may then be entered to indicate that the credit for the course was received by examination.

## Repeat/Equivalent Course Rules

Repeat/equivalent course processing is controlled by the **(Repeat) Limit** and the **(Repeat) Maximum Hours** fields on the Basic Course Information Form (SCACRSE). These fields are invoked in the Registration Module according to the status of the Registration Error Checking flags on the Term Control Form (SOATERM) and are calculated in Academic History according to the Repeat/Multiple Course Rules Form (SHARPTR).

### Note

The **Repeat Status Code** field on SCACRSE does not control any processing. It is informational only. ■

## Repeat Policies

The Repeat/Multiple Course Rules Form (SHARPTR) is used to establish the institution's repeat policy. It allows for repeated courses to be treated in two different ways (repeat limit rule or repeat hours rule) with three different course selections (last, highest, or first passing). Repeat policies may be established for repeated courses where the number of times a student may repeat is limited and repeated courses where the number of hours a student may earn in a course is limited.

- The **Repeat Limit Selection Rule** field on SHARPTR handles the situation where the number of times a student takes a course is limited. Repetition of the course will invoke the repeat rules specified in this column. This is specified on the Basic Course Information Form (SCACRSE) by the **(Repeat) Limit** field.
- The **Repeat Hours Selection Rule** field on SHARPTR handles the situation where the institution establishes a maximum number of hours that may be earned before

the selection rule is used. Each rule has an associated evaluation grade that determines the minimum grade a course must have to be considered for repeat processing evaluation.

- The values in the **Repeat Limit Evaluation Grade** field and the **Repeat Hours Evaluation Grade** field on SHARPTR are the minimum grades that will be used for repeat checking, for the term, level, and selection rule. Once these grades are set, courses with a numeric value less than the evaluation grade for the selection rule being used will not be considered in repeat checking.
- The more restrictive selection rule on SCACRSE for the **(Repeat) Limit** or **(Repeat) Maximum Hours** values is the rule that will be used.

## Use of Equivalent Courses in Repeat Processing

In order for equivalent courses to be evaluated, they must be established on the Course Detail Information Form (SCADETL), in the Equivalent Course block in the main window. Equivalent courses are evaluated based upon the target course being evaluated in the repeat process for the term. If course equivalents exist on SCADETL for the term you are processing, the rules for the target course are used in repeat evaluation.

*For example,* in the Key Information of SCADETL, the **Subject** is ENGL, the **Course (Number)** is 101, and the **Term** is 199810. In the Course Equivalency window, ENGL 100 is defined as an equivalent from term 199410 to term 199760. A student has completed institutional work in academic history for ENGL 101 for 199810 and has also completed institutional work in academic history for ENGL 100 in 199510. When running the repeat process for 199810, ENGL 100 and ENGL 101 will be evaluated, since the student completed ENGL 100 within the course equivalency start and end term associated with ENGL 101 on SCADETL.

## Course Selection Rules

The **Repeat Limit Selection Rule** and **Repeat Hours Selection Rule** fields on SHARPTR are used to define which course(s) will be included in the student's earned and passed hours when a repeat limit or repeat hours condition exists.

In establishing the rules, the following selections must be specified:

Rule L	=	Latest occurrence of the course will count
Rule F	=	First occurrence of the course with a passing grade will count
Rule H	=	Course with the highest grade will count

## Evaluation Grade

The **Repeat Limit Evaluation Grade** field on SHARPTR is used to define the minimum evaluation grade for the effective term and level. A grade is entered from the Grade Code Maintenance Form (SHAGRDE). The Repeat/Equivalent Course Check Report

(SHRRPTS) translates the grade to its numeric value, which is specified on SHAGRDE, to determine where a grade ranks.

The evaluation grade, established with a rule on SHARPTR, is the minimum value based on its numeric value in SHAGRDE that can be considered in the repeat process. All courses that do not meet the evaluation grade minimum can appear on the output for SHRRPTS, because the evaluation grade established on the repeat rule on SHARPTR determines the courses displayed on the output.

*For example, when the **Repeat Limit Selection Rule** is set to Latest, the **Repeat Limit Evaluation Grade** defined with the rule is D, and the student has taken the course twice, the first time they received a D, and the second time received a W. According to the rule, the D grade would be included, and the W grade record would have a comment: *\*Not Updated – Check Grade*. This is due to the W grade having a numeric value less than the D grade as defined on the Grade Code Maintenance Form (SHAGRDE), and therefore, it will not be considered in repeat evaluation.*

The passing grade is the grade code to be considered in evaluation when the Rule "F" (First Passing) is selected. This is established by entering a grade value in the **Passing Grade** field in the Repeat/Equivalent Course Conditions and Passing Grade Rules block of SHARPTR. An example of how this will work is found under the topic "Example Output from SHRRPTS" which appears later in this section.

## Sample Rules

It is important to remember when using repeat limits, that a course is not seen as violating a repeat limit rule until the student actually has one more occurrence than the repeat value for that course in their history. For instance, if repeat limit is one, the first and second instances of the course will count, because the course is allowed to be repeated once. The next time the course is taken, repeat processing must choose which course of the three to count. So, two will always be counted.

It is also important to remember that if the **(Repeat) Maximum Hours** field on SCACRSE is set to zero, no occurrences of the course will be included by SHRRPTS. If the student has multiple occurrences of the course, all occurrences that meet the evaluation grade (or the passing grade, when the First Passing rule is used) will be excluded.

Using the following Course Information, an example follows which uses each of the Repeat Limits, Repeat Maximum Hours, Selection rules, and Passing Grade rules. The example course is a three credit hour course, and the evaluation grades are all set to *D*.

Course Repeat #1	F
Course Repeat #2	D
Course Repeat #3	A *
Course Repeat #4	A *

Course Repeat #5      C  
Course Repeat #6      B

\* When Highest is selected, and two course selections have equally high grades, the selection is random.

*This example uses Highest and Latest.*

Repeat Limit - Null                      Using Repeat Limit Selection Rule                      Latest  
Repeat Maximum Hours - Null  
Course # 6 would be included.

Repeat Limit - 0                              Using Repeat Limit Selection Rule                      Latest  
Repeat Maximum Hours - Null  
Course # 6 would be included.

Repeat Limit - Null                      Using Repeat Hours Selection Rule                      Latest  
Repeat Maximum Hours - 7  
Course #'s 5 and 6 would be included.

Repeat Limit - 0                              Using Repeat Limit Selection Rule                      Latest  
Repeat Maximum Hours - 7  
Course # 6 would be included.

Repeat Limit - Null                      Using Repeat Hours Selection Rule                      Latest  
Repeat Maximum Hours - 0  
No courses would be included.

Repeat Limit - 0                              Using Repeat Hours Selection Rule                      Latest  
Repeat Maximum Hours - 0  
No courses would be included.

Repeat Limit - 2                              Using Repeat Limit Selection Rule                      Latest  
Repeat Maximum Hours - Null  
Course #'s 4, 5, and 6 would be included.

Repeat Limit - 2                              Using Repeat Hours Selection Rule                      Latest  
Repeat Maximum Hours - 0  
No courses would be included.

Repeat Limit - 2                              Using Repeat Limit Selection Rule                      Latest  
Repeat Maximum Hours - 12

Course #'s 4, 5, and 6 would be included.

Repeat Limit - 2 Repeat Maximum Hours - 6 Course #'s 5, and 6 would be included.	Using Repeat Hours Selection Rule	Latest
--	-----------------------------------	--------

Repeat Limit - Null Repeat Maximum Hours - Null Course #'s 3 or 4 would be included. *	Using Repeat Limit Selection Rule	Highest
--	-----------------------------------	---------

Repeat Limit - 0 Repeat Maximum Hours - Null Course #'s 3 or 4 would be included. *	Using Repeat Limit Selection Rule	Highest
---	-----------------------------------	---------

Repeat Limit - Null Repeat Maximum Hours - 7 Course #'s 3 and 4 would be included.	Using Repeat Hours Selection Rule	Highest
--	-----------------------------------	---------

Repeat Limit - 0 Repeat Maximum Hours - 7 Course #'s 3 or 4 would be included. *	Using Repeat Limit Selection Rule	Highest
--	-----------------------------------	---------

Repeat Limit - Null Repeat Maximum Hours - 0 No courses would be included.	Using Repeat Hours Selection Rule	Highest
--	-----------------------------------	---------

Repeat Limit - 0 Repeat Maximum Hours - 0 No courses would be included.	Using Repeat Hours Selection Rule	Highest
---	-----------------------------------	---------

Repeat Limit - 2 Repeat Maximum Hours - Null Course #'s 3, 4, and 6 would be included.	Using Repeat Limit Selection Rule	Highest
--	-----------------------------------	---------

Repeat Limit - 2 Repeat Maximum Hours - 0 No courses would be included.	Using Repeat Hours Selection Rule	Highest
---	-----------------------------------	---------

Repeat Limit - 2 Repeat Maximum Hours - 12 Course #'s 3, 4, and 6 would be included.	Using Repeat Limit Selection Rule	Highest
--	-----------------------------------	---------

Repeat Limit - 2 Repeat Maximum Hours - 6 Course #'s 3 and 4 would be included.	Using Repeat Hours Selection Rule	Highest
---	-----------------------------------	---------

*This example uses First Passing.*

Repeat Limit - Null Repeat Maximum Hours - Null Passing Grade - C Course # 3 would be included.	Using Repeat Limit Selection Rule	First Passing
--	-----------------------------------	---------------

Repeat Limit - 0 Repeat Maximum Hours - Null Passing Grade - C Course # 3 would be included.	Using Repeat Limit Selection Rule	First Passing
---	-----------------------------------	---------------

Repeat Limit - Null Repeat Maximum Hours - 7 Passing Grade - C Course #'s 3 and 4 would be included.	Using Repeat Hours Selection Rule	First Passing
---	-----------------------------------	---------------

Repeat Limit - 0 Repeat Maximum Hours - 7 Passing Grade - C Course # 3 would be included.	Using Repeat Limit Selection Rule	First Passing
--	-----------------------------------	---------------

Repeat Limit - Null Repeat Maximum Hours - 0 Passing Grade - C No courses would be included.	Using Repeat Hours Selection Rule	First Passing
---	-----------------------------------	---------------

Repeat Limit - 0 Repeat Maximum Hours - 0 Passing Grade - C No courses would be included.	Using Repeat Hours Selection Rule	First Passing
--	-----------------------------------	---------------

Repeat Limit - 2 Repeat Maximum Hours - Null Passing Grade - C Course #'s 3, 4, and 5 would be included.	Using Repeat Limit Selection Rule	First Passing
---	-----------------------------------	---------------

Repeat Limit - 2	Using Repeat Hours Selection Rule	First Passing
------------------	-----------------------------------	---------------

Repeat Maximum Hours - 0  
Passing Grade - C  
No courses would be included.

Repeat Limit - 2	Using Repeat Limit Selection Rule	First Passing
Repeat Maximum Hours - 12		
Passing Grade - C		
Course #'s 3, 4, and 5 would be included.		

Repeat Limit - 2	Using Repeat Hours Selection Rule	First Passing
Repeat Maximum Hours - 6		
Passing Grade - C		
Course #'s 3 and 4 would be included.		

## GPA Calculation Indicator

The **Repeat Limit GPA Calculation (Indicator)** field on SHARPTR determines how the repeated course will be treated in the hours and GPA calculation. *S* specifies that only courses selected based upon the selection rule will be included. *A* specifies that all courses will be included.

### S - Selected Course

The course(s) selected to be excluded based on the rule specified above will be marked with the **Repeat Limit GPA Calculation (Indicator)** field set to *E* (Excluded), and the hours associated with the course will be deducted from the Term and Overall Hours Passed, Hours Earned, GPA Hours, Quality Points, and GPA calculations. The credit hours will be left in the Hours Attempted calculation.

### A - All Courses Count in GPA

The course(s) selected to be excluded based on the rule specified above will be marked with the **Repeat Limit GPA Calculation (Indicator)** field set to *A*, and the hours associated with the course will be deducted from the Term and Overall Hours Passed and Hours Earned. The credit hours will be left in Hours Attempted, GPA Hours, Quality Points, and GPA.

### Notes

- For either selection rule, the courses that are not excluded will be marked with the **Repeat Limit GPA Calculation (Indicator)** field set to *I* (Included), and all hours will be counted in the Term and Overall Hours Passed, as well as the GPA calculations.

- Those courses having a grade with the **Count in GPA** box checked on the Grade Code Maintenance Form (SHAGRDE) will be excluded in the repeat process and marked with an *E* on the Repeat/Equivalent Course Check Report (SHRRPTS).
- Be sure to run the Calculate GPA Report (SHRCGPA) for *both* the collector file and for all students at the end of the term when utilizing repeat processing.

## Implementation of the Repeat/Equivalent Course Check Process

To use repeat/equivalent course checking, you must set the indicators on SHARPTR.

### 1. **Level Indicator** – Check this box to use course level in repeat processing.

If the **Level Indicator** is unchecked, then course levels will not be compared.

This indicator allows institutions to select the courses used for matching on the course levels. If the **Level Indicator** is checked, then course levels are compared and must match in order to be selected for the repeat process.

### 2. **Title Indicator** – Check this box when the title on a course must match to be considered a repeat.

If the **Title Indicator** is unchecked, all course work with the same subject and course number will be considered in the evaluation based upon the additional repeat/course equivalent rules established, even if the titles are different.

This indicator is used by institutions who re-use course numbers, e.g., a previous course completed (MATH 101 Calculus) with the same subject and course number was an entirely different course with a different course title (MATH 101 Trigonometry). In this situation, institutions would not want to consider these courses in the repeat process evaluation.

The title check will be based upon the course title established in the Course Maintenance Form (SHATCKN). (This is the course title that is stored in the SHRTCKN table.) When checking the title using registration repeat checking, additional tables are referenced when looking at courses that are in progress or graded but not rolled to history.

If the **Title Indicator** is checked, the repeat process will evaluate the courses completed by the student. If the course title which appears on SHATCKN for the previous course work being evaluated is *different* than the course title on the target course being evaluated, the previous course work will not be used in repeat evaluation. This record will display on the output for SHRRPTS with the following comment: *\*Not Considered – Diff Title*. Review of these types of records will only occur if there are at least two records that have the same course title.

### 3. **Schedule Type Indicator** – Check this box to if the course schedule type must match to be considered a repeat.

If the **Schedule Type Indicator** is unchecked, all courses with a schedule type or null schedule type will be considered in repeat evaluation.

Institutions have the option to consider courses to be evaluated to match on the schedule type of each course. If this indicator is checked, then courses to be considered in evaluation will only be those course records with matching schedule types. For those courses that do not have a matching schedule type or a null schedule type, the record will display on the output for SHRRPTS with the following comment: *\*Not Considered – Diff Schd Type*, meaning they are not used in the evaluation of the repeat process.

If you choose to use this option and have converted some academic history detail from your legacy system, you may need to re-evaluate the value of the schedule type on these records on the Course Maintenance Form (SHATCKN).

Remember that a null schedule type will not be considered in evaluation if you choose this option.

**4. Transfer Course Indicator** – Check this box to consider transfer courses in repeat processing.

If the **Transfer Course Indicator** is unchecked, repeat processing will not consider any transfer work in processing.

For institutions that leave the **Transfer Course Indicator** unchecked, but need to know the entire academic history record, use the Print Transcript Work parameter on the Repeat/Equivalent Course Check Report (SHRRPTS) to print transfer work of the same subject and course number. Valid values for the Print Transfer Work parameter are *Y* or *N*. If this parameter is set to *Y*, transfer work will display at the end of the institutional course work for the student for the same subject and course number. Each transfer record printed will have the comment: *\*TRANSFER – Not Evaluated*. This transfer work data is strictly informational and is not used in processing or evaluation. If the parameter is set to *N*, transfer work will not print on the output of SHRRPTS.

The output for SHRRPTS prints the results in one sort order, alphabetically by last name. The sort of the records associated with each student will be as follows: if the course work is considered, (that is, the course is included or excluded from repeat processing), unless the course fails the minimum grade value, this information will appear first in term order. Institutional courses with Repeat Messages such as *\*Not Considered – Diff Schd Type* or *\*Not Considered – Diff Title* will appear next, and then transfer work is displayed.

**5. Passing Grade** – Select a grade from SHAGRDE.

This rule establishes the minimum passing grade that must exist in order to consider the record for evaluation in the repeat process used when the Rule "F" (First Passing) is selected. If the **Passing Grade** field is used, you must enter a grade code established on the Grade Code Maintenance Form (SHAGRDE). Only one passing grade can be defined for the Repeat/Equivalent Course Check Report (SHRRPTS).

Any grade code with a numeric value equal to or greater than the minimum passing grade will be used in evaluation of the repeat processing rules in academic history when using the first passing rule. The course will be included first, then the process will choose no passing grades in ascending order, starting with the earliest rows.

## Example Output From SHRRPTS

### First Passing Grade

#### *Example A:*

The course ACCT 2333 on SCACRSE is defined with a start term equal to 199510 and an end term equal to 999999. Repeat Limit is null on the SCACRSE record.

For the term being evaluated, 199810, SHARPTR has the Using Repeat Limit Selection Rule and the Using Repeat Hours Selection Rule set up.

Selection Rule	F
Evaluation Grade	F
GPA Calc	S
Schedule Type Ind	unchecked
Passing Grade	D
Title Ind	checked

A student, Ed Hyde, completed ACCT 2333 with a grade of F in term 199510 and earned a grade of A in term 199810. The results of processing SHRRPTS are as follows:

#### *Ed Hyde*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10023	ACCT	2333	1	L	A	UG	3.00	I SYSTEM
199510	10157	ACCT	2333	1	L	F	UG	3.00	E SYSTEM

ACCT 2333, taken in term 199510, was considered in the repeat process due to the grade of F being equal to the minimum grade defined on the rules on SHARPTR. Since the minimum passing grade is set to D, CRN 10157 was excluded in the repeat evaluation process.

**Example B:**

Example B is the same as Example A above, except the evaluation grade on the rules on SHARPTR is set to D.

The course ACCT 2333 on SCACRSE is defined with a start term equal to 199510 and an end term equal to 999999. Repeat Limit is null on the SCACRSE record.

For the term being evaluated, 199810, SHARPTR has the Using Repeat Limit Selection Rule and the Using Repeat Hours Selection Rules set up.

Selection Rule	F
Evaluation Grade	D
GPA Calc	S
Schedule Type Ind	unchecked
Passing Grade	D
Title Ind	checked

A student, Ed Hyde, completed ACCT 2333 with a grade of F in term 199510 and earned a grade of A in term 199810. The results of processing SHRRPTS are as follows:

*Ed Hyde*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10023	ACCT	2333	1	L	A	UG	3.00	
199510	10157	ACCT	2333	1	L	F	UG	3.00	*Not Updated – Check Grade

ACCT 2333, taken in term 199510, was *not* considered in the repeat process due the grade of F *not* being equal to the evaluation grade defined on the rules on SHARPTR. Therefore, CRN 10157 was not considered in the repeat evaluation.

No repeat message is displayed for the course taken in term 199810, since no updates would take place in Academic History based on the evaluation grade for term 199510.

Use the Print Repeated Courses Only parameter in the Repeat/Equivalent Course Check Report (SHRRPTS). When this parameter is set to *Y*, the report will not print the course information in this example, since the courses are not considered and will not be updated by repeat processing. When this parameter is set to *N*, the report will continue to print the information as shown in the example above.

**Example C:**

For the term being evaluated, 199810, SHARPTR has:

Level	UG
Selection Rule	F
Evaluation Grade	F
GPA Calc	S
Repeat Limit	NULL on SCACRSE records
Passing Grade	C
Title Ind	unchecked
Level Ind	unchecked

SHRRPTS is run for Term 199810, Level UG, in Report Mode, with List Transfer Work set to Y.

*Corey Charles - Repeat Limit Null*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10017	ENGL	1201	1	L	F	UG	3.00	I SYSTEM
199410	SG016	ENGL	1201	6	L	F	UG	3.00	I SYSTEM

If a grade with a numeric value below a C is earned for 199810, the student has not received a passing grade at any time for that course. The course is included in the repeat process. All grades will still count toward the GPA calculation.

**Example D:**

For the term being evaluated, 199810, SHARPTR has:

Level	UG
Selection Rule	F
Evaluation Grade	F
GPA Calc	S

Repeat Limit            3 on SCACRSE records

Passing Grade            C

Title Ind                unchecked

Level Ind                unchecked

SHRRPTS is run for Term 199810, Level UG, in Report Mode, with List Transfer Work set to Y.

*Stuart Anderson - Repeat Limit 3*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10187	PHED	101	1	L	F	UG	2.00	I SYSTEM
199410	110	PHED	101	2	I	A	UG	2.00	I SYSTEM
199410	111	PHED	101	3	L	A	G	2.00	I SYSTEM
199410	112	PHED	101	1	L	B	UG	2.00	I SYSTEM

The repeat limit for PHED 101 on SCACRSE is set to three. Therefore, all records are included in the repeat process. CRN 10187 for term 199810 is *included* in the repeat process, because the grade of F is below the minimum grade for first passing being equal to C. Therefore, according to the process rules, all grades below the minimum value of the first passing grade are still included in the GPA calculation.

**Example E:**

For the term being evaluated, 199810, SHARPTR has:

Level                    UG

Selection Rule        F

Evaluation Grade    F

GPA Calc              S

Repeat Limit         3 on SCACRSE records

Passing Grade        C

Title Ind                    unchecked

Level Ind                    unchecked

SHRRPTS is run for Term 199810, Level UG, in Report Mode, with List Transfer Work set to Y.

*Karen Black - Repeat Limit 3*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10196	PHED	101	3	L	A	UG	2.00	I SYSTEM
199810	10197	PHED	101	2	L	F	UG	2.00	E SYSTEM
199810	10198	PHED	101	1	L	F	UG	2.00	E SYSTEM
199510	10169	PHED	101	4	L	D	UG	2.00	I SYSTEM
199510	10172	PHED	101	1	L	D	UG	2.00	I SYSTEM
199510	10171	PHED	101	2	L	F	UG	2.00	I SYSTEM

*Transfer Work:*

199410		PHED	101			A	UG	2.00	* TRANSFER: Not Evaluate
--------	--	------	-----	--	--	---	----	------	-----------------------------

The Repeat process will evaluate the records by first looking for passing grades, then the system will include those grades where no passing grades exist. In this case, CRN 10196 for 199810 was used first, then CRN 10172 for 199510, and then CRN 10169 and CRN 10171 for 199510. Since these grades are still below the evaluation value of the C grade defined on the first passing rule, they are included in the GPA calculation. CRN 10197 and 10198 were *excluded* due to the *repeat limit* being set to three.

**Example F:**

For the term being evaluated, 199810, SHARPTR has:

Level	UG
Selection Rule	F
Evaluation Grade	F
GPA Calc	S

Repeat Limit            3 on SCACRSE records

Passing Grade            C

Title Ind                unchecked

Level Ind                unchecked

SHRRPTS is run for Term 199810, Level UG, in Report Mode, with List Transfer Work set to Y.

*Heather Jones - Repeat Limit 3*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10196	PHED	101	3	L	A	UG	2.00	I SYSTEM
199810	10197	PHED	101	2	L	F	UG	2.00	E SYSTEM
199810	10198	PHED	101	1	L	F	UG	2.00	E SYSTEM
199610	10124	PHED	101	1	L	D	UG	2.00	E SYSTEM
199610	10122	PHED	101	3	L	F	UG	2.00	E SYSTEM
199610	10123	PHED	101	2	L	F	UG	2.00	E SYSTEM
199510	10169	PHED	101	4	L	D	UG	2.00	I SYSTEM
199510	10172	PHED	101	1	L	D	UG	2.00	I SYSTEM
199510	10170	PHED	101	3	I	F	UG	2.00	E SYSTEM
199510	10171	PHED	101	2	L	F	UG	2.00	I SYSTEM

*Transfer Work:*

199410		PHED	101			A	UG	2.00	* TRANSFER: Not Evaluated
--------	--	------	-----	--	--	---	----	------	------------------------------

For this example, the first passing grade which was included was CRN 10196 for 199810. Then the process will now choose the no passing grades in ascending order starting with the earliest rows. Next, if additional records exist for the same term, the selection is random as to which are included. On this example, CRNs 10171, 10169, and 10172 were used.

## Schedule Type Processing

### Example A:

The course PHYS 101 on SCACRSE is defined with a start term equal to 199510 and an end term equal to 999999. Repeat Limit is null on the SCACRSE record.

For the term being evaluated, 199810, SHARPTR has the Using Repeat Limit Selection Rule and the Using Repeat Hours Selection Rules set up.

Selection Rule	F
Evaluation Grade	D
GPA Calc	S
Schedule Type Ind	unchecked
Passing Grade	D
Title Ind	checked

A student, Elizabeth Johnson, completed PHYS 101 with an grade of D in term 199510 and a grade of C in term 199810. The results of processing SHRRPTS are as follows:

*Elizabeth Johnson*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10204	PHYS	101	1	I	C	UG	4.00	E SYSTEM
199510	10173	PHYS	101	1	C	D	UG	4.00	I SYSTEM

CRN 10204 of PHYS 101 is set equal to E (Excluded) in the repeat process, because the first grade completed is equal to the passing grade (the D grade) on SHARPTR. In addition, the **Schedule Type Indicator** is unchecked. Therefore, both sections of the courses were used in evaluation.

### Example B:

The course MATH 101 on SCACRSE is defined with a start term equal to 199510 and an end term equal to 999999. Repeat Limit is null on the SCACRSE record.

For the term being evaluated, 199810, SHARPTR has the Using Repeat Limit Selection Rule and the Using Repeat Hours Selection Rules set up.

Selection Rule	F
Evaluation Grade	D
GPA Calc	S
Schedule Type Ind	checked
Passing Grade	D
Title Ind	unchecked

*Andrew Wright*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10204	MATH	101	1	I	C	UG	4.00	
199510	10173	MATH	101	1		D	UG	4.00	* Not Considered - Diff Schd Type

MATH 101, completed in term 199510, was not considered in evaluation due to the course having a null schedule type.

No repeat message is displayed for the course taken in term 199810, since no updates would take place in Academic History based on the different schedule type.

Use the Print Repeated Courses Only parameter in the Repeat/Equivalent Course Check Report (SHRRPTS). When this parameter is set to *Y*, the report will not print the course information in this example, since the courses are not considered and will not be updated by repeat processing. When this parameter is set to *N*, the report will continue to print the information as shown in the example above.

### Optional Printing of Transfer Work

Respond to the parameters of SHRRPTS as follows to have transfer work print on the output:

Parameter	Value
Term Code	199810

Parameter	Value
Level Code	UG
Report or Update	R
Print Transfer Work	Y

**Example:**

*Edward Benjamin*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10195	ACCT	1102	1	L	A	UG	3.00	I SYSTEM
199510	10168	ACCT	1102	1	L	F	UG	3.00	E SYSTEM
<i>Transfer Work:</i>									
199610		ACCT	1102			D	UG	3.00	* TRANSFER: Not Evaluated

A student, Edward Benjamin, completed ACCT 1102 in term 199610 as transfer work. This course will appear on the output as information only. Transfer work is not used in the evaluation of repeat processing.

If the **Transfer Course Indicator** on SHARPTR is unchecked, his course will appear on the output as information only. Transfer work is only used in the evaluation of repeat processing when the **Transfer Course Indicator** is checked.

If transfer work was set to be used, the output would appear as with other repeat processing output, and the SHATRNS and SHATAEQ records will be updated to show the Included, Excluded, or Averaged result of the processing and the source of the update (System, Manual, or Null).

## Handling of Courses With Different Titles

**Example A:**

The course BIOL 1205 on SCACRSE is defined with a start term equal to 199410 and an end term equal to 999999. In 199410, the course title was Biology 1. Effective for term 199710, the course title was changed to Microbiology. This was changed in the course catalog on SCACRSE effective for term 199710. Repeat Limit is null on the SCACRSE record.

For the term being evaluated, 199810, SHARPTR has the Using Repeat Limit Selection Rule and the Using Repeat Hours Selection Rules set up.

Selection Rule            F  
 Evaluation Grade        D  
 GPA Calc                S  
 Schedule Type Ind      unchecked  
 Passing Grade          D  
 Title Ind                checked

*Walter Washington*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10013	BIOL	1205	1	L	A	UG	4.00	E SYSTEM
199710	10010	BIOL	1205	2	B	C	UG	4.00	I SYSTEM
199410	10034	BIOL	1205	1	C	C	UG	4.00	* Not Considered - Diff Title

Since the course title was changed in 199710, the course BIOL 1205 completed in 199410 was *not* considered in the repeat evaluation due to the different course title and the indicator on SHARPTR. The **Title Indicator** is checked, so that repeat processing will check for this course title change.

**Example B:**

Using the same example as above but changing the **Title Indicator** to unchecked, results in the course for term 199410 being used in the evaluation of the repeat process.

*Walter Washington*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10013	BIOL	1205	1	L	A	UG	4.00	E SYSTEM
199710	10010	BIOL	1205	2	B	C	UG	4.00	E SYSTEM
199410	10034	BIOL	1205	1	C	C	UG	4.00	I SYSTEM

## Course Equivalency

### Example A:

For the following example, HIST 135 and POL 135 are equivalents of each other as defined on SCADETL with a from term equal to 199510 and a to term equal to 999999. The courses on SCACRSE are defined with an effective start term equal to 199510 and an end term equal to 999999. Repeat Limit is null on the SCACRSE records.

For the term being evaluated, 199810, SHARPTR has the Using Repeat Limit Selection Rule and the Using Repeat Hours Selection Rules set up.

Selection Rule	F
Evaluation Grade	D
GPA Calc	S
Schedule Type Ind	unchecked
Passing Grade	D
Title Ind	unchecked

*MaryBeth Anderson*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10191	POL	135	1	B	A	UG	3.00	E SYSTEM
199510	10163	HIST	135	1	L	B	UG	3.00	I SYSTEM

Both POL 135 and HIST 135 are used in the repeat process evaluation, because the target course being evaluated in 199810 is POL 135. POL 135 has HIST 135 defined as a course equivalent on SCADETL within the start and end term range associated with this equivalency.

### Example B:

For this example, MA 135 Calculus which had been offered since 199410, was changed to course number MA 150 Calculus, effective for term 199810. The course MA 135 on SCACRSE is defined with an effective start term equal to 199410 and an end term equal to 199720. The course MA 150 on SCACRSE is defined with an effective start term equal to 199810 and an end term equal to 999999.

For this example, MA 150 has MA 135 defined as an equivalent effective for the 199810 term. On SCADETL, for MA 150 for term 199810 in the Course Equivalency window,

MA 135 is an equivalent course with a from term equal to 199410 and a to term equal to term 199720. Repeat Limit is null on the SCACRSE records.

For the term being evaluated, 199810, SHARPTR has the Using Repeat Limit Selection Rule and the Using Repeat Hours Selection Rules set up.

Selection Rule	L
Evaluation Grade	D
GPA Calc	S
Schedule Type Ind	unchecked
Passing Grade	D
Title Ind	checked

*Julie Farley*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199810	10123	MA	150	1	B	A	UG	3.00	I SYSTEM
199510	10145	MA	135	1	L	D	UG	3.00	E SYSTEM

Both MA 135 and MA 150 are used in the repeat process evaluation, because the target course being evaluated in term 199810 is MA 150. MA 150 has MA 135 defined as a course equivalent on SCADETL within the start and end term range associated with this equivalency.

### Courses With Multiple Repeat Messages

There may be occurrences where a course has more than one repeat message associated with it. The output will display the first message that occurs, based on the order of processing.

### Handling of Courses With Different Courses Levels

#### *Example:*

BIOL 111 at course level UG has been offered since the term 199806. This was changed to course number BIOL 101 at course level GR in 199809. On SCADETL for course BIOL 101 effective for 199809, BIOL 111 was defined as an equivalent for start term 199806 to end term 999999.

For the term being evaluated, 199810, SHARPTR has the Using Repeat Limit Selection Rule and the Using Repeat Hours Selection Rules set up.

Selection Rule	F
Evaluation Grade	D
GPA Calc	S
Schedule Type Ind	unchecked
Passing Grade	D
Title Ind	checked
Level Ind	unchecked

*Aleena Smith*

Term	CRN	Subject	Course	Section	Schedule Type	Grade	Level	Hours	Repeat Message
199809	98102	BIOL	111	1	L	A	UG	3.00	I SYSTEM
199806	6001	BIOL	101	1	L	F	GR	3.00	E SYSTEM

Both BIOL 111 and BIOL 101 are used in the repeat process evaluation, because the target course being evaluated in 199809 is BIOL 111. BIOL 111 has BIOL 101 defined as a course equivalent on SCADETL within the start and end term range associated within this equivalency, and since the **Level Indicator** on SHARPTR is unchecked, the course levels do not need to match in order to be considered for repeat evaluation.

## Expanded Credit Hours and GPA Fields

### Overview

Your institution can expand credit hour values assigned to individual courses and control how GPA values are displayed in the system, on the Web, and on printed reports. Specifically, you can make the following decisions:

- You can use 100- point grading scales and define 10,000-point requirements for programs and courses.
- When determining how GPA values should be displayed for your students, you can also decide whether the values should be truncated or rounded off, as well as how many decimal places should be displayed.

- If you want to continue to use values that are truncated to two decimal places, your values will display as per usual.
- You can set up your GPA and quality point display rules by level and/or campus.

The expanded fields are defined as follows:

- Credit hours fields use the format 9,999.999.
- Grade codes fields use up to six positions or XXXXXX.
- Quality point fields for grade codes use the format 999.999.
- Numeric values fields for grade codes use the format 999.
- GPA fields store and display values up to the format 99,999,999,999,999.999999999.
- Quality point fields store and display values up to the format 99,999,999,999.999999.

## Field Sizes

Field sizes are based on the field usage. Fields are categorized as having data for an individual course, a term summary, or a cumulative summary.

For SHAGRDE, for example, the field expansion is as follows:

Column	Traditional Size	Expanded Size
Grade Code	XXX	XXXXXXX
Quality Points	99.99	999.999
Numeric Value	99	999

For individual courses, the field expansion is as follows:

Column	Traditional Size	Expanded Size
Credit Hours	99.99	9999.999
Quality Points	99.99	9999999.999999 *
Grade Code	XXX	XXXXXXX
Numeric Value	99	999

\* This is based on 9999.999 X 999.999.

For term summary records, the field expansion is as follows:

<b>Column</b>	<b>Traditional Size</b>	<b>Expanded Size</b>
Credit Hours	999.99	999999.999
Quality Points	9999.99	999999999.999999 **
GPA	9999.999999	999999999999.999999999

\*\* This is based on 9,999,999.999999 from an individual course X 50 courses per term.

For full summary records, the field expansion is as follows:

<b>Column</b>	<b>Traditional Size</b>	<b>Expanded Size</b>
Credit Hours	999.99	999999999.999
Quality Points	999999999.99	999999999999.999999 ***
GPA	9999.999999	999999999999999.999999999

\*\*\*This is based on the largest credits possible for 20 terms X the largest points possible per course.

## Set up Rules on SHAGPAR

Use the GPA Display Rules Form (SHAGPAR) to set up rules for your institution that will determine how grade point averages (GPAs) and quality points will be displayed for the various segments of your student population.

You can create overall GPA display rules and/or display rules for level and campus GPAs. You can query on the GPA display rules based on the effective term, and/or course level, and/or course campus combination(s) entered in the Key Block.

## Processing

The GPA display rule selection process works as follows:

1. Get the term selection code for the level code: F(first) or L(ast) term of coursework or M(ost recent rule) from the Level Term Selection block.

If no record exists, get the term selection code from the Overall Term Selection block.

2. Get the student's GPA rule term.

If the term selection code is F, get the term code from the student's first term GPA record for that level in academic history.

If the term selection code is L, get the term code from the student's last term GPA record for that level in academic history.

If the term selection code is M, set the student's GPA rule term code to 999999.

**3. Get the appropriate GPA rule.**

**3.1.** If a campus GPA is to be displayed, use the GPA display rule from the Campus GPA Rules block where the student's course campus and level codes match those of the rule with the highest effective term code that is less than or equal to the student's GPA rule term.

If no rule exists in the Campus GPA Rules block, use the GPA display rule from Level GPA Rules block where the student's course level code matches that of the rule with the highest effective term code that is less than or equal to the student's GPA rule term.

If no rule exists in the Level GPA Rules block, use the GPA display rule from the Overall GPA Rules block with the highest effective term code that is less than or equal to the student's GPA rule term.

**3.2.** If a level GPA is to be displayed, use the GPA display rule from the Level GPA Rules block where the student's course level code matches that of the rule with the highest effective term code that is less than or equal to the student's GPA rule term.

If no rule exists, use the display rule from the Overall GPA Rules block with the highest effective term code that is less than or equal to the student's GPA rule term.

*For example:*

An institution's GPA display rules are set up as follows:

*Overall Term Selection*      Use student's first term is selected.

<b>Overall GPA Rules</b>	<b>GPA Values</b>	<b>Quality Point Values</b>
Term 000000	Display Code = Round Display (2) spaces after decimal	Display Code = Truncate Display (2) spaces after decimal

*Level Term Selection*

Level GR	Use student's last term is selected.
Level LW	Use most recent display rule is selected.
Level UG	Use student's first term is selected.

<b>Level GPA Rules</b>	<b>GPA Values</b>	<b>Quality Point Values</b>
Level GR - Term 200010	Display Code = Round Display (4) spaces after decimal	Display Code = Round Display (2) spaces after decimal
Level GR - Term 199610	Display Code = Truncate Display (2) spaces after decimal	Display Code = Truncate Display (2) spaces after decimal
Level LW - Term 200210	Display Code = Truncate Display (9) spaces after decimal	Display Code = Truncate Display (2) spaces after decimal
Level LW - Term 199510	Display Code = Truncate Display (2) spaces after decimal	Display Code = Truncate Display (2) spaces after decimal
Level UG - Term 200110	Display Code = Round Display (3) spaces after decimal	Display Code = Round Display (3) spaces after decimal
Level UG - Term 199710	Display Code = Round Display (4) spaces after decimal	Display Code = Round Display (4) spaces after decimal
Level UG - Term 199410	Display Code = Round Display (2) spaces after decimal	Display Code = Round Display (2) spaces after decimal
<b>Campus GPA Rules</b>	<b>GPA Values</b>	<b>Quality Point Values</b>
Campus -Level - Term CEN - UG - 199410	Display Code = Round Display (4) spaces after decimal	Display Code = Truncate Display (2) spaces after decimal
Campus -Level - Term EST - UG - 199410	Display Code = Round Display (4) spaces after decimal	Display Code = Round Display (3) spaces after decimal
Campus -Level - Term NOR - UG - 199410	Display Code = Round Display (6) spaces after decimal	Display Code = Round Display (4) spaces after decimal

In the absence of display rules for the campus and level codes, the overall rule applies. ■

## Forms and Reports/Processes That Select SHAGPAR Rules

The following list of objects (forms, reports, and processes) impacted by the GPA Display Rules Form (SHAGPAR) includes logic describing how the objects will select the correct rule from the form.

 **Note**

Only those objects that display system-generated GPA and quality point (as opposed to manually entered) data require logic to select the correct display rule. ■

Objects	GPA/Quality Point Data Displayed	Rule Selection Logic
SHAINST SHAPCMP SHARQTC SHASUBJ SHATERM SHATRMC SHATRNS	The following data are displayed for these objects: <ul style="list-style-type: none"><li>• Grade code quality points</li><li>• Level GPA /quality points</li><li>• Campus GPA/quality points</li></ul>	Rule processing is as follows: <i>First:</i> Get the term selection code for the level code from the Level Term Selection block - F(irst) or L(ast) term of course work or M(ost recent).  If no record exists for the level code, get the term selection code from the Overall Term Selection block.
<i>continued</i>		<i>Second:</i> Get the student's GPA rule term. <ul style="list-style-type: none"><li>• If the term selection code is F, get the term code from the student's first term GPA record for that level in academic history.</li><li>• If the term selection code is L, get the term code from the student's last term GPA record for that level in academic history.</li><li>• If the term selection code is M, set the student's GPA rule term code to 999999.</li></ul>

Objects	GPA/Quality Point Data Displayed	Rule Selection Logic
<i>continued</i>		<p><i>Third:</i></p> <p>Get the appropriate GPA rule.</p> <ul style="list-style-type: none"> <li>• If a campus GPA is to be displayed, use the GPA display rule from the Campus GPA Rules block where the student's course campus and level codes match those of the rule with the highest effective term code that is less than or equal to the student's GPA rule term.</li> <li>• If no rule exists in the Campus GPA Rules block, use the GPA display rule from the Level GPA Rules block where the student's course level code matches that of the rule with the highest effective term code that is less than or equal to the student's GPA rule term.</li> <li>• If no rule exists in Level GPA Rules block, use the GPA display rule from the Overall GPA Rules block with the highest effective term code that is less than or equal to the student's GPA rule term.</li> <li>• If a level GPA is to be displayed, use the GPA display rule from the Level GPA Rules block where the student's course level code matches that of the rule with the highest effective term code that is less than or equal to the student's GPA rule term.</li> <li>• If no rule exists, use the display rule from the Overall GPA Rules block with the highest effective term code that is less than or equal to the student's GPA rule term.</li> </ul>
SHATAEQ	Term GPA/quality points	The logic will be the same as for the forms listed above except when the student being processed does not have any term GPA records in academic history. When this is the case, the effective term(s) on the attendance period(s) will be processed as if they already existed in the Term GPA Table (SHRTGPA).
SFRENRL SHRTAEQ	<p>The following data are displayed for these objects:</p> <ul style="list-style-type: none"> <li>• Level GPA /quality points</li> <li>• Term GPA</li> </ul>	The logic will be the same as for the forms listed above (SHAINST, etc.) with the exception that displaying a campus GPA is not an option.
SHRGPA	<p>The following data are displayed for this object:</p> <ul style="list-style-type: none"> <li>• Level GPA /quality points</li> <li>• Term GPA/quality points</li> <li>• Campus GPA/quality points</li> </ul>	The logic will be the same as for the forms listed above (SHAINST, etc.).

Objects	GPA/Quality Point Data Displayed	Rule Selection Logic
SHRGRDE	<p>The following data are displayed for this object:</p> <ul style="list-style-type: none"> <li>• Grade code quality points</li> <li>• Level GPA /quality points</li> <li>• Term GPA/quality points</li> <li>• Campus GPA/quality points</li> </ul>	<p>The logic will be the same as for the forms listed above (SHAINST, etc.). However, the values in the Campus Process Request and Campus to be Processed parameters will control whether or not grade mailers will be produced for specific course campuses.</p> <ul style="list-style-type: none"> <li>• If the value in the Campus Process Request parameter is <i>Y</i>, the process should attempt to find GPA display rules in the Campus GPA Rules block first.</li> <li>• If the value in the Campus Process Request is <i>N</i>, the process should attempt to find GPA display rules in the Level GPA Rules block first.</li> </ul>
SHRTRTC	<p>The following data are displayed for this object:</p> <ul style="list-style-type: none"> <li>• Grade code quality points</li> <li>• Level GPA /quality points</li> <li>• Term GPA/quality points</li> <li>• Campus GPA/quality points</li> </ul>	<p>The logic will be the same as for the forms listed above (SHAINST, etc.). However, the values in the Campus Selection Indicator and Campus Selected parameters will control whether or not transcripts will be produced for specific course campuses.</p> <ul style="list-style-type: none"> <li>• If the value in the Campus Selection Indicator parameter is <i>Y</i>, the process should attempt to find GPA display rules in the Campus GPA Rules block first.</li> <li>• If the value in the Campus Selection Indicator parameter is <i>N</i>, the process should attempt to find GPA display rules in Level GPA Rules block first.</li> </ul>

## GPA Calculation Process

The calculation process is used by forms that initiate the GPA calculation and/or display system-related GPA data. Forms and processes that display system-related GPA data must be able to select the correct rule from the GPA Display Rules Form (SHAGPAR).

The calculation process does the following:

- Handles pre-Banner hours
- Calculates GPA by subject
- Calculates an overall term GPA
- Calculates a degree GPA
- Calculates an institutional GPA for a given level and term
- Calculates a campus GPA for a given level, term, and campus
- Calculates a transfer GPA where the transfer term equals any valid term code

### Note

Only those objects that display system-generated GPA and quality point (as opposed to manually entered) data require logic to select the correct display rule. ■

The calculation process does *not* involve any rounding or truncating.

The GPA calculation is processed as follows:

1. The credit hour values of courses with grade codes where the GPA divisor hours indicator is checked are multiplied by the quality points value associated that grade code.

*For example:*

<b>Subject and Course</b>	<b>Credit Hours</b>	<b>Grade</b>	<b>Quality Points</b>	<b>Credit Hours * Quality Points</b>
BIOL 101	1000.00	AAAAAA	400.00	400000.000000
ENGL 103	1500.00	BBBBBB	300.00	450000.000000
SPAN 201	2000.00	AAABBB	350.00	700000.000000

2. The products of these calculations are summed.

*For example:*

<b>Subject and Course</b>	<b>Credit Hours</b>	<b>Grade</b>	<b>Quality Points</b>	<b>Credit Hours * Quality Points</b>
BIOL 101	1000.00	AAAAAA	400.00	400000.000000
ENGL 103	1500.00	BBBBBB	300.00	450000.000000
SPAN 201	<u>2000.00</u>	AAABBB	350.00	<u>700000.000000</u>
<i>Total GPA Hours</i>	4500.00		<i>Total Quality Points</i>	1550000.000000

3. This sum is divided by the total number of credit hours from those courses included in step 1.

*For example,*

<b>Subject and Course</b>	<b>Credit Hours</b>	<b>Grade</b>	<b>Quality Points</b>	<b>Credit Hours * Quality Points</b>
BIOL 101	1000.00	AAAAAA	400.00	400000.000000
ENGL 103	1500.00	BBBBBB	300.00	450000.000000

Subject and Course	Credit Hours	Grade	Quality Points	Credit Hours * Quality Points
SPAN 201	<u>2000.00</u>	AAABBB	350.00	<u>700000.000000</u>
<i>Total GPA Hours</i>	4500.00		<i>Total Quality Points</i>	1550000.000000

$$150000.000000 / 4500.00 = 344.4444444444 \text{ (GPA)}$$

- The entire value from the preceding calculation is stored.

*For example:*

The GPA 344.444444444 is stored in the SHRTGPA table.

## Calculate GPA Using SHRCGPA

Calculation of grade point averages is performed using the stand-alone GPA Calculation Process (SHRCGPA). SHRCGPA calculates (or re-calculates) both term and cumulative grade point averages for the selected term and group of students. You can use population selection or you can select all students for the term, students whose histories have been rolled, or students whose information has been fed to a collector file. The process also calculates a student's GPA by student centric period, level, and type (institutional, transfer credit, and overall) for terms that are part of a student centric period.

SHRCGPA is controlled by two parameters, term and selection. There are three options for selection:

- A All.* When *All* is chosen, the term GPA will be calculated or recalculated for all students who have rolled enrollments for the specified term.
- R Rolled.* When *Rolled* is chosen, the term GPA will be calculated or recalculated for students who have had sections rolled to Academic History or enrollment/grade changes made in Academic History for the specified term.
- C Collector.* When *Collector* is chosen, all students who have had courses excluded by the Repeat/Equivalent Course Check Process (SHRRPTS) will have term GPAs calculated or recalculated for all terms with excluded courses, regardless of the specified term.

All three selection options will calculate or recalculate appropriate term and level GPAs.

## Calculate GPA by Student Centric Period

GPA processing can calculate a student's GPA by student centric period for terms that are part of a student centric period. When a student changes his cycle (either retroactively or for the current, in-progress term), a warning is displayed that existing student centric period records will be deleted, and the GPA needs to be recalculated.

When the cycle designator is changed on SGASTDN or SFAREGS after the student has existing academic history records, the *Cycle Designator does not agree with existing Academic History* message is displayed. When the student centric period value is entered, altered, or deleted on SHAINST, the GPA and totals for the student centric period will be automatically recalculated, and the *GPA recalculation completed* message is displayed.

A student centric GPA is stored by level and type. The types include Institutional (*I*), Transfer Credit (*T*), and Overall (*O*). The transfer credit GPA is a combined GPA for all transfer work within the student centric period. Even though transfer work has been accepted for an effective term within the student centric period, it will only be included in the GPA by student centric period if the student has an institutional academic history term header record for that effective term.

When GPA calculation is called by SHATRNS or SHATCKN, or when recalculation is performed on SHAINST, the student's GPA will be calculated by student centric period, if the student centric period data element in the academic history term header record has a student centric period value.

## Calculate Campus GPA

It is possible for the institution to calculate a campus GPA based on the course level and course campus using SHRCGPA. This is an optional process which is controlled via the **Process Campus GPA** checkbox on the Academic History Control Form (SHACTRL). If the institution decides to calculate the campus GPA, the Calculate Campus GPA Process (SHRCONV) must be run after checking the box on SHACTRL.

This conversion process creates a campus GPA record for each student that has a term GPA record. This process will create a number of records on the database and may take some time to complete.

### Warning

No users may be on the system while the calculation is in process. ■

The Campus GPA Process may also be disabled by unchecking the **Process Campus GPA** checkbox on the Academic History Control Form (SHACTRL). When unchecked, all of

the existing campus GPA records on the database are deleted, and no forms or reports which use the campus GPA will display the information.

 **Warning**

Again, no users should be on the system while the campus GPA records are being deleted. ■

The Course History by Term and Campus Form (SHATRMC) is available when the campus GPA has been calculated. This form displays the campus GPA information for the level selected. The main window of the form displays the cumulative campus GPA and hours information. The Term GPA and Course Detail Information window details the GPA information on a term-by-term basis.

The following is an example of a campus GPA calculation:

The student has courses for term 199101 in the following course levels and course campuses:

Level	Campus	Hours	Grade	Points
01	1	3.00	B	9.00
01	1	4.00	A	12.00
01	2	3.00	C	6.00
02	1	3.00	A	12.00
02	2	1.00	B	3.00

Hence, the student will have the following Campus GPA information (using a 4.0 GPA scale):

Level	Campus	Hours	GPA
01	1	7.00	3.00
01	2	3.00	2.00
02	1	3.00	4.00
02	2	1.00	3.00

## Recalculate GPA

Use the GPA Recalculation Report (SHRGPAC) to recalculate the GPA for all terms for each student. When GPA calculation is called by SHATRNS or SHATCKN, or when recalculation is performed on SHAINST, the student's GPA will be recalculated. When terms have been recalculated, then all levels for each student are recalculated. Students may be selected for GPA recalculation using one of three methods:

- The user has previously created a population selection file.
- The user enters a term, and if no population selection file exists, and the user does not select individual students, all students enrolled in the term will be processed.

- The user will be prompted for individual student IDs.

The process also recalculates a student's GPA by student centric period, level, and type (institutional, transfer credit, and overall) for terms that are part of a student centric period.

## End of Term

The following steps should be performed at end-of-term.

1. Build grades using the Grade Code Maintenance Form (SHAGRDE). The grade, including the information to determine which hours it counts in: earned, attempted, or passed, and whether it counts in the GPA, is defined on this form. Valid grading modes are also identified.

 **Note**

Grades only need to be created once. ■

2. Build substitute grades using the Grade Code Substitution Form (SHAGRDS). For example, if a student taking a course with a pass/fail grading mode is given a B grade, that B may be substituted with a P grade.

 **Note**

Substitute grades only need to be created once. ■

3. Enter grades in the Class Roster Form (SFASLST) or the Class Attendance Roster Form (SFAALST).
4. Roll grades to Academic History using the Grade Roll Process (SHRROLL), or by checking the **Roll** box on the Class Roster Form (SFASLST) or the Class Attendance Roster Form (SFAALST), and saving.
5. Use the Repeat/Multiple Course Rules Form (SHARPTR) to set up rules to determine what courses are considered repeats and how they will be used in the GPA calculation.
6. Run the Repeat/Equivalent Course Check Process (SHRRPTS) to flag courses that are repeated based on the rules set up on SHARPTR.
7. Run the Calculate GPA Process (SHRCGPA) to re-calculate GPAs for students who took courses.
8. Run the Calculate GPA Process (SHRCGPA) to calculate GPAs based on the term and the selected group of students. Groups of students can include those whose information has been fed into a collector file, only those whose academic histories have been rolled, or all the students for the term.
9. Set up academic standing rules relating to the institution's policies in probation and Dean's List on the Academic Standing Rules Form (SHAACST).

10. Run the Calculate Academic Standing Process (SHRASTD) to calculate the academic standing for the selected term and group of students.
11. Produce grade mailers in batch mode by using the Grade Mailer Process (SHRGRDE). Student's grades must have either been entered manually or through the Grade Roll Process (SHRROLL).
12. Build continuant term rules on the Continuant Terms Rule Form (SOACTRM). These rules allow you to determine which terms constitute consecutive enrollment.
13. Run the Student Type Update Process (SHRTYPE) to automatically update the student type on the General Student record based on the rules created on the Continuant Terms Rule Form.

## IPEDS Report Procedures

The following Integrated Postsecondary Education Data System (IPEDS) reports are supported in Banner.

SHRIRES	IPEDS First Time Residency Report
SHRIACT	IPEDS Total Activity Report
SHRICIP	IPEDS Completions Report
SHRIPDS	IPEDS File Generation Process
SHRIAGE	IPEDS Summary by Age Report
SHRIETH	IPEDS Race/Ethnic Status Report - (Fall Enrollment Report)
SHRIGRS	Graduation Rate Survey Report

## Ethnicity Use Definition for IPEDS

The following information should be used for the building and maintenance of the tables used to prepare ethnicity data entry within the Banner Human Resources System for EEO reporting, and within the Banner Student System for IPEDS reporting.

The forms used are the Race Rules Form (GORRACE), the Ethnic Code Rules Form (PTRETHN), and the Ethnic Code Validation Form (STVETHN). The Ethnic Code Rules Form (PTRETHN) and the Race Rules Form (GORRACE) are used to report counts of individuals to the federal government based on ethnic background.

The Ethnic Code Validation Form (STVETHN) is used to identify individuals at a low level ethnic value, i.e., breakdowns of ethnicity. Examples of this would be Apache, Blackfoot, and Sioux as ethnic values in the Ethnic Code Validation Form (STVETHN).

The codes associated with these values are then cross-referenced into the Banner Human Resources and Banner Student Systems against the Ethnic Code Rules Form (PTRETHN) and Race Rules Form (GORRACE) respectively, for proper federal ethnic values. Therefore, each of the codes mentioned above would cross-reference to a code that indicates “Native American”.

With this methodology, it is then permissible to use low level university-specific descriptions on the Ethnic Code Validation Form (STVETHN), while maintaining the proper federal values on the Ethnic Code Rules Form (PTRETHN) and the Race Rules Form (GORRACE).

When dealing with individuals who are “internationals”, it is important to note that the Banner Student System IPEDS First Time Residency Report (SHRIRES) will not even consider the individual's ethnic code if a row exists in the Person International Information Table (GOBINTL), *and* a code exists in the **Visa Type** field on GOAINTL that relates to a visa type code on STVVVTYP where the **Non-Resident** field is checked (set to *Y*), and the visa **Start Date** and **End Date** values from GOAINTL are current as of the creation of the IPEDS data. This indicates that the individual is a non-resident alien, and the IPEDS report processes them as such and does not look at ethnicity.

#### **Warning**

The process of maintaining the Ethnic Code Validation Form (STVETHN) between two areas such as the Banner Human Resources System and the Banner Student System needs to be coordinated so that agreed upon values are used where appropriate, *but under no circumstances should values, once entered, be changed on a regular basis to coincide with reports.* ■

## Multi-Race and Ethnicity Reporting

The SHRIACT, SHRICIP, SHRIETH, and SHRIGRS IPEDS reports use the new ethnicity code, and students are reported based on their responses to two questions on the multiple race and ethnicity online survey. Reports display two or more races for students who report multiple races on the online multiple race and ethnicity survey. The multiple races are displayed when the ethnicity reported is not Hispanic, and two or more races from multiple race categories (such as Asian and White) are selected. The multiple races are converted to a value of “two or more races”.

Reports display “Unknown” for students who did not complete the online multiple race and ethnicity survey. A non-response is equivalent to the race and ethnicity being unknown. When a student selects an ethnicity of Non-Hispanic and does not select a race, that student will be reported as unknown.

Non-resident aliens are reported as “NRA”, and the race and ethnicity data is not considered.

## SHRIPDS Processing

SHRIPDS uses an ethnicity code to collect ethnicity data for students. Ethnicity is recorded as Hispanic, Non-Hispanic, or Non-Resident Alien. When a student selects Hispanic for the ethnicity, that ethnicity is reported, but no race selection is reported. When a student selects Non-Hispanic for the ethnicity, and a race selection is indicated, the race selections are reported. When a student selects Non-Hispanic for the ethnicity, and does not select a race selection, the ethnicity and race are reported as unknown.

SHRIPDS also collects multiple race information for students. GORRACE entries for each student are checked for an ethnicity of Non-Hispanic and two or more races. The multiple race selections are converted to a value for “two or more races”.

The process will also display a value of “unknown” for a student who did not respond to the multiple race and ethnicity survey or who selected an ethnicity of Non-Hispanic but did not select a race. When a student selects an ethnicity of Hispanic, the race is not reported. When a student selects an ethnicity of Non-Hispanic, the selected race is reported.

## Reporting Categories

The IPEDS reporting categories used by the Web upload files are:

Reporting Categories	Web Upload Values
Non-Resident Alien	1
Race and Ethnicity Unknown	7
Hispanic/Latino	8
American Indian or Alaskan Native *	9
Asian *	10
Black or African American *	11
Native Hawaiian or Other Pacific Islander *	12
White *	13
Two or more races *	14

(\* Non-Hispanic only)

## Data Conversion for Uploads

A common procedure is used to convert the multiple race and ethnicity data for a single person after the biographical information for existing ethnicity has been updated to the new ethnicity through the various upload processes in Student, such as SRTLOAD and SARETMT. The old ethnicity codes are loaded to Banner and converted to the new ethnicity and race code fields. The load and conversion process takes place in one step. The conversion of multiple race and ethnicity data is run from within the upload process if the old ethnicity code exists and the new race and ethnicity do not exist. Some processes, like the tape load, only use the ethnicity and do not load the race information. Those

processes have not been modified in Banner or by the vendor to include the new multiple race and ethnicity data.

## IPEDS First Time Residency Report (SHRIRES)

In the IPEDS First Time Residency Report (SHRIRES), the students are categorized based on the award category of their degree in their student record. First-time students (where student type matches requested type) who are registered in the requested term and whose general student level matches the requested level, will be reported by state, which is determined by the student's address type.

A population of students is selected using the following criteria:

1. Student validly registered for the term being processed.
2. Student has a general student record with an effective term that is less than or equal to the term being processed and which has a degree code that is valid on the Degree Code Validation Form (STVDEGC), and the category code on the STVDEGC matches the category code(s) you requested. The general student level must match your requested level code(s). Student must have a student type which matches your requested first-time freshman code(s) and cumulative credit hours which do not exceed the parameter limit you have set.

The Degree Award Category Code Validation Table (STVACAT) is used to classify degree codes (i.e., B.A. = Bachelor of Arts) into award categories. Required codes for the STVACAT Table are included in the table definitions and should be used. Use the parameter selection to specify which Degree Award Categories are to be used for the report.

The Degree Code Validation Form (STVDEGC) uses the Degree Award Category Code Validation Form (STVACAT) to identify the category that the degree code belongs to, such as Bachelor's, Master's, Doctoral.

### **Example:**

<b>Degree Code</b>	<b>Degree Category</b>
BS Bachelor of Science	24

Students are counted in the HS Grad/Year column if they have a high school graduation date on the High School Information Form (SOAHSCH) that falls within the user-specified parameter dates.

Transfer hours are used in the calculation of student classification. For example, if a student has 60 transfer credits and 20 institutional credits, then 80 credits will be used to determine their class standing.

## SHIRES Web Upload

Use the Report Format parameter to create hardcopy output only, a comma-delimited file only, or both formats during the same run. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file. The Report Format parameter is required. Enter 1 to produce hardcopy output. Enter 2 to produce output in a Web upload file format. Enter 3 to produce both formats. 3 is the default.

### Note

When running this report from job submission, the Web upload file name will be in the format `shires_wu_#####.txt`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

For any additional information on the IPEDS Web-Based Data collection process refer to the following website: [www.nces.ed.gov/ipeds/](http://www.nces.ed.gov/ipeds/), or contact the IPEDS helpdesk at 1-877-225-2568.

### ***Key Pair Value File Format***

The key pair value file format is the standard from the National Center for Educational Statistics (NCES) which is used for the creation of the Web upload in the IPEDS reports. The import/export file layout specification, including accepted values for the fields, can be found on the NCES website.

The NCES Unit ID value should be the one entered on SHACTRL.

## IPEDS Total Activity Report (SHRIACT)

In the IPEDS Total Institutional Activity Report (SHRIACT), both credit hours attempted in a 12-month period and unduplicated headcount of students are generated in the grand totals for the report. All students with at least one course recorded for credit will be counted for the period specified by the parameters.

This report looks at the information maintained in Academic History, not in Registration. Therefore, if a course has not yet been rolled to history, it will not be reported. For each course that falls within the period specified by the parameters, total credit hours and contact hours will be reported in the grand totals. If there is no enrollment in a course, the course will not be reported in the grand totals

Contact hours are calculated by adding the term contact hours together (lecture, lab and other), as defined in the Basic Course Maintenance Form (SCACRSE), and multiplying that number by the number of students enrolled in the course.

Contact Hours = (Lecture hours + Lab hours + Other Hours) x # of students enrolled in course

The unduplicated headcount is calculated by taking those students that have at least one degree credit course in their academic history record on the Course Summary Form (SHACRSE). Students are reported according to their student level. If students have more than one level during a year, the students are counted by the level they are in the last term of the report, based on the user-defined parameters.

**Example:**

Report Start Date	July 1, 2003
Report End Date	June 30, 2004
200301	Fall Term
Student's Level 01	Undergraduate
200302	Spring Term
Student's Level 02	Graduate

Student will be counted as a graduate student.

SHRIACT reflects course information that has been rolled to Academic History and applied to the level in the Institutional Course block of SHADEGR used for this report. Active registrations do not impact the figures represented in the file.

Total activity reporting (SHRIACT) includes Part E - Retention Data of First Time Undergraduates from Fall to Fall, which requires that schools report the percentage number of full-time, first-time undergraduates who are retained from one fall term to the next. (Part-time percentage is determined separately.) Retention is counted as fall to fall only. This data is reported with the spring submission and is no longer included with the 12-month enrollment data submitted in the fall (see below).

A person in the full-time cohort does not have to remain full-time to be counted as retained. For example, if Cohort A is enrolled in fall 2003 as full-time but is part-time in fall 2004, that student is counted as retained. Institutions are required to report the percent of students who are in a fall, full-time, first-time undergraduate cohort who have subsequently enrolled in the next fall term. Institutions must report the same data for the fall, part-time, first-time undergraduate cohort. Part E is also included in the Web Upload File, to report first-time fall cohorts who returned the following fall.

The NCES does not collect the First Year Retention data with the same submission as the 12-Month Enrollment Report or the Unduplicated Count and Instructional Activity Report, both of which are produced using SHRIACT. Since SHRIACT generates the required data for both reports, it is necessary to run SHRIACT in the fall and spring to produce the different data that is required.

Beginning with the Fall 2007 submissions, the Unduplicated Count and Instructional Activity data is collected in the Fall. To generate the report for the Fall, run SHRIACT with the parameters used for first-year retention data set to NULL, thus producing no

retention data. These parameters are: Effective Term of Fall Cohort, Retention Term of Fall Cohort, Full-time Fall Cohort Code, and Part-time Fall Cohort Code.

The First Year Retention Rate will be collected in the Winter (optional) and Spring submissions beginning in 2008. The actual cohort values and number of exclusions will be reported, and the retention percentages will be calculated by the NCES system. To generate the report for the Winter and Spring, run SHRIACT with the first-year retention parameters populated with your institution's values to produce the first year retention data. These parameters are: Effective Term of Fall Cohort, Retention Term of Fall Cohort, Full-time Fall Cohort Code, and Part-time Fall Cohort Code.

 **Note**

You need to include any level codes that were formerly used for First-Professional in the list of level codes for Graduate. ■

Multiple values can be entered in the Effective Terms of Fall Cohort parameter and the Retention Terms of Fall Cohort parameter. This allows your institution to process multiple effective terms and multiple retention terms by student centric period.

### SHRIACT Web Upload

The report produces a control page with the parameter values and the number of records processed, as well as a comma-delimited file for the Web upload. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file.

 **Note**

When running this report from job submission, the Web upload file name will be in the format `shriact_wu_#####.txt`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

The SHRIACT Temporary Table (SHRTACT) is used internally within SHRIACT to accumulate data for the Web upload file creation. When the process is completed, the contents of this table are deleted.

For any additional information on the IPEDS Web-Based Data collection process refer to the following website: [www.nces.ed.gov/ipeds/](http://www.nces.ed.gov/ipeds/), or contact the IPEDS helpdesk at 1-877-225-2568.

### ***Key Pair Value File Format - Fall Data Collection, 12 - Month Enrollment Section***

The key pair value file format is the standard from the National Center for Educational Statistics (NCES) which is used for the creation of the Web upload in the IPEDS reports. The import/export file layout specification, including accepted values for the fields, can be found on the NCES website.

- The NCES Unit ID value should be the one entered on SHACTRL.
- The Student Level code comes from the applicable SHRDGMR record and is matched against the code(s) entered in the run parameters.
- The Race value comes from the race defined on SPAPERS in the GORPRAC table.
- The Undergraduate Credit Hours is stored on SHRTCKG.
- The Contact Hours is the sum of the lecture, lab, and other hours from SCBCRSE.
- The Graduate Credit Hours is stored on SHRTCKG.
- The Representative Year selection is based on a comparison between term dates as defined on STVTERM and dates entered in the run parameters.

### ***Key Pair Value File Format - Winter/Spring Data Collection, Enrollment Section***

The key pair value file format is the standard from the National Center for Educational Statistics (NCES) which is used for the creation of the Web upload in the IPEDS reports. The import/export file layout specification, including accepted values for the fields, can be found on the NCES website.

- The NCES Unit ID value should be the one entered on SHACTRL.
- The CIP Code is CIP code defined on STVCIPC.
- The Student Level code comes from the applicable SHRDGMR record and is matched against the code(s) entered in the run parameters.
- The Race value comes from the race defined on SPAPERS in the GORPRAC table.
- The Sex comes from the gender defined on SPAPERS in the SPBPERS table.
- The Full-Time Fall Cohort is the sum of the students in the cohort in SGASADD.
- The Full-Time Exclusions is the sum of the cohort exemptions in SGASADD.
- The Full-Time Students Retained Through Fall is the difference between the number of students in the cohort minus the number of cohort exemptions in SGASADD.
- The Part-Time Fall Cohort is the sum of students in the cohort in SGASADD.
- The Part-Time Exclusions is the sum of the cohort exemptions in SGASADD.
- The Part-Time Students Retained Through Fall is the difference between the number of students in the cohort minus the number of cohort exemptions in SGASADD.

#### **Note**

If for any combination of CIP code, award level, race, and sex, the count is zero, the line will not be included in the import file. However, if there were no awards granted in a specific CIP code and award level and the

program is still offered at the institution, submit the record as suggested by the NCES. ■

 **Note**

If there is zero enrollment for any category (student level, age, state) the line does not have to be included in the import file. For Part C, HS=1 and 2 are not mutually exclusive categories. If first-time students who graduated from high school in the past 12 months are reported (HS=2) for any state, then also report those students as all first-time students (HS=1). Sort Order: UNITID,SURVSECT,PART. ■

### **Race/Ethnicity Values**

The Web upload values used for the race/ethnicity types can be found on the NCES site: <https://surveys.nces.ed.gov/ipeds/>. These values are associated with values in Banner on the Race Rules Form (GORRACE).

 **Note**

If a student is a non-resident alien, then only the alien status is counted, and race is disregarded. The non-resident alien status is determined by the current visa type established on the International Information Form (GOAINTL), where the current visa type code on the Visa Type Code Validation Form (STVVTYP) has the **Non-Resident (Indicator)** checked (set to Y), and where the visa **Start Date** and **End Date** values from GOAINTL are current as of the creation of the IPEDS data. ■

## IPEDS Completions Report (SHRICIP)

The IPEDS Completions Report (SHRICIP) provides degree and award information on degrees conferred by the institution within the user specified time frame. These degrees are broken down by degree level.

Only degrees with a degree status on the Degree Status Code Validation Form (STVDEGS) with an **Awarded Indicator** of A (for awarded) are included in the Web upload file.

The following degree award categories are included:

### **Award Category**

- 24 - Bachelor's Degree
- 41 - Post-Baccalaureate Certificate
- 42 - Master's Degree
- 43 - Post Master's Certificate
- 44 - Doctoral Degree - Research Scholarship
- 45 - Doctoral Degree - Professional Practice
- 46 - Doctoral Degree - Doctoral Degree Other

 **Note**

All designated CIP Codes are included in the file. ■

The following degrees are excluded from SHRICIP:

- degrees and awards conferred by branches of your institution located in foreign countries
- honorary degrees and awards

## SHRICIP Web Upload

The report produces a control page with the parameter values and the number of records processed, as well as a comma-delimited file for the Web upload. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file.

The Web upload is processed as follows.

- For the first major (MAJORNUM1), the report reflects those students who have completed their studies toward a particular certificate or degree and have been denoted as awarded (SHRDGMR\_DEGS\_CODE = AW) in Academic History. (These translate to NCES Award Levels 1, 2, 3, 4, 5, 6, 7, 8, 9, 17, 18, 19.)
- For the second major (MAJORNUM2), file entries are created for students who have been awarded an Associate Degree, Bachelors Degree (or equivalent), Masters Degree, or Doctoral Degree. (These translate to NCES Award Levels 3, 5, 7, 17, 18, 19.) The second degree can be recognized by the secondary major in the curriculum record.

### Note

When running this report from job submission, the Web upload file name will be in the format `shricip_wu_#####.lis`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

For any additional information on the IPEDS Web-Based Data collection process refer to the following website: [www.nces.ed.gov/ipeds/](http://www.nces.ed.gov/ipeds/), or contact the IPEDS helpdesk at 1-877-225-2568.

## **Key Pair Value File Format, Completions Section**

The key pair value file format is the standard from the National Center for Educational Statistics (NCES) which is used for the creation of the Web upload in the IPEDS reports. The import/export file layout specification, including accepted values for the fields, can be found on the NCES website.

- The NCES Unit ID value should be the one entered on SHACTRL.
- The First or Second Major comes from the SHRDGMR record for the student.
- The CIP code is the code (as defined on STVMAJR) that is associated with the major in the secondary curriculum or the second major in the primary curriculum. The CIP codes are defined on STVCIPC.

- The Award Level comes from the STVACAT code assigned the applicable curriculum record. The degree code is defined on STVDEGC.
- The Race value comes from the race defined on SPAPERS in the GORPRAC table.
- The Sex comes from the gender defined on SPAPERS in the SPBPERS table.

 **Note**

If for any combination of CIP code, award level, race, and sex, the count is zero, the line will not be included in the import file. However, if there were no awards granted in a specific CIP code and award level and the program is still offered at the institution, submit the record as suggested by the NCES. ■

The following criteria apply:

- The selection comes first from the Base Curriculum Rules Table (SOBCURR) where the degree code corresponds to a degree code (STVDEGC) that is assigned to a corresponding degree category code (STVACAT). Please see the Award Values section which follows for degree category equivalent information.
- When entering a value for the Report Term parameter in SHRICIP, consider that the process will use the latest set of curriculum records (SOBCURR) that are locked and effective up to and including the term entered in the Report Term parameter. For example, when the Report Term parameter is set to 200010, it will not select curriculum records that are effective for term 200020.
- After the base rules are selected, the Curriculum Rules Major Table (SORCMJR) is analyzed. The process will select the appropriate effective term major code which is “linked” to the curriculum base rule. In addition, the major code is only selected if it has a valid corresponding STVCIPC code associated with it in STVMAJR, where in STVMAJR the column STVMAJR\_VALID\_MAJOR is equal to Y.
- For example, the Report Term parameter is equal to 200010; if a curriculum base rule is effective for term 200010, this curriculum base rule will be selected. If one of the associated majors linked to this base rule is effective for term 200020, and has a valid corresponding STVCIPC code associated with it in STVMAJR where in STVMAJR the column STVMAJR\_VALID\_MAJOR is equal to Y, this major code will not be used in this report.

### **CIP Code Table**

Valid CIP codes are listed in Classification of Instructional Programs (CIP) 1990 Version which is available at this web site: <http://nces.ed.gov/ipeds/>.

## Award Values

The following values are used for the award levels.

Web Upload Value	Description	Banner Value on STVACAT
1	Postsecondary award, certificate, or diploma of less than one academic year (less than 900 contact or clock hours) ( <i>unchanged</i> )	21
2	Postsecondary award, certificate, or diploma of at least one but less than two academic years (at least 900 but less than 1800 contact or clock hours) ( <i>unchanged</i> )	22
3	Associate's Degree ( <i>unchanged</i> )	23
4	Postsecondary award, certificate, or diploma of at least two but less than four academic years (at least 1800 contact or clock hours) ( <i>unchanged</i> )	25
5	Baccalaureate/Bachelor's Degree or equivalent ( <i>unchanged</i> )	24
6	Post-baccalaureate Certificate ( <i>unchanged</i> )	41
7	Master's Degree ( <i>unchanged</i> )	42
8	Post-Master's Certificate ( <i>combined</i> )	43, 32
9	Doctor's Degree ( <i>obsolete</i> )	44
10	First-Professional Degree ( <i>obsolete</i> )	31
11	First-Professional Certificate (Post-Degree) ( <i>obsolete</i> )	32
17	Doctoral Research/Scholarship ( <i>new</i> )	44
18	Doctoral Professional Practice ( <i>new</i> )	45, 31
19	Doctoral Other ( <i>new</i> )	46

## Race/Ethnicity Values

The Web upload values used for the race/ethnicity types can be found on the NCES site: <https://surveys.nces.ed.gov/ipeds/>. These values are associated with values in Banner on the Race Rules Form (GORRACE).

### Note

If a student is a non-resident alien, then only the alien status is counted, and race is disregarded. The non-resident alien status is determined by the current visa type established on the International Information Form (GOAINTL), where the current visa type code on the Visa Type Code Validation Form (STVVTYP) has the **Non-Resident (Indicator)** checked (set to Y), and where the visa **Start Date** and **End Date** values from GOAINTL are current as of the creation of the IPEDS data. ■

## IPEDS File Generation Process (SHRIPDS)

The IPEDS File Generation Process (SHRIPDS) is an extract process that is used to produce the Enrollment Summary of Students by Age (SHRIAGE), the Enrollment Summary by Racial/Ethnic Status (SHRIETH), and the Enrollment Summary by First Time Residency (SHRIRES). This process, which creates a table, must be run prior to running any of these reports. A control report, which lists the parameters used, is also produced from this process.

SHRIPDS is the IPEDS report extract process. This process must be run prior to producing the three dependent reports. A file of individual and communal statistics is created which is used by SHRIAGE, SHRIETH, and SHRIRES.

These following three reports retrieve data needed for the Fall Enrollment Report:

Report	Part	Description
SHRIETH	Parts A and D	Enrollment Summary by Racial/Ethnic Status
SHRIAGE	Part B	Enrollment Summary of Students by Age
SHRIRES	Part C	Enrollment Summary by First-Time Residency (Freshman)

A population of students is selected by SHRIPDS using the following criteria:

1. Student is validly registered for the term being processed.
2. Student has a general student record with an effective term that is less than or equal to the term being processed and which has a degree code that is valid on the Degree Code Validation Form (STVDEGC).

For each student retrieved, a record is created and inserted into the SHRIPDS file for later use by the reports.

IPEDS rules dictate that a student may only be counted once in the ethnicity section if he/she is a non-resident alien. A check is made to determine if this is the case, and if it is, the ethnicity is set to reflect this condition.

The student's sex indicator is captured. The student's age is calculated using his/her birthday and user-entered date (default today's date), and the appropriate age column is determined.

The process gathers first year, second year, third year, and fourth year statistics based either upon credit ranges or calculated student classification. Parameters allow entry of one or more student classification codes which, when using online job submission, are validated against the Class Code Validation Form (STVCLAS). When class code values are entered in these parameters, the specified class codes determine which row a student will be reported in, in the IPEDS Web upload file. The credit hour parameters which have been used to control the first year, second year, etc., determination are still required. However, if values are entered in any class code parameters for a given year, the class code instead of the credit hour value is used to determine the row in which a student is reported.

A calculation is done to determine whether or not the student is full-time or part-time based on the following criteria:

- Valid undergraduate registered hours for the process term are equal to or greater than the credit hours designated as full-time undergraduate (parameter for Full-Time Undergraduate Hours).
- Graduate full-time or part-time hours are calculated the same way. Use the Graduate level parameters to count all student levels and categories that were formerly counted in First-Professional. First-Time First-Professionals must now use the student type code for First-Time Graduate.

Additionally, data is gathered and indicators set if the student is enrolled in all remedial courses, all foreign campuses, all off-campus, and/or all audit courses. All of a student's registered courses are examined for remedial attributes (those supplied via parameter).

The IPEDS reports work the same as other Banner reports. If run through job submission, editing of data with system table ties is done. If run interactively, no system table editing done.

 **Note**

The other IPEDS reports (SHRIACT, SHRICIP, SHRIGRS) are stand alone reports that can be run without running SHRIPDS first. ■

## Campus Codes

The process looks at the student's individual registered courses when considering the parameters for Foreign Campus Code and Off-Campus Code. Schools won't necessarily build courses that are offered at a foreign campus, but the student might be assigned to a foreign campus.

Each user is allowed to decide for themselves which (if any) of their campus(es) meet the criteria, and enter them via this parameter. If all the courses in which a student is registered match the parameter supplied data, then an appropriate switch is set. This works the same way for the off-campus codes.

## Student Centric Periods

SHRIPDS processes information based on terms that are part of student centric periods. SHRIPDS is run by term using the Process Term parameter. When the Process by Student Period parameter is also used, the process checks the rules on SOASCPT to determine which student centric period includes the value entered in the Process Term parameter as the last term. All term codes that are part of the student centric period are considered, as is the order in which the terms fall within the student centric period.

After the student centric period and the associated terms have been identified, each student record that shows enrollment in any term in the student centric period is read for reporting.

- If the student is registered in all terms of the student centric period, the following occurs:
  - Enrollment hours are summed from all terms in the student centric period in which the student is enrolled, using the existing rules in base SHRIPDS processing.
  - Student centric period rules for time status are used and combine the enrollment hours for all the terms in the student centric period.
  - The general student record is used for the lowest term in the student centric period in which the student has registration. The process reports the student's class, type, level, and category.
  - Registration records for all terms in the student centric period are used to determine remedial courses, foreign campus courses, off-campus courses, audit grade mode courses, and audit registration status courses.
  - Academic standing status rules are used. If the student is new, the system assumes a standing of *00*. For continuing students, the system pulls the standing from the previous term's academic standing in the **End of Term Academic Standing** field in the Term Header block on SHAINST. (If there is no standing, the system assumes *00*.) If an override standing has been entered for the term on SGASTDN, the system will use the override standing.

- If the student is not registered in all terms of the student centric period, the student's registration records are reported for terms included in the student centric period using these rules:
  - The general student record is used for the lowest term in the student centric period in which the student has a registration record. This determines time status, student class, type, level, and category.
  - Student registration records are used for all terms of the student centric period. This determines remedial courses, foreign campus courses, off-campus courses, audit grade mode courses, and audit registration status courses.

See the following example.

A student is registered in a term that falls within a student centric period.

- Student centric period 2009A is composed of terms 200910 and 200920.
- The student is not included in the student centric period, but is registered in two terms (terms 200910 and 200930), and term 200910 is included in student centric period 2009A.
- Registration is reported for term 200910, because term 200910 is included in student centric period 2009A.
- Registration in term 200930 is not reported, because term 200930 is not included in student centric period 2009A.

## IPEDS Summary of Students by Age (SHRIAGE)

The IPEDS Summary by Age Report provides a breakdown of registered students by CIP Code within the Department of Education age categories. The CIP Code associated with the student is derived from the student's major code (STVMAJR) from SORLCUR and SORLFOS. The information on this report coincides with the data on the Enrollment Summary by Racial/Ethnic Status (SHRIETH). The information is broken down as follows:

Undergraduate Degree Seeking	Rows	01–06	of SHRIETH for full-time students
All Other Credit Undergraduates	Row	07	of SHRIETH for full-time students
Graduate Students	Rows	11–13	of SHRIETH for full-time students

This report generates student counts by age, gender, and full-time/part-time status according to CIP Code. It also creates Part B of the EF Survey Section.

### SHRIAGE Web Upload

Use the Report Format parameter to create hardcopy output only, a comma-delimited file only, or both formats during the same run. This comma-delimited file format conforms to

the NCES requirements for the creation of the Key Pair Value file. The Report Format parameter is required. Enter 1 to produce hardcopy output. Enter 2 to produce output in a Web upload file format. Enter 3 to produce both formats. 3 is the default.

 **Note**

When running this report from job submission, the Web upload file name will be in the format `shriage_wu_#####.txt`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

For any additional information on the IPEDS Web-Based Data collection process refer to the following website: [www.nces.ed.gov/ipeds/](http://www.nces.ed.gov/ipeds/), or contact the IPEDS helpdesk at 1-877-225-2568.

### **Key Pair Value File Format - Winter/Spring Data Collection, Fall Enrollment Section**

The key pair value file format is the standard from the National Center for Educational Statistics (NCES) which is used for the creation of the Web upload in the IPEDS reports. The import/export file layout specification, including accepted values for the fields, can be found on the NCES website.

- The NCES Unit ID value should be the one entered on SHACTRL.
- The Age Category is the date calculated by SHRIPDS, based on the student's birth date and the value in the Birth Date parameter. If no student birth date is recorded, the value *unknown* is displayed.
- The Student Level is the level of the appropriate general student record compared to the values entered in the parameters for SHRIPDS, which must be run prior to running SHRIAGE.
- The Sex comes from the gender defined on SPAPERS in the SPBPERS table.

 **Note**

If for any combination of CIP code, award level, race, and sex, the count is zero, the line will not be included in the import file. However, if there were no awards granted in a specific CIP code and award level and the program is still offered at the institution, submit the record as suggested by the NCES. ■

## **IPEDS Race/Ethnic Status Report (SHRIETH) - Fall Enrollment**

The Race/Ethnic Status Report generates the racial/ethnic breakdown of the selected students and may be used to complete Part A of the Enrollment Summary Report. Statistical information is generated on the race/ethnic background of students by CIP code. The text file reports statistics only on the CIP codes specified and provides data for Part A of the EF Survey Section and Part D, for the total number of students enrolled.

Undergraduate students are classified by student type, degree category, and level. For example, if a first time undergraduate freshman has a degree category of Masters of Business then he will be counted in the Undergraduates Enrolled for Credit because his degree category does not meet the parameter specified undergraduate degree categories.

For the Ethnic Status Report (SHRIETH), students must be registered in the requested term. Subject areas for the students are determined by the CIPC code on the CIPC Code Validation Form (STVCIPC) for each student's major, which is in the student's learner curriculum record. These major codes are defined on the Major, Minor, Concentration Code Validation Form (STVMAJR).

The ethnic category for a student is determined by the **New Ethnicity Code** value maintained on the General Person Form (SPAPERS). The `SPBPERS_ETHN_CDE` value is used to track ethnicity for hispanic, non-hispanic, or non-resident alien ethnicities. Race categories are defined on the Race Rules Form (GORRACE) using the **Regulatory Race (Code)** value that is associated with the **Institution Race (Code)** value. The `GORRACE_RRAC_CODE` value is used to report race categories.

If a student is a non-resident alien, then only the alien status is counted; race is disregarded. The non-resident alien status is determined by the current visa type established on the International Information Form (GOAINTL), where the current visa type code on the Visa Type Code Validation Form (STVVTYP) has the **Non-Resident (Indicator)** checked (set to *Y*), and where the visa **Start Date** and **End Date** values from GOAINTL are current as of the creation of the IPEDS data.

The Degree Award Category Code Validation Table (STVACAT) is used to classify degree codes (i.e., B.A. = Bachelor of Arts) into award categories. Required codes for the STVACAT Table are included in the table definitions and should be used.

Students are categorized in this report using user-specified parameter selections.

**Example:**

- Full-time versus part-time hours for undergraduates and graduates is a parameter selection.
- Undergraduate and graduate degree categories are user selected.  
Unlimited categories are available.  
Graduate categories should include those categories formerly used for First-Professional, as well as all Doctoral categories.
- First-Time students are determined by user-selected student types for undergraduates and graduates.  
Unlimited student types are available.
- Level codes for undergraduates and graduates are user specific.  
Unlimited level codes are available.

- The credit hour range for a first year student is user-defined.
- You may specify the student types used for unclassified students.

The Degree Code Validation Form (STVDEGC) uses the Degree Award Category Code Validation Form (STVACAT) to identify the category that the degree code belongs to, i.e., Bachelor's, Master's, Doctoral.

**Example:**

<b>Degree Code</b>	<b>Degree Category</b>
BS - Bachelor of Science	24

*First-Time Freshmen* are students classified as freshman by the Student Type Validation Form (STVSTYP) when their category matches the user-entered category, and their level matches a freshman, user-entered, undergraduate level.

*Other First Year* students are classified as transfer-in, degree or certificate-seeking undergraduates.

*Sophomores* are classified as students who have more than the maximum number of freshman hours and less than the maximum number of hours designated for a sophomore via the parameter selection of second year credit hours.

The students whose earned credit hours are greater than or equal to the user-specified freshman credit hours and less than the user-specified sophomore credit hours are counted as sophomores.

**Example:**

<i>Freshman Credit Hours</i>	=	30
<i>Sophomore Credit Hours</i>	=	60
<i>Junior Credit Hours</i>	=	90
Student A has 30 hours	=	Sophomore
Student B has 29 hours	=	Freshman
Student C has 60 hours	=	Junior

*Juniors* are classified as students who have more than the maximum number of sophomore hours and less than the maximum number of hours designated for a junior via the parameter selection of third year credit hours.

*Seniors* are classified as students who have more than the maximum number of hours designated for a third year student.

*Unclassified* students are students that have a student type equal to the parameter selected as unclassified student type.

Transfer hours are used in the calculation of student classification. For example, if a student has 60 transfer credits and 20 institutional credits, then 80 credits will be used to determine their class standing.

Those students who have dropped or withdrawn from all of their classes will not be included in the file. The process examines the **Count in Enrollment** box on the Course Registration Status Code Validation Form (STVRSTS). If all of the course statuses are flagged as "Do not count in enrollment" or unchecked, then the student is not included in the file.

The totals for full-time degree/certificate-seeking undergraduate students and part-time degree/certificate-seeking undergraduates are reflected in the counts.

Part D is used to generate a new record for the number of students enrolled. Only one record is required.

## SHRIETH Web Upload

The report produces a control page with the parameter values and the number of records processed, as well as a comma-delimited file for the Web upload. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file.

### Note

When running this report from job submission, the Web upload file name will be in the format `shrieth_wu_#####.txt`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

For any additional information on the IPEDS Web-Based Data collection process refer to the following website: [www.nces.ed.gov/ipeds/](http://www.nces.ed.gov/ipeds/), or contact the IPEDS helpdesk at 1-877-225-2568.

### ***Key Pair Value File Format - Winter/Spring Data Collection, Fall Enrollment Section (Part A)***

The key pair value file format is the standard from the National Center for Educational Statistics (NCES) which is used for the creation of the Web upload in the IPEDS reports. The import/export file layout specification, including accepted values for the fields, can be found on the NCES website.

- The NCES Unit ID value should be the one entered on SHACTRL.
- The CIP Code is the sum of all the STVMAJR CIP codes.
- The Student Level is the level of the appropriate general student record compared to the values entered in the parameters for SHRIPDS, which must be run prior to running SHRIETH.

- The Race value comes from the race defined on SPAPERS in the GORPRAC table.
- The Sex comes from the gender defined on SPAPERS in the SPBPERS table.

 **Note**

If for any combination of CIP code, award level, race, and sex, the count is zero, the line will not be included in the import file. However, if there were no awards granted in a specific CIP code and award level and the program is still offered at the institution, submit the record as suggested by the NCES. ■

**Key Pair Value File Format - Winter/Spring Data Collection, Fall Enrollment Section (Part D)**

The key pair value file format is the standard from the National Center for Educational Statistics (NCES) which is used for the creation of the Web upload in the IPEDS reports. The import/export file layout specification, including accepted values for the fields, can be found on the NCES website.

The NCES Unit ID value should be the one entered on SHACTRL.

 **Note**

If for any combination of CIP code, award level, race, and sex, the count is zero, the line will not be included in the import file. However, if there were no awards granted in a specific CIP code and award level and the program is still offered at the institution, submit the record as suggested by the NCES. ■

## Graduation Rate Survey Report (SHRIGRS)

The Graduation Rate Survey (GRS) Report collects data on the numbers of undergraduate students entering an institution as full-time, first-time, degree/certificate seeking students. The GRS requires institutions to collect and generate data on a particular cohort code. The GRS applies only to those institutions that are eligible for Federal student financial assistance and enroll full-time, first-time, degree/certificate seeking undergraduate students.

Reporting is by race/ethnicity and gender, length of time to completion, number still persisting, and number transferred to other institutions. The report requires an institution to take a snapshot of these students for a particular year (cohort) and then again after 150% of normal time has elapsed.

Beginning with the Spring 2008 submissions, the NCES has eliminated Sections V and VI that collected data on students who received athletically related student aid. (The related parameters are no longer used and should not be populated.) Institutions are no longer required to report this data to IPEDS, but are still required to disclose this data, as specified in the Student Assistance General Provision Regulations (34 CFR 668) which

implemented the Student Right-to-Know Act. An item has been added for the URL which can be used to report this disclosure.

 **Note**

Although the GRS is part of the IPEDS reports, you do not have to run the IPEDS File Generation Process (SHRIPDS) prior to running the Graduation Rate Survey Report (SHRIGRS). ■

The GRS is published in four versions:

<b>Version</b>	<b>Institution</b>
GRS1	4-year institutions
GRS2	2-year public institutions
GRS2A	2-year private institutions
GRS3	less than 2-year institutions

## Setting Up the Report

Use the following steps to implement the Graduation Rate Survey report.

**1.** Update the following validation forms with your institution's codes:

**1.1.** Cohort Code Validation Form (STVCHRT)

Define your institution's cohort codes for the Graduation Rate Survey Report (SHRIGRS) on this form. Populate the following fields for each cohort code: **Cohort Code**, **Description**, **Start Term**, **End Term**, **Degree Level**, and check (set to *Y*) the **Print Indicator**.

When defining your cohorts, it is important that the start term represents the fall term for the fall cohort or the beginning term for the full year cohort of the year in which the students entered the institution. The end term represents the last term in which the students could have completed or graduated from their respective programs.

The degree level code on STVCHRT is associated with the award category code on the Degree Code Validation Form (STVDEGC) to ensure that the degree level is valid. If the award category code is not indicated, the bachelors degree code is the default.

The **Print Indicator** must be checked for those cohort codes that are to be included in the Graduation Rate Survey report (SHRIGRS). Cohort codes may

be used for both the Graduation Rate Survey report and for tracking other types of populations of groups.

 **Note**

Separate cohorts should be created for each program that is not part of your normal program timeframe.

For example, if you are a four year institution and offer mainly four year programs, but have five year programs, then a separate cohort should be created for each program. If you are a two year institution and offer mainly two year programs, but have three year programs, then a separate cohort should be created for each program. ■

Students are considered to be completers if they have received their degree, diploma, or certificate, and the degree or award is actually conferred within 150% of normal time.

For example, if your institution offers an associate degree which normally is two years in completion length, students will have three years to complete the requirements for the degree. If your institution offers a baccalaureate degree which is normally four years in length, students will have six years to complete the requirements. If your institution offers a baccalaureate degree which is five years in length, students will have seven and one half years to complete the requirements. If a student is admitted with the intention of pursuing an associates degree and is part of an associate cohort, but decides to pursue a bachelors degree, the student will remain in the associate cohort in which they were admitted.

The following is a list of the term codes and timeframes that are used in the examples provided.

<b>Academic Year</b>	<b>Fall Term Code</b>	<b>Spring Term Code</b>	<b>Summer Term Code</b>
01-02	200210	200220	200240
02-03	200310	200320	200340
03-04	200410	200420	200440
04-05	200510	200520	200540
05-06	200610	200620	200640
06-07	200710	200720	200740

*Example 1:*

For an institution which offers a two year associate degree and four year baccalaureate programs, the cohort codes for the entering Fall class for 2001 might be defined as follows:

<b>Cohort Code</b>	<b>Description</b>	<b>Start Term</b>	<b>End Term</b>	<b>Degree Level</b>	<b>Print Incl.</b>
01ASSOCIATE	Fall 2001 Associate	200210	200440	AS	Y
01BACHELOR	Fall 2001 Bachelor	200210	200740	BA	Y

Therefore, students entering the associate cohort in the fall of 2001 will be given until the end of the summer for the academic year 2003-2004 to complete their degree level program. Students entering the bachelor cohort in the fall of 2001 will be given until the end of the summer of the academic year 2006-2007 to complete their degree level program.

*Example 2:*

For an institution which offers only a two year degree, the cohort code for the entering fall class for 2001 might be defined as follows:

<b>Cohort Code</b>	<b>Description</b>	<b>Start Term</b>	<b>End Term</b>	<b>Degree Level</b>	<b>Print Incl.</b>
01ASSOCIATE	Fall 2001 Associate	200110	200440	AS	Y

### 1.2. Cohort Reason Code Validation Form (STVCREA)

Use this validation form to define reasons for excluding a student from a cohort code. For the purpose of calculating the Graduation Rate Survey graduation rates, an institution may inactivate a student's cohort code, and therefore, remove the student from the cohort, if they leave the institution for one of four reasons:

- Are deceased or totally and permanently disabled,
- To serve in the armed forces,
- To serve with a foreign aid service of the Federal Government, such as the Peace Corps,
- To serve on official church missions.

### 1.3. Withdrawal Reason Code Validation Form (STVWRSN)

Use this validation form to define the codes that your institution uses to record the withdrawal reason for those students who transfer out. A transfer-out is a non-completer who has transferred to and enrolled in another eligible institution within 150% of normal time for their program. Tracking also needs to occur for those students who attend a less than two year institution and left

for a job in a related field. Since the GRS requires institutions to determine the type of institution that a student has transferred to, less than 2- year, 2-year, 4-year or higher, your codes should refer to these categories.

The withdrawal reason codes are assigned to the student on the Term Course Maintenance Form (SHAINST). If the withdrawal reason or transfer institution codes are added or changed for the student on SHAINST, the corresponding withdrawal information (SARADAP table) is not automatically updated. To make the corresponding adjustment, access the student's admissions record on the Admissions Application Form (SAAADMS), if a SAAADMS record exists for the term.

The transfer institution codes are assigned on the Term Course Maintenance Form (SHAINST) and are based on the term code that is less than or equal to the term in the Enrollment Term parameter.

*Example:*

The following codes could be used to designate the withdrawal reason.

<b>Code</b>	<b>Institution/Reason</b>
<i>T1</i>	Less than a 2-year institution
<i>T2</i>	2-year institution
<i>T4</i>	4-year institution or higher
<i>J1</i>	Left for a job related to the student's study

2. Associate students with a cohort code for an effective term on the Additional Student Information Form (SGASADD). There are two ways to do this.

The first is to add an individual student to a cohort online, using the Additional Student Information Form (SGASADD). A student must have a student ID for an effective term to be associated with a cohort code.

The second is to add multiple students to a cohort using the batch Cohort Load Process (SGRCHRT). This process uses population selection, and should be run to update the student's general student cohort codes for the specified effective term. (Cohort codes may be loaded by a batch process into a person's existing recruiting, admissions, general student, or academic history record.)

A student should be included in the cohort if they enter an institution as a full-time, first-time, degree/certificate seeking, undergraduate student during either the fall term of a given year or between September 1 and August 31 of the same academic year. Students who enroll during the summer, but fail to enroll in the fall should not be included. Transfer students should not be included in your cohort.

3. Track students who have withdrawn due to transfer or study related job.

The Graduation Rate Survey reporting requires institutions to track students who either transfer out to an eligible institution or leave the institution for a job related to their field of study, within 150% of normal time for their program. To count a student as a transfer out, you must verify that the student has enrolled at an eligible institution. “Enrollment” is defined under 34 CFR 668.2 of the Student Assistance General Provisions as the “Status of a student who has completed the registration requirements (except for the payment of tuition and fees) at the institution he/she is attending.” “Eligible institution” refers to an institution that is eligible for Title IV funds. You must also determine the type of institution that the student has transferred to: less than 2-year, 2-year, 4-year, or higher.

Withdrawal codes for transfer to an eligible institution or leaving for a job related to the student’s field of study (GRS3 version only) are entered in the **Withdrawal Reason** field on the Term Course Maintenance Form (SHAINST). The **Withdrawal Reason** field is validated against the Withdrawal Reason Code Validation Form (STVWRSN), where codes are updated and maintained. The transfer institution codes for the institution to which the student has transferred are entered on the Term Course Maintenance Form (SHAINST). Codes for the **Transfer Institution** field are queried and selected from the Source/Background Institution Query-Only Form (SOISBGI). Codes are updated and maintained on the Source/Background Institution Code Validation Form (STVSBGI).

 **Note**

The data in these fields will be used for the Graduation Rate Survey reporting and will not control any system processing. These fields may be used to support other local processing needs as appropriate. ■

4. Track students who leave in good academic standing.

Students who did not transfer out, but left the institution in good academic standing within 150% of normal time, must be reported. Good academic standing is defined as “the minimum quality point average or grade point average your institution requires for graduation”. This is required for the two year institutions that must complete the GRS2 and GRS2A versions of the report. The academic standing code is taken from the SHRTTRM record, which records the end of term academic standing. Academic standing codes are created and maintained on the Academic Standing Code Validation Form (STVASTD).

 **Note**

If the **End of Term Academic Standing** field is null on SHAINST, information will not be reported for this requirement. ■

## Student Centric Periods

The following parameters can be used with student centric periods.

- Start Term parameter - Enter the minimum start term of the student centric period to be processed.

- End Term parameter - Enter the maximum end term of the student centric period to be processed.
- Enrollment Terms parameter - The maximum enrollment term is used to select students to be reported for the student centric period. Students enrolled in any terms up to the maximum enrollment term will be reported.

## SHRIGRS Web Upload

The report produces a control page with the parameter values and the number of records processed, as well as a comma-delimited file for the Web upload. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file.

### Note

When running this report from job submission, the Web upload file name will be in the format `shrigrs_wu_#####.txt`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

For any additional information on the IPEDS Web-Based Data collection process refer to the following website: [www.nces.ed.gov/ipeds/](http://www.nces.ed.gov/ipeds/), or contact the IPEDS helpdesk at 1-877-225-2568.

### **Key Pair Value File Format**

The key pair value file format is the standard from the National Center for Educational Statistics (NCES) which is used for the creation of the Web upload in the IPEDS reports. The import/export file layout specification, including accepted values for the fields, can be found on the NCES website.

This report uses key pair value file formats for four year institutions, two year institutions, and less than two year institutions.

- The NCES Unit ID value should be the one entered on SHACTRL.
- The Race value comes from the race defined on SPAPERS in the GORPRAC table.
- The Sex comes from the gender defined on SPAPERS in the SPBPERS table.

## Academic Standing Rules Procedures

Academic Standing Rules are built by level and college on the Academic Standing Rules Form (SHAACST). This allows the institution to create different academic standing rules for undergraduate liberal arts students vs. graduates and different rules for the Music College vs. the Business School. If college is not used by your institution for determining academic standing then a wild card college of 99 can be used. If this wild card is used then no other specific college rules can be created.

An Academic Standing Rules Query Form (SHQASTR) can be accessed from the Key Information after entering a level, to see the rules which have been created.

There are three sections on the Academic Standing Rules Form (SHAACST).

- The first section is the Academic Difficulty Rules information. This section is used to create the rules the institution uses when determining probation and dismissal. Rules for updating the student's status to good standing after being on probation are also created in this section.
- The second section is the Dean's List information. This section is used to determine if the student is eligible for the dean's list based on the rules established.
- The third section is the Excluded Grades information. This section defines, for the dean's list rules selected, what grades will disqualify a student from meeting a rule.

The following outlines the fields used by the Academic Difficulty Rules.

- **Term** - Term during which rules take effect
- **Status** - Student's current academic standing  
If the student is new, the system assumes a standing of *00*. For continuing students, the system pulls the standing from the previous term's academic standing in the **End of Term Academic Standing** field in the Term Header information of the Term Course Maintenance Form (SHAINST). (If there is no standing, the system assumes *00*). If an override standing has been entered for the term on the General Student Form (SGASTDN), the system will use the override standing.
- **Sequence Number** - Academic standing rule sequence number  
Used to distinguish different rules for the same selection criteria. Will be used in priority order. If a student matches the first rule (sequence 1), then the system will use that standing. For example, if there are two different rules for determining probation, one based on term GPA and the other on cumulative GPA, then you can create the first rule using term GPA, and the second using cumulative GPA.
- **Probation Indicator** - Indicator for preventing registration if checked  
Probation indicator defaulted from the Academic Standing Code Validation Form (STVASTD) when retrieving current status.
- **Term Hours Low/Term Hours High** - Minimum and maximum attempted term hours  
Low and high term hours the student is registered for from the Registration Form (SFAREGS). Used to create different rules for part-time and full-time students.
- **Cumulative Hours Low/ Cumulative Hours High** - Minimum and maximum cumulative hours based on type  
Includes transfer hours earned.

- **Type** - Type of cumulative hours

Type of cumulative hours used to determine if student is eligible for rule.

Valid values are:    *A* - Attempted  
                               *E* - Earned  
                               *P* - Passed  
                               *G* - GPA Hours

Type is only limited within term and status.

- **Term Institutional GPA From/To** - Minimum and maximum GPA for the rule if institutional term GPA is used to determine academic standing

If term GPA is not used, fields are left blank.

- **Cumulative Institutional GPA From/To** - Minimum and maximum GPA for the rule if institutional cumulative GPA is used to determine academic standing

If institutional cumulative GPA is not used, fields are left blank. If used in conjunction with term GPA, student's GPA for term and cumulative consideration must fall within appropriate ranges.

- **Cumulative Overall GPA From/To** - Minimum and maximum GPA for the rule if institutional plus transfer (overall) GPA is used to determine academic standing

May be useful for students admitted on probation. If institution and transfer cumulative GPA is not used, fields are left blank. If used in conjunction with either or both of the other GPA ranges, student must comply with all rules to attain next standing.

- **Status** - Next academic standing code

This is the academic standing the student attains if he/she meets all the requirements for the specified rule.

There are no restrictions on using varying hour types on different GPA selections for different rules, except within term and status.

There are three parameter options which control the update to maximum hours on the Calculate Academic Standing Report (SHRASTD).

1. Calculate Maximum Hours? Y/N
2. Pre-registration Future Term? (This is the term to which you want the new maximum hours to apply.)
3. Maximum Hours Update/Audit? U/A (The process may be run in Audit mode to determine who would be updated with new maximum hours.)

In order for an update to maximum hours to occur, the following items must also be considered:

1. The Calculate Academic Standing Process (SHRASTD) must be requested and run in Update mode.
2. An E-term record must exist for the designated pre-registration future term.
3. There may be no graded sections as part of the student's registration for the future term designated.

The report lists all students selected for academic standing updates. Two columns on the report display the maximum hours information.

The Max Prev column (Previous Maximum Hours) reflects the current (prior to update) value in the **Maximum Hours** field on the Student Course Registration Form (SFAREGS) of the future term designated.

The Hrs New column (New Maximum Hours) reflects the value associated with the newly calculated academic standing (as defined on the Academic Standing Code Validation Form (STVASTD)), which will be used to update the **Maximum Hours** field on the Student Course Registration Form (SFAREGS) for the future term.

If Previous Max Hours and New Max Hours are equal, neither value will print. Also, if there is no pre-registration for the future term designated, the report will present the Max Hours that will be assigned if/when the student registers for the future term designated.

## Progress Evaluation Processing and Combined Academic Standing

You can track students' progress (and regression) in addition to their academic standing using progress evaluation processing. You can define progress evaluation codes and rules by which those codes will be assigned to students, as well as combined academic standing codes and rules that are based on the existing academic standing codes and the progress evaluation codes. As such, the combined academic standing code is a single value that reflects a student's academic standing and progress evaluation.

Forms in the General Student, Registration, and Academic History modules are used to capture and display the progress evaluation data.

### Combined Academic Standing Code Validation Form (STVCAST)

This form allows you to create and define valid combined academic standing codes. The combined academic standing code is defined by a combination of an academic standing code and a progress evaluation code.

## Progress Evaluation Code Validation Form (STVPREV)

This form allows you to create and define valid progress evaluation codes.

## Student Course Registration Form (SFAREGS)

This form displays the progress evaluation (PREV) code, the combined academic standing (CAST) code, and the associated descriptions for the student, as well as the academic standing. Override codes and terms will display if available, and you may update (override) an existing code using these fields. The fields have been added to the Student window of SFAREGS, which is accessed using the Update Student's Term Information item from the Options Menu, when you are in the Registration Information block.

When you are registering a student in a course, the form checks the combined academic standing code first to see if this code can cause registration to be prohibited or if maximum hours are attached to that code. It then looks at the academic standing for prohibitions or maximum hour restrictions.

The logic within baseline registration, telephone registration, and Web registration considers whether or not a student's combined academic standing (CAST) code has any registration restrictions or limitations associated with it. If it does not, or if the student does not have a combined academic standing (CAST) code, the registration process will also consider whether or not the academic standing (ASTD) code has any registration restrictions or limitations associated with it. As such, your institution should carefully consider whether or not to place registration restrictions and/or limitations on both sets of codes (CAST and ASTD). SunGard® Higher Education's recommendation is to associate registration restrictions and/or limitations with one set of codes or the other, not necessarily both.

## General Student Form (SGASTDN)

This form displays the progress evaluation (PREV) code and the combined academic standing (CAST) code for the student, as well as the activity dates and descriptions for these fields in the Academic Status window. Override codes, descriptions, and override terms for the PREV and CAST codes are also in this window. These fields provide override capability for possible restrictions placed on students based on their combined academic standing and progress evaluation status.

## General Student Summary Form (SGASTDQ)

This form displays the progress evaluation (PREV) code and the combined academic standing (CAST) code for the student. Override codes for the PREV and CAST codes are display only fields.

## Academic Standing Rules Form (SHAACST)

This form includes the rules for progress evaluation (PREV), the progress evaluation grade exclusions, and the combined academic standing (CAST) rules. Three windows allow the creation and definition of the rules used by the Progress Evaluation Process (SHRPREV). The rules are used to assign progress evaluation codes and combined academic standing codes to student records.

The windows are:

- Progress Evaluation Rules window
- Progress Evaluation Grade Exclusion window
- Combined Academic Standing Rules window

### **Progress Evaluation Rules Window**

The Progress Evaluation Rules block is used to create rules that will determine which progress evaluation code to assign to the students being processed. Fields within the rules allow for defining the population to which they apply. These fields include program, campus, degree, major, and student type.

This window is accessed using Next Block or the Progress Evaluation Rules item in the Options Menu.

### **Progress Evaluation Grade Exclusion Window**

The Progress Evaluation Grade Exclusion window is used to create a list of grade codes that will cause a course bearing one of these grades to be excluded from those that count towards positive progress.

This window is accessed using Next Block or the Progress Evaluation Grade Exclusions item in the Options Menu.

### **Combined Academic Standing Rules Window**

The Combined Academic Standing window is used to create and define rules using academic standing codes assigned to the student(s) by the Academic Standing Process (SHRASTD) and progress evaluation codes assigned to the student(s) by the Progress Evaluation Process (SHRPREV). A rule should be created for each possible combination of academic standing code and progress evaluation code.

This window is accessed using Next Block or the Combined Academic Standing Rules item in the Options Menu.

## Term Course Maintenance Form (SHAINST)

This form displays the progress evaluation code and the combined academic standing code of the student, as well as the activity dates and descriptions for these fields.

## Subject Sequence History Form (SHASUBJ)

This form displays the progress evaluation (PREV) code and the combined academic standing (CAST) code of the student in the Current Standing block. Override codes and descriptions for the PREV and CAST codes are display only fields.

## Term Sequence Course History Form (SHATERM)

This form displays the progress evaluation (PREV) code and the combined academic standing (CAST) code of the student in the Current Standing block. Override codes and descriptions for the PREV and CAST codes are display only fields.

## Progress Evaluation Process (SHRPREV)

This process is used to calculate progress evaluation and combined academic standing codes and print a report of the results. The process can be run in update or audit mode.

Prior to running this process, make sure valid codes have been set up on STVPREV and STVCAST, and that valid rules have been set up on SHAACST (for the SHRCAST, SHRPREV, and SHRPRGE blocks).

The Calculate Academic Standing Report (SHRASTD) should be run at least once in update mode for the term code being processed before SHRPREV is run. This is to make certain that student academic standing codes have been assigned.

When SHRPREV is run, the PREV\_CODE is first derived from the override progress evaluation code displayed on the General Student Form (SGASTDN) for the most recent term prior to the term processed, if one exists. Next, it is derived from the end of term progress evaluation code displayed on the Term Course Maintenance Form (SHAINST) for the most recent term prior to the one being processed, if one exists. If there is no end of term progress evaluation code displayed on SHAINST for the most recent term prior to the one being processed, a value of "00" (Good Standing) will be assumed.

The following error messages may be displayed on the output, if the process is unable to calculate progress evaluation and combined academic standing codes for the student:

- *No Student record*
- *No Term Course Header Record*
- *No CAST Rule for Student*
- *No PREV Rule for Student*

The Progress Evaluation Process (SHRPREV) takes grade changes into account when determining the percentage of courses the student has completed and then assigning progress evaluation status codes for the term. The process also considers transfer hours as included in cumulative hours, when cumulative hours are checked for progress evaluation rule qualification as defined in the academic standing rules. Future term hours are included when progress evaluation rules are assigned, so that the student's hours are considered up to and including the term for which the process is run, instead of just the overall cumulative hours for that student.

## Student Type Update Procedures

The Continuant Terms Rule Form (SOACTRM) is used to establish the rules for how the existing student type, maintained on the General Student Form (SGASTDN), will be updated to the **Next Student Type**, which is maintained on the Student Type Validation Form (STVSTYP). The form is used to establish the rules for consecutive enrollment. These rules may change over time and may be different for different student types, so the keys to the table are term and student type. Terms which are continuant to the key term by student type are built on the table. An unlimited number of terms may be specified as continuant. For example, a new freshman may become a continuing student after two terms, but a transfer student becomes a continuing student after one term.

The Student Type Update Process (SHRTYPE) automatically updates the student type based on the rules established on SOACTRM. This process should be run after the courses have been rolled to history at the end of the term using SHRROLL. If the **Next Student Type** field is null on the Student Type Validation Form (STVSTYP) then no update of the student type occurs.

The student must have an enrollment status on the Student Course Registration Form (SFAREGS) that permits registration for the update process to occur. The enrollment status on SFAREGS must have the **Prevent Registration** box on the Enrollment Status Validation Form (STVESTS) unchecked.

SHRTYPE can be run for a rules term, an update term, in audit or update mode, can process student type for a learner curriculum, and process student type by student centric period rules.

The option to use student centric period rules to determine student type allows you to update student type based on a student's enrollment in a student centric period, instead of enrollment by term. The student type in effect on the general student record (SBGSTDN) for the first term in the student centric period will be used for reporting for the duration of the student centric period.

The Process by Student Period parameter is used to consider student centric period rules when determining the student type.

- When this parameter is set to Y and the student has a cycle designator (general student record) or student centric period (academic history record) in effect for the

update term, the SOACSCP rules are used to evaluate whether the student type should be updated to the next student type defined on STVSTYP.

- When this parameter is set to *Y* and the student does not have a cycle designator or student centric period in effect for the update term, the SOACTRM rules are used to evaluate whether the student type should be updated to the next student type defined on STVSTYP.
- When this parameter is set to *N*, the current SOACTRM rules are used, even if the student has a cycle designator or student centric period in effect for the update term.

## Examples

The following are examples of how the student type update process will function.

### Continuant Terms Rules

Key	Student Type	Continuant Terms		
199101	B	199004	199003	199002
199101	A	199004	199003	199002
199101	D	199101		

199101 - Fall 1991	B - New Freshman
199004 - Summer 2 1990	D - Transfer Student
199003 - Summer 1 1990	
199002 - Spring 1990	

If you run the Student Type Update Process (SHRTYPE), then each student's academic history will be examined. SHRTYPE looks for either an enrollment record or academic history in the rules term *and* academic history for any of the terms listed in the Continuant Term information of the Continuant Terms Rule Form (SOACTRM). If the process is being run for Rules Term 199101 with an Update Term of 199102 and the new freshman students are registered for courses (have an enrollment record) and have at least one course on their Term Course Maintenance Form (SHAINST) for either term 199004, 199003, or 199002, then the students will have their student statuses updated. The transfer students who took courses in 199101 will have their student types updated automatically, because the courses have been rolled to history for term 199101.

The following are the entries in the Student Type Table for the examples below:

Student Type		New Student Type
A	Returning Freshman	C
B	New Freshman	C

C	Continuing	
D	Transfer	C
E	Adult/Continuing Ed	

**Example 1:**

John Smith has a student type of *B* on his general student record for term 199101. Term 199101 is the first term John has ever registered. He has no academic history information for the continuant terms. John's student type will not change.

**Example 2:**

Ann Jones has a student type of *B* for term 199101 on her general student record. Ann took two courses in term 199003 which exist on SHAINST and has registered for a course in term 199101. Following the rules on SOACTRM, a new general student record will be created for Ann with an effective term of 199102 and a student type of *C*.

**Example 3:**

Hope Lance has a student type of *C* for term 199101 on her general student record. Since no new student type value is maintained on the Student Type Validation Form (STVSTYP) for the student type of *C*, then no update is performed. **Note:** No rules need to be built on SOACTRM for student types which will not be updated via the Student Type Update Process (SHRTYPE).

**Example 4:**

Joe Stein has a student type of *A* for term 199101 on his general student record. Joe took courses in term 199004 which exist on SHAINST and has registered for courses in term 199101. Following the rules on SOACTRM, his student type should be updated to a *C* for term 199102. Joe already has a general student record for term 199102, so it will be updated with the new student type of *C*.

**Example 5:**

Mike King has a student type of *D* for term 199101 on his general student record. Mike took courses in term 199101 which exist on SHAINST and has registered for courses in term 199101. Following the rules on SOACTRM, his student type should be updated to a *C* for term 199102.

**More Example Process Steps**

Here is another example of the student type update process.

*The scenario is:*

- Grades have been rolled to history for the Fall 1995 term (e.g., 199510).
- You want to update the student type of these students to the appropriate code (as defined on STVSTYP) for the Spring 1996 term (e.g., 199520).

*Perform the following steps:*

1. Access SOACTRM.
2. In the Key Block, enter the term code in the **Term** field for which you have just completed end-of-term processing. (In this example, you would enter *199510*.)
3. Enter the valid student type code(s) to be updated in the **Student Type** field.

This data so far should select those students who have registration records *and* at least one institutional academic history record for the term 199510.

4. Use Next Block to access the Continuant Term block.
5. Use the **Continuant Term** field to further narrow your selection of the population by entering those term(s) for which the student(s) must have at least one institutional record in academic history.

In this example, you only want to select those students for update who have academic history records for the Fall 1995 term, so you would enter *199510* again here.

 **Note**

Based upon your institutional policy, if you need to add more than one term code here, this would be an *OR* condition. ■

6. Save your changes, and exit SOACTRM.
7. Access job submission, and run SHRTYPE.
  - 7.1. Enter the term you entered in the Key Block of SOACTRM in the Rules Term parameter. (For this example, you would enter *199510*.)
  - 7.2. Enter the term code to be used to update the student type on SGASTDN for the general student record in the Update Term parameter. (For this example, you would enter *199520*.)
  - 7.3. Enter *A* (Audit) in the Mode parameter to verify that the report is selecting the correct population. Once you have verified the output, you can run the process in Update Mode.

## Electronic Gradebook - Define Sub-Components

Electronic gradebook functionality is used to define, enter, and view sub-components. This section discusses the definition of sub-components and components defined for CRN (section) and how they are used to calculate the grade.

Please refer to the *Banner Student Self-Service User Guide* and the *Banner Faculty and Advisor Self-Service User Guide* for more detailed information describing the Web processing used with this baseline functionality.

### Overview

You can create and maintain the definition of the gradable components for a CRN of a course (section), as well as the grade scale to be used for grade calculations for the CRN. You can also define additional rules for the component definition and define components at a layer lower than the gradable component, that is the sub-component level. The sub-component marks must be defined in relation to a component so that they may be used by the system to calculate the component mark.

- Components may have AND/OR logic or rule-based logic to allow for sub-set selections (e.g., three of five, etc.) and best of logic (e.g., best two out of four, etc.) to be used for the calculation of a section mark. Sub-components may also use the same facilities for the calculation of component marks. Each sub-component and/or component has a minimum passing mark. Component and sub-component data entry is sequenced to allow the AND/OR and the best of logic to function properly.
- The specific grade scale to be used can be identified at the sub-component and component levels and factored into the overall final grade calculation for the CRN (section) for the student. This includes both the numeric and alphabetic marking processes.
- Each sub-component and/or component may have deadline dates for submission of work, as well as a definition of maximum time (number of days) work can be late. Calculation of a sub-component or component mark can degrade the percentage mark by a number of days, to a minimum mark, specifically no higher than the cap mark identified for the sub-component or component itself.
- Weighting at the sub-component and component levels is formatted to 999.99.
- A maximum (cap) on the resit mark at the sub-component or component levels can be set, and a maximum number of resits allowed on a sub-component and on a component can also be defined. (Manual administration is required to ensure that a student has not reached the maximum number of resits before they are allowed to actually take a resit.)
- When CRNs (sections) are rolled from one term to another using SSRROLL, a sub-component will not be rolled unless the component to which it is attached is set to be rolled.

## Forms and Process Used

- SHAGRUL - Used to define the rules to be associated with the grade book calculations.
- SHARTYP - Used to define rule types to be associated with grade book rules.
- SHARPAR - Used to define parameters to be associated with the rule type functions.
- SHAGSCH - Used to define a grade scale for use in the grade calculation procedure and to draw a relationship between a percentage and a letter grade.
- SOATERM - Used to store default late rules and resit rules for components and sub-components and to define midterm and final deadline date entry capabilities.
- SHAGCOM - Used to assign grade scales and define components and sub-components.
- SSRROLL - Used to roll gradable components and sub-components.

## Sample Data

The Gradebook Rule Type Definition Table (SHBRTYP) and grade rule are delivered by SunGard Higher Education with two pre-defined rules types, rule type parameters, and the associated procedures. Please see the sample data which follows.

### Late Rule

Rule Type Data

Rule Type Name	LATE
Description	Late mark degradation
System-required	Y

### Parameter Data

First day percentage degradation per day  
First day actual percentage degradation per day  
Late cap mark in percent  
Max number of late days  
Percentage degradation per day  
Actual mark degradation per day

### Resit Cap Rule

Rule Type Data

Rule Type Name	RESIT
Description	Resit cap mark calculation
System-required	Y

## Parameter Data

Resit cap in percent

Max number of resits allowed

## Late Rule Function

The late rule function is used in the calculation of component and sub-component grades.

The procedure uses the due date from `SHRSCOM_DUE_DATE` or `SHRGCOT_DUE_DATE` and the submission dates from `SHRSMRK_COMPLETION_DATE` or `SHRMRKS_COMPLETION_DATE` to identify students who have submitted work that is considered late. If an extension date exists on `SHRSMRK` or `SHRMRKS` for a student, then this is used instead of the due date. If there is a value in the parameter for first day degradation by percentage or first day actual mark degradation (if both are entered, percentage will take precedence), these values are used. They are then accumulated with the parameter values for actual mark or percentage (if both are entered, percentage will take precedence) for each additional day the work is late up to the maximum number of days the work is late.

If no first day values are present, then each day the work is late accumulates using the second set of parameters only. The mark is then degraded by the total amount, either by percentage or actual mark, down to the minimum late mark. If an alpha grade has been entered on the Web, the default score defined on `SHRGRSC` is used to calculate the degraded value, and it is then mapped back to the appropriate alpha grade. The resulting score is stored in `SHRSMRK_PERCENTAGE` or `SHRMRKS_PERCENTAGE` with a grade change code of *DL*. The parameter values are always stored as percentage values in the rule definitions. Therefore if the mark entered is an alpha grade, then the numeric median value is selected from the relevant grade scale. If a numeric mark is entered, the percentage value is calculated using the Out of value to give a percentage.

Here are two examples of the Late Rule Function.

### **Example 1:**

First day percentage degradation of 10%.

Percentage degradation of 5% per day.

Late cap = 40%

Max Late days = 5

Student has mark of 60% and is 5 days late.

Mark will be degraded by 30%, (60% - 18%).

Final mark = 42%

**Example 2:**

Percentage degradation of 5% per day.

Late cap = 40%

Max Late days = 5

Student has mark of 60% and is 10 days late.

Mark will be degraded by 50%, which will then require capping to the late cap value (60% - 30%).

Final mark = 40% capped to late cap value.

## Resit Rule Function

The procedure uses the grade change codes with the **Resit Indicator** set to *Y* to identify students with resits. It then applies the resit rule from either SHRSCOM or SHRGCOM, which in turn looks at SHAGRUL for the necessary parameter values. It selects a count of existing resits for the sub-component/component and checks this against the parameter value for maximum number of resits. If this check is passed, the procedure goes on to check the mark entered against the parameter value for the resit cap. If the entered mark is greater than the resit cap value, then the mark is degraded back to the resit cap value with a grade change code of *CR*. If the mark is not capped, the mark is stored with a grade change code that is chosen by the user. The resulting score is stored in SHRSMRK\_PERCENTAGE or SHRMRKS\_PERCENTAGE. The parameter values are always stored as percentage values in the rule definitions. Therefore, if the mark entered is an alpha grade, the numeric median value is selected from the relevant grade scale. If a numeric mark is entered, the percentage value is calculated using the Out Of value to give a percentage.

Here are two examples of the Resit Rule Function.

**Example 1:**

Max no of resits = 2

Resit cap mark = 40%

Students first resit attempt is marked with 60 out of 120 = 50%.

This is capped to the max resit mark of 40% and mapped back to a mark of 48.

**Example 2:**

Max no of resits = 2

Resit cap mark = 40%

Students third resit attempt is marked with 60 out of 120 = 50%.

Process recognizes that too many attempts to resit have been made, and this is reported using an error message.

## Best of Processing

Here is an example of Best of processing.

### **Best of ... Example:**

A section is made up of seven components.

All weightings are assumed as equal in this example.

The best...of value for the section is 3.

The component definition table looks as follows:

<b>Name</b>	<b>Sub-Set Logic</b>	<b>Mark</b>	<b>Weight</b>	<b>Out of</b>
Comp 1	OR	45	1	100
Comp 2	OR	40	1	100
Comp 3	OR	70	1	100
Comp 4	OR	55	1	100
Comp 5		40	1	100
Comp 6		50	1	100
Comp 7		85	1	100

Please remember that this sub-set and best of logic requires the component definitions to be entered in the correct sequence order.

The above example would translate as follows:

Comp 6 and 7 will be included in the overall section calculation, as the components directly above (Comp 5 and 6 respectively) have no sub-set logic implied and therefore default to AND logic. This allows a combination of Best of and Must Include.

Then the best (highest) three components from Comps 1, 2, 3, 4, and 5 will be used, as each component directly above has OR logic applied.

Therefore the over all section mark would be:

(the best three from Comps 1, 2, 3, 4, and 5) + Comp 6 + Comp 7.

For this example, the marks from Comps 1, 2, and 4 (highest three from Comps 1- 5) plus Comp 6 and 7 would match this criteria giving the following final mark:

$$\frac{(45 + 70 + 55) + 50 + 85}{5} = 61$$

## Subset Processing

Here is an example of Subset processing.

### **Subset Example:**

A section is made up of seven components.

All weightings are assumed as equal in this example.

The best...of value for the parent section is blank.

The component definition table looks as follows:

<b>Name</b>	<b>Sub-Set Logic</b>	<b>Mark</b>	<b>Weight</b>	<b>Out of</b>
Comp 1	OR	45	1	100
Comp 2	OR	40	1	100
Comp 3	AND	70	1	100
Comp 4	OR	55	1	100
Comp 5		40	1	100
Comp 6	OR	50	1	100
Comp 7		85	1	100

Please remember that this sub-set and best of logic requires the component definitions to be entered in the correct sequence order.

The above example would translate as follows:

The best...of value for the parent section is blank. Therefore, all OR logic will default to best 1 of.

(Take the best 1 of Comps 1, 2, and 3) AND (the best 1 of Comps 4 and 5) AND (the best 1 of Comps 6 and 7.)

For this example, Comp 2 (highest from Comps 1- 3) plus Comp 4 (highest from Comps 4 and 5) plus Comp 7 (highest from Comps 6 and 7) would match this criteria giving the following final mark:

$$\frac{(70) + (55) + (85)}{3} = 7$$

## Electronic Gradebook - Enter Sub-Components

Electronic gradebook functionality is used to define, enter, and view sub-components, This section discusses the entry of sub-components and how they are used to calculate the grade.

Please refer to the *Banner Student Self-Service User Guide* and the *Banner Faculty and Advisor Self-Service User Guide* for more detailed information describing the Web processing used with this baseline functionality.

### Overview

You can define security via several methods and use the Web for the entry of the component marks for a student. You can also define additional rules to apply security to those who may have permission to enter marks. Marks may be entered at the sub-component level. Entry and changes to marks are maintained by the system using an audit trail.

- Marks may be entered for the student for the sub-components defined for the CRN (section). Where there are no sub-components, the marks may be entered for the components defined for the CRN (section).
- Entry of sub-component, and where applicable, component marks is performed via the Web in Banner Faculty and Advisors Self-Service.
- No mark will be calculated for a component if required sub-component marks are missing, and no final grade will be calculated for a CRN (section) if a required component mark is missing, except where exemptions have been entered, and except where a subset of value has been entered for the parent section or component.
- Degraded late marks are calculated like simple interest. Percentage or actual deductions are made from the original mark and are not compounded each day.

### Forms and Processes Used

- STVROLE - Used to define roles inherent to the institution.
- SOAROLE - Used to assign one or multiple roles to an individual.
- STVGCMT - Used to define institutional comments that can be associated with a student's final mark.
- SFAALST - Used to enter grade codes and comments.
- SFASLST - Used to enter grade codes and comments.
- SHATCKN - Used to enter grade codes and comments.

- SOAFAPC - Used to attach a process code (and thereby grant Web access if attribute or advisor type checking is turned on) to a faculty attribute or advisor type.
- STVGHCG - Used to indicate if grade change codes have resit or exemption status for the mark entered.
- SHRROLL - Used to roll components and sub-components when there is no value for the grade date.
- SFPREGS - Used to purge components and sub-components from registration records before coursework is purged.
- SSPSCHD - Used to purge components and sub-components records for a section before the section is purged.

## Sample Data

Two system-required codes are delivered by SunGard Higher Education for the Grade Change Validation form (STVGCHG). The codes are *CR* (Capped Resit) and *DL* (Degraded Late Mark).

Two roles are delivered by SunGard Higher Education for the Role Definition Validation Form (STVROLE). The roles of *F* (Faculty Member) and *A* (Advisor) provide all users who are set up in SIAINST as faculty members and advisors with a role description on SOAFAPC.

## Electronic Gradebook - View Sub-Components

Electronic gradebook functionality is used to define, enter, and view sub-components. This section discusses the viewing of sub-components and components and the associated grades.

Please refer to the *Banner Student Self-Service User Guide* and the *Banner Faculty and Advisor Self-Service User Guide* for more detailed information describing the Web processing used with this baseline functionality.

### Overview

You can view the component marks for a student using Banner Student Self-Service and Banner Faculty and Advisors Self-Service. You can also review the system-maintained audit trail of changes to the sub-component and component marks.

- You have the ability to historically view marks for the student for the sub-components defined for CRN (section).
- Students and appropriate staff can view only the current mark for the sub-component or component via the Web.

- Appropriate staff members are given permission to view the history of sub-component and component marks in Banner.
- The Class Roster Report (SFRSLST) is used to identify students who are missing final grades and therefore, the sub-component and component marks that are related to that final grade.

## Forms Used

- SHATCKN - Used to view component grades and their history, as well as sub-component grades and their history.
- SFAREGS - Used to create a set of records associated with the student for all courses where gradable components have been defined, as well as records for all sub-component definitions associated with the component records for the section.

## Setting Up Sleep/Wake Processes

### Note

The following Banner systems and processes are valid for the Sleep/Wake processing described in this section: ■

### Banner Student

Report/Process	Description
SFRSCHD	Student Schedules
SHRTRTC	Academic Transcript

### Accounts Receivable Module

Report/Process	Description
TGRRcpt	Account Receipt
TSRCBIL	Student Billing Statement (Invoices)
TGRMISC	Miscellaneous Receipt

1. Define printer and print command on the Printer Validation Form (GTVPRNT). In the **(Printer) Code** field, enter a name to reference each specific printer that may be used for printing output from sleep/wake processing. In the **Comment (Printer Command)** field, enter the correct operating system print command as it would

normally be entered from the command line prompt, substituting an @ (at sign) as the place holder for the filename to be printed.

<b>Operating System</b>	<b>Print Command</b>
UNIX example:	<code>lp -d talaris1 @</code>
VMS example:	<code>print/queue=ln01 @</code>

2. On the appropriate System Distribution Initialization Information Form (SOADEST for Student or TOADEST for Accounts Receivable), enter the printer code from GTVPRNT that should be identified with the collector table rows that will be inserted to the appropriate tables when online application forms create a request for output that can be generated by sleep/wake processing.

 **Note**

The collector tables are as follows: ■

<b>Process</b>	<b>Collector Table</b>
SFRSCHED	SFRCBRQ
SHRTRTC	SHTTRAN
TGRMISC	TBRCMIS
TGRRCPPT	TBRCRCP
TSRCBIL	TBRCBRQ

3. On the Process Submission Control Form (GJAPCTL), for the valid sleep/wake jobs listed previously, enter the correct response for the parameter that specifies that the job should be processed for collector table entries. Refer to the documentation for each specific process to determine the appropriate response in each case (correct responses may be COLLECTOR, Y, %, etc.).

In addition, each sleep/wake job has a printer code parameter. You must specify exactly the same code for this parameter answer that was entered on either SOADEST or TOADEST. A value of Y should be entered for the run in sleep/wake mode parameter, and a number of seconds should be specified for the sleep/wake interval (cycle) for each process.

 **Note**

Do not enter the printer code in the top section of GJAPCTL; only enter it in the parameter section of the form. ■

## Creating a Population Selection

To perform population selection, the application you will be working with must first be defined on the Application Definition Rules Form (GLRAPPL).

The second step is to enter the Population Selection Definition Rules Form (GLRSLCT), enter the **Application (Code)**, and create a **Selection ID (Identifier)** with a description.

In the Selection Definition section, define the **Select** and **From** portions of the SQL statement that the selection represents.

### **Example:**

```
Select:      SARADAP_PIDM
From:        SARADAP
```

Next, enter the Selection Rules for the population of records you would like to see.

### **Example:**

```
SARADAP_TERM_CODE_ENTRY    =    '200010'        AND
SARADAP_LEVL_CODE          =    'UG'
```

Save your data and exit. Your population selection rules will be compiled. If any errors are issued during the compilation process, resolve the errors before continuing. If you do not resolve all errors given during the compile process, you will not be able to use the population selection rules to extract a population.

You are now ready to extract the population of people. The Population Selection Extract (GLBDATA) is run from the Process Submission Control Form (GJAPCTL). At minimum, you will need to supply the parameters for Selection Identifier 1, Application, and Creator ID, which are the values that were in the Key Information of the Population Selection Definition Rules Form (GLRSLCT).

After extracting the population, you can use the Population Selection Extract Data Form (GLAEXTR) to view and/or modify the people in the population. You can add or delete people from the population using this form. The keys to the form are **Application**, **Selection ID**, and **Creator ID**. (**User ID** is also displayed in the Key Information.) You will be able to add or delete people only from populations that you selected.

After extracting the population, and modifying the people in it if necessary, you can use the population for a variety of purposes. Letters can be produced using Letter Generation, based upon a population, and many Banner reports and processes also can accept a population for processing.

For additional details on population selection, refer to the *Banner General User Guide*.

## Purge Process

The following purge process is part of the Academic History module:

### shptrtc.pc - Transcript Request Purge

This process must be run in order to purge the Banner transcript requests from the system. Transcript requests are defined as “official”, “unofficial”, or “both”. Within this criteria, several purge options are available: 1) Purge by request date, 2) Purge by level, and 3) Purge by TPRT type. A transcript must have been requested through the use of the Transcript Request Form (SHARQTC) in order to be purged through this process. Purging of electronic transcripts by EDI transcript status is optional.

## Transfer Articulation Procedures

---

### Transfer Articulation Validation Tables

Two of the transfer articulation validation forms are used to control processing. The first is the Calendar Type Code Validation Form (STVCALD). This form enables you to build the multiplier which will be used when it is necessary to convert from one type of calendar to another. An example of this would be a semester hour school which takes courses in from quarter hour schools. In this case, the quarter hour school gave 4.5 credits for the course where the semester hour school only gives 3 credit hours. To accomplish this, the sending school would have to have a calendar type code which has a multiplier of .667 (4.5 quarter credits x .667 = 3.00 semester credits).

The second validation table which is used in processing is the Transfer Articulation Course Status Validation Form (STVTAST). This form indicates whether the transfer course is active or inactive. Multiple active and inactive course statuses may be used. For example, an inactive course status may be PN - Pending Department Authorization.

### Transfer Articulation Institution Creation

The Transfer Articulation Institution Form (SOABGTA) maintains all the information about the transfer institution based on effective term. From and to terms are provided on all sections of the form so that the data is maintained as it changes over time. This is handled in the same manner as the effective terms in the Catalog module.

For example, if the calendar type of an institution changes from semester to quarter in 1991, then a record for 1990 indicating a semester calendar type and a record for 1991 indicating a quarter calendar type can be created. This allows all courses being presented for transfer in 1990 to be articulated under a semester calendar and all courses being presented for transfer in 1991 to be articulated under a quarter calendar.

The transfer level information is very important to the transfer articulation process. This section maintains the valid levels of work which will be presented for transfer from the sending institution. This level is used in establishing the valid grades and the way which the grades should be handled in transfer GPA calculations. Again, this section contains a from and to term to maintain changes over time.

## Transfer Articulation Grading Schemes

A grading scheme must be created for each transfer institution. The grading scheme is the valid set of grades which the sending school uses when grading its courses. To ease the data entry process, use the **Default Institution** field in the Key Information of the Transfer Grade Code Maintenance Form (SHATGRD). This allows the grades from one school to be copied to another school via the transfer institution code. For example, the University of XYZ uses a plus/minus grading scheme (A, A-, B-, B, etc.) which has been created on SHATGRD. Now the University of ABC is being created, and they have the same grading scheme as University of XYZ. The transfer institution code from the Source Background Institution Validation Form (STVSBGI) for XYZ would be entered as the default institution when creating the grades for University of ABC. Then any adjustments, deletions, or additions which may need to be made can be done on the form.

The default grading logic on the Transfer Grade Code Maintenance Form (SHATGRD) works such that when grades are defaulted from the default institution, the effective term of the grade will be the effective term from the Transfer Articulation Institution Form (SOABGTA). Only the grades for the levels established on SOABGTA will be copied. For example, a new institution (University of ABC) is being created for effective term 199301, and only level 02 has been set up as a valid transfer level code on SOABGTA. The default institution (University of XYZ) has both level 01 and 02 grades which became effective in 199201. When the default copy occurs, only the level 02 grades will be copied, and all the effective terms will be 199301.

The **Count in Attempted**, **Passed**, **Earned**, and **GPA** fields on SHATGRD are used to calculate the GPA for the transfer institution. The **Institution Grade** and **(Grading) Mode** are used for performing an automatic grade code conversion when articulating the transfer work. For example, some schools convert all grades during the articulation process to a standard transfer grade such as *T*, regardless of what grade the student received at the sending school. The **Num(eric) Value** field is used to determine and calculate the minimum grade criteria when articulating courses.

## Creating the Transfer Institution Courses

The sending institution's courses may be entered on either the Transfer Institution Catalog Entry Form (SHATATC) or the Transfer Course Articulation Form (SHATATR). SHATATC allows for the display and maintenance of the sending institution's course catalog which will be used when articulating courses. Since some courses articulate differently for different degree programs, a program code has been provided in the Key Information. Transfer course work may be articulated under a specific program or without

a program code. If a program code is used, then the specific course equivalencies associated with the program code will be used in articulation. This allows a course to be articulated differently under different programs. A null (blank) Program Code indicates this is the default or standard program code which should be used. The following outlines how these program codes can be used.

Null (blank) Program Code		X00001 Program Code	
ARTS	001	ANTH	405
BIOL	001	BIOL	001
ENGL	001		
HIST	001		

A student being articulated under program code X00001 who takes ANTH 405, BIOL 001, and ENGL 001 will use the transfer course equivalencies under program code X00001 for ANTH 405 and BIOL 001. Since no course equivalencies have been established for ENGL 001 under program X00001, the Null Program Code (the default) will be examined to determine if a course equivalency exists for ENGL 001.

Since ENGL 001 exists in the null Program Code, then the course will be articulated as specified under the null Program Code. Using this example you see that only the exceptions under a degree program should be built as separate transfer course equivalencies. There would be no reason to build ENGL 001 under program code X00001 if it articulates the same way under the null Program Code.

 **Note**

Program codes are an optional processing feature. If your institution does not articulate courses differently under different programs, then all course equivalencies are built under the null Program Code. ■

The effective term associated with the transfer course is used when creating or changing the equivalent courses over time. For example, ACCT 101 from the sending institution is created with an effective term of 199001. In 199101, ACCT 101 becomes ACCT 51 at the sending institution. SHATATC would look as follows:

Eff term	Subj	Course	St
199001	ACCT	101	AC
199101	ACCT	101	IN
199101	ACCT	51	AC

The same type of process would occur if ACCT 101 from the sending institution for term 199001 was equivalent with ACCT 51 at the receiving institution but as of 199101 the course equivalency would change to ACCT 1001.

Eff term	Subj	Course	St	Course equivalency (on SHATATR)
199001	ACCT	101	AC	ACCT 51
199101	ACCT	101	AC	ACCT 1001

Multiple transfer courses may be grouped together when creating course equivalencies. This is done through the use of the group connector and a primary indicator.

For example, remedial English 001, 002, and 003 must all be taken to get credit for English 010 at the receiving institution. The SHATATC form would look as follows to perform this function.

Group		Subject	Course
CD	P		
01	Y	ENGL	001
01		ENGL	002
01		ENGL	003

A user-defined group code (01 in this example) is used to join these three courses together. These courses will then be treated as a unit when the articulation occurs. If the student does not take all courses within the group, then *no* course equivalency is given.

The **Primary (Group Indicator)** is used to indicate the primary course within the group. A primary indicator *must* be specified on all groups. The primary indicator is used when performing the grade code conversion during the articulation process.

You may have the same course appear in multiple groups which may have different equivalencies. The following is an example of this method of grouping:

#### **Transfer Course**

Group	P	Effective Term	Level	Subject	Course	Credits
01	Y	199101	01	BIOL	300	3.00
01		199101	01	BIOL	300L	0.00
01		199101	01	BIOL	300G	1.00

#### **Equivalent Course**

Subject	Course	Credits
BIOL	3000	4.00

### Transfer Course

Group	P	Effective Term	Level	Subject	Course	Credits
02	Y	199101	01	BIOL	300	3.00
02		199101	01	BIOL	300L	0.00

### Equivalent Course

Subject	Course	Credits
BIOL	3000	3.00

In this example, BIOL 300 is both in Group 01 and 02, giving different credit hour equivalencies based on the group of transfer courses.

Transfer course comments may be added and maintained via a Next Block function from any transfer course on SHATATC.

## Creating the Transfer Institution Equivalency

Equivalent courses are added and maintained on the Transfer Course Articulation Form (SHATATR). Equivalent courses may be singular, such as ACCT 101 is equivalent to ACCT 51, or multiple, such as ENGL 050 and ENGL 051 are equivalent to ENGL 100. An *OR* condition is also available so that PSYC 101 or BIOL 101 may be equivalent to PSYC 110. In an *OR* condition, the first course will be used as the default when performing the articulation process.

Parenthesis may also be used when creating course equivalencies to group together the appropriate course equivalencies. An example of multiple course equivalencies follows:

### Transfer Course

STAT 101

### Equivalent Course

A/O	Subj	Crse
	STAT	101
O	ACCT	101
O	( MATH	050
A	MATH	051 )

This course equivalency states that STAT 101 is equivalent with:

STAT 101 or ACCT 101 or (MATH 050 and MATH 051)

As stated before, STAT 101 will be used as the default when articulating STAT 101.

Equivalent course comments may be added and maintained for each course in the Institution Course Comments window for any equivalent course on SHATATR.

Use a List function from the **Subject** field in the Equivalent Course section of SHATATR to see the valid subjects and a Count Query Hits function to see existing courses which are in the catalog for the effective term.

When a transfer course has a range of possible credit values defined in the transfer catalog, the system determines the number of credits assigned to the equivalent course as follows:

- If the Credits Used field in Equivalent Course block of SHATATR is not null, that value is assigned to the equivalent course.
- If the **Calendar Type and Multiplier** field for the institution defined in SOABGTA is not null, the equivalent course credits are calculated by multiplying the transfer course's credits (as entered in SHATAEQ) by the value in the **Calendar Type and Multiplier** field.
- If the value in the **Calendar Type and Multiplier** field on SOABGTA for the institution is null, the value entered for the transfer course (as entered in SHATAEQ) is assigned to the equivalent course.

## Transfer Course Attributes

Transfer Articulation Course Attributes may be associated with institutional courses in the Transfer Articulation module. The Transfer Course Articulation Form (SHATATR) contains an Institution Course Attribute window. This window stores the attribute information associated with the transfer and equivalent course. When an equivalent course which exists on the course catalog is entered on the Transfer Course Articulation Form (SHATATR), the course attributes from the Catalog module will default to the institution course. If the institutional course does not exist on the catalog, then you have the option of adding the course attributes on the Institution Course Attribute window of SHATATR. Attribute information entered on SHATATR will default to the Transfer Articulation Evaluation Form (SHATAEQ) when the transfer course information is entered.

Institutional attributes may also be added or modified on an individual student basis on the Transfer Articulation Evaluation Form (SHATAEQ). These institutional course attributes are also included on the roll to academic history and will display on the Transfer Course Form (SHATRNS) for the institutional course work via the Institutional Equivalent Course Attributes section. This section is used to record the attribute information associated with the equivalent course. There is an indicator (\*) on the Institutional Equivalent Course Detail section to designate the course for which attributes are being displayed.

The Transfer Articulation Attributes Form (SHATRТА) allows the attributes to be entered for courses in the transfer articulation process. All of the key data must be entered prior to entering course attributes. The Key Information includes: **ID, Institution, Attendance**

**Period, Term, Level, Subject and Course** (Transfer Course Details), as well as **Subject and Course** (Institutional Equivalent Details).

This form may also be accessed via the Transfer Articulation Attribute item in the Options Menu or a Duplicate Record function from the Transfer Articulation Evaluation Form (SHATAEQ). This is a much easier method for entering course attributes than accessing SHATRTA directly.

These attributes may be updated by the Transfer Articulation Module on SHATAEQ during the Grade Roll Process (SHRROLL). Attributes maintained on SHATRTA will automatically roll to academic history and will display on the Transfer Course Form (SHATRNS).

## Transfer Course Title

A function exists on the Transfer Articulation Evaluation Form (SHATAEQ) to add the course title associated with the Transfer Course and the Institution Equivalent Course information. Once entered, this title will roll with the transfer course information to the Transfer Course Form (SHATRNS).

The **Duplicate** field on the Transfer Articulation Evaluation Form (SHATAEQ) indicates that the same subject and course for the same term are being transferred. This field will allow for each duplicate course to be articulated to its equivalent instead of performing a one to many articulation.

## Performing Transfer Articulation for Students

Now that all the course equivalencies have been created, the transfer students can be loaded, and their course work may be articulated. This is done on the Transfer Articulation Evaluation Form (SHATAEQ). Transfer course work may be articulated under a specific program or without a program code. If a program code is used then the specific course equivalencies associated with the program code will be used in articulation.

The transfer courses which the student is presenting are entered in the Transfer Scroll Box. If the transfer courses being entered do not exist on the Transfer Institution Catalog Entry Form (SHATATC), a message is generated and you may, using the **Subject field Search** feature (Option List - Define New Course) or performing a Count Query Hits function, transfer to the Transfer Course Articulation Form (SHATATR) to enter the transfer and equivalent course information. Use the **Subject field Search** feature (Option List - View Transfer Catalog) or perform a List function to view the existing transfer courses which have been created.

Once all the transfer courses have been created, you may perform the articulation by selecting the Perform Articulation item in the Options Menu or performing a Duplicate Item function. (**Note:** This will articulate all the courses in the window.) Once complete,

the Equivalent Scroll box will display the equivalent courses, and the **Articulate Ind(icator)** will be automatically set to *Successful* on the courses for which articulation occurred. A setting of *No Equivalent* indicates that no articulation occurred, either because no equivalency was created, the minimum grade has not been met, or not all courses in a group exist.

Courses can be articulated individually by selecting *Articulate* in the **Articulate Ind(icator)** and performing a Next Item function. An articulation may be overridden by selecting *Override Edit* in the **Articulate Ind(icator)** and then entering the equivalency information on the course. Courses can be articulated manually by selecting *Manual* in the **Articulate Ind(icator)** and performing a Next Item function.

To create a one-to-many articulation directly on SHATAEQ, enter the Transfer Course information scroll box. Select *Manual* in the **Articulate Ind(icator)** field, then proceed to the Course Equivalent information.

To enter the next course equivalence, use Next Record. This automatically copies the transfer information on the previous record into this current record. Your cursor will be on the **Subject** field in the equivalence side of the record, and you may now enter the course equivalence.

If you have finished entering a many-to-one entry and want to enter additional articulations, use Next Record or select the next record, then use Clear Record. This will clear all transfer data except for the attendance period, term, and level data. Your cursor will be in the **Group** field, and you can may enter your data.

When courses are grouped, and articulation is performed manually by selecting *Articulate* in the **Articulate Ind(icator)**, the primary grouped courses will have this field automatically updated with a setting of *Successful*, and all other courses in the group will be updated with a setting of *No Equivalent*.

Once transfer courses have been entered, the Equivalent Course GPA section of SHATAEQ will display the hours and GPA information. The institution hours and GPA information will display after the articulation occurs.

This transfer articulation information may be moved to academic history whenever the evaluation is complete. This move is processed by selecting *Roll to History* in the **History Indicator** field in the Equivalent Course GPA/Roll to History window on SHATAEQ.

To enter or adjust this transfer course work, you must manually adjust it on SHATRNS or delete the courses from academic history and roll them back to transfer articulation. This is done by selecting *Delete from History* in the **History Indicator** field on in the Equivalent Course GPA/Roll to History window of SHATAEQ. This window is accessed from the Options Menu or via a Previous Block function.

The courses may then be unarticulated, by selecting the Perform Unarticulation item in the Options Menu or performing a Next Primary Key function in the Transfer Institution Equivalent information, and re-articulated either with the additional courses or under a

different program code. The roll to history is then performed again to move the courses back to academic history.

 **Note**

When the courses are in transfer articulation then no adjustments or entries may be performed on SHATRNS. When the courses are in academic history, no adjustments or entries may be performed on SHATAEQ. Also, equivalent courses on SHATAEQ do *not* print on the transcript until they are rolled to history. ■

## Performing Unarticulation

To perform unarticulation, select the Perform Unarticulation item in the Options Menu or perform a Next Primary Key function in the Transfer Institution Equivalent information.

Records with a value of *Successful* will be set to (*None*) when they are unarticulated. Records with a value of *Override Edit* cannot have unarticulation performed. If you wish to unarticulate a record with a setting of *Override Edit*, you must first change the value to *Unarticulate*, and then perform unarticulation. Once you set the value to *Unarticulate*, and then perform unarticulation, the value of *Unarticulate* is automatically set to (*None*), and the record is unarticulated. All records with a value of (*None*) are not considered for unarticulation, since no articulation was performed.

To unarticulate one course at a time on SHATAEQ, select *Unarticulate* in the **Articulate Indicator** field, and then use Next Item. Once you perform a Next Item function, there is an automatic save of the unarticulation. If you attempt to perform unarticulation on a record that is a one-to-many entry or a many-to-one entry, unarticulation will be performed on *all* records associated with that entry.

# Graduation Procedures

---

## Graduation Processing

Graduation processing is used to monitor the graduation and diploma information associated with the degree being awarded to the student, as well as the creation of ceremonies being held and tracking those individuals who are attending the ceremonies. This is done through the use of application and query forms, as well as mass entry and update forms which provide an efficient way to enter and update degree, diploma, and ceremony attendance data.

All graduation forms review the student's hold information and inform you if the student has a graduation hold on their record. The Holds Query-Only Form (SOQHOLD) is accessed from most of the graduation forms. These holds may be overridden to continue processing when necessary.

Mass entry forms are used to search on data, perform updates, and then display the results. Search and update criteria are user-defined and include student and curriculum elements where appropriate. Population selection can be used. The selected students can be reviewed and their updates processed immediately, or the updates can be held for later processing in job submission using a batch process. An audit form is used to view processing results for the mass entry forms.

The mass entry forms allow you to enter search and query criteria to select IDs for update. Depending on the mass entry form used, the parent records of selected IDs can have specific values updated, as well as a pending letter inserted in SUAMAIL. Search and update validation is performed using mass entry column codes from the Mass Entry Column Validation Form (STVMECL). Updates can be submitted immediately on the mass entry form or held for batch processing using the Process Mass Entry Report (SORMEBP). Immediate and pending updates can then be viewed on the Mass Entry Audit Form (SOAMAUD). Result messages are captured when updates occur and can be reviewed directly on the mass entry form at the time of the update and/or on the mass entry audit form after the updates are submitted in batch. Reviewing update result messages allows for failed inserts and updates to be resolved. The Purge Mass Entry Audit Process (SOPMAUD) is used to delete mass entry audit records.

When updates occur or when updates are held for batch submission, mass entry forms retain the user ID, date and timestamp, search and update criteria, and IDs, which are selected for audit purposes. When the forms are used for query only, no updates are processed, and audit information is not collected.

Please refer to “Appendix D - Mass Entry Processing” for detailed information on using mass entry processing, performing updates, and auditing results.

## Set Up Graduation Information

Graduation information for a student is entered using the Degrees and Other Formal Awards Form (SHADEGR) or the Mass Entry Graduation Form (SHAMDEG). SHAMDEG allows the entry of graduation information which can then be viewed using SHADEGR.

The Degrees and Other Formal Awards Form (SHADEGR) supports the entry and maintenance of graduation data in the Graduation Information. When data is entered in the **Graduation Term** field, the **Graduation Year** field is populated. The section also contains graduation date, status, and fee information. The section is accessed for entry or update of graduation information using a Duplicate Item function from the Degree Information or by tabbing through the fields.

The Departmental Honors and Institutional Honors sections of SHADEGR each have the **Print on Transcript** and **Print on Commencement Report** fields. When either of these fields is checked, the appropriate honors will print on the student's transcript or commencement report.

The Degree Summary Form (SHADGMQ) displays summary information about all the degrees which a student is seeking or which have been awarded. Graduation term and status are part of the information that is displayed.

## Mass Enter Graduation Information

You can search for and update degree records on Mass Entry Graduation Form (SHAMDEG) when a degree record exists for the student on SHADEGR. The search uses criteria associated with SHADEGR, except for the graduation application status code, which is associated with the degree record on SHAGAPP.

Degree records returned by the search can update SHADEGR graduation information. Updates will take place, regardless of any holds the students may have. Updates will also take place whether or not data previously existed on SHADEGR for the degree sequence number in the Results window that is selected for update.

The **Authorize** field on SHADEGR is updated when changes are made on SHAMDEG. This field displays the user ID of the person who updated the graduation status for the student.

Fees can be added on SHAMDEG and viewed on TSAAREV when no previous charges have been applied on SHADEGR. When a fee is added on SHAMDEG and a fee already exists on SHADEGR, the new fee will not be charged, and no new TSAAREV record is created during the mass update. A message is displayed that the fee has already been applied. You must select *Charge Fee* or *Waive Fee* from the **Fee** radio group in order to access the other fee fields.

When a student has a degree outcome status of awarded, (the **Awarded Indicator** on STVDEGS is set to *Awarded* for the degree status code), graduation criteria (term, status, year, date) and fees selected for the mass update will not be applied. A message is displayed that the degree has been awarded, and updates are not allowed. Mail submission updates will also not be processed.

When the outcome status is changed, the existing curriculum status code for the field of study is updated to the new curriculum status code based on the rules on STVDEGS and SORCSTS. When the graduation status is changed, and the **Update Next Degree Status** checkbox is checked (set to *Y*) for the graduation status rule on STVGRST, the outcome status on SHADEGR is updated based on the STVGRST rule.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Graduation Status Validation

The Graduation Status Validation Form (STVGRST) is used to create and update graduation statuses. These statuses are used to update the student's degree record with any statuses related to graduation, such as needed approval or monies owed. The **Update Next Degree Status** checkbox is used to indicate whether the student's degree status is to be automatically updated when the graduation status is entered or modified. This field works in conjunction with the **Next Degree Status** field, which is maintained on the Degree Status Code Validation Form (STVDEGS). If the graduation status indicates an update to degree status, and a next degree status code is present on STVDEGS, it will be substituted and the record updated.

## Set Up Diploma Information

Diploma information for a student can be entered using the Diploma Form (SHADIPL) or the Mass Entry Diploma Form (SHAMDIP). Mass updates of diploma information can be accomplished using the Mass Update Diploma Form (SHAMUDI).

The Diploma Form (SHADIPL) is used to create and maintain diploma-related information. The student must have a degree record on the Degrees and Other Formal Awards Form (SHADEGR) before a diploma record can be created. Diploma-related information includes:

- Order date, mailed date, and pickup date for the diploma.
- Diploma fee information which allows the institution to charge a fee for the diploma.
- Diploma name and address information. The diploma name defaults from the legal name, and if none is specified, from the current name, and may be updated on this form. This information is stored as the diploma name and does not change unless you modify the field. Changes to the student's name on the General Person Identification Form (SPAIDEN) have no effect on this field.
- Awarding institution information is used if the institution awards degrees under multiple names. A default value can be set up on the Graduation Default Control Form (SHAGRDD).

The Awarding Institution Validation Form (STVINNM) is used to create and update awarding institution codes. These codes represent the school, college, or institution awarding the diploma.

- The ceremony where the student is planning to receive their diploma can be attached to a diploma and will allow for the automatic update of the pickup date when the cap and/or gown are returned. The student must be registered in the ceremony for the date to be updated on the diploma record.
- Diploma comments can also be maintained.

## Mass Enter Diploma Information

The Mass Entry Diploma Form (SHAMDIP) will present search results for use with mass entry when a degree record exists for the student on SHADEGR and no diploma record exists on SHADIPL. Updates will insert diploma records in SHADIPL and optionally insert ceremony records on SHACATT. Updates will take place, regardless of any holds the students may have. Once a SHADIPL record exists based on the search criteria entered, those records will not be presented by a search and cannot be updated using SHAMDIP.

In order for the update criteria ceremony and ceremony term entered on the SHAMDIP to be processed successfully on SHADIPL, a ceremony attendance record (SHACATT) must exist, or the update of the ceremony and ceremony term will fail. SHADIPL also requires that the SHACATT record exist. SHAMDIP provides the option to create the ceremony/ceremony term record on SHACATT in order to update SHADIPL.

When the **Create Ceremony Attendance** checkbox is checked (set to *Y*), a ceremony attendance record is inserted in SHACATT for the term and ceremony on SHAMDIP. The record on SHACATT will have the ceremony, ceremony term, and activity date. Additional ceremony information may be added to the record when mass ceremony attendance updates are performed on SHAMUCA. The ceremony and term are also updated on SHADIPL when the **Create Ceremony Attendance** checkbox is checked. The ceremony attendance information may be viewed on the Ceremonies By Attendee Query Form (SHACPRQ).

Fees updated on SHAMDIP are always new fees. You must select *Charge Fee* or *Waive Fee* from the **Fee** radio group in order to access the other fee fields. Fee information can be viewed on TSAAREV.

### Note

When a diploma address type is included in the update criteria, the active mailing address from SPAIDEN (SPRADDR) is updated, but the address type is not updated or displayed on SHADIPL. ■

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Mass Update Diploma Information

You can search for and update diploma records on the Mass Update Diploma Form (SHAMUDI) when a diploma record exists for the student on SHADIPL. Records returned by the search can have the diploma record (SHADIPL) updated. Updates will take place, regardless of any holds the students may have. Updates will also take place whether or not data previously existed.

In order for the update criteria ceremony and ceremony term entered on the SHAMUDI to be processed successfully on SHADIPL, a ceremony attendance record (SHACATT) must exist, or the update of the ceremony and ceremony term will fail. SHADIPL also requires that the SHACATT record exist. SHAMUDI provides the option to create the ceremony/ ceremony term record on SHACATT in order to update SHADIPL.

When the **Create Ceremony Attendance** checkbox is checked (set to *Y*), a ceremony attendance record is inserted in SHACATT and SHADIPL for the term and ceremony on SHAMUDI. The record on SHACATT will have the ceremony, term, and activity date. Additional ceremony information can be added to the record when mass ceremony attendance updates are performed on SHAMUCA.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Set Up Ceremony Information

The Ceremony Form (SHACRMY) is used to create and maintain ceremony information. There are no restrictions as to what constitutes a ceremony. Ceremony types are defined on the Ceremony Validation Form (STVCERT). Examples of ceremonies might be: Spring Graduation, College of Business Diploma Ceremony, or Awards Dinner.

The ceremony information can be associated with the event information in the Location Management module. This is done by entering a valid event in the **Event** field. Events cannot be created using this form. If an existing event from the Event Form (SLAEVNT) is entered, the site, building, room, date, and time data will default in and cannot be changed on SHACRMY. If the **Event** field is left blank, you are able to enter or change the event information. The site code must exist on the Site Code Validation Form (STVSITE) to be entered. Buildings and rooms are not validated. First and second choice locations are available for events.

Other information available on this form includes:

- Maximum student tickets and maximum non-student tickets information is used to indicate how many tickets may be given to an individual.
- The maximum capacity is the maximum capacity of the ceremony.
- The required dress code specifies the type of attire to be worn, based on values from the Ceremony Dress Validation Form (STVDRES).
- Unlimited accommodation attributes may be entered for a ceremony, and these special accommodations are shared with the Location Management module.
- Unlimited ceremony comments can also be maintained.

The Ceremony Query Form (SHACRMQ) is a stand alone query form which is used to display all existing ceremonies for an institution. Select the View Ceremony [SHACRMY] item in the Options Menu to access the Ceremony Form (SHACRMY) to view and/or update specific information for a particular ceremony. Select the Ceremony Attendance Detail [SHACATQ] item to access the Ceremony Attendance Query Form (SHACATQ) to query information on attendees for a ceremony.

## Set Up Ceremony Attendance Information

Once the ceremony has been created, the attendees for the ceremony are entered using either the Ceremony Attendance Form (SHACATT) or the Mass Entry Ceremony Attendance Form (SHAMCAT). The Mass Entry Diploma Form (SHAMDIP) and the Mass Update Diploma Form (SHAMUDI) may also be used to add ceremony information.

The Ceremony Attendance Form (SHACATT) is used to create and maintain ceremony attendance records for an individual. The person does not need to be a student to attend a ceremony. A record will exist for each unique ceremony that the attendee will attend. Information maintained on this form includes cap, gown, and hood types and sizes, as well as order, pickup and return dates.

Ceremony attendance can be for a student or a non-student. If the non-student is a faculty member, then the Faculty Degree Information Form (SIAFDEG) may be accessed to examine the faculty member's institution and degree information. This may be useful in determining which hood type should be ordered for the ceremony.

The Attendee Size Classification Rules Form (SHASIZE) is an optional rules form which defines sizes and ranges that are utilized by SHACATT.

### Ceremony Attendance Validation

Three validation forms support setting up ceremony attendance information.

- The Measurement Validation Form (STVMEAS) is used to indicate the valid units of measurement for height, weight, and head size.
- The Academic Dress Type Validation Form (STVTYPE) is used to indicate the valid types for cap, gown, and hood orders.
- The Academic Dress Size Validation Form (STVSIZE) is used to indicate the valid sizes for caps and gowns.

## Mass Enter Ceremony Attendance Information

The Mass Entry Ceremony Attendance Form (SHAMCAT) will present search results for use with mass entry when a degree record exists for the student on SHADEGR, and no ceremony record exists on SHACATT for the ceremony and term entered in the update criteria. An update ceremony and term are required for any updates to occur. The

ceremony and ceremony term will be inserted on SHACATT. Updates will take place, regardless of any holds the students may have.

The search can be refined by requesting that a graduation application exist on SHAGAPP and that the response for ceremony attendance be considered. When the **Select Graduation Application** checkbox is checked (set to *Y*), the records returned by SHAMCAT must also have an associated SHAGAPP record. The graduation application record must in turn have a ceremony attendance value that matches the setting of the **Attend Ceremony** radio group on SHAMCAT. When the **Select Graduation Application** checkbox is unchecked (set to *N*), the value of the **Attend Ceremony** radio group is not considered by the search.

When a student has a degree record with an assigned ceremony and term on SHACATT, a second record cannot be added for the same ceremony and term. The record will not be inserted, and a message will be displayed that the ceremony already exists and updates will not take place.

Fees cannot be applied a second time for the ceremony and ceremony term on SHACATT. Fees cannot be updated or changed. You must select *Charge Fee* or *Waive Fee* from the **Fee** radio group in order to access the other fee fields. Fee information can be viewed on TSAAREV.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

The Ceremony Attendance Query Form (SHACATQ) is a stand alone query form that is used to display detail information for a ceremony and its attendees. The **Attending** field in the Key Information of SHACATQ calculates and displays the number of persons attending the ceremony. If the **Diploma** box is checked, it indicates that this ceremony is the one where the attendee will receive their diploma. The checkbox may be unchecked by accessing the Diploma Form (SHADIPL) and removing data from the **Ceremony** and **Term** fields. Only one diploma can be awarded per degree.

From SHACATQ, select the Ceremony Attendance [SHACATT] item in the Options Menu to access the Ceremony Attendance Form (SHACATT), or select the View/Update Diploma [SHADIPL] item in the Options Menu to access the Diploma Form (SHADIPL), if more attendee detail is desired. When information is changed or updated on SHACATT or SHADIPL, the modifications will be reflected on SHACATQ.

The Ceremonies By Attendee Query Form (SHACPRQ) is a stand alone query form which displays all ceremonies for which an attendee is registered. Select the Update Ceremony Detail [SHACATT] item in the Options Menu or perform a Count Query Hits function to access the Ceremony Attendance Form (SHACATT), or select the Update Diploma Detail [SHADIPL] item in the Options Menu to access the Diploma Form (SHADIPL), to view

and/or modify attendance or diploma information. When information is updated on SHACATT or SHADIPL, the modifications will be reflected on SHACPRQ.

## Mass Update Ceremony Attendance Information

You can search for and update ceremony attendance records on the Mass Update Ceremony Attendance Form (SHAMUCA) when a ceremony attendance record exists for the student on SHACATT. Update criteria on SHAMUCA updates ceremony attendance records on SHACATT and diploma information on SHADIPL. The **Diploma Pickup Date** is updated on SHADIPL when the ceremony and term in the search criteria match the student, and the **Diploma Pickup Date** is entered in the update criteria. Updates will take place, regardless of any holds the students may have.

Updates for cap and gown sizes are based on the rules on SHASIZE. If measurements exist on SHACATT that meet SHASIZE rules, cap and gown size values will default when they are updated on SHAMUCA. When SHASIZE rules exist that meet the student's measurements for cap or gown, the cap or gown cannot be updated without calculating the sizes.

The cap, gown, and hood information can be applied to the order, pickup, and return dates as needed. A type for cap, gown, or hood must already exist on the Ceremony Attendance Form (SHACATT) or be indicated in the appropriate type field to cause an update when a date is changed. If an order date is entered for a cap, and the participant's cap type is blank, then the participant's cap order date would not be changed.

If a record was created for a participant and only reflects the fact they have been registered to attend a ceremony but lacks detail information such as cap or gown type, this information can be added or updated as needed. Tickets can be updated and added to existing cap, gown, and hood information. Number of tickets and diploma pickup dates can also be updated.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Create Graduation Rules

The Graduation Default Control Form (SHAGRDD) is used to set up height, weight, and head size information, which can be used on the Ceremony Attendance Form (SHACATT), and the awarding institution default value, which is used on the Diploma Form (SHADIPL).

The Attendee Size Classification Rules Form (SHASIZE) creates a table of sizes and ranges which is used by the Ceremony Attendance Form (SHACATT) to determine ceremony attendee cap or gown size, based on the attendee's height, weight, and head size.

When these rules are established, they default the appropriate cap or gown size into the Attendee Information section of SHACATT when cap and/or gown type is present. You can override the rules.

## Update Degree Status

The Degree Status Update Report (SHRDEGS) updates the degree status and/or the student status based on user defined criteria. This report may be run in either Audit or Update Mode. The report allows an institution to quickly update all those students whose degree status is pending to awarded. It also allows the institution to set a student status which may prohibit future registration from occurring.

The update of degree status is controlled by the selected parameter values. For example, you supply the current degree status as well as the new degree status. Only those students with the current degree status will be selected for processing. Other optional selection parameters include: Graduation Term, Graduation Year, Graduation Status, Degree Code, Campus, and Level. The student status to be used for the update may be specified along with the effective term to update the general student record.

## Produce Commencement Report

The Commencement Report (SHRCOMM) produces a list of students by degree award status code, their degrees, majors, and any institutional or departmental honors associated with the degree. Students are printed in last name alpha order within a certain date range as specified in the parameters. A graduation date must exist in the **Graduation Date** field on the Degrees and Other Formal Awards Form (SHADEGR) in order to be included in the report. The report also includes graduation information. The parameter selections which support this include: Graduation Term Selection, Graduation Year Selection, and Graduation Status Selection.

## Produce Commencement Attendance Report

The Commencement Attendance Report (SHRCATT) displays the ceremony information and lists those persons who are attending the ceremony. You may request that the report also display the information on caps, gowns, and hoods, which may be used by the institution to place their orders.

The parameter selection options which may be specified include: Print only students, non-students, or all; Print the cap, gown, and hood detail; Print the cap, gown, and hood order totals; List only those persons who have no cap, gown, or hood information; List only those persons who have not picked up their order; List only those persons who have not returned their order.

# Self-Service Graduation Application Processing

Eligible students who expect to complete a course of study can apply to graduate on institution-specified dates through Banner Student Self-Service. Eligibility is determined based on existing learner and/or outcome curriculum records. Graduation application processing reviews the student's curricula and other eligibility criteria and matches them against user-defined rules to determine which students can apply through self-service. Submitted applications can be controlled to create outcome and degree records using the curriculum selected for graduation. The ability to create degree and outcome curriculum records from self-service graduation applications works in conjunction with manual curriculum roll processing.

## Set Up Processing in Baseline

Do the following to set up baseline forms for use with graduation application processing in self-service.

1. Set up graduation application status codes on STVGAST.
  - 1.1. Check the **Active Indicator** for active status codes.
  - 1.2. Check the **Web Indicator** for status codes to be used in self-service.
2. Set up graduation application display rule codes on STVGADR.
3. Build graduation application display rule selection rules on SHAGADS in process order.

These rules determine which graduation application display rule is used.

4. Build graduation application display rules on SHAGADR.

These rules tell self-service which graduation application pages to display, what date to request from the student, and whether degree and diploma records are created or updated.

- 4.1. Add overall self-service controls for the rule.
  - 4.2. Add graduation date availability information for the rule.
  - 4.3. Add diploma name and address information for the rule.
  - 4.4. Add payment options for the rule.
5. Build graduation application eligibility rules on SHAGELR.

These rules determine whether the student has the required curriculum, general student, or academic history and GPA data required by the institution in order to apply to graduate. These rules also determine if the curriculum for self-service graduation

applications must be from the *LEARNER* module or the *OUTCOME* module or can be from either module.

- 5.1. Set up curriculum information for the rule.
  - 5.2. Set up general student information for the rule.
  - 5.3. Set up academic history information for the rule.
  - 5.4. Set up a level to use for GPA and earned hours for the rule.
  - 5.5. Set up the institutional and overall minimum GPA and/or hours for the rule.
6. Review the graduation application that was submitted through self-service on SHAGAPP.
    - 6.1. Update, delete, or inactivate the application as needed.
    - 6.2. Use the **Create/Update Degree Record** button to update the degree and diploma records for an active application.
- or*
7. Enter the graduation application, curriculum, and diploma information for a new application when SHAGAPP is accessed from SGASTDN, SFAREGS, or SHADEGR.
  8. Use the **Create/Update Degree Record** button to create the degree and diploma records for the new, active application.

## Use Apply to Graduate in Self-Service

Banner Student Self-Service pages are used for eligible learners to apply to graduate or complete a course of study. Links in the Student Records Menu are used with graduation application processing. The Apply to Graduate link initiates the process. The View Application to Graduate link allows students, faculty, and advisors to view submitted applications.

You must define who is eligible to submit an application and complete a degree based on existing outcome or learner curriculum records. You must also specify when applications can be submitted. You must determine what information to display to the student and define which degree and/or diploma data you want to collect from the self-service graduation application.

Using a self-service process to initiate the application to complete a degree provides graduation processing for deans, registrars, advisors, and other administrators. A separate process is used to control creation of the outcome records which streamlines and assists with manual corrections of final degree records. The student can also view any active graduation applications.

## Curriculum Selection Page

This page is used to choose the curriculum and degree for the graduation application. If the learner does not have graduation holds and meets at least one self-service graduation eligibility rule, and the current and active curriculum for the learner has a minimum of one institutional academic history record (SHRTTRM) or registration record (SFRSTCR), and no existing graduation applications or awarded degrees are associated with the record, and display rules exist for that curriculum, the graduation application process will continue. The curriculum information comes from the SORLCUR/SORLFOS curriculum tables.

## Graduation Date Selection Page

This page displays the curriculum information selected by the student, as well as the graduation term, date (day/month/year), and/or graduation year information that can be selected for the graduation application. The graduation date information comes from the Graduation Date Availability window on SHAGADR.

## Graduation Ceremony Selection Page

This page allows the user to verify the learner's attendance at any graduation ceremony that is associated with the completion of the degree or course of study. If the graduation date/term/year selected has the **Ceremony** checkbox checked (in the Graduation Date Availability window on SHAGADR) to request this information, this data will be displayed. If indicator is not checked, the student will continue either to the Diploma Information pages or to the Graduation Charge and Payment page if graduation fee charging has been established. If diploma information or charging information is not requested, the student will proceed to the Graduation Application Summary page.

## Diploma Name Selection Page

This page is displayed when the **Display Page** checkbox is checked (set to *Y*) for the graduation application display rule in the Diploma Name block (in the Diploma Name/Address Options window) on SHAGADR. The user can determine which name is to be displayed (current or alternate name and diploma name), which part of the middle name is to be displayed, and which parts of the name are to be displayed, such as a suffix.

If you allow the learner to select and/or edit the diploma name, all names on file will be displayed in a pulldown list on this Web page. Once one name is selected and the learner continues, you can also allow editing of any portion of the name. The information can be updated if the **Edit** checkbox is checked (set to *Y*) in the Diploma Name block on SHAGADR. When the learner uses the **Continue** button on this Web page, a new page will be displayed where the fields that are enabled for editing can be updated. This name will populate the diploma data in the Graduation Application Table (SHBGAPP).

### Note

The **Full Legal Name** field value on SPAIDEN is never used for self-service diploma name information. This field is a single-name field that has been concatenated, and therefore, cannot be broken into first, middle, last, and suffix columns for display or editing in self-service. ■

## Diploma Mailing Address Selection Page

This page is displayed when the **Display Page** checkbox is checked (set to *Y*) for the graduation application display rule in the Diploma Mailing Address block (in the Diploma Name/Address Options window) on SHAGADR.

You can also display existing diploma mailing address information for the curriculum selected, by checking the **Display** checkbox in the Diploma Mailing Address block. If the **Edit** checkbox is checked (set to *Y*) in the Diploma Mailing Address block, the available addresses selected may also be edited. The system displays the current address by default, but the student can change it for diploma mailing.

## Graduation Charge and Payment Page

This page is displayed when the **Charge Graduation Fee** checkbox is checked (set to *Y*) in the Processing Controls block (in the Payment Options window) and the **Create/Update Degree** checkbox is checked (set to *Y*) in the Overall Self-Service Graduation Application Controls block (in the main window) for the graduation application display rule on SHAGADR. Payment options information comes from the Payment Options block on SHAGADR.

## Graduation Application Summary Page

This page displays the curriculum, graduation term, graduation date, diploma name, address information, and any charges and payments for the graduation application. The student can verify the information and then submit the graduation application.

## Confirmation Letter Page

This page displays the graduation confirmation letter for the graduation application rule that was entered in the **Confirmation Letter** field in the main window on SHAGADR.

## Build Graduation Application Status Codes

Graduation application status codes are maintained on the Graduation Application Status Validation Form (STVGAST). These status codes are used by the Graduation Application Form (SHAGAPP) and indicate the status of the graduation application that is submitted through the graduation application self-service pages.

## Build Graduation Application Display Rule Codes

Graduation application display rule codes are maintained on the Graduation Application Display Rule Code Validation Form (STVGADR). These display rule codes are used on the Self-Service Graduation Application Display Rules Form (SHAGADR) to define how the graduation application Web pages are displayed to the learner in self-service.

Some sample rule codes might be:

- *UGASMSP* - Undergraduate Arts Science Main Spring
- *GRBUDFA* - Graduate Business Downtown Fall
- *UGBACHS* - Undergraduate Bachelors Spring
- *DEFAULT* - Default Rule

## Build Graduation Application Display Rules

Graduation application display rules are maintained on the Self-Service Graduation Application Display Rules Form (SHAGADR). These display rules are used to specify the settings used for display and update of graduation application information in self-service. Controls can be set up for overall self-service display, graduation date availability, diploma name and mailing address display and edit, and payment options for application fees. Use the **Copy** button in the Key Block to copy the settings from one rule to another.

### Payment Options

The billing term is determined by checking the last SHRTTRM record, the last SFRSTCR record, or the most recent SGBSTDN record. If you check the **Charge Graduation Fee** checkbox, and you do not enter a detail code or an amount, a warning message is displayed. You can proceed and enter that data at a later time. However, the student cannot proceed with the graduation application in self-service, because the charge information is missing. An error is displayed in self-service to contact the administrator/registrar.

### Charges for Application Fees

When a degree sequence is created manually and a graduation fee is assessed using SHADEGR, if a graduation application is created at a later time using the **Apply to Graduate** button in the Curriculum window for an *unrolled learner curriculum record*, the user will not be prevented from entering a graduation fee for that new graduation application. This fee can be entered, because the process does not check that a degree record with an outcome curriculum that could match the learner curriculum (matches on college, level, degree, and program) already had a graduation fee applied.

It is recommended that when degree records are created, the graduation fees are assessed *after* the learner curriculum record has been rolled. It is also recommended that degree sequences are not created manually before the learner curriculum records are rolled. Since the **Roll to Outcome** button allows degree creation without requiring that the grade roll take place, learner and outcome records can be kept current and consistent.

For more information on using the **Roll to Outcome** button, refer to the “Manual Curriculum Roll Processing” section in this chapter.

### **Warning**

Users are cautioned that changes made to curriculum records close to graduation may not be available to students for selection from self-service, if those curriculum records have not been rolled to outcome through the grade roll process (SHRROLL).

Processing looks for a curriculum record with the highest associated academic history record (SHRTTRM). Therefore, curriculum changes (such as changes to fields of study) made after the last grade roll, but before the next grade roll when graduation applications can become available through self-service, are only displayed for those curriculum records for the term of the last grade roll to history.

Major changes should be updated through the grade roll procedures or maintained on the most current and active outcome curriculum record, if records are not rolled to academic history prior to allowing students to access self-service graduation. ■

A graduation fee cannot be created from Banner Student Self-Service unless the **Create/Update Degree** checkbox is checked (set to *Y*) on SHAGADR. Once the graduation application is submitted, fee information on that record cannot be updated on SHAGAPP, and the display only **Fee (Status)** radio group for the degree sequence in SHADEGR is set to *Fee Charged*.

## Use Graduation Application Display Rule Selection

Graduation application display rule selection criteria are maintained on the Graduation Application Display Rule Selection Form (SHAGADS). These selection rules are used to determine how the application process will assign a self-service graduation display code to a student's curriculum record. When the self-service graduation application process does not find a SHAGADS rule that matches any current, active curriculum for a student, no curriculum records will be available for selection on the Graduation Application Summary page.

You can define or query prioritized selection rules for use with the graduation application display rules. At least one graduation application display selection rule must be associated with at least one graduation application display rule code for that rule to be used in the self-service processing. Multiple graduation application selection rules can be created for the same graduation application display rule code.

You must specify a unique process order for each selection rule that is defined. The process order is the order in which the selection rules will be considered. You can then specify the graduation application display rule code and any combination of optional curriculum elements for the rule. This allows you to control the display and update of self-service data when a curriculum rule is found that matches a select rule code for a graduation application.

When a student uses the self-service graduation application process, the information displayed in self-service is based on the graduation application display rule on

SHAGADR. This means that one specific rule will be used for that student's curriculum. The graduation application process checks the display rule selection data on SHAGADS for process order from lowest to highest, to determine if the student curriculum record contains data that matches the rule data. When a matching record is found, the graduation application display rule code on that record is the rule used for displaying curriculum information in self-service.

If the student qualifies for at least one eligibility rule, then processing will continue to determine how the curriculum and graduation application information is to be displayed. When eligibility is considered, student holds, outcome status for the degree sequence (cannot be "awarded"), and term code selection for the curriculum (based upon the highest academic history (SHRTTRM) or registration (SFRSTCR) record for the curriculum) are also considered before the curriculum is displayed.

The following criteria apply to the selection rule processing:

- Only one selection rule will be matched for the learner and the degree combination of curricula.

Either a learner curriculum record or outcome curriculum records will be processed. A matching select rule *must* be found in order for the curriculum to be displayed.

Select rules are searched in process number order to find a match to the student's current and active curriculum records.

- All the defined fields must match the selection. Blank fields will be ignored.
- The selection data is considered as included. There are no exclude capabilities.
- The selection data is not active or inactive. Records can be deleted as needed.
- The selection data does not have begin or end dates.
- For a curriculum record with a module code of *LEARNER*, only one record is considered. A select rule is found for this one curriculum.
- For a curriculum record with a module code of *OUTCOME*, a set of curriculum records can exist. The select rule is found that matches one of the records in the set.

The primary curriculum is examined to see if a matching select rule exists. If a match is found, that select rule is used. If no match is found, the first secondary curriculum is checked against each select rule until a match is found. When a match is found, the process stops. If no match is found, the next secondary curriculum is checked.

Here is a summary of the selection rule processing:

1. The student's record is checked for holds. Graduation holds will prevent the student from using the self-service graduation application process.

2. The student's current and active curriculum records are gathered, and each is compared to the SHAGADS rules using the processing order that has been determined for the rules.
3. When a matching select rule is found, the process stops, and the display rule that is found is used for that curriculum.
4. Eligibility checking takes place to see if a single eligibility rule exists that passes for the student. Eligibility checking can define whether the curriculum module must be *LEARNER* or *OUTCOME* or can be from either module in the eligibility rules.
5. The learner curriculum record is examined to see if any curriculum records exist that are available for graduation application selection. Learner curriculum records are restricted by term.
6. When an SHRTTRM record exists in academic history, the maximum SHRTTRM term associated with that curriculum is used as the learner term.  
*or*
  - If no academic history term exists, and an SFRSTCR record exists in registration, the maximum SFRSCTR term associated with that curriculum is used as the learner term.*or*
  - If neither an academic history nor registration term record exists, the learner curriculum is *not* available for graduation application selection.
7. When no current, active, curriculum data matches any selection rule criteria, an error message is displayed, and the student will not be able to submit a graduation application in self-service.

Restrictions are as follows:

- The learner module curriculum cannot be used if it has been rolled.
- The curriculum cannot have an active graduation application associated with it.
- An eligibility rule must match the curriculum.
- Graduation dates must be available on the date the student attempts to apply for graduation.

When the student's outcome curriculum records are examined:

- Processing determines the most recent outcome term.
- The degree sequence for that curriculum cannot have an outcome status of "awarded".
- The curriculum cannot have an active graduation application associated with it.

- Each curriculum record in the degree sequence must also be eligible for graduation.
- Graduation dates must be available on the date the student attempts to apply for graduation.

The processing order for the rules is important, as selection rules can be created that use common criteria. For example, you could have two selection rules such as:

- Rule A defines a level and campus code.
- Rule B contains the same level code in the definition, but instead of using a campus code, it selects the rule using a college code.

You may want the process matching to stop as soon as a curriculum is found with the matching campus code. If the student's curriculum record does not have a matching campus code, then the rule with the college code rule can be used. To do this, you can assign the process order of 10 on the rule with campus code, which is rule A, and you can assign the process order of 15 on the rule with college code, which is rule B. In this case, if a student has a curriculum record that matches the level, college, and campus for both rules A and B, the display of graduation dates, diploma options, and so on, is based on rule A, for the lowest numeric processing order or the first selection rule found.

**Example of display rule selection data order:**

In this example, the display rule selection data is checked in priority, ascending order: 10, 20, 999.

Processing Order	Display Rule	Levl	Camp	Coll	Degr	Prog	Majr	Dept
10	UG-BS-ART	UG			BS		ART	
20	UG-BS	UG			BS			
999	DEFAULT							

Selection rule *10* with display rule *UG-BS-ART* is the selected rule when the learner has a curriculum record with a level code of *UG*, a degree code of *BS*, and major/field of study code of *ART*.

If the learner data matches this selection rule criteria, no additional analysis is needed, and the graduation application display rule settings specified for *UG-BS-ART* are used for the graduation application process for the learner/curriculum. If the learner data does not match the selection rule criteria, the next priority selection rule (*20*) will be checked.

Selection rule *20* with display rule *UG-BS-ART* is the selected rule when the learner has a curriculum record with a level code of *UG*, a degree code of *BS*, and as multiple curriculum records are considered at the same time as a set, all current and active outcome records in the set must be matched.

If the learner data matches this selection rule criteria, no additional analysis is needed, and the graduation application display rule settings specified for *UG-BS* are used for the graduation application process for the learner/curriculum. If the learner data does not match the selection rule criteria, the next priority selection rule (999) will be checked.

Selection rule 999 with display rule *DEFAULT* is the selected rule when the learner has an active, current curriculum record.

If no learner data matches any selection rule criteria, an error message is displayed, and the learner cannot submit the graduation application in self-service.

## Use Graduation Application Eligibility Rules

Graduation application eligibility rules are maintained on the Graduation Application Eligibility Rules Form (SHAGELR). These rules determine who is eligible to apply for graduation using Banner Student Self-Service graduation application pages. Students whose general student, curriculum, and academic history records match the restrictions created in an eligibility rule can apply to graduate in self-service. At least one eligibility rule must be met for each current/active SORLCUR record in the curricula set in order for the learner to be allowed to submit a graduation application via self-service. Rules can be queried and are ordered by rule number.

Eligibility rules allow users to decide if the curriculum used for graduation must be from the *LEARNER* module, the *OUTCOME* module, or can be from either. You can determine if the eligibility rules that are created apply to students with specific curriculum data and then set any general student criteria, academic history criteria, required level-specific GPA and earned hours criteria, and institutional and/or overall level GPA and hours data restrictions.

### Note

The term used to evaluate the general student data is the maximum SFRSTCR term for the student. If this does not exist, the maximum SGBSTDN term is used. The term used to evaluate the academic history data is the most recent SHRTRM term. ■

When a student selects the Apply to Graduate menu option in Banner Student Self-Service, all current and active curriculum records are examined. If an existing learner curriculum has not been rolled to history or an outcome curriculum has not already been awarded, and no active graduation application exists for the curriculum, the process checks for eligibility. One eligibility rule needs to be met so the student can apply for graduation.

The following criteria apply to the eligibility rule processing:

- One and only one eligibility rule must be matched for the curriculum record or curriculum record set. For outcome curriculum records, the set that includes primary and secondary curriculum data does not have to use the same eligibility rule for all records in the set.

- All the defined fields on the eligibility rule must match the curriculum record. Blank fields will be ignored.
- The eligibility data is considered as included. There are no exclude capabilities.
- The eligibility data is not active or inactive. Records can be deleted as needed.
- The eligibility data does not have begin or end dates.
- Eligibility rules are assigned one-up numbers.
- It is not necessary to have a graduation application select rule that matches the eligibility rule. The eligibility rule can be defined at a more specific level than the select rule.

## Use Graduation Application Sequence Numbers

The **Graduation Sequence** field on SGASTDN, SFAREGS, SHADEGR, and SOIHCUR and the **Graduation Application Sequence** field on SHAGAPP are used to display the graduation application sequence number on the curriculum record for the learner (SGASTDN, SFAREGS) and outcome (SHADEGR) curriculum records.

Graduation application sequence numbering tracks the graduation application sequence number for the learner and outcome curriculum records. When a graduation application is submitted, the application number is generated as a one-up number and is stored with the curriculum record (SORLCUR) that was used to generate the application.

Only one active graduation application can exist for a curriculum. However, multiple curriculum records may be associated with the same graduation application. This situation occurs because a degree has multiple curriculum records associated with it, but that degree record was generated by the same application where the learner curriculum records have matching elements such as level, college, degree, and program.

## Maintain Graduation Applications

Graduation application information that is submitted in self-service is maintained on the Graduation Application Form (SHAGAPP). This form is used to review and update the information while the graduation application is active. You can also delete an application, change the status of an application, or view an inactive application. New graduation applications can be submitted from this form when it is called from SGASTDN, SFAREGS, and SHADEGR, as these forms will pass the selected curriculum and field of study information. The curriculum information cannot be changed.

Fee information for the application is interdependent. The detail code, fee amount, billing term, and fee date need to be entered for the fee to be applied to the application. However, fee information cannot be entered if an outcome curriculum record exists.

Diploma name and address mailing information can be viewed and updated for an active graduation application. This information is used to create or update the diploma record.

when the **Create/Update Degree Record** button is selected. This information will not be displayed, if it has not been entered in self-service.

Use the **Create/Update Degree Record** button to create a degree record and an outcome curriculum record when the graduation application has been submitted from self-service. If the curriculum associated with the application has not been rolled, this button will perform the roll to outcome (academic history). When no degree record exists for the matching curriculum data that is attached to the active graduation application, a new degree record is created. If a degree record exists, it is updated using the values from the application. The application can be reviewed and then manually updated on SHAGAPP when it has been approved. This button is inactive when the graduation application is inactive.

Graduation applications for the learner are queried by graduation application number in descending order. The graduation application number is assigned when the application number is submitted. This sequence number is stored on the curriculum record. A curriculum will have only one active associated graduation application at a time.

New graduation applications can be created using the **Apply to Graduate** button from SGASTDN, SFAREGS, and SHADEGR. Once a graduation application is created from SGASTDN and SFAREGS, if the curriculum has not yet been rolled to outcome (academic history), the **Apply to Graduate** button remains enabled. (The **Apply to Graduate** button also remains enabled in SHADEGR.) These forms allow you to toggle between the Curriculum window and the associated graduation application sequence. If an existing graduation application is called from SGASTDN, SFAREGS, or SHADEGR, only the specifically associated graduation application will be queried. Curriculum information cannot be changed from SHAGAPP.

If an existing graduation application is called from SGASTDN, SFAREGS, or SHADEGR, only the specifically associated graduation application will be queried. When SHAGAPP is called from SGASTDN, SFAREGS, or SHADEGR, a new graduation application can be created, but the curriculum information cannot be changed. You cannot create a graduation application from SFAREGS or SGASTDN when the learner curriculum record has already been rolled to outcome (academic history).

If a student wishes to withdraw or cancel an application (such as application 1), it can be inactivated using the status code on STVGAST. Once an application has been inactivated, it cannot be modified. The curriculum record associated with the application is not inactivated or updated in the curriculum tables (SORLCUR and SORLFOS). The student is now eligible to submit a new application for the same curriculum. When the new application is submitted, and the application number in the SORLCUR record is replaced with new application number (application 2). Application 2 is now associated with the curriculum record that previously was associated with application 1. When application 1 is viewed on SHAGAPP, the curriculum associated with it is no longer displayed, the **Active Indicator** is unchecked, and the **Create/Update Degree Record** button is inactive.

### **Example:**

A learner submits graduation application 1 for the curriculum record of BA/UG/ARTS. The application status is submitted/active. The SORLCUR record is updated to set the graduation application sequence number to 1. (This update to SORLCUR is *not* a non-destructive update.)

The learner then withdraws the application, so the application status on SHAGAPP is changed to withdrawn/inactive. No SORLCUR update is performed. The associated SORLCUR record still has the graduation application sequence number set to 1.

The learner submits graduation application 2 for the same curriculum record of BA/UG/ARTS. The application status is submitted/active. The SORLCUR record is updated to set the graduation application sequence number to 2.

SORLCUR information associated with graduation application 1 is overwritten. The curriculum information for graduation application 1 is no longer used in processing, although graduation application 1 still exists in the SHBGAPP table.

## Use Apply to Graduate

The **Apply to Graduate** button is used to create graduation applications from learner and outcome curriculum records on SGASTDN, SFAREGS, and SHADEGR. This button is masked on SOILCUR. This button is active on learner curriculum records in SGASTDN and SFAREGS when the graduation application sequence number is null for the curriculum record. When a previous graduation application exists for a curriculum record (whether the record is active or inactive), that application must be deleted before the button can be enabled. Just inactivating the application will not allow you to create a new application.

Only one active graduation application can exist for a curriculum record, but multiple curriculum records may have the same graduation application. This can only occur on the outcome curriculum record, which groups primary and secondary curricula together when an application is created for a degree sequence where more than one outcome curriculum record has been associated with it.

The process behind the button used to create the graduation application executes the Graduation Application API (`sb_gradapp`) and updates the graduation sequence number on SORLCUR. The user can then update the graduation application information on SHAGAPP. The graduation application can be created using the graduation application selection display rule code from self-service. However, not all graduation applications are created using self-service. The process that creates applications from baseline does not check any selection rules. Only self-service graduation applications use the selection display rule codes. When a baseline application is created, the user needs to fill in all the graduation application data manually on SHAGAPP.

Outcome curriculum records are created as follows when all significant curriculum elements match the graduation application. When multiple, current, active learner curriculum records exist with same level, college, degree, and program, and the **Apply to**

**Graduate** button is selected, or the application is submitted through self-service, all the curriculum records with the same level, college, degree, and program are grouped together with that single application and graduation application sequence number. This takes place because only one degree is ever created with the same level, college, degree, and program when the learner curriculum records are rolled to the outcome record.

The exception to this scenario is when a graduation application already exists for the matching degree sequence, and then a new degree record is created. It is possible that an institution has already applied a graduation fee to a degree sequence. In order to prevent adding another graduation fee for the same degree sequence, a new degree sequence will be created, even when the college, level, program, and degree match. Users are cautioned about creating graduation charges from self-service when learner curriculum elements may change for the student, such as when only the major is changed (college, level, degree, and program are not changed), after graduation fees have already been applied to the degree sequence.

In the case where a student has applied to graduate and a degree sequence with that graduation application is created, that outcome curriculum record (and learner curriculum record if it was rolled) will not be available for selection from the self-service graduation pages, since the application exists and is active.

If the student changes majors for the same degree (college, level, degree, and program are unchanged), when the user attempts to duplicate or update the learner curriculum record to add the new major, the system asks if the graduation application should be copied to the new curriculum. If no, then the new graduation application needs to be created using the **Apply to Graduate** button. The new curriculum record will not be eligible for application through self-service until the student registers, is graded, and grades are rolled to history. Therefore, it is recommended that graduation applications are copied and updated if necessary at the time the major change is processed. This may occur if a student changes a major in the term that is closest to the intended graduation term, but after the degree sequence and graduation application already exist.

When it is necessary to remove one of the curriculum records from the application, the user needs to delete the existing graduation application with the two matching curriculum records, and inactivate the learner curriculum record on SGASTDN or SFAREGS. Another option is to modify one of the significant elements on the curriculum record (level, college, degree, program), so the two curriculum records are no longer a match. Then the application can be created. The user can delete the degree record and the associated outcome curriculum record where the two matching curricula existed and can use the manual roll process to create the correct degree record with only one rolled curriculum record per degree.

### **Apply to Graduate on SGASTDN and SFAREGS**

The **Apply to Graduate** button in the Curriculum window of SGASTDN and SFAREGS is used as follows. This button triggers the Graduation Application API (`sb_gradapp`), updates the graduation application sequence number on SORLCUR, and opens SHAGAPP so additional data can be entered. Curriculum data is copied from the

curriculum record (including **Admission Term, Matriculation Term, Graduation Date, Graduation Term, Graduation Year** values). If that data does not exist, data from SGBSTDN is used.

The button does not insert diploma information into the graduation application. This button is only enabled if the learner curriculum record is current and active. The button is not enabled when the learner curriculum record has been rolled to history, when the graduation application is attached to an awarded degree, or when the graduation application is inactive. When a graduation application exists, the button opens SHAGAPP in update mode for that graduation application.

## Apply to Graduate on SHADEGR

The **Apply to Graduate** button is used on SHADEGR to create a graduation application from an outcome record with an **Outcome Status** of *SO (Sought)*. All current and active curriculum records for the outcome will be included in the graduation application, when that application is created. When outcome curriculum is copied, the graduation application sequence is copied to the new record.

This button triggers the Graduation Application API (`sb_gradapp`) to create the application, updates the graduation application sequence number on the outcome curriculum records, and opens SHAGAPP so additional data can be entered. The values for the **Graduation Date, Graduation Term, Graduation Year, Graduation Status** fields and the **Fee** radio group are inserted into the new graduation application from SHADEGR. The current date is always used as the graduation application date when the new graduation application is created using the **Apply to Graduate** button on SHADEGR. This date can be modified in SHAGAPP. If the graduation application already exists, and the outcome degree status is still *SO (sought)* and the button is enabled, but the user is taken to the existing graduation application.

The button does not insert diploma information into the graduation application. This button is only enabled if the learner curriculum record is current and active. The button is not enabled when the graduation application is attached to an awarded degree or when the graduation application is inactive. When a graduation application exists, the button opens SHAGAPP in update mode for that graduation application.

## Use Application Sequencing with Curriculum

Graduation application sequencing works with curriculum records as follows:

- The graduation application must always have an associated curriculum.
- That curriculum must be current and active.
- If none of the student's curriculum records are current, the status of the graduation application must be inactive unless the curriculum has been rolled to outcome (academic history), or the curriculum is an outcome curriculum and the degree has been awarded.

Using the **Replace** button in the Curriculum window automatically changes the graduation application status code to inactive, unless the curriculum was rolled and the associated degree awarded. The **Duplicate** and **Update** buttons prompt the user to copy the graduation application sequence number to the new current application. If the sequence number is not copied, then the application is made inactive. If the curriculum record has been rolled to outcome (academic history) and the associated degree has an awarded status, the sequence number will not be copied to the new curriculum record. You cannot delete a curriculum record if a graduation application exists.

## Replace on SGASTDN

When the graduation application sequence number is populated for an unrolled learner curriculum record, a message is displayed that the graduation application will be inactivated. The user can then choose to continue or cancel the replacement process. If you continue, the new curriculum record is created with the graduation sequence number set to null, and the previous graduation application is made inactive. If you do not continue, the replacement process is cancelled.

The delete process for SGBSTDN uses the SOBCTRL processing that determines if the learner curriculum record with the same term must be deleted. An alert is shown if the SGBSTDN record being deleted is not the last general person record. This allows the user to delete the curriculum record as well as the learner curriculum record, or not. The message *Warning: Curriculum data may exist for term. Review curricula and delete if necessary* displays three buttons: **Delete Learner and Curricula**, **Delete Learner**, and **Show Curricula and Cancel**.

When the **Delete Learner Curriculum** checkbox is checked in the Curriculum Rules window on SOACTRL, the **Delete Learner** button is not displayed in the warning message. The user must select either **Delete Learner and Curricula** or **Show Curricula and Cancel**. When the **Delete Learner and Curricula** button is selected, and one of the existing curriculum records is current for a future SGBSTDN effective term, a warning will be displayed, and the user can cancel the delete action.

You cannot delete an SGBSTDN record if a current curriculum record exists for the term, and it has an unrolled graduation application. If the SGBSTDN record is the last record being deleted, it cannot be deleted if it has any associated curriculum records with unrolled graduation applications (existing graduation application sequence numbers).

## Duplicate and Update on SGASTDN and SFAREGS

When a graduation application sequence of 1 has been created for a learner curriculum in SGASTDN or SFAREGS, using the **Duplicate** button or the **Update** button displays a Copy Graduation Sequence alert window with buttons used to **Copy** the graduation application sequence number to the new current application, **Inactivate** it, or create a **New Priority**. The alert only appears when the graduation application is active, the curriculum has not been rolled, and the curriculum is current and active.

When the **Copy** button is used, the curriculum priority remains the same. The user can change curriculum values (including the priority) and save the changes. The graduation sequence number of 1 can be viewed on the new curriculum record, and the new curriculum data is associated with graduation application sequence of 1. The **Roll to Outcome** button is disabled, but the **Apply to Graduate** button remains enabled, as it can be used to toggle between the Curriculum window and the graduation application data. The **Roll to Outcome** and **Apply to Graduate** buttons are disabled for the previous curriculum record.

When the **Inactivate** button is used, the original graduation sequence 1 for the original curriculum is inactivated (the status in SHAGAPP is set to the system-required, inactive, application status code), and the **Roll to Outcome** and **Apply to Graduate** buttons are not enabled on that curriculum record. The user may edit the curriculum data, but when the changes are saved, no graduation application will be associated with that new record. A new curriculum record can be rolled to outcome (history), or a graduation application can be created manually.

When the **New Priority** button is used, the curriculum priority is increased to the next sequence number based on the SOACTRL rules, and the original graduation application sequence 1 remains active and associated with the original priority 1 curriculum. The user can either roll the curriculum record or submit a new graduation application for the new curriculum priority that has been created.

## Replace, Duplicate, and Update on SHADEGR

The **Replace**, **Duplicate**, and **Update** buttons work differently on SHADEGR than on SGASTDN.

When the **Replace** button is used for an outcome curriculum record that has a graduation application associated with the degree sequence, the new curriculum record will automatically replace the old curriculum record for the graduation application. The outcome delete process will delete the graduation application. If a learner curriculum record exists for a graduation application, the outcome delete process will not delete the graduation application. When an outcome curriculum record is copied, the graduation application sequence number is copied to the new record. This includes processing for the **Update** and **Duplicate** buttons in the Curriculum window.

## Deleting General Student and Degree Records

You can delete a general student record (SGBSTDN) when a graduation application exists for the curriculum, but you cannot delete the curriculum record. You cannot delete a general student record when a current curriculum record has an associated graduation application sequence number and the curriculum record is being deleted.

When a degree or outcome record (SHRDGMR) is deleted, the associated graduation application is also deleted.

## Student Type and Sequence Number

When SHRTYPE is run, the process copies the graduation application sequence number to the new learner curriculum record when the student type is changed. This will not happen if the curriculum record has been rolled to history and the associated degree has been awarded.

## Admissions Decision and Sequence Number

During the admissions decision process, if a graduation application exists, the graduation application is inactivated, unless the curriculum record has been rolled to history and the associated degree has been awarded.

## Student Status and Sequence Number

When the student status is changed on SGASTDN or SHADEGR, the graduation application sequence number is copied to the new curriculum record, unless the curriculum record has been rolled to history and the associated degree has been awarded.

## Purging Curriculum Records with Sequence Numbers

When SOPLCPV is run, curriculum records are not purged if a graduation application sequence number exists and the graduation application record exists. The same is true for the Curriculum API (sb\_curriculum) processing.

## Create a Graduation Application Record

When the learner completes the graduation application and submits it, the data entered is written to the Graduation Application Table (SHBGAPP) and the Graduation Application API (sb\_gradapp). The following data is used to create the record.

Column	Value When Initially Submitted
SHBGAPP_PIDM	PIDM associated with the learner who submitted the graduation application
SHBGAPP_SEQNO	One-up number for the number of graduation applications submitted by the learner
SHBGAPP_ACTIVE_IND	Y (checked)
SHBGAPP_REQUEST_DATE	Date the graduation application was submitted
SHBGAPP_GAST_CODE	Status of the graduation application determined by the graduation application display rule application and the status when submitted
SHBGAPP_GAST_DATE	Date of the application status

<b>Column</b>	<b>Value When Initially Submitted</b>
SHBGAPP_USER_ID	ID of the user who last updated the record
SHBGAPP_ACTIVITY_DATE	System date
SHBGAPP_GADR_CODE	Display rule used when run from self-service
SHBGAPP_GRAD_DATE	Selected graduation date
SHBGAPP_GRAD_TERM_CODE	Selected graduation term code
SHBGAPP_GRAD_ACYR_CODE	Selected graduation year
SHBGAPP_GRAD_ATTEND_CDE	Code used to indicate if the learner plans to attend the graduation ceremony
SHBGAPP_LAST_NAME	Last name to use for the diploma name
SHBGAPP_FIRST_NAME	First name to use for the diploma name
SHBGAPP_MI	Middle name to use for the diploma name
SHBGAPP_NAME_SUFFIX	Suffix to use for the diploma name
SHBGAPP_STREET1	Street line one for the diploma address
SHBGAPP_STREET2	Street line two for the diploma address
SHBGAPP_STREET3	Street line three for the diploma address
SHBGAPP_CITY	City for the diploma address
SHBGAPP_STAT_CODE	State code for the diploma address
SHBGAPP_ZIP	ZIP code for the diploma address
SHBGAPP_NATN_CODE	Nation code for the diploma address
SHBGAPP_TERM_CODE_DETC	VARCHAR2(6)
SHBGAPP_DETC_DETAIL_CODE	VARCHAR2(4)
SHBGAPP_DETC_AMOUNT	NUMBER(12,2)
SHBGAPP_DETC_DESC	VARCHAR2(30)
SHBGAPP_FEE_DATE	DATE
SHBGAPP_TRAN_NUMBER	NUMBER(4)

Column	Value When Initially Submitted
SHBGAPP_WPYO_RECEIPT_NUMBER	NUMBER(8)
SHBGAPP_DATA_ORIGIN	NUMBER(8)

## Create and Update Academic History Records

Degree and diploma records can be created and/or updated during the graduation application process. The process also checks the status codes of graduation applications for curriculum records that are to be archived.

### Degree Records

A degree record (SHRDGMR) can be created automatically when a self-service graduation application is submitted (based on the graduation application display rule) or on demand from SHAGAPP, SGASTDN, or SFAREGS. A degree record can be updated from SHAGAPP using the **Create/Update Degree Record** button. A new degree record is only created when one does not already exist that matches on college, level, degree, and program, or if those curriculum elements match, but a graduation application already exists.

### Diploma Records

A diploma record (SHBDIPL) can be created or updated when the graduation application is submitted (based on the graduation application display rule) or automatically from SHAGAPP. A new diploma record is only created when one does not already exist for the degree sequence.

### Curriculum Archive Records

When an SORLCUR record is moved into the curriculum archives (SORHCUR), if the process detects an active graduation application, the application status will be set to inactive.

## Graduate Student Tracking Procedures

### Graduate Student Tracking Overview

The main components used in the tracking of graduate student information are assistantship, fellowship, and internship information, dual degree data, multiple advisors, committee information, non-course processing, and the academic transcript. Please note that the majority of the forms and processing may be used for all student populations and can accommodate other institutional needs besides tracking the graduate student population.

All of the forms related to this processing are found in either the General Student module in the General Student Menu (\*GSTUDENT) and the Graduate Student Tracking Menu (\*GSTUDENTB), or in the Academic History module in the Committee/Service Information Menu (\*HISTORYE). There are forms which appear in both the General Student and Academic History modules.

## Processing Assistantship, Fellowship, and Internship Information

This processing component of graduate student tracking allows you to record a range of data related to assistantships, fellowships, and internships. The data includes (but is not limited to) such things as effective term range, type, source of funds, stipend, supervisor, tasks, task coordinator, comments, and more. Multiple assistantships, fellowships, and internships may be set up for a person or a student.

The primary form in this component is the Assistantship/Fellowship/Internship Form (SGAASST). The keys to this form include the **ID** (dependent upon an identification record only, which allows information to be recorded for non-students as well as students), **Effective Term**, **Category**, and **Type** fields, all of which are required in the Key Information before entering data in the other sections of the form.

The **Category** field has the hard coded options "A" (Assistantship), "F" (Fellowship), or "I" (Internship). The **Type** field is validated against the Assistantship/Fellowship/Internship Type Validation Form (STVGTYP). Examples of types may include teaching assistantship, arts fellowship, nursing internship, lab assistantship, etc.

The Assistantship/Fellowship/Internship Form (SGAASST) includes two windows of data (Information section of the main window and the Tasks and Comments window). All of the data on the form is from and to term driven; this allows you to capture and track changes over time. In order to make changes to data, the from term in the section of the form must be equal to the effective term in the Key Information (similar to the way changes are made to courses in the Catalog module). In order to track changes and create a new effective term record for any of the information, you must enter the new effective term in the Key Information and then press the Maintenance button or perform a Duplicate Record function in the section of the form where the change is to be made. You may query for all existing records related to a specific assistantship, fellowship, or internship by using the Assistantship/Fellowship/Internship Query Form (SGAASTQ), which is accessed from the Key Information using the **ID** field **Search** feature, and selecting View Existing A/F/I Info (SGASSTQ) from the Option List.

The Comment section of the form allows you to create free format comments related to the assistantship, fellowship, or internship. In addition, there is an **Origin (Code)** (validated against the Originator Code Validation Form (STVORIG)) and an **Origin Date**.

The second form related to assistantship, fellowship, and internship information is the Assistantship/Fellowship/Internship Query Form (SGAASTQ), a stand alone query form that may be accessed from the Key Information of the Assistantship/Fellowship/Internship Information Form (SGAASST) or via the A/F/I Summary item on the Options Menu from

anywhere on SGAASST. SGAASTQ allows you to query for existing assistantship, fellowship, or internship information based upon one or more of the following pieces of data: **Recipient ID, Recipient Name, Term, Category, Type, Status, Program, Catalog Term, Level, Degree, College, Major, and Department.**

In addition, you may view or update the Assistantship/Fellowship/Internship Form (SGAASST) for a specific record by selecting the A/F/I Information item in the Options Menu or performing a Count Query Hits function from the **Recipient ID** field on the Assistantship/Fellowship/Internship Query Form (SGAASTQ).

## Creating Multiple Advisors

This processing component allows you to assign an unlimited number of advisors to a student. The advisor information is effective term driven, allowing you to track and maintain changes to the information over time.

The primary form in this component is the Multiple Advisors Form (SGAADVR). The keys to this form are the **ID** and **Term** fields. **ID, Name** (untitled), and **Advisor Type** (optional) are also entered, as well as the ability to designate an advisor as primary using the **Primary Indicator**. The advisor ID must be set up as a valid advisor on the Faculty/Advisor Information Form (SIAINST). The **Advisor Type** field is validated against the Advisor Type Validation Form (STVADVR), which may include such values as program advisor, peer advisor, athletic advisor, dissertation advisor, etc. The primary advisor is displayed on the Student Course Registration Form (SFAREGS). Therefore, one advisor should always be designated by you as the primary advisor.

The Multiple Advisors Form (SGAADVR) may also be accessed from the General Student Form (SGASTDN). Perform a Duplicate Item function from the **New Term** field of the main window of SGASTDN to view SGAADVR.

## Tracking Dual Degree Information

Dual Degree information (such as JD/MBA) is tracked in the system via the General Student Form (SGASTDN) and the Degrees and Other Formal Awards Form (SHADEGR). The dual degree information may be entered or viewed on either form by selecting the appropriate tab to display the Dual Degree data. The data which may be created for the dual degree includes the **Degree, Level, College, Department, and Major** fields. You may enter any combination of degree and level, as well as college, department, and major. The system does not allow you to enter a level, college, department, or major without a degree. After entering the dual degree information, you may perform an Exit function from the Dual Degree data to return to the General Student Form (SGASTDN) or the Degrees and Other Formal Awards Form (SHADEGR).

Dual Degree information which is created on the General Student Form (SGASTDN) creates dual degree information for that degree record on the Degrees and Other Formal Awards Form (SHADEGR) during the grade roll process, in both the online grade roll or the batch grade roll. Dual degree information is a part of the processing which the system

performs when creating degree records on SHADEGR. If any of the dual degree information is changed through the General Student Form (SGASTDN), the next time the Grade Roll (SHRROLL) is run, the system updates the existing degree record with the new dual degree data on the Degrees and Other Formal Awards Form (SHADEGR). This is similar to the way the system updates (does not create) the existing degree record if primary curriculum major or any secondary curriculum information is changed on the General Student Form (SGASTDN). The system creates a new degree record during the Grade Roll (SHRROLL) on the Degrees and Other Formal Awards Form (SHADEGR), *only* if the level, primary curriculum degree, or primary curriculum college on SGASTDN does not match an existing degree record in academic history.

 **Note**

As a result of the processing described above, schools that use dual degree information for students with existing degree records need to create the dual degree information only on the General Student Form (SGASTDN). The system automatically attaches that information to the existing degree record on the Degrees and Other Formal Awards Form (SHADEGR) for those students during the next grade roll process.

If the student has no remaining grades to be rolled (i.e., the student has already graduated or withdrawn from your institution), or if you want the information to be available immediately, you need to create the dual degree information on both the General Student Form (SGASTDN) and the Degrees and Other Formal Awards Form (SHADEGR). ■

## Setting Up Committee/Service Information

This processing allows you to set up committee or service information which is affiliated with a person (such as a dissertation committee) or that is stand alone, with no person affiliation (such as a long-range planning committee). Committee member information may be tracked. Various query options exist for committee information. In addition, committee information may be printed on a student's transcript at your request.

 **Note**

The Banner Human Resources System makes use of the service aspect of the committee forms. An example of a committee/service type they might use could be a community recycling project. ■

The primary form in this component is the Committee/Service Form (SHACOMI). The key to this form is **Committee/Service Type** field and optionally, the **Associated ID** field. A committee type may be set up without an ID, but an ID may not be set up without a committee type. The **Committee/Service Type** field is validated against the Committee/Service Type Validation Form (STVCOMT) and may include such values as dissertation committee, academic appeals committee, thesis review committee, long range planning committee, or curriculum review committee. The **Transcript Print Switch** may be checked for each committee type created on STVCOMT that you want to print on student transcripts. You may view all existing committees on the Committee/Service Inquiry Form (SHICOMQ) by selecting the Committee/Service Inquiry item from the Options Menu, selecting List Existing Comm/Serv (SHICOMQ) from the Option List for the

**Committee/Service Type** field, or by performing a Count Query Hits function from the Key Information of SHACOMI. The **Associated ID** field is dependent upon an identification record only; therefore, committees may be affiliated with persons outside of the general student population. The Committee/Service Form consists of two windows: the Committee/Service Information window (or main window) and the Committee/Service Comment window.

The Committee/Service Information window allows you to record general information about the committee, to record information about an unlimited number of committee members. The Committee/Service Comments window allows you to record an unlimited number of free format text comments related to the committee.

If the committee is affiliated with a valid student ID on the Committee/Service Form (SHACOMI), it may be set up as a non-course (or part of a non-course) and applied to a degree for a student on the Academic Non-Course Form (SHANCRS). Use the Non-Course Information item in the Options Menu to display the Academic Non-Course Form (SHANCRS). This allows you to record the committee as a non-course (or part of a non-course). You may also give the committee a degree audit non-course requirement code (NCRC) and apply it to a degree for the student.

Committee information may be queried in a variety of ways through the use of three stand-alone query forms: the Committee/Service Inquiry Form (SHICOMQ), the Committee/Service By Person Inquiry Form (SHICMID), and the Committee/Service Member Inquiry Form (SHICMBQ).

- The Committee/Service Inquiry Form (SHICOMQ) allows you to search for existing committees based upon the committee type, person ID or name affiliated with the committee, home college, home department, committee status, date initiated, and dissolved date. Committee member information for all of the committees found in a given query displays on the form in the Committee/Service Members section. As you scroll through the committees displayed after a search is executed, member data changes to correspond with the selected committee. If you perform a Next Block function to the Committee Members section, a greater than sign (>) is placed next to the committee to which the members belong.
- The Committee/Service By Person Inquiry Form (SHICMID) allows you to search for existing committees by the ID of the person or student affiliated with the committee. The form displays information about the committee in the Committee/Service Identification Data section and about the committee members in the Committee/Service Member Data section for the committees retrieved during a given search. As you scroll through the committees displayed after a search is executed, member data changes to correspond with the selected committee. If you perform a Next Block function to the Committee/Service Member Data section, a greater than sign (>) is placed next to the committee to which the members belong.
- The Committee/Service Member Inquiry Form (SHICMBQ) allows you to search for committee members based upon the member ID, member name, role, member status, member college, member department, participation from and to dates, and committee type.

Use the Event Form (SLAEVNT) to create and schedule meetings for the committee(s) on SHACOMI. Select the Schedule Meetings item from the Options Menu to access SLAEVNT. The one-up event number is automatically generated. The **Event Description** appears with the name of the committee. The **Committee or Service Indicator** is populated (checked) by the system, because this event was established through the SHACOMI. This data cannot be updated.

Once on SLAEVNT, use the Schedule item in the Options Menu or a Next Block function from the Event Information to access the Meeting Times window to set up the start and end dates, day of the week, beginning and ending times, building, and room for the committee meeting. Use the Committee/Service Information item in the Options Menu to return to SHACOMI.

## Using Non-Course Processing

Non-Course processing may be set up in conjunction with a student's academic history, while also being connected to degree audit processing. Non-courses may be set up in academic history for any combination of qualifying paper, committee, and academic event. Non-courses may also be applied toward a student's degree record and are displayed in the same manner as courses.

The primary form in this component is the Academic Non-Course Form (SHANCRS). The key to this form is a valid student ID. The form is comprised of the Academic Non-Courses information and the Degree Applied information.

The Academic Non-Courses information allows you to create an unlimited number of non-course records. In addition, every academic non-course which is created here also displays (as an exact match of that information) on the Academic Non-Courses window of the Degrees and Other Formal Awards Form (SHADEGR) for each degree record the student may have. An academic non-course record may be comprised of a combination of data such as paper, committee, and event.

The Degrees Applied information allows you to apply an academic non-course created in the Academic Non-Courses section of the form with an unlimited number of degree records which may exist for the student. If you perform a Next Block function from the Academic Non-Courses information, the system places an asterisk (\*) next to the academic non-course to indicate the record to which the Degree Applied section is connected. You may access the Degree Summary Form (SHADGMQ) using the (**Applied Degree**) **Number** field **Search** feature or by performing a List function. In addition, once you apply an academic non-course to a degree, the system places a check in the **Apply Non-Course Work to Learner Outcome** checkbox for that record in the Non-Course window of the Degrees and Other Formal Awards Form (SHADEGR) for the degree to which it was applied.

This processing functions in a manner similar to the way the system sets the **Applied to Learner Outcome** flag for courses on the Degrees and Other Formal Awards Form (SHADEGR) during the Grade Roll (SHRROLL). You may change the **Apply Non-Course Work to Learner Outcome** to unchecked. If you delete the "degree applied to"

information on the Academic Non-Course Form (SHANCRS), the setting of the **Apply Non-Course Work to Learner Outcome** flag is also removed for that non-course record in the Non-Course window of the Degrees and Other Formal Awards Form (SHADEGR). However, if you change the **Apply Non-Course Work to Learner Outcome** flag from checked to unchecked on a record in the Non-Course window of SHADEGR, the record remains on the form, but the Degree Applied section of SHANCRS no longer contains that information.

In addition to creating non-courses directly on the Academic Non-Course Form (SHANCRS), the same information may be created through accessing the Academic Non-Courses window on either the Committee/Service Form (SHACOMI), the Qualifying Paper Form (SHAQPNO), or the Transcript Events and Comments Form (SHATCMT). Select the Non-Course Information item from the Options Menu or perform a Duplicate Item function from SHAQPNO or SHATCMT to access the Academic Non-Course Form (SHANCRS). Select the Non-Course Information item from the Options Menu to access SHACOMI.

## Associating Academic Transcript With Committees and Events

The student's academic transcript is associated with committee information and academic events for graduate student tracking. Committee information may be printed on the transcript if the **Print on Transcript (Indicator)** on the Committee/Service Form (SHACOMI) is checked for a specific committee *and* the Transcript Type Rules Form (SHATPRT), for the type of transcript being requested, also has the print indicator checked for **Committees**.

Decision and event grade may be printed along with the event on the transcript if the **Transcript Print (Indicator)** on the Academic History Event Code Validation Form (STVEVEN) is checked *and* the Transcript Type Rules Form (SHATPRT), for the type of transcript being requested, also has the print indicators checked for **Academic Events**, **Academic Event Decision** and **Academic Event Grade**.

## Graduate Student Tracking Implementation Instructions

### Create Assistantships, Fellowships, and Internships

Use the following steps to create assistantship, fellowship, and internship information.

1. Create assistantships, fellowships, and internships values on the following validation forms:

STVTASK	Assistantship/Fellowship/Internship Task Validation Form
STVSOFF	Assistantship/Fellowship/Internship Source of Fund Validation Form
STVGSTA	Assistantship/Fellowship/Internship Status Validation Form
STVGTYP	Assistantship/Fellowship/Internship Type Validation Form

2. Create an assistantship for a student on the Assistantship/Fellowship/ Internship Form (SGAASST) by entering the following information.
  - 2.1. Enter data in the **ID, Effective Term, Category, and Type** fields in the Key Information.
  - 2.2. Enter data in the **Status, Supervisor, Source of Funds, FTE, Minimum Course Load, Maximum Course Load, and Required Hours** fields in the A/ F/I Information section of the form.
  - 2.3. Populate the **Degree, Level, College, Major, and Department** fields by selecting the Degree Summary item in the Options Menu or performing a Count Query Hits function to view the student's degree record or records, and perform a Select function on any of the degree records.
  - 2.4. Enter several tasks related to the assistantship in the Task and Comments window. Assign a coordinator who is a faculty member to one of the tasks and a coordinator who is not a faculty member to another task. Leave at least one task with no coordinator assigned to it.
  - 2.5. Enter a multiple line comment with an originator code in the Comment section.
  - 2.6. Save the data you have entered and then perform a Rollback function.
  - 2.7. Enter a new effective term in the Key Information.
  - 2.8. Create a new effective term record in the Information section by pressing the Maintenance button and selecting Copy Information from the Option List or by performing a Duplicate Record function.
  - 2.9. Change one or more pieces of data in the Information section, and then perform a Save function.
3. Perform a query on the Assistantship/Fellowship/Internship Query Form (SGAASTQ) for the assistantship you created.

 **Note**

The two records are displayed, one for each effective term record that you created. ■

4. Select the Assistantship/Fellowship/Internship Information item in the Options Menu or perform a Count Query Hits function on either record to view the assistantship on the Assistantship/Fellowship/Internship Form (SGAASST).

## Create Multiple Advisors

Use the following steps to create multiple advisor information.

1. Create advisor type values on the Advisor Type Validation Form (STVADVR).
2. Create an advisor and an advisor type for a student by either:
  - 2.1. going to the Multiple Advisors Form (SGAADVR) and entering the appropriate data, or
  - 2.2. from the General Student Form (SGASTDN), performing a Duplicate Item function from the **New Term** field to access SGAADVR. Enter an advisor and an advisor type, and designate a primary advisor.
3. Add a second advisor and advisor type on SGAADVR.
4. Perform a Rollback function on SGAADVR, and enter a different term in the Key Information than the term used on the General Student Form (SGASDTN).
5. Press the **Maintenance** button and select Copy Advisor Information from the Option List or perform a Duplicate Record function in the Advisors information, and delete the primary advisor.
6. Perform a Save function, and note the message the system displays regarding the primary advisor.

## Create Dual Degree Data

Use the following steps to create dual degree information.

1. Select the Academic and Graduation Status, Dual Degree tab to display the Dual Degree information to create, view, or update dual degree data.
2. Enter a dual degree and any combination of level, college, department, or major.
3. Exit from the window and perform a Save function.
4. Register the student for a course, grade the course, and roll the grade to academic history.

5. Access the Degrees and Other Formal Awards Form (SHADEGR) for that student, and use the **Degree Sequence** field **Search** feature or perform a List function to access the Degree Summary Form (SHADGMQ).

 **Note**

The **Dual Degree** field is checked for the degree that was included in the Grade Roll (SHRROLL). Perform a Select function with that degree to return to SHADEGR. ■

6. On SHADEGR, select the Dual Degree tab to display the Dual Degree window to create, view, or edit the dual degree information.

 **Note**

Any changes made to the information here will not affect the dual degree information which may exist on the General Student Form (SGASTDN). ■

## Create Committee/Service Information

Use the following steps to create committee/service information.

 **Note**

The Banner Human Resources System makes use of the service aspect of the committee forms. An example of a committee/service type they might use could be a community recycling project. ■

1. Create committee/service status, type, and member values on the following validation forms:

STVCOMS      Committee/Service Status Validation Form

STVCOMT      Committee/Service Type Validation Form

**Note:** Also set the **Transcript Print** switch for each type created on STVCOMT.

STVCOMF      Committee Member Role/Function Validation Form

2. Create a committee/service on the Committee/Service Form (SHACOMI) which is affiliated with a student.

 **Note**

Committees may also be affiliated with non-students or may be created as stand alone. ■

3. Enter a committee/service type and student ID in the Key Information.

4. Enter the following committee/service information.
  - 4.1. Assign a status to the committee in the Committee/Service Information section.
  - 4.2. Populate the **Home College** and **Home Department** fields on SHACOMI by selecting the General Student Summary item from the Options Menu. When you have accessed the General Student Summary Form (SGASTDQ), perform a Select function on any one of the records queried.

 **Note**

The college and department are not required to match those on the general student record. ■

- 4.3. Create two or more committee members in the Committee/Service Members section, and assign a role and status to each.
- 4.4. Create at least one member through use of the Available Faculty By Term Query Form (SOAFVQ) by selecting the Available Faculty By Term item from the Options Menu and then performing a Select function on any of the faculty members queried who has either a college or department or both displayed.

 **Note**

The system will also bring back the college and department for the committee member. ■

- 4.5. Create a multiple line comment in the Committee/Service Comments window for the committee.
5. Create a stand alone committee in the Key Information that does not have an ID affiliated with it.
6. Access the Committee/Service Inquiry Form (SHICOMQ) by selecting List Existing Comm/Serv (SHACOMI) from the Option List or by performing a Count Query Hits function from either the **Committee/Service Type** field or the **Associated ID** field in the Key Information of the Committee/Service Form (SHACOMI).
7. Access the Committee/Service By Person Inquiry Form (SHICMID) by entering the selection from the Committee/Service Information Menu (\*AHISTORYE), which is a submenu on the Academic History Menu (\*AHISTORY) or selecting the Committee/Service By Person Inquiry item from the Options Menu on SHACOMI.
8. Access the Committee/Service Member Inquiry Form (SHICMBQ) by selecting the Committee/Service Member Inquiry item from the Options Menu on SHACOMI.

 **Note**

All of the query forms for committees are stand alone query forms. ■

9. Access the Committee/Service Form (SHACOMI) for the committee and ID you created. Select the Non-Course Information item in the Options Menu to display the

Academic Non-Course Form (SHANCRS) to create, view, or edit academic non-course information related to the committee.

**10.** Schedule a meeting for your committee using SLAEVNT.

- 10.1.** Access SLAEVNT by selecting the Schedule Meetings item in the Options Menu, to create and schedule meetings for the committee.

The one-up event number is automatically generated. The **(Event) Description** appears with the name of the committee. The **Committee/Service Indicator** is populated by the system because this event was established through the SHACOMI. This data cannot be updated.

- 10.2.** Use the Schedule item in the Options Menu or a Next Block function from the Event Information to access the Meeting Times window to set up the start and end dates, day of the week, beginning and ending times, building, and room for the committee meeting.

## Create Non-Course Information

Use the following steps to create non-course information.

1. Set up a student with at least one degree record on the Degrees and Other Formal Awards Form (SHADEGR).
2. Access the Committee/Service Form (SHACOMI) to enter the committee/service type and associated ID for the student created in Step 1.
3. From within the Committee/Service Information section, select the Non-Course Information item from the Options Menu to display the Academic Non-Course Form (SHANCRS) to create, view, or edit academic non-courses.

 **Note**

The committee type from the Committee/Service Form displays. ■

4. An academic non-course may be comprised of any combination of the fields displayed in SHANCRS. Along with the committee, enter a complete-by date and a status code. Save the data, and exit back to the Committee/Service Form (SHACOMI).
5. Access the Qualifying Papers Form (SHAQPNO), and enter the same student ID as was used for the committee information. Create a qualifying paper for the student. Save the data, and select the Non-Course Information item from the Options Menu or perform a Duplicate Item function to display SHANCRS for entering non-course data.

 **Note**

The paper number you just created is displayed. ■

6. Enter a CAPP non-course requirement code along with the paper. Also, enter a status (choose a status which signifies "satisfied"), and perform a Save function.
7. Perform a Next Block function to the Degree Applied section of SHANCRS. Use the **Number field Search** feature or perform a List function to access the student's Degree Summary Form (SHADGMQ). Perform a Select function on the student's degree record queried. Save your data.
8. Access the Academic Non-Course Form (SHANCRS), and enter the student's ID. Perform a Next Block function.

 **Note**

The information which you created through using SHANCRS from the Committee/Service Form (SHACOMI) and the Qualifying Paper Form (SHAQPNO) is recorded here. You may also add, change, or delete academic non-course information using this form. ■

9. Access the Degrees and Other Formal Awards Form (SHADEGR) for the student you have been using. Enter the degree number to which you applied the qualifying paper non-course. Use the Non Course Work tab to access the Non-Course window.

 **Note**

Both the academic non-course records you created (the paper and the committee) display here, and the paper has the **Apply Non-Course Work to Learner Outcome** box checked. ■

10. Access the Transcript Events and Comments Form (SHATCMT), and enter the student's ID and level. Create an event in the Academic Events section. Enter a decision and a grade for the event, and save your data.

 **Note**

Academic non-course processing may also be accomplished from this form as well, by selecting the Academic Non-Course Information item in the Options Menu or by performing a Duplicate Item function. ■

## Academic History Reports

---

This section includes a sample of each report in the Academic History module. Parameter definitions have also been provided for your convenience.

The following reports are run through the Academic History module:

Grade Roll Process	(SHRROLL)
Calculate GPA Conversion Process	(SHRCONV)
Calculate GPA Report	(SHRCGPA)
GPA Recalculation Report	(SHRGPAC)

Calculate Academic Standing Report	(SHRASTD)
Repeat/Equivalent Course Check Report	(SHRRPTS)
Grade Mailer Report	(SHRGRDE)
Student Type Update Report	(SHRTYPE)
Transcript Population Creation Process	(SHRTPOP)
Academic Transcript	(SHRTRTC)
Academic Transcript Request Purge	(SHPTRTC)
Degree Status Update Report	(SHRDEGS)
Commencement Report	(SHRCOMM)
Commencement Attendance Report	(SHRCATT)
Transfer Equivalency Catalog	(SHRTECA)
Transfer Equivalency Worksheet	(SHRTAEQ)
Transfer Articulation Purge	(SHPTAEQ)
IPEDS First Time Residency Report	(SHRIRES)
IPEDS Total Activity Report	(SHRIACT)
IPEDS Completion Report	(SHRICIP)
IPEDS File Generation Process	(SHRIPDS)
IPEDS Enrollment Summary Age Analysis	(SHRIAGE)
IPEDS Enrollment Summary Racial/Ethnic Status	(SHRIETH)
Graduation Rate Survey Report	(SHRIGRS)
Electronic Data Interchange Reconciliation	(SHREDIR)
Electronic Data Interchange Institutions	(SHREDII)
Electronic Transcript Upload Purge Process	(SHRETRP)
Upload of EDI Transcript	(SHREDIP)
Electronic Data Interchange Extract	(SHREDIY)
Degree Verification Process	(SHRDEGV)
Progress Evaluation Process	(SHRPREV)
PESC/XML Transcript Export Process	(SHRPESE)
PESC/XML Transcript Import Process	(SHRPESI)
Transfer Catalog Data Import Process	(SHRTCIM)
Incomplete Grade Process	(SHRCINC)
Roll Learner to Outcome Process	(SHRROUT)

# Grade Roll to Academic History (SHRROLL)

## Description

This process is used to roll grades entered in Registration through the Class Roster Form (SFASLST) and the Attendance Roster Form (SFAALST) or online through Banner Faculty and Advisor Self Service into Academic History. (Grades may also be rolled online via SFASLST and SFAALST). The grade roll creates a term header record in academic history and copies courses from registration into the Term Course Maintenance Form (SHAINST). The process also populates the term header record with the student centric period when the record is created during the roll process and the student has a student centric period associated with the term or a cycle designator in effect for the term.

## Grade Roll and Degree Records

The grade roll will create a degree record in academic history with a status of *SO* for sought, (a system-required value on STVDEGS), if no degree record already exists. The learner curriculum that is active for the term associated with the graded courses that are being rolled will become the sought outcome curriculum for the newly created degree record.

- If a degree record already exists with the status of *SO* for sought or *PN* for pending (*PN* is also a system-required value on STVDEGS), and the student's learner curriculum (program, degree, level, and college) for the term in which the courses are registered, graded, and to be rolled matches the existing curriculum on the degree record with the status of *SO* or *PN*, the courses will be rolled into that existing, matching degree record.
- If the program, degree, level, and college in the learner and outcome curriculum records match, but the campus or active field of study data in the term being rolled differ, a new degree record will be created that includes the changed or new campus and field of study information.
- If the program, degree, level, and college are the same, but the major is different, the major on the existing degree record is updated to reflect the change in major information.
- If a degree record exists with the status of *SO* or *PN*, and the student's learner curriculum for the term in which the registered and graded courses to be rolled does not match the existing, active outcome curriculum values of program, degree, level, and college, a new degree record with status of *SO* will be created with the new curriculum information from the term being rolled.
- If a degree record exists with the status that of *AW* for awarded, and additional courses are then graded and rolled, a new degree record with a status of *SO* will be created using the active learner curriculum, even if all curriculum information matches that of the awarded degree.

## Grade Roll and the Curriculum Roll Indicator

The Roll Indicator (SORLCUR\_ROLL\_IND) on SORLCUR (**Roll Learner** radio group on SOILCUR) is only applicable to the General Student (Learner) module. Therefore, the **Roll Learner** radio group on SGASTDN and SFAREGS should be used to set the value of the Roll Indicator and to designate which learner curriculum records are to be rolled to history (outcome).

When the curriculum is rolled, the outcome record is created (SHADEGR), and the learner curriculum inserted for the outcome. A new outcome is not created if a previous outcome exists that has not been awarded and has a curriculum record with the same level, degree, college, and program. In this case, the curriculum is rolled to the existing outcome.

The **Roll Learner** radio group choices on SOILCUR are *Yes*, *No*, or *Default*. The default value originates first from the setting of the **Primary (Indicator)** or the **Secondary (Indicator)** on SOACURR. If a curriculum has not been defined, the default value then originates from the **Create or Update Outcome Record with Primary Learner Curriculum** radio group or the **Create or Update Outcome Record with Secondary Learner Curricula** radio group on SOACTRL.

- Select *Yes* to roll the learner record to academic history (outcome).
- Select *No* to not roll the learner record.
- Select *Default* to use the curriculum rules defined on SOACURR (**Primary** or **Secondary** checkboxes) and SOACTRL (**Create or Update Outcome Record with Primary Learner Curriculum** radio group or **Create or Update Outcome Record with Secondary Learner Curricula** radio group).

### Note

All non-learner modules (Recruiting, Admissions, Academic History) will display a value of *No* in this field. ■

## Grade Roll and Section Dates

Section start and end dates are rolled to academic history when an enrollment is rolled, regardless of whether the section is a CEU section.

When information is rolled to academic history either online using the Class Roster Form (SFASLST) or the Class Attendance Roster Form (SFAALST) or in batch using the Grade Roll to Academic History (SHRROLL), the section start and end dates are rolled.

- If the schedule type of the section permits assignment of a CRN to a co-op activity, and the CRN is assigned to a co-op for the term, the start and end dates for the co-op are rolled.
- If no co-op exists or the section's type does not permit the assignment of a CRN to a co-op activity, then the section dates are rolled.

### Grade Roll and Components/Sub-components

The process will only roll components and sub-components when there is no value for the grade date. The grade update restrictions also apply to components and sub-components.

When a final grade is entered against an individual registration record, the grade date (SFRSTCR\_GRDE\_DATE) is not, as yet, updated. When SHRROLL is run in batch mode, those registration records containing a value in the **Final Grade** field (SFRSTCR\_GRDE\_CODE) and no value in the **(Grade) Date** are rolled to academic history. The existence of a date in this field prevents the batch grade roll process from performing any subsequent rolls to academic history. The presence of this date also prevents the final grade from being updated in either SFASLST or SFAALST.

The same grade update restriction is required for component and sub-component marks. Therefore, when the registration is rolled, the same date that is entered in the registration date field is also used to populate the roll date in the SHRMRKS, SHRCMRK, and SHRSMRK tables for the applicable student.

### Grade Roll and Open Learning Courses/Part-of-Term

The start from and to dates are used to select all registration records in a range. For traditional courses (which are assigned to a part-of-term), the part-of-term start date associated with the section is used to determine inclusion. For open learning courses, the start date of the original SFRAREG record for the student is used.

If you need to isolate a portion of a term for roll processing, enter either a valid term or a wildcard (%) to search all terms. The wildcard feature is only permitted if start from and to dates are also entered. In this instance, only registration records in a particular term matching the date range entered would be rolled.

Also, if a specific part-of-term is entered, records meeting the date requirements are rolled. A valid term must be entered in order to also have the associated part-of-term.

Term	Part-of-Term	Date Range	Results
Fall 2002			All graded registration records for the Fall 2002 term would be rolled.
Fall 2002	1		All graded registration records for the Fall 2002 term for sections assigned a part-of-term code of 1 would be rolled.
Fall 2002	%	01-SEP-2002 to 30-NOV-2002	All graded registration records with a registration start date between the date range (inclusive), for the Fall 2002 term, would be rolled.
%	1	01-SEP-2002 to 30-NOV-2002	Not permitted.
Fall 2002	1	01-SEP-2002 to 30-NOV-2002	All graded registration records for the Fall 2002 term for sections assigned a part-of-term code of 1 with a registration start date between the date range (inclusive) would be rolled.
%	%	01-SEP-2002 to 30-NOV-2002	All graded registration records with a registration start date between the date range (inclusive) would be rolled.

Open learning information is rolled from SFRAREG to SHRTCKN for the number of extensions processed for a registration record, the original start date from the first SFRAREG record, and the most recent expected completion date. The instructor assignment from the SFRAREG record is rolled and is displayed in the Instructor Information block on SHATCKN.

## How Degree Attributes Move from Catalog to Academic History

1. Degree attributes are entered in the Catalog module (SCADETL).
2. A new schedule record is created in the Class Schedule module, and the catalog attributes populate the schedule attributes (SSADETL).

 **Note**

This is the reason that degree attributes exist on the catalog record, so they can be defaulted into the schedule record. ■

3. A student registers for the section, and the section is graded and rolled to history.
4. For the first student that is rolled in the section, the schedule degree attributes are used to populate the history degree attributes (SHRATTC).
5. The History Course Section Attribute Table (SHRATTR), which is used in CAPP, is populated from SHRATTC.
6. Other students register for the section and have grades rolled. The contents of SHRATTC are used to populate the student's degree attributes.
7. You can view the rolled section degree attributes (SHRATTC) on SHADEGR and SHATCKN, although they are not updateable.
8. To customize the degree attributes on a student's record (SHRATTR), you can insert and/or delete data from the SHRATTR block.

Parameters	Name	Required?	Description	Values
	Term Code	Yes	Enter the term code representing the term for which grades are to be rolled.	Term Code Validation Form (STVTERM)
	Start From Date	No	Enter the registration start range from date for the records to be rolled.	
	Start To Date	No	Enter the registration start range to date for the records to be rolled.	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Part of Term Code	Yes	Enter the code representing the part of term for which grades are to be rolled. Multiple values allowed. Enter % for all parts-of-term.	Part of Term Code Validation Form (STVPTRM)
	Course Reference Number	Yes	Enter the CRN of the course(s) for which grades are to be rolled. Multiple values allowed. Enter % for all courses.	
	User ID	Yes	When grades are rolled into academic history, each entry for each student is associated with the user ID responsible for the roll. Enter that user ID.	
	Report Mode	Yes	Audit mode does not update the database (as Update mode does), and is useful for identifying errors which can then be corrected for a roll in Update mode which does update the database.  <b>Note:</b> When Audit mode is used, a list of errors can be included in the output. If errors occur when Update mode is used, only the records for students with errors may not be completed by the process. API errors are listed as <i>APIERR</i> , a record type on SOTPRNT.	A Audit U Update
	Print Selection	Yes	<i>All</i> will print all grades rolled in the Control Report, and <i>Error</i> will print only those grades which did not roll due to errors.  <b>Note:</b> An error will be generated if the substitute grade information is not correctly established on the database.	A All E Error
	Grade Term	No	Enter the term in which the course was graded.	Term Code Validation Form (STVTERM)
	Roll Long Section Title	Yes	Enter <i>Y</i> to roll the long section title from the syllabus or <i>N</i> to not roll the long section title. The default is <i>N</i> .	Y Roll long section title N Do not roll long section title

## Report Sample—Grade Roll to Academic History Report (SHRROLL)

*This sample shows the results in Update Mode.*

## Calculate GPA Conversion Process (SHRCONV)

**Description** This process is used to calculate and store the campus GPAs by term and the level of the students. It should be run before any of the other GPA calculation processes are executed. Academic History tables will be locked in exclusive mode to prevent problems from occurring while the process is running. Be certain no users are accessing Academic History before running this job. Due to the calculation of GPAs for all students in Academic History, this job may run for several hours.

No parameters are used with this process. The process is always run in Update Mode, and the GPAs are updated.

## Calculate GPA Report (SHRCGPA)

**Description** This process is used to calculate the GPA for the selected term and group of students. You can use population selection or you can select all students for the term, students whose histories have been rolled, or students whose information has been fed to a collector file. The process also calculates a student's GPA by student centric period, level, and type (institutional, transfer credit, and overall) for terms that are part of a student centric period.

Parameters	Name	Required?	Description	Values
	Term	Yes	Enter the code representing the term for which the report is to be run.	Term Code Validation Form (STVTERM)
	Select All, Rolled, or Collector	Yes	Enter <i>A</i> to select all the students from the term, <i>R</i> to select only those students whose academic histories have been rolled, or <i>C</i> to select those students whose information has been fed to a collector file.	A All R Rolled C Collector
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.

## GPA Recalculation Report (SHRGPAC)

**Description** This process is used to recalculate the GPA for all terms for each student. When terms have been recalculated, then all levels for each student are recalculated. Students may be selected for GPA recalculation using one of three methods:

- The user has previously created a population selection file.
- The user enters a term, and if no population selection file exists, and the user does not select individual students, all students enrolled in the term will be processed.
- The user will be prompted for individual student IDs.

The process also recalculates a student's GPA by student centric period, level, and type (institutional, transfer credit, and overall) for terms that are part of a student centric period.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Process Term	Yes	Enter the code representing the term for which the report is to be run.	Term Code Validation Form (STVTERM)
	Student ID	No	Enter the student IDs which are to be processed for recalculation.	
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)

Parameters	Name	Required?	Description	Values
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	Audit Trail Report Request	No	Enter Y to request the production of an audit trail report.

## Calculate Academic Standing Report (SHRASTD)

**Description** This process is used to calculate the academic standing for the selected term and group of students. You should run this process after the Repeat/Equivalent Course Check Report (SHRRPTS) but before the Grade Mailer Report (SHRGRDE). Records are selected and processed for the term requested for students having an SHRGCOL record.

The academic standing process uses a student's "displayed" GPA rather than the "stored" GPA when determining their academic standing. For example, if a student's GPA is calculated to be 1.987821, that is the value that will be stored. However, if the institution's GPA display rules are set up to round the GPA to three digits, the displayed GPA would be 2.000, and that is the value the SHRASTD process will use to evaluate the student's academic standing.

When running the report to calculate either academic standing or Dean's List standing, only that status which has been selected to be calculated will be updated. If both academic standing and Dean's List standing are to be calculated, both will be updated. To update minimum/maximum hours, academic standing must also be updated. To calculate minimum/maximum registration hours, the Calculate Academic Standing parameter must also be set to *Y*. The students are selected for this report *only* if the record exists on the Grade Mailer Status/Error Correction Form (SHAGCOL).

The process also calculates academic standing by student centric period for students with an active student centric period for the term. The student is considered to have an active student centric period for the term when the **Student Centric Period** field on SHAINST (or the column in the SHRTTRM table) has a valid value. The Academic Difficulty Rules by Student Centric Period window on SHAACST is used to maintain academic standing hours and GPA rules by student centric period.

When academic standing is evaluated for the student for the final term of the student centric period, the new standing is based on the institutional hours and GPA from all the terms associated with the student centric period. When academic standing is evaluated for the student for an earlier term in the student centric period, the most recent, previous academic standing calculated before the student centric period will be assigned as the new standing.

For a student, for all terms prior to the final term in a student centric period, the academic standing is rolled forward from the student's most recent term that is prior to the start of the current student centric period. This permits registration restrictions and maximum hours calculations to remain in effect throughout the student centric period. When a student who has an active student centric period does not enroll in the final term of the student centric period, and academic standing is calculated for the final term, the student's standing is evaluated based on

the student centric period GPA totals, but the academic standing is stored in the highest or maximum existing term header record for the student centric period.

**Note**

When a student does not have an active student centric period assigned, the existing term-based rules from SHAACST are used for the evaluation of academic standing. ■

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Term	Yes	Enter the code representing the term for which the report is to be run.	Term Code Validation Form (STVTERM)
	Update Academic Standing	Yes	Do you want the academic standing to be calculated/ updated?	Y Calculate academic standing N Do not calculate academic standing
	Update Dean's List Standing	Yes	Do you want the Dean's List standing calculated/ updated?	Y Calculate Dean's List standing N Do not calculate Dean's List standing
	Audit/Update Mode	Yes	A or audit mode will print a report of the calculated academic standings, without actually updating the database. U or update mode will update records with the new standing.	A Audit U Update
	Calculate Min/Max Registration Hrs	Yes	Enter Y to compare the hours for the new academic standing codes to existing future registration. Enter N when no checking is needed.	Y Compare hours N No checking
	Pre-registration Future Term	No	Enter the future term registration to be compared to the new academic standing minimum/maximum registration hours.	Term Code Validation Form (STVTERM)

Parameters	Name	Required?	Description	Values
	Min/Maximum Hours Update/Audit	No	<p>Enter <i>U</i> to update the future term to the new minimum/maximum hours. Enter <i>A</i> to print an audit report of the updated minimum/maximum hours, without actually updating the database.</p> <p>The Audit/Update Mode parameter must also be set to <i>U</i> for update, if this parameter is set to <i>U</i> for update.</p>	<p><i>U</i> Update future term</p> <p><i>A</i> Audit updated hours</p>
	Update 'USER' Source New Value	Yes	<p>Enter <i>Y</i> to override minimum/maximum hours, or <i>N</i> to not override minimum/maximum hours when the existing source for the hours from SFAMHRS is <i>USER</i>.</p>	<p><i>Y</i> Override minimum/maximum hours</p> <p><i>N</i> Do not override minimum/maximum hours for source <i>USER</i></p>
	Process by Student Period	Yes	<p>Enter <i>Y</i> to calculate the academic standing for student centric periods or <i>N</i> to not calculate the academic standing. The default is <i>N</i>.</p> <ul style="list-style-type: none"> <li>When this parameter is set to <i>Y</i>, the process considers students who are assigned to a cycle designator and student centric period using the rules for student centric period academic standing processing.</li> <li>When this parameter is set to <i>Y</i>, any students who are not assigned to a cycle designator for the term are processed using baseline term academic standing processing.</li> <li>When this parameter is set to <i>N</i>, only baseline term academic standing processing is performed.</li> </ul>	<p><i>Y</i> Calculate academic standing for student centric periods</p> <p><i>N</i> Do not calculate academic standing for student centric periods</p>
	SCPs to be processed	No	<p>Enter the student centric periods to be processed for academic standing. Values should be valid for the term entered in the Term parameter. When the Process by Student Period parameter is set to <i>Y</i>, this parameter must be entered.</p>	<p>Student Centric Period Term Control Form (SOASCPT).</p>

## Repeat/Equivalent Course Check Report (SHRRPTS)

**Description** The Repeat/Multiple Course Rules Form (SHARPTR) is used to define rules on handling grades and credits if students should exceed repeat limits when taking courses. This process is run after the grade roll (SHRROLL) and before grade mailers (SHRGRDE) to check new courses rolled into history for repeats and/or equivalents. It will then look at the rules on SHARPTR to determine how they should be calculated into the student's record. Any course, including transfer courses, identified as a repeat or equivalent which should be excluded from the record's calculations of hours and GPA is accordingly flagged with an *E* (for excluded) on the transcript. The report will sort the output of students in alphabetical order by last name.

Parameters	Name	Required?	Description	Values
	Term Code	Yes	Enter the code representing the term for which repeat/equivalent checking is to be run.	Term Code Validation Form (STVTERM)
	Level Code	Yes	Enter the level for which you wish to run the report. Multiple values are allowed.	Level Code Validation Form (STVLEVL)
	Report or Update	Yes	Enter <i>R</i> to process the report in audit mode, or enter <i>U</i> to update the database with the results. <b>Note:</b> After running in update mode, the GPAs need to be recalculated using the Collector option in the Calculate GPA Report (SHRCGPA).	<i>R</i> Report results in audit mode <i>U</i> Report results in update mode and update the database
	Print Transfer Work	Yes	Enter <i>Y</i> to print transfer work on the report. Enter <i>N</i> to not print transfer work on the report.	<i>Y</i> Print transfer work <i>N</i> Do not print transfer work
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	User ID	No	Enter the user ID for the population selection. This is the ID of the user who selected the population of people. This may or may not be the same as the Creator ID. All or none of the population selection parameters must be entered.	
	Print Repeated Courses Only	Yes	<p>Enter <i>Y</i> to suppress printing of any courses that are not considered for repeat processing due to the repeat rules settings for the term being processed. Only repeated courses will be printed.</p> <p>Enter <i>N</i> to print all repeated courses, including those courses not considered as the result of the settings in the repeat rules for the term being processed. These courses will have associated informational messages.</p> <p>The default is <i>N</i>.</p>	<p><b>Y</b> Print repeated courses only</p> <p><b>N</b> Print all repeated courses and messages for non-repeated courses</p>

## Grade Mailer Report (SHRGRDE)

**Description** This process produces grade mailers for students for whom grades have been entered either manually or through the Grade Roll Process (SHRROLL). The process should be run after the Grade Roll (SHRROLL), the Repeat Checking Process (SHRRPTS), the Calculate GPA Process (SHRCGPA), and after the Academic Standing Process (SHRASTD). Grade mailer status is maintained in the Term Header Block of the Term Course Maintenance Form (SHAINST). A grade mailer must be pending for persons selected via population selection in order for a grade mailer to be generated.

Four types of grade mailers exist:

- *Original* - produced as a result of a new institutional grade record created in academic history. Once grades are rolled, original grade mailers are produced.
- *Duplicate* - requested through the Term Header Block of the Term Course Maintenance Form (SHAINST). Will produce a duplicate grade mailer.
- *Mid-term* - produced by entering mid-term grades through the use of the Class Roster Form (SFASLST). (Mid-term grades are not rolled to academic history.)
- *Revised* - produced as a result of grade change through the use of the Course Detail Information Form (SCADETL) from the Term Course Maintenance Form (SHAINST).

Parameters	Name	Required?	Description	Values
	Term Code	Yes	Enter the term code which represents the term for which grade mailers are to be run. Single value only.	Term Code Validation Form (STVTERM)
	Grade Mailer Type	Yes	Enter the code representing the grade mailer(s) to be produced. Enter <i>O</i> for Original, <i>D</i> for Duplicate, <i>R</i> for Revised, or <i>%</i> for a combination of those three codes. Enter <i>M</i> for Midterm. The value <i>M</i> is not included in the <i>%</i> value. Single value only.	O Original D Duplicate R Revised % All three above: O, D, R M Midterm

Parameters	Name	Required?	Description	Values
	Print Academic Standing Y/N/O	Yes	Do you want academic standing to print on grade mailers? Enter <i>Y</i> to print the academic standing. Enter <i>N</i> to not print the academic standing. Enter <i>O</i> to print the override standing.	Y Print standing N Do not print standing O Print override standing
	Print Dean's List (Y/N)	Yes	Do you want Dean's List to print on grade mailers?	Y Print Dean's List N Do not print Dean's List
	Print Headings (Y/N)	No	Do you want headings to print to identify subject, course, section, title, etc.? If using pre-printed forms which already have columns appropriately identified, answer <i>N</i> .	Y Print headings N Do not print headings
	Address Selection Date	No	Which address, effective on this date, do you want to print on the grade mailer. Leave blank for today or enter in date format DD-MON-YYYY.	
	Address Type	Yes	Enter the address type to be printed on the grade mailer. Multiple requests are permitted and must be entered in priority sequence.  For example, <i>IMA 2PR</i> will first print the mailing address, and if none is found, will print the permanent address.	Address Type Code Validation Form (STVATYP)
	Level Code	Yes	Enter the level code representing the population for which grade mailers are to be run (single value only), or % may be entered for all.	Level Code Validation Form (STVLEVL)
	Campus Code	Yes	Enter the campus code representing the campus for which grade mailers are to be run (single value only) or % may be entered for all.	Campus Code Validation Form (STVCAMP)

Parameters	Name	Required?	Description	Values
	Campus Process Request	Yes	Enter a <i>Y</i> to indicate that a specific course campus will be used in processing the grade mailers. An <i>N</i> indicates that no special course campus processing is to be used.	Y Use specific campus N No special campus used
	Campus To Be Processed	Yes	Enter the course campus code representing the campus of the course for which grade mailers are to be run (single value only).  <b>Note:</b> This parameter is required if the Campus Processing Requested parameter is set to <i>Y</i> .	Campus Code Validation Form (STVCAMP).
	Print Transfer GPA (Y/N)	No	Enter <i>Y</i> to have the students' transfer GPAs printed on the grade mailers. Enter <i>N</i> to prevent students' transfer GPAs from printing on the grade mailers. If this value is null, the transfer GPA will not print on the grade mailers.	Y Print transfer GPA N Do not print transfer GPA
	Term Description Print Option	No	Enter a <i>Y</i> to indicate that the full term description is to be printed on the grade mailer following the level description. Enter <i>N</i> to if you do not wish the full term description to be printed on the grade mailer.	Y Print full term description N Do not print full term description
	Print Ungraded Sections	Yes	Enter <i>Y</i> to print the ungraded sections on the grade mailer.  <b>Note:</b> Ungraded sections will appear on the grade mailer after the list of graded courses.  <b>Note:</b> Only those courses with a course registration status that is gradable will print on the student's grade mailer.	Y Print ungraded sections N Do not print ungraded sections
	Ungraded Section Indicator	No	Enter a value of up to three characters to print in the grade field of the ungraded sections (i.e., "UNG" for ungraded courses). This is a free format field that is not validated against a validation form.	

Parameters	Name	Required?	Description	Values
	Selection Identifier	No	<p>Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.</p> <p><b>Note:</b> A person included in the population must meet all other grade mailer criteria in order to have a grade mailer produced. For example, if original grade mailers are requested and population selection is used, no mailer will be produced for people in the population who have no original grade mailer pending.</p>	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	<p>Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.</p> <p>The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.</p>	Application Inquiry Form (GLIAPPL)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	Print Expanded Fields (Y/N)	Yes	<p>Enter <i>Y</i> to print a modified grade mailer with a five position course number and quality points in format 9999.99.</p> <p>Enter <i>N</i> to print the standard grade mailer. This is the default for the parameter.</p> <p><b>Note:</b> If pre-printed forms are used, be sure to test mailers with expanded field data before using this option for production runs.</p>	<p>Y Print modified mailer</p> <p>N Print standard mailer</p>

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Sort by Name (N) or ZIP Code (Z)	No	Enter <i>N</i> to sort the output by the student's last name. Enter <i>Z</i> to sort the output by the student's ZIP/Postal Code. The default is <i>Z</i> .  <b>Note:</b> Sorting by ZIP code sorts mailers first by nation description (if nation codes exist on the address), then by ZIP code in ascending order, and then alpha by last name order. Grade mailers with no address are grouped at the end, in alpha by last name order.	N Last name sort Z ZIP code sort
	Print Expanded Quality Pts/GPA	Yes	Enter <i>Y</i> to print quality points and GPA up to their maximum sizes. Enter <i>N</i> to print quality points as 999.99 and GPA as 9.99. The default is <i>N</i> .	Y Expanded maximum quality points N Regular quality points

## Student Type Update Report (SHRTYPE)

**Description** This process updates the existing student type for each learner that is maintained on the General Student Form (SGASTDN) to the next student type, which is maintained on the Student Type Code Validation Form (STVSTYP). The process uses the rules on the Continuant Terms Rule Form (SOACTRM) to identify terms and student types which should be updated. For example, the next student type for a “new” student might be *Continuing*. An academic history record in the Term Course Maintenance Form (SHAINST) for user-specified terms will trigger the system to change the student type to the next status based on the fact that the student was enrolled.

This process also reviews all current and active curricula and processes the student type, if available, on the curriculum record (SORLCUR). It displays the learner curriculum sequence number for the learner curriculum that contains the status type that is selected by the update process. For example, if a student has a current and active curriculum for the processing term with a sequence number of 6 and a status type of A, and the SOACTRM rules determine that status type A moves to status type B for continuant term processing, then SHRTYPE is run with the Process Curriculum parameter set to Y, and SHRTYPE prints a learner curriculum sequence number of 6 in the column after the updated student type information. The process also copies the graduation application sequence number to the new curriculum record if the degree to which the curriculum was rolled has not been awarded.

### Note

This process should be run after the Grade Roll to Academic History (SHRROLL). ■

The process has an option to use student centric period rules to determine student type. This allows you to update student type based on a student’s enrollment in a student centric period, instead of enrollment by term. The student type in effect on the general student record (SBGSTDN) for the first term in the student centric period will be used for reporting for the duration of the student centric period.

Parameters	Name	Required?	Description	Values
	Rules Term	Yes	Enter the term code for which there must be academic history in order to be updated. This term should be the same as the key term on the Continuant Terms Rule Form (SOACTRM).	Term Code Validation Form (STVTERM)
	Update Term	Yes	Enter the term code for which the new student type should be effective.	Term Code Validation Form (STVTERM)

Parameters	Name	Required?	Description	Values
	Mode	Yes	A or audit mode will print a report of all students affected, their current student type, and what would be changed, without actually updating their database. <i>U</i> or update mode will update records with the next status.	A Audit U Update
	Process Curriculum	No	Enter <i>Y</i> to process the student type for the learner curriculum record. Enter <i>N</i> to process only the student type for the general student record (SGBSTDN).	Y Process student type for learner curriculum record N Process student type for general student record
	Process by Student Period	No	Enter <i>Y</i> to use student centric period rules when determining the student type or <i>N</i> to not use student centric period rules. The default is <i>N</i> .  See notes below.	Y Process student centric period rules N Do not process student centric period rules

- When this parameter is set to *Y* and the student has a cycle designator (general student record) or student centric period (academic history record) in effect for the update term, the SOACSCP rules are used to evaluate whether the student type should be updated to the next student type defined on STVSTYP.
- When this parameter is set to *Y* and the student does not have a cycle designator or student centric period in effect for the update term, the SOACTRM rules are used to evaluate whether the student type should be updated to the next student type defined on STVSTYP.
- When this parameter is set to *N*, the current SOACTRM rules are used, even if the student has a cycle designator or student centric period in effect for the update term.

## Transcript Population Creation Process (SHRTPOP)

**Description** This process is used to select a population of students for whom you wish to have the transcripts printed. Electronic transcripts can be sent in EDI or XML format.

When you use the population selection parameters, the record is only processed if the student in the population selection has an SHADEGR record that is effective for the term value entered in the Selection Term parameter. When you use the population selection parameters, the parameters for Student ID, Level(s), Advisor ID, Degree Code, Degree Status, Degree Graduation Date, College, and Major are bypassed.

Parameters	Name	Required?	Description	Values
	Purge Parameter	No	Enter <i>Y</i> if you want the population from the previous transcript purged if the selection file already exists. If you don't enter <i>Y</i> , and a population already exists, the run will be aborted.	
	Selection Term	No	Enter the code representing the term for which the report is to be run. Enter % to cause all students with any academic history to be selected. Students must be registered for the requested term and have some academic history (no specific term), or students must have academic history for the requested term. At least one of these conditions must exist for the student to be selected.	Term Code Validation Form (STVTERM)
	Student ID	No	Enter the ID(s) for the selected student(s) for whom you want the transcript to run, or enter % or a NULL value to select all the students.	
	Level(s)	No	Enter the level(s) for which you want to run the transcripts, or enter % or a NULL value to select all the levels.	Level Code Validation Form (STVLEVL)
	Advisor ID	No	Enter the ID(s) number of the advisor(s) to whom the transcript is to be restricted, or enter % or a NULL value if there are no restriction. Only those students assigned to the requested advisor(s) will be selected.	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Degree Code	No	Enter the degree code(s) for which the transcript is to run, enter % for all degree codes, or enter a NULL value to bypass the degree code restrictions, so that degrees are not even considered.	Degree Code Validation Form (STVDEGC)
	Degree Status	No	Enter the degree status(es) to which the transcript is to be restricted. Enter % to select all degree statuses, or enter a NULL value if there are no restrictions.	Degree Status Validation Form (STVDEGS)
	Degree Graduation Date	No	Enter the date after which the student must have graduated to receive a transcript.	
	College	No	Enter the college code(s) for the transcript, or enter % or a NULL value to select all the colleges.	College Code Validation Form (STVCOLL)
	Major	No	Enter the major code(s) selected for the transcript, or enter % or a NULL value to select all the majors.	Major, Minor, Concentration Code Validation Form (STVMAJR)
	Transcript Type	No	Enter the type of transcript requested. If null, all transcript types are selected for processing. Enter % or a null value to select a transcript displaying all data that may be printed on the Transcript Type Rules Form (SHATPRT).	Transcript Type Code Validation Form (STVTPRT)
	Billing Term	No	Enter the term during which the student's transcript fee is to be billed. If no term is entered, no transcript fee will be processed.	Term Code Validation Form (STVTERM)
	Billing Code	No	Enter the detail code associated with the transcript fee for which the student is to be billed. If no code is entered, no charge is made.	
	Billing Description	No	Enter a free-format description associated with the transcript fee.	
	Billing Amount	No	Enter the amount the student is to be billed for the transcript.	

Parameters	Name	Required?	Description	Values
	Issued to Institution Code	No	This parameter is required for EDI use. Enter the institution code for the institution where the transcript will be sent.  <b>Note:</b> These institutions should be designated as EDI Capable on STVSGBI.	Source/Background Institution Code Validation Form (STVSBGI)
	Send Electronic	No	Use this parameter if you have the ability to send an electronic transcript.  Enter <i>P</i> to select the PESC/XML transcript format, <i>E</i> to select the EDI TS130 format, or <i>N</i> or blank to select the paper transcript format.	P PESC/XML transcript E EDI TS130 transcript N Paper transcript
	Issued to Name	No	Enter the name of the person or department to whom the transcript was issued. When running through the Host, if a NULL value is entered, the system will proceed to the In-Progress Term parameter.	
	Issued Street 1	No	Enter the first line of the street address of the person or department to whom the transcript was issued.	
	Issued Street 2	No	Enter the second line of the street address of the person or department to whom the transcript was issued.	
	Issued Street 3	No	Enter the third line of the street address of the person or department to whom the transcript was issued.	
	Issued City	No	Enter the city of the issued address.	
	Issued State	No	Enter the state of the issued address.	State/Province Code Validation Form (STVSTAT)
	Issued Zip	No	Enter the ZIP code for the issued address.	
	Issued Country	No	Enter the country code for the country of the issued address.	Nation Code Validation Form (STVNATN)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	In-Progress Term	No	Enter the cutoff term for future registration. Courses from history to selected term will be printed.	Term Code Validation Form (STVTERM)
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	User ID	No	Enter the user ID for the population selection. This is the ID of the user who selected the population of people. This may or may not be the same as the Creator ID. All or none of the population selection parameters must be entered.

## Academic Transcript (SHTRRTC)

**Description** This process is run in order to produce the Banner paper transcript from the system. A transcript must have been requested through the use of the baseline Transcript Request Form (SHARQTC), Banner Student Self-Service transcript request processing, or a baseline transcript population for a transcript identified through the Transcript Population Creation Process (SHRTPOP), in order to be produced through this process.

SHARQTC sends the request to a collector file which is read by this process and then printed. Transcripts may be produced for an individual with a pending request, or for all requests which have been sent to the collector file. The type of information that displays on the transcript is controlled by the transcript type specified on the request. The Transcript Type Rules Form (SHATPRT) is used to define the options and create the rules associated with the transcript type.

### Note

The process checks the value in the `SHTTRAN_TYPE` field. A *Null* value indicates the paper transcript should be printed. Values of *E* (EDI) or *P* (PESC/XML) are ignored, and a transcript is not printed if those electronic values exist. ■

The transcript also displays course history information and GPA totals by term within student centric periods. All terms with a specific student centric period on the term header record (SHRTTRM) are grouped between a student centric header line and student centric GPA statistics section on the report output. This allows an institution to provide totals for both the student centric period and terms within the student centric period. This information is displayed when the **Student Centric Period Statistics** checkbox is selected on the Transcript Type Rules Form (SHATPRT).

Parameters	Name	Required?	Description	Values
	Transcript Population File	No	Enter <i>Y</i> if the population for which the transcript(s) are to be printed has previously been selected via the Transcript Population Process (SHRTPOP).	
	ID and [Sequence] as XXXXXXXXXXX000	No	Enter % or a NULL value to select all IDs and sequences. To select a specific ID, enter the nine character ID number (XXXXXXXXXX) for the student. Enter the three character sequence number (000) after the ID to select a specific transcript request. Multiple IDs may be entered.  <b>Note:</b> The sequence number is derived from the <b>Request (Number)</b> field on the Transcript Request Form (SHARQTC). When multiple requests exist for a transcript, you may select the specific one you want by entering that sequence number after the student's ID.	
	Transcript Type	No	Enter the type of transcript(s) requested. Enter % or a NULL value to select all transcript types.	Transcript Type Code Validation Form (STVTPRT)
	Transcript Printer	No	If a specific printer is requested, only those students requested via that printer will be printed. Enter % or a NULL value to select all printers.	
	Address Selection Date	No	Enter the date (format DD-MON-YYYY) for which you wish to retrieve an active address record of the student for whom the transcript is being printed.	
	Address Priority and Type	Yes	Enter the priority number and address type code (format 1MA) for the address selection.	
	Official Transcript Request	No	Enter <i>Y</i> if the transcript request is official, <i>N</i> or a NULL value if the request is considered unofficial.	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Campus Selection Indicator	No	Enter <i>Y</i> if only the courses associated with the campus selected are to be printed. An <i>N</i> will include all course campus codes on the transcript.	
	Campus Selected	Yes	(Required if Campus Selection Indicator is set to <i>Y</i> ) Enter the course campus code representing the campus of the courses which are to be included on the transcript.	Campus Code Validation Form (STVCAMP)
	Control Report	No	Enter <i>Y</i> to generate a control report, <i>N</i> or a NULL value to suppress printing of the control report.	
	Page Alignment	No	Enter <i>Y</i> to generate one page of alignment, <i>N</i> or a NULL value to suppress alignment.	
	Run in Sleep/Wake Mode	No	Enter <i>Y</i> to begin the sleep/wake cycling for this process and printer.	<i>Y</i> Use sleep/wake <i>N</i> Do not use sleep/wake
	Enter Sleep Interval	No	Enter the time (in seconds) this process is to pause before resuming execution.	
	Substitute In Progress Title	No	Enter the value that you would prefer to print on the transcript if the default title "IN PROGRESS WORK" is not desirable. A title of up to 30 alpha numeric characters may be entered.	

Parameters	Name	Required?	Description	Values
	Sort Order	Yes	<p>Enter the number that corresponds with the sort order for the transcript: 1 - College, 2 - Dept., 3 - Major, 4 - College, Dept., Major, 5 - Name, 6 - Degree, Major.</p> <p><b>Note:</b> Sort options 1, 2, 3, 4, and 6 sort the information based on the first primary curriculum record (minimum priority number).</p> <p><b>Note:</b> The alpha sort option cannot be used for last name, first name, and then middle name, if the diploma or legal names are selected to be printed on the transcript. The last name is not separated from the first name in these two instances.</p>	1 College 2 Dept. 3 Major 4 College, Dept., Major 5 Name 6 Degree, Major
	Process rqsts awaiting grades?	Yes	<p>Use this parameter to process requests that learners want held until end of term grades are rolled to academic history. Enter <i>Y</i> to process requests waiting for end of term grades. Enter <i>N</i> to process requests that are not waiting for end of term grades. The default is <i>N</i>.</p>	Y Process requests waiting for end of term grades N Process requests that are not waiting for end of term grades
	Process rqsts awaiting degrees?	Yes	<p>Use this parameter to process requests that learners want held until their degrees are posted to SHADEGR. Enter <i>Y</i> to process requests waiting for degrees to be posted. Enter <i>N</i> to process requests that are not waiting for degrees to be posted. The default is <i>N</i>.</p>	Y Process requests waiting for degrees to be posted N Process requests that are not waiting for degrees to be posted
	Web Self-Service Options	No	<p>Use this parameter to process requests that learners submitted via Banner Student Self-Service with Web self-service options selected.</p>	Web Self Service Options Validation Form (STVWSSO)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Web Payment Options	No	Use this parameter to process requests that learners submitted via Banner Student Self-Service with Web payment options selected.	Web Payment Options Validation Form (STVWPYO)
	Print Expanded Hours Formats	Yes	Enter <i>Y</i> to print the credit and/or points and GPA in the expanded format or <i>N</i> to not print using the expanded formats.	Y Print expanded formats N Do not print expanded formats

## Academic Transcript Request Purge (SHPTRTC)

**Description** This process must be run in order to purge the Banner transcript requests from the system. Transcript requests are defined as “official”, “unofficial”, or “both”. Within this criteria, several purge options are available. You can purge transcript requests by request date, level, or transcript type. A transcript must have been requested through the Transcript Request Form (SHARQTC) to be purged using this process.

Parameters	Name	Required?	Description	Values
	Report Term	No	Enter the term to be used in the heading of the report (has no effect on the purge).	
	Option	Yes	Enter 1 to purge by date, 2 to purge by level, or 3 to purge by transcript request type.	1 Purge by date 2 Purge by level 3 Purge by transcript request type
	Official Determination	Yes	Enter Y if only official transcripts are to be purged; N if only unofficial transcripts are to be purged; or enter % if both types of transcripts are to be purged.	Y Purge official transcripts N Purge unofficial transcripts % Both
	Purge Date	No	If option 1 was selected in the Option parameter, enter date prior to which data will be purged.	
	Purge Level	No	If option 2 was selected in the Option parameter, enter level from which data will be purged. Enter % to select all levels.	Level Code Validation Form (STVLEVL)
	Purge Transcript Type	No	If option 3 was selected in the Option parameter, enter transcript type for which data will be purged.	Transcript Type Code Validation Form (STVTPRT)
	EDI Transcript Purge Option	No	Enter Y to purge selected EDI transcripts by EDI transcript status. Enter N if no EDI transcripts are to be purged. Enter % to purge all selected EDI transcripts.	Y Purge by EDI transcript status N Do not purge EDI transcripts % Purge all selected EDI transcripts

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	EDI Transcript Status	No	This parameter is required if the EDI Transcript Purge Option parameter is set to <i>Y</i> . Enter the statuses of the EDI transcripts that are to be purged.	Electronic Status Code Validation Form (STVEDIS)
	Mode	Yes	<i>A</i> or audit mode will print a report of all transcript requests purged, without actually updating the database. <i>U</i> or update mode will update the database.	A Audit U Update

## Degree Status Update Report (SHRDEGS)

**Description** This report updates the existing degree status code to a new user-defined degree status. Optionally, the student status maintained on the General Student Form (SGASTDN) may also be updated for a user-defined effective term. The process will push the field of study curriculum status to the new status based on values on STVSTST. This report may be run in audit or update mode.

<i>Parameters</i>	<i>Name</i>	<i>Required?</i>	<i>Description</i>	<i>Values</i>
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	Report Term	Yes	Enter the code representing the term for which the report is to be run. This is the term that will be used in headers and student selection.	Term Code Validation Form (STVTERM)
	Audit or Update Mode	Yes	Enter <i>A</i> for audit mode to print a report of the degree statuses, without actually updating the database. Enter <i>U</i> (update) to update records with the new degree status. The default value is audit.	A Audit U Update

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Current Degree Status Code	Yes	Enter the current degree status code to be used in the selection for the report.	Degree Status Code Validation Form (STVDEGS)
	New Degree Status Code	Yes	Enter the new degree status code to be applied to the selected degrees.	Degree Status Code Validation Form (STVDEGS)
	Graduation Term	No	Enter the graduation term to be used in the selection. Multiple values may be entered. If entered, only those students whose graduation term matches the user entered term will be selected for the update. If blank, all graduation terms are processed.	Term Code Validation Form (STVTERM)
	Graduation Year	No	Enter the year to be used in the selection. If blank, all years are processed.	Academic Year Validation Form (STVACYR)
	Graduation Status	No	Enter the graduation status to be used in the selection. If blank, all graduation statuses are processed.	Graduation Status Validation Form (STVGRST)
	Degree Code	No	Enter the degree code to be used in the selection. Multiple values may be entered. If blank, all degree codes are processed.	Degree Code Validation Form (STVDEGC)
	Campus	No	Enter the campus code to be used in the selection. If blank, all campus codes are processed.	Campus Code Validation Form (STVCAMP)
	Level	No	Enter the level code to be used in the selection. Multiple values may be entered. If blank, all levels are processed.	Level Code Validation Form (STVLEVL)

Parameters	Name	Required?	Description	Values
	New Student Status	No	Enter the student status for updating if the student record is to be updated. If blank, no update of student status occurs. If a value is entered, and this value differs from the selected student's student status in the General Student module, a new General Student record will be created with the new student status for the student status effective term.	Student Status Code Validation Form (STVSTST)
	Student Status Effective Term	No	Required, if new student status is not null. Enter the new effective term if the student status is to be updated.	Term Code Validation Form (STVTERM)

## Commencement Report (SHRCOMM)

**Description** This report produces a list of students by degree award status code, their degrees, majors, and any institutional or departmental honors associated with the degree. It prints by student in last name alpha order. The report prints students within a certain date range as specified in the parameters, and a graduation date must exist in the **Graduation Date** field on the Degrees and Other Formal Awards Form (SHADEGR) in order to be included in the report.

Parameters	Name	Required?	Description	Values
	Degree Status Code Selection	Yes	Enter the degree status code which represents the population for which the report is to be generated. Enter a single value only, or enter % for all.	Degree Status Code Validation Form (STVDEGS)
	Graduation Begin Range	Yes	Enter the begin date for the date range for which the report is to be generated. Enter in format YYMM where Y=year and M=month. Enter month as 01 for January through 12 for December. The default value is 0000.	
	Graduation End Range	Yes	Enter the end date for the date range for which the report is to be generated. Enter in format YYMM where Y=year and M=month. Enter month as 01 for January through 12 for December. The default value is 9999.	
	Graduation Term Code Selection	No	Enter the graduation term code which represents the population for which the report is to be generated. Multiple values may be entered, or enter % for all.	Term Code Validation Form (STVTERM)
	Graduation Year Selection	No	Enter the graduation year for which the report is to be generated.	Academic Year Validation Form (STVACYR)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Graduation Status Code	No	Enter the graduation status code which represents the population for which the report is to be generated. Multiple values may be entered, or enter % for all.	Graduation Status Validation Form (STVGRTS)
	Print Graduation Holds	No	Enter Y to print students with active graduation holds.

## Commencement Attendance Report (SHRCATT)

**Description** This report produces a list of attendees by ceremony type and term, as well as information on cap, gown, and hood ordering, pickup, and return.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Ceremony Type	Yes	Enter the ceremony type code which indicates the ceremony to be attended. Enter % for all ceremony types.	Ceremony Type Validation Form (STVCERT)
	Term	Yes	Enter the term in which the ceremony will occur. Enter % for all term codes.	Term Code Validation Form (STVTERM)
	Students, Non-Students, or All?	No	Enter <i>S</i> to print only students, <i>N</i> to print non-students, or leave null to print all students and non-students.	S Print students N Print non-students Null Print both
	Print Cap/Gown/Hood Detail?	No	Enter <i>Y</i> to print detail of cap, gown, and hood information for the attendees.	
	Print Cap/Gown/ Order Totals?	No	Enter <i>Y</i> to print totals of caps, gowns, and hoods ordered by the attendees.	
	List All With No Cap/Gown Information	No	Enter <i>Y</i> to list only those attendees with no cap, gown, or hood information available.	
	List All With No Pickup Date	No	Enter <i>Y</i> to list only those attendees who have not picked up their order for cap, gown, or hood.	
	List All With No Return Date	No	Enter <i>Y</i> to list only those attendees who have not returned their cap, gown, or hood.

## Transfer Equivalency Catalog (SHRTECA)

**Description** This report provides a listing used to review the transfer courses entered for each institution.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Report Term	Yes	Enter the term code which represents the term for which the catalog is to be produced.	Term Code Validation Form (STVTERM)
	Process Term	Yes	Enter the effective term for which the course catalog is to be viewed. A term of 9999999 will produce all effective terms.	Term Code Validation Form (STVTERM)
	Institution to Process	No	Enter the institution code for which you want the transfer equivalency catalog created, or enter % to select all institutions in the database.	Source/Background Institution Code Validation Form (STVSBGI)
	Program Code	No	Enter the selected program code for which you want to review the transfer equivalency catalog, or enter % to select all program codes.	
	Level Code	No	Enter the level code for which you want to create the transfer equivalency catalog. Enter % for all levels.	Level Code Validation Form (STVLEVL)
	Active/Inactive Indicator	No	Enter <i>A</i> to select only active catalog transfer courses, <i>I</i> to select only inactive catalog transfer courses or % to select all courses, active and inactive.	A Active courses I Inactive courses % All courses
	Print Course Comments	No	Enter <i>Y</i> if you want the course comments printed in the Transfer Equivalency Catalog. Entering <i>N</i> will suppress the printing of the comments.	Y Print course comments N Do not print course comments

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Print Equivalent Courses	No	Enter <i>Y</i> if you want the equivalent courses printed in the Transfer Equivalency Catalog. Entering <i>N</i> will suppress the printing of the equivalent courses.	Y Print equivalent courses N Do not print equivalent courses
	Print Equiv Course Comments	No	Enter <i>Y</i> if you want the comments for the equivalent courses printed in the Transfer Equivalency Catalog. Entering <i>N</i> will suppress the printing of the equivalent course comments.	Y Print equivalent course comments N Do not print equivalent course comments

## Transfer Equivalency Worksheet (SHRTAEQ)

**Description** This worksheet is used to review the Transfer Equivalency information for a student.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Report Term	Yes	Enter the term code which represents the term for which the report is to be run.	Term Code Validation Form (STVTERM)
	Selected Student ID Number	Yes	Enter a specific student ID(s) for which the worksheet is to be created, or enter % to run the worksheet for all students for the selected term.	
	Selected Transfer College	Yes	Enter the college(s) for which you want the transfer equivalencies worked out for the student(s), or enter % for all the colleges for the student(s).	
	Selection Identifier	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.

## Transfer Articulation Purge (SHPTAEQ)

**Description** This process is used to purge the transfer articulation information for a student. The user may want to purge this information for those students who do not register or attend class.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Report Term	Yes	Enter the term code which represents the term from which the transfer articulation information is to be purged.	Term Code Validation Form (STVTERM)
	Purge ID	No	Enter an ID for which the purge is to be processed, or enter % or a Null value to select all students with no registration.	
	Purge Institution	No	Enter an institution within a selected population for which the purge is to be processed. Enter % or a Null value to select all institutions. Valid values should be selected from the Source or Background Institution Base Form (SOASBGI).	Source or Background Institution Base Form (SOASBGI)
	Run Mode	Yes	A or audit mode will print a report of all transfer articulation request information which will be purged, without actually updating the database. <i>U</i> or update mode will update the database.	A Audit U Update

## IPEDS First Time Residency Report (SHRIRES)

**Description** This report is used to report all students who are first time students, by state, which is determined by the students' address type. Students are categorized based on the award category of their degree in their student record. First-time students (where student type matches requested type) who are registered in the requested term and whose general student level matches the requested level, will be reported by state, which is determined by the student's address type.

A population of students is selected using the following criteria:

1. Student validly registered for the term being processed.
2. Student has a general student record with an effective term that is less than or equal to the term being processed and which has a degree code that is valid on the Degree Code Validation Form (STVDEGC), and the category code on the STVDEGC matches the category code(s) you requested. The general student level must match your requested level code(s). Student must have a student type which matches your requested first-time freshman code(s) and cumulative credit hours which do not exceed the parameter limit you have set.

The Degree Award Category Code Validation Table (STVACAT) is used to classify degree codes (i.e., B.A. = Bachelor of Arts) into award categories. Required codes for the STVACAT Table are included in the table definitions and should be used. Use the parameter selection to specify which Degree Award Categories are to be used for the report.

The Degree Code Validation Form (STVDEGC) uses the Degree Award Category Code Validation Form (STVACAT) to identify the category that the degree code belongs to, such as Bachelor's, Master's, Doctoral.

Students are counted in the HS Grad/Year column if they have a high school graduation date on the High School Information Form (SOAHSCH) that falls within the user-specified parameter dates.

Transfer hours are used in the calculation of student classification. For example, if a student has 60 transfer credits and 20 institutional credits, then 80 credits will be used to determine their class standing.

### Note

The IPEDS File Generation Process Report (SHRIPDS) must be run prior to this report, as it produces the IPEDS Extract File used in this report. ■

## Web Upload

The Report Format parameter is used to create hardcopy output only, a comma-delimited file only, or both formats during the same run. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file.

The Report Format parameter is required. Enter 1 to produce hardcopy output. Enter 2 to produce output in a Web upload file format. Enter 3 to produce both formats. 3 is the default.

### Note

When running this report from job submission, the Web upload file name will be in the format `shrires_wu_#####.txt`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

Parameters	Name	Required?	Description	Values
	Report Term	Yes	Enter the term code representing the term for which the report is to be run. For report heading only.	Term Code Validation Form (STVTERM)
	HS Graduation From Date	Yes	Enter the beginning date range for graduation for students who are to be counted in report. The system is looking for a high school graduation date on SOAHSCH, the High School Information Form. Any person who has a graduation date between the from and to dates will be counted in the HS Grad/Year column of the report.	
	HS Graduation To Date	Yes	Enter the end date range for graduation for students who are to be counted in report. The system is looking for a high school graduation date on SOAHSCH, the High School Information Form. Any person who has a graduation date between the from and to dates will be counted in the HS Grad/Year column of the report.	
	Address Selection Date	Yes	Which address, effective on this date, do you want to use for residency reporting? Leave blank for today or enter in date format DD-MON-YYYY.	

Parameters	Name	Required?	Description	Values
	Address Type	Yes	<p>Enter the address type to be used in determining the residency status of the student (the state code is what the system is looking for). Multiple requests are permitted and must be entered in priority sequence.</p> <p>For example, <i>IMA 2PR</i> will first print the mailing address, and if none is found, will print the permanent address.</p> <p>Enter each parameter then hit return for the next prompt. Returning with a null value will move you on to parameter 06. If a student doesn't have the specified address type(s), the state of residence will be reported as unknown.</p>	Address Type Code Validation Form (STVATYP)
	Report Format	Yes	Enter 1 to produce hardcopy output. Enter 2 to produce output in a Web upload file format. Enter 3 to produce both formats. 3 is the default.	1 Hardcopy output 2 Web upload file 3 Both

## IPEDS Total Activity Report (SHRIACT)

**Description** In SHRIACT, both credit hours attempted in a 12-month period and unduplicated headcount of students are generated in the grand totals for the report. All students with at least one course recorded for credit will be counted for the period specified by the parameters. This report looks at the information maintained in Academic History, not in Registration. Therefore, if a course has not yet been rolled to history, it will not be reported. For each course that falls within the period specified by the parameters, total credit hours and contact hours will be reported in the grand totals. If there is no enrollment in a course, the course will not be reported in the grand totals.

This report is used with student centric period processing. You can enter multiple values in the Effective Terms of Fall Cohort parameter and the Retention Terms of Fall Cohort parameter. This allows your institution to process multiple effective terms and multiple retention terms by student centric period.

Contact hours are calculated by adding the term contact hours together (lecture, lab, and other hours), as defined on the Basic Course Information Form (SCACRSE), and by multiplying that number by the number of students enrolled in the course.

$$\text{Contact Hours} = (\text{Lecture Hours} + \text{Lab Hours} + \text{Other Hours}) \times \text{number of students enrolled in course}$$

The unduplicated headcount is calculated by taking those students who have at least one degree credit course in their academic history record (SHACRSE). Students are reported according to their student level. If a student has more than one level during a year, the student is counted by the level he/she is in the last term of the report, based on the user-defined parameters.

Total activity reporting (SHRIACT) includes Part E - Retention Data of First Time Undergraduates from Fall to Fall, which requires that schools report the percentage number of full-time, first-time undergraduates who are retained from one fall term to the next. (Part-time percentage is determined separately.) Retention is counted as fall to fall only. This data is reported with the spring submission, and is no longer included with the 12-month enrollment data submitted in the fall (see below).

A person in the full-time cohort does not have to remain full-time to be counted as retained. For example, if Cohort A is enrolled in fall 2003 as full-time but is part-time in fall 2004, that student is counted as retained. Institutions are required to report the percent of students who are in a fall, full-time, first-time undergraduate cohort who have subsequently enrolled in the next fall term. Institutions must report the same data for the fall, part-time, first-time undergraduate cohort. Part E is also included in the Web Upload File, to report first-time fall cohorts who returned the following fall.

The NCES does not collect the First Year Retention data with the same submission as the 12-Month Enrollment Report or the Unduplicated Count and Instructional Activity Report, both of which are produced using SHRIACT. Since SHRIACT generates the required data for both reports, it is necessary to run SHRIACT in the fall and spring to produce the different data that is required.

Beginning with the Fall 2007 submissions, the Unduplicated Count and Instructional Activity data is collected in the Fall. To generate the report for the Fall, run SHRIACT with the parameters used for first-year retention data set to NULL, thus producing no retention data. These parameters are: Effective Term of Fall Cohort, Retention Term of Fall Cohort, Full-time Fall Cohort Code, and Part-time Fall Cohort Code.

The First Year Retention Rate will be collected in the Winter (optional) and Spring submissions beginning in 2008. The actual cohort values and number of exclusions will be reported, and the retention percentages will be calculated by the NCES system. To generate the report for the Winter and Spring, run SHRIACT with the first-year retention parameters populated with your institution's values to produce the first year retention data. These parameters are: Effective Term of Fall Cohort, Retention Term of Fall Cohort, Full-time Fall Cohort Code, and Part-time Fall Cohort Code.

#### Note

You need to include any level codes that were formerly used for First-Professional in the list of level codes for Graduate. ■

Multiple values can be entered in the Effective Terms of Fall Cohort parameter and the Retention Terms of Fall Cohort parameter. This allows your institution to process multiple effective terms and multiple retention terms by student centric period.

## Web Upload

The report produces a control page with the parameter values and the number of records processed, as well as a comma-delimited file for the Web upload. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file.

#### Note

When running this report from job submission, the Web upload file name will be in the format `shriact_wu_#####.txt`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

The SHRIACT Temporary Table (SHRTACT) is used internally within SHRIACT to accumulate data for the Web upload file creation. When the process is completed, the contents of this table are deleted.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Start Date of Report Period	Yes	Enter the first day of the 12-month period covered by the report. Enter in date format, DD-MON-YYYY.	
	End Date of Report Period	Yes	Enter the last day of the 12-month period covered by the report. Enter in date format, DD-MON-YYYY.	
	Undergraduate Level Code	Yes	Enter the undergraduate level to be shown on the report. Multiple values may be entered.	Level Code Validation Form (STVLEVL)
	Graduate Level Code	No	Enter the graduate level to be shown on the report. Multiple values may be entered.	Level Code Validation Form (STVLEVL)
	No Longer Used (Professional Level Code)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Effective Terms of Fall Cohort	No	Enter the cohort effective term for report Part G. Multiple term values can be entered to process multiple effective terms and multiple retention terms by student centric period.	Term Code Validation Form (STVTERM)
	Retention Terms of Fall Cohort	No	Enter the cohort retention term for report Part G. Multiple term values can be entered to process multiple effective terms and multiple retention terms by student centric period.	Term Code Validation Form (STVTERM)
	Full-time Fall Cohort Code	No	Enter the full-time, first-time, cohort code for report Part G.	Cohort Code Validation Form (STVCHRT)
	Part-time Fall Cohort Code	No	Enter the part-time, first-time, cohort code for report Part G.	Cohort Code Validation Form (STVCHRT)
	No Longer Used (Report Format)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>

## IPEDS Completion Report (SHRICIP)

**Description** The SHRICIP report provides degree and award information on degrees conferred by the institution within the user-specified time frame. These degrees are broken down by degree level.

Only degrees with a degree status on the Degree Status Code Validation Form (STVDEGS) with an **Awarded Indicator** of A (for awarded) are reported are included in the Web upload file.

The following degree award categories are included:

- 24 Bachelor's Degree
- 41 Post-Baccalaureate Certificate
- 42 Master's Degree
- 43 Post-Master's Certificate
- 44 Doctoral Degree - Research Scholarship
- 45 Doctoral Degree - Professional Practice
- 46 Doctoral Degree - Doctoral Degree Other

### Note

All designated CIP Codes are included in the file. ■

The following degrees are excluded from SHRICIP:

- degrees and awards conferred by branches of your institution located in foreign countries
- honorary degrees and awards

### Web Upload

The report produces a control page with the parameter values and the number of records processed, as well as a comma-delimited file for the Web upload. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file.

The Web upload is processed as follows.

- For the first major (MAJORNUM1), the report reflects those students who have completed their studies toward a particular certificate or degree and have been denoted as awarded (SHRDGMR\_DEGS\_CODE = AW) in Academic History. (These translate to NCES Award Levels 1, 2, 3, 4, 5, 6, 7, 8, 9, 17, 18, 19.)

- For the second major (MAJORNUM2), file entries are created for students who have been awarded an Associate Degree, Bachelors Degree (or equivalent), Masters Degree, or Doctoral Degree. (These translate to NCES Award Levels 3, 5, 7, 17, 18, 19.) The second degree can be recognized by the secondary major in the curriculum record.

**Note**

When running this report from job submission, the Web upload file name will be in the format shricip\_wu\_#####.lis, where ##### is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

Parameters	Name	Required?	Description	Values
	Report Term	No	Enter the term code representing the term for which the report is to be run. Used in report heading only.	Term Code Validation Form (STVTERM)
	Degree From Date	Yes	Enter the beginning date range for the graduation date (maintained on SHADEGR, the Degrees and Other Formal Awards Form) for the population to be reported.	
	Degree To Date	Yes	Enter the end date range for the graduation date for the population to be reported.	
	Foreign Campus Code	Yes	Enter the campus code for the foreign campus to be used. Multiple values may be entered.	Campus Code Validation Form (STVCAMP)
	Break by 1st Two CIP Positions	Yes	Enter <i>Y</i> to cause a break on the report output followed by racial/ethnic breakdown on the first two CIP codes. Enter <i>N</i> to have the report output print in its normal format.	Y Break output with CIP code information, first two codes N Normal format
	Break by Entire CIP Code	No	Enter <i>Y</i> to cause a break on the report output followed by racial/ethnic breakdown on entire CIP codes. Enter <i>N</i> to have the report output print in its normal format.	Y Break output with CIP code information, entire codes N Normal format
	No Longer Used (Report Format)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>

## IPEDS File Generation Process (SHRIPDS)

**Description** This extract process allows you to select the parameters used to run the IPEDS Summary by Age Report (SHRIAGE), the IPEDS Race/Ethnic Status Report (SHRIETH), and the IPEDS First Time Residency Report (SHRIRES). A file of individual and communal statistics is created which is used by SHRIAGE, SHRIETH, and SHRIRES. SHRIPDS, which creates a table, must be run prior to running any of these reports. A control report, which lists the parameters used, is also produced from this process.

These three reports retrieve data needed for the Fall Enrollment Report:

<b>Report</b>	<b>Part</b>	<b>Description</b>
SHRIETH	Parts A and D	Enrollment Summary by Racial/Ethnic Status
SHRIAGE	Part B	Enrollment Summary of Students by Age
SHRIRES	Part C	Enrollment Summary by First-Time Residency (Freshman)

A population of students is selected by SHRIPDS using the following criteria:

1. Student is validly registered for the term being processed.
2. Student has a general student record with an effective term that is less than or equal to the term being processed and which has a degree code that is valid on the Degree Code Validation Form (STVDEGC).

For each student retrieved, a record is created and inserted into the SHRIPDS file for later use by the associated reports.

IPEDS rules dictate that a student may only be counted once in the ethnicity section if he/she is a non-resident alien. A check is made to determine if this is the case, and if it is, the ethnicity is set to reflect this condition.

The student's sex indicator is captured. The student's age is calculated using his/her birthday and user-entered date (default today's date), and the appropriate age column is determined.

The process gathers first year, second year, third year, and fourth year statistics based either upon credit ranges or calculated student classification. Parameters allow entry of one or more student classification codes which, when using online job submission, are validated against the Class Code Validation Form (STVCLAS). When class code

values are entered in these parameters, the specified class codes determine which row a student will be reported in, in the IPEDS Web upload file. The credit hour parameters which have been used to control the first year, second year, etc., determination are still required. However, if values are entered in any class code parameters for a given year, the class code instead of the credit hour value is used to determine the row in which a student is reported.

A calculation is done to determine whether or not the student is full-time or part-time based on the following criteria:

Valid undergraduate registered hours for the process term are equal to or greater than the credit hours designated as full-time undergraduate (parameter for Full-Time Undergraduate Hours).

Graduate full-time or part-time hours are calculated the same way. Use the Graduate level parameters to count all student levels and categories that were formerly counted in First-Professional. First-Time First-Professionals must now use the student type code for First-Time Graduate.

Additionally, data is gathered and indicators set if the student is enrolled in all remedial courses, all foreign campuses, all off-campus, and/or all audit courses. All of a student's registered courses are examined for remedial attributes (those supplied via parameter).

The IPEDS reports work the same as other Banner reports. If run through job submission, editing of data with system table ties is done. If run interactively, no system table editing done.

## Campus Codes

The process looks at the student's individual registered courses when considering the parameters for Foreign Campus Code and Off-Campus Code. Schools won't necessarily build courses that are offered at a foreign campus, but the student might be assigned to a foreign campus.

Each user is allowed to decide for themselves which (if any) of their campus(es) meet the criteria, and enter them via this parameter. If all the courses in which a student is registered match the parameter supplied data, then an appropriate switch is set. This works the same way for the off-campus codes.

## Student Centric Periods

SHRIPDS processes information based on terms that are part of student centric periods. SHRIPDS is run by term using the Process Term parameter. When the Process by Student Period parameter is also used, the process checks the rules on SOASCPT to determine which student centric period includes the value entered in the Process Term parameter as the last term. All term codes that are part of the student centric period are considered, as is the order in which the terms fall within the student centric period.

After the student centric period and the associated terms have been identified, each student record that shows enrollment in any term in the student centric period is read for reporting.

- If the student is registered in all terms of the student centric period, the following occurs:
  - Enrollment hours are summed from all terms in the student centric period in which the student is enrolled, using the existing rules in base SHRIPDS processing.
  - Student centric period rules for time status are used and combine the enrollment hours for all the terms in the student centric period.
  - The general student record is used for the lowest term in the student centric period in which the student has registration. The process reports the student's class, type, level, and category.
  - Registration records for all terms in the student centric period are used to determine remedial courses, foreign campus courses, off-campus courses, audit grade mode courses, and audit registration status courses.
  - Academic standing status rules are used. If the student is new, the system assumes a standing of *00*. For continuing students, the system pulls the standing from the previous term's academic standing in the **End of Term Academic Standing** field in the Term Header block on SHAINST. (If there is no standing, the system assumes *00*.) If an override standing has been entered for the term on SGASTDN, the system will use the override standing.
- If the student is not registered in all terms of the student centric period, the student's registration records are reported for terms included in the student centric period using these rules:
  - The general student record is used for the lowest term in the student centric period in which the student has a registration record. This determines time status, student class, type, level, and category.
  - Student registration records are used for all terms of the student centric period. This determines remedial courses, foreign campus courses, off-campus courses, audit grade mode courses, and audit registration status courses. See the following example.

A student is registered in a term that falls within a student centric period.

- Student centric period 2009A is composed of terms 200910 and 200920.
- The student is not included in the student centric period, but is registered in two terms (terms 200910 and 200930), and term 200910 is included in student centric period 2009A.
- Registration is reported for term 200910, because term 200910 is included in student centric period 2009A.

- Registration in term 200930 is not reported, because term 200930 is not included in student centric period 2009A.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Purge IPEDS File Option	No	Enter <i>Y</i> to purge an existing IPEDS table. If you enter <i>N(o)</i> , and a table already exists, the process will terminate.	Y Purge table N Do not purge table
	Process Term	Yes	Enter the code representing the term for which the report is to be run.	Term Code Validation Form (STVTERM)
	Full-Time Undergraduate Hours	Yes	Enter the minimum number of credits required in order to be considered a full-time undergraduate student.	
	Full-Time Graduate Hours	Yes	Enter the minimum number of credit hours required in order to be considered a full-time graduate student.	
	No Longer Used (Full-Time Professional Hours)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Freshman Credit Hour Limit	Yes	Enter the undergraduate credit hour limit for a student to be considered a freshman. Students must have a number of cumulative credit hours in academic history that is less than the maximum freshman credit hour limit entered in this parameter, in order to be considered a freshman.  <b>Note:</b> If a value is entered in the Freshman Class Codes parameter, the calculated class, rather than hours, is used to determine placement in IPEDS reports.	

Parameters	Name	Required?	Description	Values
	Second Year Credit Hour Limit	Yes	<p>Enter the undergraduate credit hour limit for a student to be considered a second year student. Students must have a number of cumulative credit hours in academic history that is less than the maximum second year credit hour limit entered in this parameter. They must also have a number of credits that is greater than or equal to the maximum freshman credit hour limit entered in the previous parameter, in order to be considered a second year student.</p> <p><b>Note:</b> If a value is entered in the Second Year Codes parameter, the calculated class, rather than hours, is used to determine placement in IPEDS reports.</p>	
	Third Year Credit Hour Limit	Yes	<p>Enter the undergraduate credit hour limit for a student to be considered a third year student. Students must have a number of cumulative credit hours in academic history that is less than the maximum third year credit hour limit entered in this parameter. They must also have a number of credits that is greater than or equal to the maximum second year credit hour limit entered in the previous parameter, in order to be considered a third year student. Students with cumulative credit hours greater than the maximum third year limit are counted as fourth year students.</p> <p><b>Note:</b> If a value is entered in the Third and/or Fourth Year Class Codes parameters, the calculated class, rather than hours, is used to determine placement in IPEDS reports.</p>	
	1st Time Freshman Student Type	Yes	Enter the student type codes representing first-time freshman students. Multiple values may be entered.	Student Type Code Validation Form (STVSTYP)

<b>Parameters</b>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Unclassified Student Type	Yes	Enter the student type codes representing unclassified students. Multiple values may be entered.	Student Type Code Validation Form (STVSTYP)
	1st Time Transfer Student Type	Yes	Enter the student type codes representing first-time transfer students. Multiple values may be entered.	Student Type Code Validation Form (STVSTYP)
	1st Time Graduate Student Type	Yes	Enter the student type codes representing first-time graduate students. Multiple values may be entered.	Student Type Code Validation Form (STVSTYP)
	No Longer Used (1st Time Professional Student Type)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Undergraduate Level Code	Yes	Enter the level code representing undergraduate students. Multiple values may be entered.	Level Code Validation Form (STVLEVL)
	Graduate Level Code	Yes	Enter the level code representing graduate level students. Multiple values may be entered.	Level Code Validation Form (STVLEVL)
	No Longer Used (Professional Level Code)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Undergraduate Category	Yes	Enter the degree award category code representing undergraduate degrees. Multiple values may be entered.	Degree Award Category Code Validation Form (STVACAT)
	Graduate Category	Yes	Enter the degree award category code representing graduate level degrees. Multiple values may be entered.	Degree Award Category Code Validation Form (STVACAT)
	No Longer Used (1st Professional Category)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Birth Date	No	Enter a date which will be used to determine the age of a person relative to the date the report is being processed. The system date is the default.	
	Remedial Course Attributes	No	Enter the valid course attribute code that indicate which course sections are remedial. Multiple values may be entered.	Attribute Validation Form (STVATTR)
	Foreign Campus Code	No	Enter a valid campus code to select students who are taking courses on foreign campuses. Multiple values may be entered. Students taking all of their courses at a foreign campus are excluded.	Campus Code Validation Form (STVCAMP)
	Off Campus Code	No	Enter a campus code to select students who are enrolled exclusively in off-campus or extension centers. Multiple values may be entered.	Campus Code Validation Form (STVCAMP)
	Audit Grade Mode	No	Enter the grading mode which identifies an audit-only registration. Multiple values may be entered.	Grading Mode Code Validation Form (STVGMOD)
	Audit Registration Status	No	Enter the course registration status code which applies to the course being taken. Multiple values may be entered.  <b>Note:</b> Students taking all audit courses are excluded from the four reports.	Course Registration Status Code Validation Form (STVRSTS)
	Freshman Class Code	No	Enter a class code which represents first year class standing. Multiple values may be entered. If entered, class standing, rather than the freshman year credit hour limit, will be used to determine first year students.	Class Code Validation Form (STVCLAS)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Second Year Class Code	No	Enter a class code which represents second year class standing. Multiple values may be entered. If entered, class standing, rather than the second year credit hour limit, will be used to determine second year students.	Class Code Validation Form (STVCLAS)
	Third Year Class Code	No	Enter a class code which represents third year class standing. Multiple values may be entered. If entered, class standing, rather than the third year credit hour limit, will be used to determine third year students.	Class Code Validation Form (STVCLAS)
	Fourth Year Class Code	No	Enter a class code which represents fourth year class standing. Multiple values may be entered. If entered, class standing, rather than the fourth year credit hour limit, will be used to determine fourth year students.	Class Code Validation Form (STVCLAS)
	Process by Student Period	No	Enter <i>Y</i> to process by a student centric period or <i>N</i> to not process by a student centric period. The default is <i>N</i> .	Y Use student centric period N Do not use student centric period

## IPEDS Summary by Age Report (SHRIAGE)

**Description** This report generates student counts by age, gender, and full-time/part-time status according to CIP Code. It also creates Part B of the EF Survey Section.

The output provides a breakdown of registered students by CIP Code within the Department of Education age categories. The CIP Code associated with the student is derived from the student's major code (STVMAJR) from SORLCUR and SORLFOS. The information on this report coincides with the data on the Enrollment Summary by Racial/Ethnic Status (SHRIETH). The information is broken down as follows:

Undergraduate Degree Seeking	Rows	01–06	of SHRIETH for full-time students
All Other Credit Undergraduates	Row	07	of SHRIETH for full-time students
Graduate Students	Rows	11–13	of SHRIETH for full-time students

### Note

The IPEDS File Generation Process Report (SHRIPDS) must be run prior to this report, as it produces the IPEDS Extract File used in this report. ■

### Web Upload

Use the Report Format parameter to create hardcopy output only, a comma-delimited file only, or both formats during the same run. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file. The Report Format parameter is required. Enter 1 to produce hardcopy output. Enter 2 to produce output in a Web upload file format. Enter 3 to produce both formats. 3 is the default.

### Note

When running this report from job submission, the Web upload file name will be in the format shriage\_wu\_#####.txt, where ##### is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Term Code	Yes	Enter the code representing the term for which the report is to be run.	Term Code Validation Form (STVTERM)
	CIP Codes	Yes	Enter the CIP codes for which you wish to run the report; enter % for all CIP codes. Multiple values may be entered.	CIPC Code Validation Form (STVCIPC)
	Grand Total Only	No	Enter <i>Y</i> to print just the grand total pages; enter <i>N</i> to print all the detail pages.	Y Print total pages N Print detail pages
	Report Format	Yes	Enter <i>1</i> to produce hardcopy output. Enter <i>2</i> to produce output in a Web upload file format. Enter <i>3</i> to produce both formats. <i>3</i> is the default.	1 Hardcopy output 2 Web upload file 3 Both

## IPEDS Race/Ethnic Status Report (SHRIETH)

**Description** This report generates the racial/ethnic breakdown of the selected students and may be used to complete Part A of the Enrollment Summary Report. Statistical information is generated on the race/ethnic background of students by CIP code. The text file reports statistics only on the CIP codes specified and provides data for Part A of the EF Survey Section and Part D, for the total number of students enrolled.

Undergraduate students are classified by student type, degree category, and level. For example, if a first time undergraduate freshman has a degree category of Masters of Business then he will be counted in the Undergraduates Enrolled for Credit because his degree category does not meet the parameter specified undergraduate degree categories.

For the Ethnic Status Report, students must be registered in the requested term. Subject areas for the students are determined by the CIPC code on the CIPC Code Validation Form (STVCIPC) for each student's major, which is in the student's learner curriculum record. These major codes are defined on the Major, Minor, Concentration Code Validation Form (STVMAJR).

The ethnic category for a student is determined by the **New Ethnicity Code** value maintained on the General Person Form (SPAPERS). The SPBPERS\_ETHN\_CDE value is used to track ethnicity for hispanic, non-hispanic, or non-resident alien ethnicities. Race categories are defined on the Race Rules Form (GORRACE) using the **Regulatory Race (Code)** value that is associated with the **Institution Race (Code)** value. The GORRACE\_RRAC\_CODE value is used to report race categories.

If a student is a non-resident alien, then only the alien status is counted, and race is disregarded. The non-resident alien status is determined by the current visa type established on the International Information Form (GOAINTL), where the current visa type code on the Visa Type Code Validation Form (STVVVTYP) has the **Non-Resident (Indicator)** checked (set to Y), and where the visa **Start Date** and **End Date** values from GOAINTL are current as of the creation of the IPEDS data.

The Degree Award Category Code Validation Table (STVACAT) is used to classify degree codes (i.e., B.A. = Bachelor of Arts) into award categories. Required codes for the STVACAT Table are included in the table definitions and should be used.

Students are categorized by the user-specified parameter selections.

**For example:**

- Full-time versus part-time hours for undergraduates and graduates is a parameter selection.
- Undergraduate and graduate degree categories are user selected. Unlimited categories are available. Graduate categories should include those categories formerly used for First-Professional, as well as all Doctoral categories.
- First-Time students are determined by user-selected student types for undergraduates and graduates. Unlimited student types are available.
- Level codes for undergraduates and graduates are user specific. Unlimited level codes are available.
- The credit hour range for a first year student is user-defined.
- You may specify the student types used for unclassified students.

The Degree Code Validation Form (STVDEGC) uses the Degree Award Category Code Validation Form (STVACAT) to identify the category that the degree code belongs to, such as Bachelor's, Master's, Doctoral.

### **Student Type Classification**

Students are classified by type as follows by the Student Type Validation Form (STVSTYP).

- *First-Time Freshmen* are students classified as freshman when their category matches the user-entered category, and their level matches a freshman, user-entered, undergraduate level.
- *Other First Year* students are classified as transfer-in, degree or certificate-seeking undergraduates.
- *Sophomores* are classified as students who have more than the maximum number of freshman hours and less than the maximum number of hours designated for a sophomore via the parameter selection of second year credit hours.
- Students whose earned credit hours are greater than or equal to the user-specified freshman credit hours and less than the user-specified sophomore credit hours are counted as sophomores.
- *Juniors* are classified as students who have more than the maximum number of sophomore hours and less than the maximum number of hours designated for a junior via the parameter selection of third year credit hours.

- *Seniors* are classified as students who have more than the maximum number of hours designated for a third year student.
- *Unclassified* students are students that have a student type equal to the parameter selected as unclassified student type.

Transfer hours are used in the calculation of student classification. For example, if a student has 60 transfer credits and 20 institutional credits, then 80 credits will be used to determine their class standing.

Those students who have dropped or withdrawn from all of their classes will not be included in the file. The process examines the **Count in Enrollment** box on the Course Registration Status Code Validation Form (STVRSTS). If all of the course statuses are flagged as “Do not count in enrollment” (**Count in Enrollment** is unchecked), then the student is not included in the file.

The totals for full-time degree/certificate-seeking undergraduate students and part-time degree/certificate-seeking undergraduates are reflected in the counts.

Part D is used to generate a new record for the number of students enrolled. Only one record is required.

#### Note

The IPEDS File Generation Process (SHRIPDS) must be run prior to this report, as it produces the IPEDS Extract File used in this report. ■

## Web Upload

The report produces a control page with the parameter values and the number of records processed, as well as a comma-delimited file for the Web upload. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file.

#### Note

When running this report from job submission, the Web upload file name will be in the format `shrieth_wu_#####.txt`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

Parameters	Name	Required?	Description	Values
	Term Code	Yes	Enter the code representing the term for which the report is to be run.	Term Code Validation Form (STVTERM)
	CIP Codes	Yes	Enter the CIP codes for which you wish to run the report; enter % for all CIP codes. Multiple values may be entered.	CIPC Code Validation Form (STVCIPC)
	No Longer Used (Grand Total Only)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	No Longer Used (Report Format)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	

### Report Sample—IPEDS Race/Ethnic Status Report (SHRIETH)

#### Sample of Hardcopy Output Control Page

28-AUG-2009 08:09:50 AM 501610	SUNGARDHE University***** AUDIT TRAIL	PAGE 1 SHRIETH
* * * REPORT CONTROL INFORMATION - SHRIETH - Release 8.2.1 * * *		
REPORT TERM: 501610 SELECTED CIP CODES: %		

# Graduation Rate Survey Report (SHRIGRS)

**Description** This report collects data on the numbers of undergraduate students entering an institution as full-time, first-time, degree/certificate seeking students. The GRS requires institutions to collect and generate data on a particular cohort code. The GRS applies only to those institutions that are eligible for Federal student financial assistance and enroll full-time, first-time, degree/certificate seeking undergraduate students. Reporting is by race/ethnicity and gender, length of time to completion, number still persisting, and number transferred to other institutions. The report requires an institution to take a snapshot of these students for a particular year (cohort) and then again after 150% of normal time has elapsed.

Beginning with the Spring 2008 submissions, the NCES has eliminated Sections V and VI that collected data on students who received athletically related student aid. (The related parameters are no longer used and should not be populated.) Institutions are no longer required to report this data to IPEDS, but are still required to disclose this data, as specified in the Student Assistance General Provision Regulations (34 CFR 668) which implemented the Student Right-to-Know Act. An item has been added for the URL which can be used to report this disclosure.

## Note

Although the GRS is part of the IPEDS reports, you do not have to run the IPEDS File Generation Process (SHRIPDS) prior to running the Graduation Rate Survey Report (SHRIGRS).

The GRS is published in four versions:

Version	Institution
GRS1	4-year institutions
GRS2	2-year public institutions
GRS2A	2-year private institutions
GRS3	less than 2-year institutions

Please refer to the “IPEDS Report Procedures” section of this chapter for detailed setup instructions for this report. You need to set up cohort codes, cohort reason codes, and withdrawal reason codes and associate students with a

cohort code for an effective term. You also need to track students who have withdrawn from the institution due to transfer or study-related job and students who are in good academic standing.

#### Note

This IPEDS report is standalone. You do *not* need to run the IPEDS File Generation Process (SHRIPDS) before running SHRIGRS. ■

### Student Centric Periods

The following parameters can be used with student centric periods.

- Start Term parameter - Enter the minimum start term of the student centric period to be processed.
- End Term parameter - Enter the maximum end term of the student centric period to be processed.
- Enrollment Terms parameter - The maximum enrollment term is used to select students to be reported for the student centric period. Students enrolled in any terms up to the maximum enrollment term will be reported.

### Web Upload

The report produces a control page with the parameter values and the number of records processed, as well as a comma-delimited file for the Web upload. This comma-delimited file format conforms to the NCES requirements for the creation of the Key Pair Value file.

#### Note

When running this report from job submission, the Web upload file name will be in the format `shrigrs_wu_#####.txt`, where `#####` is the run sequence number.

Prior to uploading this file to the website, you must convert it to a text (.txt file). ■

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	GRS Version Number - 1, 2, 2A, or 3	Yes	Enter the version number representing the type of institution for which the graduation rate survey is to be run. Pick one of the four values in the next column.	1 4 year 2 2 year public 2A 2 year private 3 less than 2 years
	Cohort Type - F or Y	Yes	Enter the Cohort Type, <i>F</i> for a Fall Cohort or <i>Y</i> for a Full Year Cohort, for the cohort you wish to include in the report. Use the Fall Cohort if your institution is standard term-based. Use the Full Year Cohort if your institution is not predominantly term-based.	F Fall Cohort Y Full Year Cohort
	Start Term	Yes	Enter the starting term for the cohort you wish to include in the report.  For student centric periods, enter the minimum start term of the student centric period to be processed.	Term Code Validation Form (STVTERM)
	End Term	Yes	Enter the ending term to be used for the Cohort Type chosen in the Cohort Type parameter. For the Full Year Cohort, use the end term for the first full year of the Full Year Cohort. For the Fall Cohort, use the term that is the same as the Start Term.  For student centric periods, enter the maximum start term of the student centric period to be processed.	Term Code Validation Form (STVTERM)
	Enrollment Term	Yes	Enter the term in which the student must be enrolled to be counted as a persister.  The maximum enrollment term is used to select students to be reported for the student centric period. Students enrolled in any terms up to the maximum enrollment term will be reported.	Term Code Validation Form (STVTERM)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Full-time Cohort Code	Yes	Enter the cohort code(s) to be processed for those specified with a matching start term for Fall cohorts. For the Full Year cohort, cohorts with a start term that is between the Start and End terms for the first full year will be processed. A wildcard (%) will process all cohort codes with a matching start term for the Fall cohort and a start term that is between the Start and End terms for the first full year, and includes cohorts with a <b>Print Indicator</b> which is checked (set to Y) on STVCHRT.	Cohort Code Validation Form (STVCHRT)
	Excl Code -- Disabled/ Deceased	Yes	Enter the code used to indicate cohort exclusion for death or disability in IPEDS reporting. Multiple codes may be entered.	Cohort Reason Code Validation Form (STVCREA)
	Exclusion Code -- Armed Forces	Yes	Enter the code used to indicate cohort exclusion for armed forces service in IPEDS reporting. Multiple codes may be entered.	Cohort Reason Code Validation Form (STVCREA)
	Excl Code -- Foreign Service	Yes	Enter the code used to indicate cohort exclusion for foreign aid services in IPEDS reporting. Multiple codes may be entered.	Cohort Reason Code Validation Form (STVCREA)
	Excl Code -- Church Mission	Yes	Enter the code used to indicate cohort exclusion for church missions service in IPEDS reporting. Multiple codes may be entered.	Cohort Reason Code Validation Form (STVCREA)
	Part-time Cohort Code	No	Enter the cohort codes for part-time students for Section IV. Multiple codes may be entered. This parameter is only used to GRS2 schools.	Cohort Code Validation Form (STVCHRT)
	Offer Athletic Aid? (Y or N)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Sport Code -- FOOTBALL	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	

<b>Parameters</b>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Sport Code -- BASKETBALL	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Sport Code -- BASEBALL	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Sport Code -- XCOUNTRY/TRACK	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Fall Term for Sport Sec. V	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	End Term for Sport Sec. V	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Undergraduate Level for Sec. V	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Full-time Hours for Sports	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	Transfer Out Code - <2 yr Inst	No	Enter the reason code the student is transferring out to a school of less than two years. Multiple codes may be entered.	Withdrawal Reason Code Validation Form (STVWRSN)
	Transfer Out Code - 2 yr Inst	No	Enter the reason code the student is transferring out to a two year school. Multiple codes may be entered.	Withdrawal Reason Code Validation Form (STVWRSN)
	Transfer Out Code - 4 yr Inst	No	Enter the reason code the student is transferring out to a four year school. Multiple codes may be entered.	Withdrawal Reason Code Validation Form (STVWRSN)
	Left for job in their field	No	Enter the reason code the student is transferring out to a job in their field. Multiple codes may be entered.	Withdrawal Reason Code Validation Form (STVWRSN)

<i>Parameters</i>	<i>Name</i>	<i>Required?</i>	<i>Description</i>	<i>Values</i>
	Code - Good Academic Standing	No	Enter the code used to indicate a good academic standing. Multiple codes may be entered. This parameter is only used for GRS2 and GRS2A schools.	Academic Standing Code Validation Form (STVASTD)
	No Longer Used (Print Details?)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>	
	No Longer Used (Report Format)	<i>Inactive, do not use</i>	<i>Values entered in this parameter will not be processed.</i>

## Electronic Data Interchange Reconciliation (SHREDIR)

**Description** The Electronic Data Interchange Reconciliation (SHREDIR) reconciles the disposition file returned from EDI.Smart with the transcript requests in the Transcript Request Collector Table (SHTTRAN). The disposition file will contain a record for each transcript generated by the Electronic Data Interchange Extract (SHREDIY), from the Transcript Request Form (SHARQTC), and sent to EDI.Smart.

Each record contains the request number, status of the transcript request in the EDI.Smart process, and the date the status was applied. The Electronic Data Interchange Reconciliation (SHREDIR) reads the disposition records and attempts to match each one to a request in the Transcript Request Collector Table (SHTTRAN). To accomplish this matching, SHREDIR will use the request number assigned and stored by SHREDIY, on SHTTRAN and passed to EDI.Smart via the control file, when the transcript was generated. If a match is found, SHREDIR will update the SHTTRAN record with the status and status date. The user can then view the status, status date, and status description on the Transcript Request Form (SHARQTC), for the student. If no match is found, an error will be printed on the report showing the student ID, sequence number, recipient/SBGI ID, request number, status, and status description, along with the error message.

Parameters	Name	Required?	Description	Values
	Mode	Yes	Enter <i>A</i> for Audit mode, to create a report of reconciliation records and/or errors with no database changes. Enter <i>U</i> for Update, to create a report of reconciliation records and/or errors with status code and status date updated to the database.	A Audit U Update
	Print Errors Only	No	Enter <i>Y</i> to create a report of only those records that cannot be reconciled. Enter <i>N</i> to create a report of all records in the Disposition file and their status. The default value is <i>N</i> .	Y Report unreconciled records N Report all records
	Reconciliation File	Yes	Enter the path and file name for the disposition file. For example, /u02/s7s80/jobsub/d.txt.	
	Signal File	Yes	Enter the path and file name for the signal file. For example, /u02/s7s80/jobsub/l.txt.

## Electronic Data Interchange Institutions (SHREDII)

**Description** The Electronic Data Interchange Institutions (SHREDII) updates the Source/Background Institution Code Validation Form (STVSBGI) with institution information.

Obtain a file from the host containing the FICE code, institution name, and EDI capable flag. SHREDII will read this file and attempt to match the FICE code to the source/background institution code if the institution FICE code is null. If a match is found, SHREDII will update the EDI capable flag and activity date. If no match is found, and the user requested *Y* for input parameter Add New Institutions, SHREDII will add the institution using the FICE code as the source/background institution code, institution name, EDI capable flag, activity date, and *C* (College) as the source/background institution type. If no match is found and the user requested *N* for input parameter Add New Institutions, SHREDII will print the institution information and a *Not Found* message on the report.

Parameters	Name	Required?	Description	Values
	Mode	Yes	Enter <i>A</i> for Audit mode to create a report of EDI capable institution records and/or errors with no database changes. Enter <i>U</i> for Update to create a report of EDI capable institution records and/or errors and update information to the database.	<i>A</i> Audit <i>U</i> Update
	Add New Institutions	No	Enter <i>Y</i> to add institutions that do not currently exist in Source/Background Institution Code Validation Form (STVSBGI) using the FICE code as the Source/Background Institution Code. Enter <i>N</i> to ignore institutions that do not exist in STVSBGI and print a message. The default value is <i>N</i> .	<i>Y</i> Add institutions not on STVSBGI <i>N</i> Ignore institutions not on STVSBGI
	Print Only Not Found	No	Enter <i>Y</i> to create a report of only those institutions that were not found in Source/Background Institution Code Validation Form (STVSBGI). Enter <i>N</i> to create a report of all institutions found in the EDI Capable Institution file. The default value is <i>N</i> .	<i>Y</i> Report institutions not on STVSBGI <i>N</i> Report institutions in EDI file

# Electronic Transcript Upload Purge Process (SHRETRP)

**Description** This process is used to purge electronic transcript data in EDI or PESC/XML format. This would be done after electronic transcripts have been processed to their final step (usually transfer articulation) in the Banner Student System. Also, storage of a large number of records may negatively impact online processing. EDI.Smart users should keep in mind that EDI.Smart includes archiving capability, so that if any future questions might arise about a previously received, articulated, and purged transcript, the original data would still be available through EDI.Smart. XML transcript data is purged from the appropriate tables (SHREPTD/SHRIPTD) based on the SHBHEAD\_DCMT\_SEQNO value for the XML import and export log tables.

## Note

An electronic transcript will not be for purged unless a routing status code exists for the transcript that has the **Archive Status Indicator** set to Y on the Electronic Document Status Code Validation Form (STVDSTS). ■

The report control information will optionally include two sections as follows:

*Section One:* Transcripts to be purged, or actually purged, depending on Run Mode, and if Suppress Report Detail is No.

*Section Two:* Transcripts with no Archive status, but are older than or equal to the Transcript Received Purge Date, if Print Transcripts Not Eligible for Purge is Yes.

## Note

If the transcript record has been matched to an existing person in Banner, the ID and name information will be printed as they exist in Banner (information from the SPRIDEN record). It is possible that a transcript that has not been matched to a existing person in Banner may be updated with an archive routing status. In this case, the ID and name information will be printed as they were received in the electronic transcript (SHBHEAD and SHRIDEN). ■

In addition, the report control information will provide summary totals of the number of transcripts by sending institution code, as well as an overall total for both transcripts to be purged or actually purged, and transcripts not eligible to be purged. Totals will be printed even if report detail printing is not selected.

Parameters	Name	Required?	Description	Values
	Sending Inst Code to Purge	Yes	Enter the code for the sending institution to be purged, or enter % for all. Multiple codes may be entered to purge groups of institutions.	Source/Background Institution Code Validation Form (STVSBGI)
	Transcript Recd Purge Date	Yes	Enter the received date for the transcript to be purged. Transcripts marked with a received date on SHAEDIS that is less than or equal to the date entered for the parameter will be purged.	
	Report Sorting Order	Yes	<p>Enter <i>N</i> for Name order, to list output alphabetically by last, first, middle initial of student name. This is the default order.</p> <p>Enter <i>S</i> for Sending institution order to list output alphabetically by sending institution code, and student name within each sending institution.</p> <p>Enter <i>I</i> for ID order, to list output in ID order. A page break will occur for each new sending institution when ID order is selected.</p> <p>Output for Name or ID order will be continuous; page breaks occur with line limit feed to the next page of output.</p>	<p>N Name order</p> <p>S Sending institution order</p> <p>I ID order</p>
	Suppress Report Detail	Yes	Enter <i>Y</i> to have summary statistics only included in the report control output. Enter <i>N</i> to print report detail. <i>N</i> is the default.	<p>Y Print summary</p> <p>N Print detail</p>

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Print (Transcripts) Not Eligible for Purge	Yes	<p>This controls optional printing of the Transcripts Without Archive Status For Purge Date section of the report output.</p> <p>Enter <i>N</i> to suppress the printing of this section. This is the default for this parameter.</p> <p>Enter <i>Y</i> to list transcripts that exist with a Received Date less than or equal to the Transcript Received Purge Date specified, but do not have an Archive routing status.</p>	<p>Y Print transcripts not eligible for purge</p> <p>N Don't print transcripts not eligible for purge</p>
	Run Mode - Audit or Update	Yes	<p>Enter <i>A</i> to Audit or list the transcripts to be purged. This is the default value for this parameter,</p> <p>Enter <i>U</i> to Update the database by performing the purge and listing the transcripts that were purged, depending on the options selected for the two preceding parameters.</p>	<p>A Audit</p> <p>U Update</p>

## Upload of EDI Transcript (SHREDIP)

**Description** This process is used to load transcript data into interim Oracle tables in Banner, after the FLAT130 file produced by EDI.Smart has been uploaded to the host where Banner resides.

Parameters	Name	Required?	Description	Values
	Data File	Yes	Enter the data file name with the complete path included.	
	Test Flag	Yes	Enter <i>Y</i> to use a test flag or <i>N</i> to not use a test flag.	Y Use test flag N Do not use test flag
	Upload Student RAP Segments	Yes	Enter <i>Y</i> to upload Student RAP segments or <i>N</i> to not upload Student RAP segments.	Y Upload Student RAP segments N Do not upload Student RAP segments
	Upload Course RAP Segments	Yes	Enter <i>Y</i> to upload Course RAP segments or <i>N</i> to not upload Course RAP segments.	Y Upload Course RAP segments N Do not upload Course RAP segments

### Note

There is no output produced by this process. ■

## Electronic Data Interchange Extract (SHREDIY)

**Description** The Electronic Data Interchange Extract (SHREDIY) must be run in order to produce Banner transcripts to be sent via EDI.Smart. A transcript must have been requested through the use of the Transcript Request Form (SHARQTC) or the Transcript Population Creation Process (SHRTPOP) in order to be produced through this process.

SHREDIY reads the requests from the collector file and generates the flat file entries for the transcripts along with control and log file entries. Only transcript requests with a send type of *E*, for EDI, will be processed. Transcripts may be produced for an individual with a pending request, or all requests which have been sent to the collector file. The Academic Transcript (SHRTRTC) must be run to produce Banner paper transcripts for those institutions who are not capable of receiving EDI transcripts. The Transcript Request Form (SHARQTC) will not allow an EDI transcript request to be made for an institution that is not EDI capable.

When each transcript is generated, SHREDIY will update the EDI sent date and assign each transcript request a request number on the Transcript Request Collector Table (SHTRTRAN). The request number is a sequential number stored in the Sequence Number Base table (SOBSEQN) and updated by SHREDIY. The request number is sent to EDI.Smart in the control record for the generated transcript.

Parameters	Name	Required?	Description	Values
	Transcript Population File	No	Enter <i>Y</i> if the population for which the transcript(s) are to be generated has previously been selected via the Transcript Population Creation Process (SHRTPOP).	
	ID and [Sequence if Desired]	No	Enter % or a NULL value to select all IDs and sequences.	
	Transcript Type	No	Enter the type of transcript requested.	Transcript Type Code Validation Form (STVTPRT)
	Address Selection Date	No	Enter the date (format DD-MON-YYYY) for which you wish to retrieve an active address record of the student for whom the transcript is being generated.	
	Address Priority and Type	Yes	Enter the priority number and address type code (format 1MA) for the address selection.	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Campus Selection Indicator	No	Enter <i>Y</i> to select courses to be included on the transcript, which are associated with the campus codes entered. An <i>N</i> will include all course campus codes on the transcript. The default value is <i>N</i> .	Y Include courses associated with campus codes entered N Include all course campus codes
	Campus Selection	Yes	(Required if Campus Selection Indicator is set to <i>Y</i> ) Enter the course campus code representing the campus of the courses which are to be included on the transcript.	Campus Code Validation Form (STVCAMP)
	GPA Format	No	Enter <i>R</i> to print rounded GPAs or <i>T</i> to print truncated GPAs. The default value is <i>R</i> .	R Round GPAs T Truncate GPA
	Process Rqsts Awaiting Grades	Yes	Use this parameter to process requests that learners want held until end of term grades have been rolled to academic history.  Enter <i>Y</i> to process requests waiting for end of term grades or <i>N</i> to process requests that are not waiting for end of term grades. The default value is <i>N</i> .	Y Process requests - waiting for grades N Process requests - not waiting for grades
	Process Rqsts Awaiting Degrees	Yes	Use this parameter to process requests that learners want held until their degrees have been posted to SHADEGR.  Enter <i>Y</i> to process requests waiting for degrees to be posted or <i>N</i> to process requests that are not waiting for degrees to be posted. The default value is <i>N</i> .	Y Process requests - waiting for degrees N Process requests - not waiting for degrees

## Degree Verification Process (SHRDEGV)

**Description** This process is used to collect data relating to the degrees a student has completed at an institution and supply the information to the Clearinghouse. The initial transmission from an institution to the Clearinghouse for degree verification requests all degree records. After this first transmission, records are submitted on a term-by-term basis.

SHRDEGV reports up to four majors and four minors with associated CIP codes. The curriculum information is pulled from the concurrent curricula tables in place of the backfill tables.

- The **Birth Date** field on SPAPERS is used by this report and must have a valid value.
- The **SSN/SIN/TIN** field on SPAPERS is not required. Degrees may be reported to the Clearinghouse without SSNs. If no SSN value exists, the requested wording *NO SSN* is printed and is padded with spaces (to nine characters) in the field, prior to being printed on the report.
- The **Graduation Date** field in the Graduation Information on SHADEGR is used by this report and must have a valid value. The program information is also required.
- The degree information is created when grades are rolled to history from SGASTDN. Make sure the **Create or Update Degree with Primary Curriculum** field on SOACTRL is set to *Yes*, as well as the **Create or Update Degree with Secondary Curriculum** field, if that is applicable.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Processing Term	Yes	Enter the code for the degree awarded term, or enter % to select all terms. The initial transmission from an institution to the Clearinghouse for degree verification requests all degree records. After the first transmission, records are submitted on a term-by-term basis.  This must match the value in the <b>Graduation Term</b> field in the Graduation Information on SHADEGR for the graduation term.	Term Code Validation Form (STVERM)
	Degree Status Code	Yes	Enter the code for the status of the awarded degree. This must match the value in the <b>Outcome Status</b> field in the Outcome Information on SHADEGR. Multiple values may be entered in this parameter.	Degree Status Code Validation Form (STVDEGS)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Degree Period	Yes	Enter the description of the period when the degree was awarded (i.e., Spring, 2001). This is a free format description of up to 15 characters.	
	Run Mode	Yes	Enter the mode in which you wish to run the report. Enter <i>1</i> to produce a report of missing or invalid data and the error encountered during processing. Enter <i>2</i> to produce a report of students who have been processed. Enter <i>3</i> to produce a delimited extract file to be transmitted to the Clearinghouse using EDI.	1 Missing/invalid data 2 Students processed 3 EDI file
	Sort Order	No	Enter the order in which the process should sort the data. Enter <i>1</i> for sorting by Last Name. Enter <i>2</i> for sorting by Level/Last Name. Enter <i>3</i> for sorting by Degree/Last Name. The default sort order is by Last Name.	1 Last Name 2 Level/Last Name 3 Degree/Last Name
	Hold Codes to be Excluded	No	Enter the hold codes used to exclude students from being reported to the Clearinghouse. Hold codes must be active on SOAHOLD for the student for the dates that encompass the term.	Hold Type Code Validation Form (STVHLDD)

## Progress Evaluation Process (SHRPREV)

**Description** This process is used to determine progress evaluation and combined academic standing codes and print a report of the results. It will also calculate each student's maximum registration hours allowed based upon their combined academic standing code. The process can be run in update or audit mode.

Prior to running this process, make sure valid codes have been set up on STVPREV and STVCAST, and that valid rules have been set up on SHAACST (for the SHRCAST, SHRPREV, and SHRPRGE blocks). The Calculate Academic Standing Report (SHRASTD) should be run at least once in update mode for the term code being processed before SHRPREV is run. This is to make certain that student academic standing codes have been assigned.

Parameters	Name	Required?	Description	Values
	Term Code	Yes	Enter the term code for the term to be processed.	Term Code Validation Form (STVTERM)
	Determine Progress Evaluation	Yes	Enter <i>Y</i> to determine the progress evaluation, or enter <i>N</i> to exclude this information.	Y Progress evaluation N No progress evaluation
	Determine Combined Academic Standing	Yes	Enter <i>Y</i> to determine the combined academic standing, or enter <i>N</i> to exclude this information.	Y Combined academic standing N No combined academic standing
	Update/Audit Mode	Yes	Enter <i>A</i> to run the report in audit mode, or enter <i>U</i> to update the database. The default is <i>A</i> .	A Audit U Update
	Calculate Max Reg. Hours	Yes	Enter <i>Y</i> to compare the new combined academic standing code's hours to future existing registrations, or enter <i>N</i> to not check this information.	Y Compare code hours N No comparison

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Pre-registration Future Terms	No	<p>Enter the term code for the future term to be used in the comparison of future term registration to the new combined academic standing code's registration hours.</p> <p>This parameter may only be used when the Calculate Max Reg. Hours parameter is set to <i>Y</i>.</p>	Term Code Validation Form (STVTERM)
	Maximum Hours Update/Audit	No	<p>Enter <i>U</i> to update future terms to new maximum hours, or enter <i>A</i> to audit this information. The default is <i>A</i>.</p> <p>This parameter may only be set to <i>U</i> when the Calculate Max Reg. Hours parameter is set to <i>Y</i>.</p>	<p><b>U</b> Update maximum hours</p> <p><b>A</b> Audit maximum hours</p>
	Student ID	No	<p>Enter a specific student ID or enter % for all.</p> <p>This parameter should not be used if the following population selection parameters are used.</p>	
	Selection Identifier	No	<p>Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.</p>	Population Selection Inquiry Form (GLISLCT)
	Application Code	No	<p>Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.</p> <p>The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.</p>	Application Inquiry Form (GLIAPPL)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	
	User ID	No	Enter the user ID for the population selection. This is the ID of the user who selected the population of people. This may or may not be the same as the Creator ID. All or none of the population selection parameters must be entered.	
	Print Detail	Yes	Enter <i>Y</i> to print detail lines, or enter <i>N</i> to only print error messages and total pages. The default is <i>N</i> .	Y Print detail N Print error messages

## PESC/XML Transcript Export Process (SHRPESE)

**Description** This Java process is used to create electronic transcripts in XML format by producing a .xml file that can be read by the receiving institution. It also produces .lis and .log file entries. It uses the file transfer protocol information on SOASBGA to send the transcript to an institution. The process reads XML transcript requests from the collector records and extracts those with a transcript type of *P* (*PESC/XML*) from the **Electronic** field on STVSBGI and a transcript type of *XML* on SHATPRT.

To use this process, a transcript must have been requested through SHARQTC or SHRTPOP (using population selection), or online using self-service. SHRPESE reads the requests from the collector file and generates the XML for the transcripts along with control and log file entries. Only official transcript requests with a send type of *P* will be processed. Transcripts may be produced for an individual with a pending request or for all requests which have been sent to the collector file. When each transcript is generated, SHRPESE will update the **Status** and **Status Date** fields in the Electronic Transcript Status information on SHARQTC. If no errors have occurred, the **Run Date** value will also be populated.

Parameters	Name	Required?	Description	Values
	Transcript Population File?	Yes	Enter <i>Y</i> if the transcript population was previously selected using SHRTPOP or <i>N</i> if no transcript population file exists. The default is <i>N</i> .	Y Transcript population exists N Transcript population does not exist
	ID and Seq No as XXXXXXXXXXX000	No	Enter the ID number as the first nine characters (XXXXXXXXXX) and the sequence number as the last three characters (000). Enter % or leave the parameter value blank to select all IDs and sequence numbers. The default is %.	
	Transcript Type	Yes	Enter the transcript type. Multiple values are allowed. The default is % for all types.	Transcript Type Code Validation Form (STVTPRT)
	Address Selection Date	No	Enter the date used to select the appropriate address in format DD-MON-YYYY.	
	Address Priority and Type	Yes	Enter the address priority followed by the address type, such as 1MA for a first priority mailing address.	

<i>Parameters</i>	<i>Name</i>	<i>Required?</i>	<i>Description</i>	<i>Values</i>
	Campus Selection Identifier	No	Enter <i>Y</i> to select a campus or <i>N</i> to not select a campus. The default is <i>N</i> .	Y Select campus N Do not select campus
	Campus Selected	No	If you entered <i>Y</i> in the Campus Selection Identifier parameter, enter the campus code for the campus to be processed.	Campus Code Validation Form (STVCAMP)
	GPA Format	No	Select the GPA format for the transcript. Enter <i>R</i> for the rounded GPA format or <i>T</i> for the truncated GPA format. The default is <i>R</i> .	R Rounded GPA T Truncated GPA
	Run in Sleep/Wake Mode	Yes	Enter <i>Y</i> to run the process in sleep/wake mode or <i>N</i> to not use this option. The default is <i>N</i> .	Y Run in sleep/wake mode N Do not use sleep/wake
	Sleep/Wake Interval	Yes	Enter the time in seconds for the sleep/wake interval. Valid values are 0 - 99999. The default is 60.	
	XML Document Process Code	Yes	Enter <i>TEST</i> to run create output for a test environment or <i>PRODUCTION</i> to create output for a production environment. The default is <i>TEST</i> .	TEST Test environment PRODUCTION Production environment
	Self-Reported Test Source	Yes	Enter the value for self-reported test scores. The default is <i>STDN</i> .	Admission Test Score Source Code Validation Form (STVTSRC)
	Domestic Address Nation Code	Yes	Enter the nation code for the domestic address. Multiple values are allowed. The default is <i>US</i> .  <b>Note:</b> The nation code description is printed on the report. So while <i>157</i> is the nation code, <i>US</i> is the nation code description that is used for the default.	Nation Code Validation Form (STVNATN)
	Email Type Hierarchy	Yes	Enter the email type to be used (such as <i>ICAMP</i> for first priority campus email) if no preferred email address exists. Multiple values are allowed.	E-mail Address Type Validation Form (GTVEMAL)

## PESC/XML Transcript Import Process (SHRPESI)

**Description** This Java process is used to import XML transcript files into an institution from other institutions. It reads files from a server, loads them to a temporary table, renames the files (.old), and then loads the data to Banner using rules set up on STVDSTS.

The process checks for duplicate records in Banner. The duplicate records will be noted in the .lis file by file name, document ID, Banner document sequence number, and the message: *Document has already been processed*. New records will be loaded with the same information as above, but the message will read *Transcript Document Imported*.

New records can be viewed and routed on SHAEDIS before they are imported. Matched records can be processed and verified using GOAMTCH and then articulated using SHATAEQ. The decision to load transcripts can also be made on SHATAEQ.

### Note

Data is imported into existing Banner EDI tables. Additional UDE (User-Defined Extensions) data is imported into new tables based on code written by the institution. ■

Parameters	Name	Required?	Description	Values
	Run in Sleep/Wake Mode	Yes	Enter <i>Y</i> to run the process in sleep/wake mode or <i>N</i> to not use this option. The default is <i>N</i> .	Y Run in sleep/wake mode N Do not use sleep/wake
	Sleep/Wake Interval	Yes	Enter the time in seconds for the sleep/wake interval. Valid values are 0 - 99999. The default is 60.	
	XML File Directory	No	Enter the name of the absolute directory from which the XML files are pulled. The \$DATA_HOME directory is used if no value is entered.	

## Report Sample—PESC/XML Transcript Import Process (SHRPESI)

# Transfer Catalog Data Import Process (SHRTCIM)

## Description

This Java process is used to import an XML extract file of course catalog data into a Banner database. After entering the input file name and other default values, the user can choose between running the process in Audit Mode or Update Mode. In Audit Mode, the process compares the records in the incoming data file with transfer course records that already exist in the system. Records in the incoming data file that are found to match existing records will be identified as partial or exact matches.

When run in Audit Mode, the process calls the `SB_TRANSFER_COURSE` API for matching logic.

- If an incoming transfer course does not match any existing transfer courses based on the institution ID plus the subject plus the course number plus the transfer level, then it will be identified as a new record.
- If an incoming transfer course matches an existing transfer course based on institution ID, plus the program, plus the transfer level, plus the subject, plus the course number, plus the effective term, plus the group, then it will be identified as an exact match (even though values in the Title, Credit Hours Low, Credit Hours High, Minimum Grade, Catalog Year, and Course Description fields may differ).

## Note

Existing transfer courses that have been entered with a value in the Program and/or Group fields will not match incoming transfer course records. As such, many incoming transfer course records that do match existing records based upon institution ID, plus transfer level, plus the subject, plus the course number, plus the effective term will fall into the next category. ■

- If an incoming transfer course does not satisfy the criteria to be identified as new or an exact match, then it will be flagged as a partial match.

After the input file has been processed in Audit Mode, users can review those courses identified as exact matches to see if any data exists in the Title, Credit Hours Low, Credit Hours High, and/or Course Description fields that should be added to the system. If not, you can check the **Protect from Import** field for the existing transfer courses in the Transfer Institution Catalog Entry Form (SHATATC) or the Transfer Course Articulation Form (SHATATR). Those courses will not be updated when the input file is processed again in Update Mode.

Similarly, after the input file has been processed in Audit Mode, users can review those courses identified as partial matches to see if any data exists in the Title, Credit Hours Low, Credit Hours High, and/or Course Description fields that should not be added to the system. If so, the **Protect from Import** field can be checked for those records, and those courses will not be updated when the input file is processed again in Update Mode.

When the process is run in Update Mode, new records from the input file are imported into the SHBTATC and SHRTCAT tables. Records identified as exact matches will update the existing records unless the **Protect from Import** field is checked. Records identified as partial matches will update existing records if the matched fields are the institution ID, effective term, transfer level, subject, and course number, unless the **Protect from Import** field is checked. Otherwise, the partial matches will be loaded as new courses.

Banner Table	Table Column	Additional Information
<i>SHBTATC</i>		<i>Transfer Course Information</i>
	SBGI_CODE	Institution ID parameter
	PROGRAM	Defaults to “.....”
	TLVL_CODE	Comes from <CourseLevelCode>  Value must be defined on STVTLVL and be valid for the institution ID on SOABGTA.
	SUBJ_CODE_TRNS	Comes from <CourseSubjectAbbreviation>  Value is not validated by Banner.
	CRSE_NUMB_TRNS	Comes from <CourseNumber>
	TERM_CODE_EFF_TRNS	Effective Term parameter
	ACTIVITY_DATE	Defaults to system date
	TRNS_TITLE	Comes from <CourseShortTitle>
	TRNS_LOW_HRS	Comes from <CourseCreditMinimumValue>
	TRNS_HIGH_HRS	Comes from <CourseCreditMaximumValue>
	TRNS_REVIEW_IND	Defaults to <i>N</i>
	TAST_CODE	Status Code parameter
	TRNS_CATALOG	Catalog Year parameter

Banner Table	Table Column	Additional Information
	TGRD_CODE_MIN	Minimum Grade parameter
	GROUP	Defaults to NULL
	GROUP_PRIMARY_IND	Defaults to NULL
	CRSE_DESC	Comes from <CourseDescription>
	USERID	Defaults to user ID of person running the process
	DATA_ORIGIN	Defaults to either SHATATC, SHATATR, or SHRTCIM
	PROTECT_IND	Defaults to N
<i>SHRTCAT</i>		<i>Transfer Course Attributes</i>
	SBGI_CODE	Institution ID parameter
	PROGRAM	Defaults to “.....”
	TLVL_CODE	Comes from <CourseLevelCode> Value must be defined on STVTLVL and be valid for institution ID on SOABGTA.
	SUBJ_CODE_TRNS	Comes from <CourseSubjectAbbreviation> Value is not validated by Banner.
	CRSE_NUMB_TRNS	Comes from <CourseNumber>
	TERM_CODE_EFF_TRNS	Effective Term parameter
	ATTR_CODE	Comes from <RAPCode> Value is not validated by Banner.
	ATTR_DESC	Comes from <RAPName>

Banner Table	Table Column	Additional Information
	USERID	Defaults to user ID of person running the process
	ACTIVITY_DATE	Defaults to system date
	DATA_ORIGIN	Defaults to SHRTCIM

Parameters	Name	Required?	Description	Values
	Input File	Yes	<p>Enter the name of the file that contains the incoming records.</p> <p>For example: catalogexport_&lt;oneup&gt;.xml</p> <p><b>Note:</b> The process retrieves the input file from the directory defined for FILE_PATH=" - Dxml.file.path=" in the shell file that launches the program. As delivered, this directory is defined as \$DATA_HOME; however, your institution can designate a different directory if desired.</p>	
	Run Mode	Yes	Enter <i>A</i> for Audit Mode (compares incoming records to existing ones) or <i>U</i> for Update Mode (imports the data into Banner). The default is <i>A</i> .	<p>A Audit Mode</p> <p>U Update Mode</p>
	Institution ID	Yes	<p>Enter the source/background institution code to be loaded as the institution ID for the incoming records.</p> <p>In Audit Mode, this value is used to select existing records for comparison. In Update Mode, this value is loaded into the SHBTATC table for each incoming transfer course record.</p>	Source/Background Institution Code Validation Form (STVSBGI)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Effective Term	Yes	Enter the effective term to be loaded for the incoming records.  In Audit Mode, this value is used to select existing records for comparison. In Update Mode, this value is loaded into the SHBTATC table for each incoming transfer course record.	Term Code Validation Form (STVTERM)
	Level Code	No	Enter the transfer course level codes to be loaded for the incoming records. If an incoming record has multiple levels associated with it, only those matching the values entered in the parameter will be processed.	Level Code Validation Form (STVLEVL)
	Status Code	Yes	Enter the status code to be loaded for the incoming records. In Audit Mode, this value will not be used to select existing records for comparison.	Transfer Articulation Course Status Validation Form (STVTAST)
	Minimum Grade	No	Enter the minimum grade code (SHATGRD) to be loaded for the incoming records. In Audit Mode, this value will not be used to select existing records for comparison.	
	Catalog Year	No	Enter the catalog year to be loaded for the incoming records. In Audit Mode, this value will not be used to select existing records for comparison.	
	Load Course Attributes	Yes	Enter <i>Y</i> to load course attributes or <i>N</i> to not load course attributes. The default is <i>Y</i> .	Yes Load attributes No Do not load attributes
	Report Type	Yes	Enter <i>D</i> to create a detailed report or <i>S</i> to create a summary report. The default is <i>S</i> .	D Detail S Summary
	Sort Order	Yes	Enter <i>1</i> to sort the output by load status and then by subject and course number or <i>2</i> to sort the output by subject and course number only. The default is <i>1</i> .	1 Sort by load status 2 Sort by subject and course number

Parameters	Name	Required?	Description	Values
	Display Full Subject	Yes	Enter <i>Y</i> to display the full, 60 character subject name on the line below the course data or <i>N</i> to not display the subject name. The default is <i>N</i> .  <b>Note:</b> Currently, the entire length of 10 characters that is allowed for the subject code will be displayed on the report, even if this parameter is set to <i>N</i> . As such, you will not need to set it to <i>Y</i> . However, if the PESC schema that is adopted as a standard allows for a value of 60 characters (as the EDI standard does), you may want to set this parameter to <i>Y</i> in order to see the entire value.	Yes Display full subject name No Do not display subject name
	Display Full Course Number	Yes	Enter <i>Y</i> to display the full, 60 character course number on the line below the course data or <i>N</i> to not display the course number. The default is <i>N</i> .  <b>Note:</b> Currently, the entire length of 15 characters that is allowed for the course number will be displayed on the report, even if this parameter is set to <i>N</i> . As such, you will not need to set it to <i>Y</i> . However, if the PESC schema that is adopted as a standard allows for a value of 60 characters (as the EDI standard does), you may want to set this parameter to <i>Y</i> in order to see the entire value.	Yes Display full course number No Do not display course number
	Display Course Description	Yes	Enter <i>Y</i> to display the course description text or <i>N</i> to not display the course description. The default is <i>N</i> .	Yes Display course description No Do not display course description

### Report Sample—Transfer Catalog Data Import Process (SHRTCIM)

When SHRTCIM is submitted in Audit Mode with the Report Type parameter set to *S* (Summary), the `.lis` output file displays record counts for new courses, exact matches, and partial matches, as well as the all the parameter values used during processing.

## Incomplete Grade Process (SHRCINC)

**Description** This process is used to automatically update incomplete grades to final grades. If an incomplete grade is found on Academic History for any course within the specified terms, and its grade extension date is less than or equal to the current system date, it is selected for processing.

### Note

The process scans only Academic History records. All grades on the class roster that have not yet been rolled are still considered to be in-process.

The grade code values that are displayed on SFAALST, SFASLST, and in Banner Faculty and Advisor Self-Service are only those grade codes that were last entered on the class roster. Any grades that have been subsequently updated in history are not reflected in the roster. ■

This process can be run by term in either Audit or Update Mode and includes reason codes for the grade changes, as well as grade comments for the grade entries. You can restrict the process selection by level and/or CRN. You can include student IDs on the output and calculate GPAs in Update Mode if you wish to do so. The incomplete grade code value that is selected and the final replacement grade are also printed in the output. If grade substitution is needed, you can choose to have the grade substitution grade code printed on the report.

The grade extension date for incomplete grades is compared against the system date to determine whether a grade change needs to occur. If a grade change is needed, a new grade entry is created for the course in the student's academic history. If the system date is greater than the incomplete extension date, then a new grade entry is inserted, but with the final grade code changed from the incomplete grade entry to the replacement final grade. The process also performs checking for grade substitution. Grade substitution can replace the updated grade with a substitute grade, based upon the grade mode associated with the student that was taking the course. A GPA recalculation is then performed when the Calculate GPA parameter is set to Y, and the process is run in Update Mode.

The process can be run in Audit Mode to forecast automated grade change results for upcoming grade conversions. The Future Date parameter can be used to forecast future results. No GPA calculation is performed in Audit Mode.

### Note

This process does not use sleep wake processing. ■

## Grade Conversion and Substitution

The process creates a new grade revision entry in the SHRTCKG table. The existing, current, incomplete entry is maintained in Academic History. This update is processed as a non-destructive grade change. The new entry is added as the next sequence number, and the final grade code is extracted from the incomplete final grade of the prior entry. The extension date is cleared for the new entry. The reason code comes from the Reasons Code parameter, and the current system date is used as the grade date. If a grade code comment is specified, it will be added to the new grade entry.

The default, incomplete, final grade is the assigned final grade of the new grade change entry. That may cause a second grade change entry to be posted for the grade substitution. The processing for the grade substitution is automatically invoked at the time the first grade change is posted. The reason code on the grade substitution entry (if one is needed) uses *SG* (substitute grade) as the reason code, and no grade comment code will appear on that entry. *SG* is a system-defined reason code used for substituted grade change entries. A second entry will be printed on the report output for the substitute grade change (by default) unless the Print Grade Substitutions parameter is set to *N*.

If grade substitution is needed for the incomplete final grade, then the substitution grade value must be reconciled to exist before the first grade change entry is posted. A final grade cannot be changed to a grade value that is inconsistent with the grade mode for which the student is taking the course, except when the grade is immediately replaced with a substitute grade value. If grade substitution is required and a substitute grade is not on file, then neither grade change will be posted, and an error message will be displayed in the output. Once the grade substitution is complete, the GPA recalculation can take place, if the Calculate GPA parameter is set to *Y*.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Term Code	Yes	Enter the term codes for automated processing of incomplete grades.	Term Code Validation Form (STVTERM)
	Level Code	No	Enter the level codes for automated processing of incomplete grades.	Level Code Validation Form (STVLEVL)
	Course Reference Number (CRN)	No	Enter CRNs for courses for automated processing of incomplete grades, if you wish to restrict the processing to only these CRNs within the term.	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Reason Code	Yes	Enter a user-defined reason code to be stored with grade change entries that indicates the reason or justification for the grade change.	Grade Change Code Validation Form (STVGCHG)
	Print Student ID	Yes	Enter <i>I</i> to include/print the student ID or <i>E</i> to exclude/not print the ID. The default is <i>I</i> .	I Print student ID E Do not print student ID
	Page Break	Yes	Enter <i>T</i> to break the output by change of term, <i>C</i> to break the output by change of course within term, or <i>N</i> to have no forced page brake. The default is <i>T</i> .	T Page break by term C Page break by course N No forced page break
	Run Mode	Yes	Enter <i>A</i> to run the process in Audit Mode and forecast automated grade change results or <i>U</i> to run the process in Update Mode and update the database. The default is <i>A</i> .	A Audit Mode U Update Mode
	Future Date	No	Enter a date in the future (DD-MON-YYYY format) to compare to extension dates of entries on file. This date takes the place of the system date. This parameter can only be used in Audit Mode.	
	Grade Comment	No	Enter a grade comment code to be stored with grade change entries. You may want to define a grade comment code to reflect that this grade change entry is the result of automated incomplete grade processing.	Grade Comment Code Validation Form (STVGCMT)
	Calculate GPA	Yes	Enter <i>Y</i> to calculate the GPA for each student that is processed or <i>N</i> to not calculate the GPA. The default is <i>N</i> .	Y Calculate GPA N Do not calculate GPA

Parameters	Name	Required?	Description	Values
	Print Grade Substitutions	Yes	Enter Y to print grade substitutions or N to not print grade substitutions. The default is Y.	Y Print grade substitutions N Do not print substitutions
	User ID	Yes	Enter the user ID to be stored with the grade records.

## Roll Learner to Outcome Process (SHRROUT)

**Description** This process is used to roll learner curriculum records to the outcome curriculum and then insert new degree sequence records. You can select a group of students using population selection or enter individual Banner IDs. The process will read the population, find the current curriculum record for the effective term, and roll that data to the outcome for any curricula that have not been rolled. When SHRROUT is run, the curriculum records will be rolled, even when the **Roll Learner** radio group is set to *No*.

### Note

The setting of the **Roll Learner** radio group is not considered if the process is submitted manually using the **Roll to Outcome** button on SGASTDN or SFAREGS. The **Roll Learner** radio group can be set to *No*, and the user can still roll the curriculum manually. The grade roll (SHRROLL) will only roll the learner curriculum record if the **Roll Learner** radio group is set to *Yes*. ■

If neither a population selection group or Banner IDs are entered, the graduation application term, graduation application status to and from dates, or graduation application status must be entered. When graduation information is entered, the graduation application is selected along with all of the associated curriculum data. If the graduation application has an associated outcome curriculum, only those records will be selected, and the outcome will be updated with graduation application data, providing the outcome has not been awarded. If no graduation information is entered, the unrolled, current, active learner curriculum is selected for the learner effective term and is rolled.

You can run the process in Audit or Update Mode so records can be reviewed before they are rolled and committed to the database. Using Audit Mode will execute all the necessary processes except the SHKROLS procedure. The degree information returned from SHKROLS will not be printed on the output until the process is run in Update Mode.

You also have the option to produce a detailed report or a summary of totals. The detailed report shows the primary and any secondary curriculum data (program, level, college, campus, primary majors, and so on) that will be created in the SHADEGR record and the degree sequence number that will be associated with the curriculum, application number, status, and date.

The process provides an option to apply all existing graded and rolled courses (transfer and institutional) to the degree sequence that is created, as long as the courses have not been already applied to a degree with an awarded status. If graduation application selection criteria are entered and the degree already exists for the graduation application, the degree and diploma records are updated with data from the graduation application (graduation date, term, year, graduation status, and outcome completion term). The graduation application status exist, but the

graduation application term and dates can be left blank. The application that is found must have an active status. The graduation application date range is selected from the date in the SHBGAPP table, not the date stored in the SHRDGMR table.

The process populates the **Roll to Outcome** field in SGASTDN, SFAREGS, and SOILCUR to show that the curriculum record has been used to create a degree and an outcome record. It also inserts the graduation application sequence number for the curriculum in the SORLCUR and SHADEGR records. Outcome curriculum records that existed prior to the roll are inactivated after the process is run.

Diploma data (diploma name and address) can be inserted into SHBDIPL for the degree sequence number if the diploma data exists in SHBGAPP when the roll is executed. Indicators in the Diploma Name/Address Options window in SHAGADR are used to insert diploma data when the self-service application is submitted.

**Note**

This roll is independent of the Grade Roll to Academic History (SHRROLL). ■

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	PopSel Application	No	Enter the code that identifies the general area for which the selection identifier was defined. All or none of the population selection parameters must be entered.  The Population Selection Extract Inquiry Form (GLIEXTR) may be used to review the people who will be processed in the load from the selection identifier and application code entered.	Application Inquiry Form (GLIAPPL)
	PopSel Selection ID	No	Enter the code that identifies the population with which you wish to work. The selection identifier must be defined on the Population Selection Definition Rules Form (GLRSLCT). All or none of the population selection parameters must be entered.	Population Selection Inquiry Form (GLISLCT)
	PopSel Creator ID	No	Enter the user ID of the person who created the population rules. All or none of the population selection parameters must be entered.	

Parameters	Name	Required?	Description	Values
	PopSel User ID	No	Enter the user ID for the population selection. This is the ID of the user who selected the population of people. This may or may not be the same as the Creator ID. All or none of the population selection parameters must be entered.	
	Banner ID	No	Enter a valid SPRIDEN ID for the student to be rolled. Multiple IDs can be entered.	Person Search Form (SOAIDEN)
	Graduation Application Status	No	Enter the graduation application status code. Multiple codes can be entered.	Graduation Application Status Validation Form (STVGAST)
	Grad Appl Status From Date	No	Enter the from date for the graduation application status.	
	Grad Appl Status To Date	No	Enter the to date for the graduation application status.	
	Graduation Application Term	No	Enter the term code for the graduation application. Multiple terms can be entered.	Term Code Validation Form (STVTERM)
	Graduation Year	No	Enter the academic year code for the graduation year. Multiple years can be entered.	Academic Year Validation (STVACYR)
	Effective Term Code	Yes	Enter the term code for the effective term from which the learner curriculum should be selected.  This parameter is required if no graduation application information has been entered in SGBSTDN for the effective term.	Term Code Validation Form (STVTERM)
	Apply Courses	No	Enter <i>Y</i> to apply courses to a new degree or <i>N</i> to not apply courses. The default is <i>Y</i> .  If left blank, the setting of the <b>Award Graded Courses to New Degree</b> checkbox on SHACTRL will be used.	Y Apply courses to new degree N Do not apply courses

Parameters	Name	Required?	Description	Values
	Run Mode	Yes	Enter <i>A</i> to run the process in Audit Mode or <i>U</i> to run the process in Update Mode and update the database. The default is <i>A</i> .	A Audit Mode U Update Mode
	Print Mode	Yes	Enter <i>D</i> to produce a detailed report or <i>S</i> to only print totals. The default is <i>S</i> .	D Detailed output S Summary output of totals

## Banner Student System Management Procedures

### Value-Based Security and Personally Identifiable Information Security Using Fine-Grained Access Control

#### Processing Overview

Value-Based Security (VBS) using Fine-Grained Access Control (FGAC) provides functionality that uses existing columns to secure data, which is appropriate for sets of tables that contain security data and for securing small sets of data. (FGAC can be used to secure an updated version of VBS processing if you wish to use it in that capacity.) Seed data is used to define product domains and domain tables.

While Banner® provides role security and object level security, Fine-Grained Access Control is used for controlling row level security. You can restrict which rows are displayed to a user. Security checking takes place when the rows are accessed. FGAC dynamically modifies an SQL statement in a transparent way to users by adding a condition (WHERE clause) which restricts the rows shown to the user.

FGAC security can be defined on a table column in a primary table for predefined domains in Banner Student. These domains are in the Catalog, Schedule, Recruiting, Admissions, and General Student modules. Test score and transfer GPA domain information is also controlled within these modules. FGAC can also be used to secure Personally Identifiable Information (PII).

Please refer to the *Banner Data Security Handbook* (formerly titled the *Banner FGAC Handbook*), for more information on setting up and using FGAC with VBS and PII.

#### Banner Student VBS Domains

A Banner FGAC domain is an area in Banner that has a common driving table. An example of a domain is Banner Student Admissions, where the driver table is SARADAP.

All lesser tables in Admissions are part of the domain and will follow the restrictions that are set based on the rules defined for the Admissions domain.

Seed data is used to define the following Banner Student VBS domains:

- SB\_CATALOG\_VBS
- SB\_SCHEDULE\_VBS
- SB\_CURRICULUM\_VBS
- SB\_FIELDOFSTUDY\_VBS
- SB\_RECRUIT\_VBS
- SB\_ADMISSIONS\_VBS
- SB\_LEARNER\_VBS
- SB\_TESTSCORES\_VBS
- SB\_TESTSCORES\_STUDENT\_VBS
- SB\_TESTCODES\_VBS
- SB\_OTHERGPA\_VBS
- SB\_OTHERGPA\_STUDENT\_VBS
- SB\_OTHERGPACODES\_VBS

The following domains are used with Banner General using Banner Student tables.

- GB\_ADDRESS\_VBS (SPRADDR)
- GB\_MEDICAL\_VBS (SPRMEDI)
- GB\_TELEPHONE\_VBS (SPRTELE)

The following table lists the domains with descriptions and the associated driver tables.

Domain	Description	Driver Table
SB_CATALOG_VBS	Catalog	SCBCRSE
SB_SCHEDULE_VBS	Schedule	SSBSECT
SB_CURRICULUM_VBS	Recruiting, Admissions, Learner, Outcome Base Curriculum	SORLCUR
SB_FIELDOFSTUDY_VBS	Recruiting, Admissions, Learner, Outcome Base Fields of Study	SORLFOS
SB_RECRUIT_VBS	Recruiting	SRBRECR
SB_ADMISSIONS_VBS	Admissions	SARADAP
SB_LEARNER_VBS	General Student	SGBSTDN

Domain	Description	Driver Table
SB_TESTSCORES_VBS	Test Scores	SORTEST
SB_TESTSCORES_STUDENT_VBS	Test scores for learners, user has access	SORTEST
SB_TESTCODES_VBS	Test Codes	STVTESC
SB_OTHERGPA_VBS	Other GPA	SORGPAT
SB_OTHERGPA_STUDENT_VBS	Other GPAs for learners, user has access	SORGPAT
SB_OTHERGPACODES_VBS	Other GPA Codes	STVGPAT

## Banner Student Institutional Example Using VBS

This example is an overview of the kinds of security that can be employed when using Banner FGAC. For more examples, please refer to the section in this chapter titled “How to Use Banner Student VBS Domains”.

An institution has two colleges, the College of Arts and Sciences and the College of Education. Each college has its own Admissions Office and Registrar’s Office.

The Admissions Office can insert, update, delete, and select all recruiting and applications in their own college. They can also admit their applicants into their college, but they cannot change the General Student record. In addition, they can only query the recruiting, application, and student records in the other college.

The Registrar’s Office in both colleges can update, delete, insert, and query General Student records. They can view all recruiting and application records.

1. Create a business profile group for the College of Arts and Sciences for the Registrar’s Office and another one for the Admissions Office on the FGAC Business Profile Assignments Form (GOAFBPR).
2. Create a third and fourth business profile group for the College of Education Registrar’s Office and another one for the Admissions Office on GOAFBPR.
3. Insert the assigned business profile code for each user on GOAFBPR.
4. Create and activate the FGAC codes for the College of Arts and Sciences and for the College of Education on the FGAC Group Rules Form (GOAFGAC).
5. For each group, enter the domains (Admissions - SB\_ADMISSIONS\_VBS and Student - SB\_LEARNER\_VBS) and the predicate SQL statement that will match the table’s college to the access list using GOAFGAC.

6. Enter the business profile groups for each domain, and check the appropriate **Select**, **Insert**, **Update**, and **Delete** access checkboxes found in the Business Profile Access to Predicate block in the Access to Predicate window on GOAFGAC.

The result of setting up the restrictions using VBS with FGAC procedures is that the Admissions Office in the College of Arts and Sciences will be able to insert, update, and delete only applications that have their college code in the **College** field in the Curricula Summary - Primary block on SAAADMS. They can view all other applications, but Oracle FGAC will prevent them from making changes to other applications. The College of Education Admissions Office will have similar restrictions placed upon them. They can view applications in the College of Arts and Sciences, but Oracle FGAC will prevent them from modifying those applications.

## Banner Student PII Domains

Two types of domains are used for Banner FGAC, one for VBS and another for PII. You can implement PII and/or VBS. They are not dependent on one another. PII is executed for all system users, although certain users and program objects can be exempt. They are system-required only on the SPRIDEN table and are used for the selection of General Person data.

PII domains are used to define a processing area, which is tied to a driver table. To access a SPRIDEN row, the PIDM must have a row in one of the PII domains to which the user is assigned. Users will be able to access PII only for records in their processing area. For example, if you work in the Admissions office, you will only be able to view PII for student applicants. Masking rules can be used on forms to prevent the display of sensitive data, such as a date or SSN.

PII processing does not require the definition of a predicate. The use of the predicate is dictated by the PII domain driver tables and the PII column. The GOKFGAC package is used to construct the predicates for PII functions for selecting information.

### Note

The SPRIDEN\_CREATE\_FDMN\_CODE column on SPRIDEN has a value of `ctx_fg_fdmn_code_home` and is used as the context variable that houses the PII domain of the user's home domain from GOAFPUD. This column is populated by APIs. ■

The following seed data is used to define Banner Student PII domains:

Domain Code	Driver Table	PII Column Name
SB_FACULTY_PII	SIBINST	SIBINST_PIDM
SB_HOUSING_PII	SLBRMAP	SLBRMAP_PIDM
SB_RECRUIT_PII	SARADAP	SRBRECR_PIDM

Domain Code	Driver Table	PII Column Name
SB_ADMISSIONS_PII	SARADAP	SARADAP_PIDM
SB_GENSTUDENT_PII	SGBSTDN	SGBSTDN_PIDM
SB_REGISTRATION_PII	SFBETRM	SFBETRM_PIDM
SB_TRANSFER_PII	SHRTTRM	SHRTTRM_PIDM

## Banner Student Institutional Example for PII

This example is an overview of the kinds of security that can be employed when using Banner FGAC.

The goal of this example is to restrict access to ID and name information based on the work location of the user and the functional location of data for the ID.

- Staff members in the Admissions, Registration, Student Billing, and Student Dean's offices are assigned to the functional locations of Admissions, Enrollment, and General Student.
- Staff members in the Payroll area are assigned to the functional locations of Applicant, Benefits, and Beneficiary.
- When the staff members in the Admissions office open a Banner form and enter an ID that does not have a record in Admissions, Enrollment, or General Student, it will appear as if the ID does not exist in the system.
- When staff members in the Payroll area open a Banner form and enter an ID that does not have a record in any of the Banner Human Resources areas, it will again appear as if the ID does not exist for the system.

Typically, the Banner Student System administrative offices do not have access to Payroll type forms, and the Payroll area may not have access to Banner Student System administrative forms. That alone prevents access to the data in those products. PII goes one step farther and prevents these offices from viewing the lists of people that exist for the other products.

## How to Use Banner Student VBS Domains

The following section provides information about Banner Student domains and how they can be implemented.

## Catalog Domain

Domain	Description	Driver	Tables
SB_CATALOG_VBS	Course Catalog	SCBCRSE	SCRSYLO, SCRSYRM, SCRSYTR, SCRTEXT, SCRSYLN, SCRFEEES, SCRGMOD, SCRLEVEL, SCRRARE, SCRRCAM, SCRRCLS, SCRRCMP, SCRRCOL, SCRDEG, SCRRLVL, SCRMAJR, SCRPRG, SCRTRM, SCRRTST, SCR SBGI, SCBCDTL, SCBCRSE, SCBDESC, SCBSUPP

The Catalog domain predicates should be used to control the insertion, updating, and deletion of data. The impact of having predicates to control selection of the catalog is far reaching in Banner Student and may cause corrupt data. For example, the course title is derived from the catalog if not it is not available from the schedule. The course title appears on many pages and reports.

### Restrictions

Restriction Mode	Columns Used in Restrictions	Column Description
Insert, Update, Delete	SCBCRSE_SUBJ_CODE	Subject area of the course
Insert, Update, Delete	SCBCRSE_CRSE_NUMB	Course number associated with the subject for the course
Insert, Update, Delete	SCBCRSE_EFF_TERM	Term this version of the course becomes effective
Insert, Update, Delete	SCBCRSE_COLL_CODE	College which offers the course
Insert, Update, Delete	SCBCRSE_DIVS_CODE	Division which offers the course
Insert, Update, Delete	SCBCRSE_DEPT_CODE	Department which offers the course
Insert, Update, Delete	SCBCRSE_CSTA_CODE	Status code for the course
Insert, Update, Delete	SCBCRSE_CIPC_CODE	CIP code (primary subject matter) for the course

## ***Business Cases***

### **Business Cases Using**

SB\_CATALOG\_VBS

### **Business Case Issues**

Restrict by subject or department or college (using Insert, Update, Delete)

```
SCBCRSE_SUBJ_CODE IN ('1','2')
AND
SCBCRSE_DEPT_CODE IN ('1','2')
AND
SCBCRSE_COLL_CODE IN ('1','2')
```

Restrict maintenance by college, department, or subject

## ***Other Business Cases***

### **Other Business Case Examples Using** SB\_CATALOG\_VBS

N/A

## ***Impacted Objects***

### **Objects that may be impacted by restrictions**

### **Possible Impacts**

SCACRSE	Maintenance of course catalog information
SCADETL	Maintenance of course catalog information
SCARRES	Maintenance of course catalog information
SCAPREQ	Maintenance of course catalog information
SCASRES	Maintenance of course catalog information
SCABASE	Maintenance of base catalog information
SCASYLB	Maintenance of course catalog syllabus
Faculty Self-Service	Maintenance of course catalog information

## Schedule Domain

Domain	Description	Driver	Tables
SB_SCHEDULE_VBS	Class Schedule	SSBSECT	SSBDESC, SSBFSEC, SSBOVRR, SSBSECT, SSRATTR, SSRBLCK, SSRCORQ, SSREVAL, SSREXTN, SSRFEES, SSLINK, SSRMEET, SSRMPRT, SSRMRDF, SSRRARE, SSRCLL, SSRRCMP, SSRRDEG, SCRRLVL, SSRMAJ, SSRPRG, SSRSTS, SSRRTST, SSRSCCD, SSRSPRT, SSRSRDF, SSRSYLN, SSRSYLO, SSRSYRM, SSRSYTR, SSRTEXT, SSRXLST, SSRRESV, SSRRFND, SSRRLVL, SSRMAJ, SSRPRG

The Schedule domain predicates should be used to control the insertion, updating, and deletion of data. It is recommended that the selection restrictions not be applied to the Schedule tables. This could impact viewing student course data on transcripts and other online course reports.

### Note

Special processing is used by the learner registration validation and update package SFKEDIT to turn FGAC off so that enrollment counts will not be compromised by VBS restrictions. ■

### Restrictions

Restriction Mode	Columns Used in Restrictions	Column Description
Insert, Update, Delete	SSBSECT_INSM_CODE	Instructional method code assigned to the section
Insert, Update, Delete	SSBSECT_TERM_CODE	Term code for the course section information
Insert, Update, Delete	SSBSECT_PTRM_CODE	Part-of-term in which the section is offered
Insert, Update, Delete	SSBSECT_SUBJ_CODE	Subject code for the section
Insert, Update, Delete	SSBSECT_SSTS_CODE	Status of the section

<b>Restriction Mode</b>	<b>Columns Used in Restrictions</b>	<b>Column Description</b>
Insert, Update, Delete	SSBSECT_SCHD_CODE	Instructional type of the section being scheduled
Insert, Update, Delete	SSBSECT_CAMP_CODE	Campus on which the section is scheduled
Insert, Update, Delete	SSBSECT_GMOD_CODE	Grading mode for the section
Insert, Update, Delete	SSBSECT_SESS_CODE	Session in which the section is scheduled

### ***Business Cases***

<b>Business Cases Using SB_SCHEDULE_VBS</b>	<b>Business Case Issues</b>
Restrict by subject or campus or session or schedule type (using Insert, Update, Delete)  SSBSECT_SUBJ_CODE IN ('1','2') AND SSBSECT_CAMP_CODE IN ('1','2') AND SSBSECT_GMOD_CODE IN ('1','2')	Restrict maintenance of the schedule to subject, campus, or grade mode types

### ***Other Business Cases***

<b>Other Business Case Examples Using SB_SCHEDULE_VBS</b>
N/A

### ***Impacted Objects***

<b>Objects that may be impacted by restrictions</b>	<b>Possible Impacts</b>
SSASECT	Maintenance of schedule information
SSADETL	Maintenance of schedule information
SSATEXT	Maintenance of schedule information
SSAPREQ	Maintenance of schedule information

**Objects that may be impacted by restrictions**

**Possible Impacts**

SSASYLB	Maintenance of schedule information
SSARULE	Maintenance of schedule information
SSAACCL	Maintenance of schedule information
SSAASEC	Maintenance of schedule information
SSAEVAL	Maintenance of schedule information
SSAOVRR	Maintenance of schedule information
SSASECQ	Maintenance of schedule information
Faculty Self-Service	Maintenance of schedule information

**Curriculum Domain**

Domain	Description	Driver	Tables
SB_CURRICULUM_VBS	Recruiting, Admissions, Learner, Outcome, Base Curriculum	SORLCUR	SORLCUR

All curriculum data is maintained in the base curriculum and field of study tables SORLCUR and SORLFOS. Restrictions on the insertion and deletion of curriculum data should be written against these tables. Also, curriculum data cannot be updated. The process used to change data includes copying the curriculum record using the key insert/key duplicate and making changes to the new record.

If the user wishes to restrict selection against SRBRECR, SARADAP, and SGASTDN based on the primary or secondary curriculum, they can use those tables' curriculum columns in building selection, updating, and deletion rules against those tables. The primary and secondary curriculum data are backfilled from SORLCUR and SORLFOS to SARADAP, SRBRECR, and SGASTDN after all inserts have occurred.

If selection restrictions are built using the SRBRECR, SARADAP, and SGASTDN curriculum data columns, an alternative check needs to be added for the data to be null. The Curriculum API validates the existence of the host record before allowing an insert. For example, you cannot insert an application module curriculum if the application does not exist. The application will appear to not exist if the rule is only for non-null values.

## ***Restrictions***

<b>Restriction Mode</b>	<b>Columns Used in Restrictions</b>	<b>Column Description</b>
Insert, Delete	SORLCUR_LMOD_CODE	Learner module code for the curriculum
Insert, Delete	SORLCUR_TERM_CODE	Term code for the curriculum
Insert, Delete	SORLCUR_LEVL_CODE	Level code for the curriculum
Insert, Delete	SORLCUR_COLL_CODE	College code for the curriculum
Insert, Delete	SORLCUR_DEGC_CODE	Degree code for the curriculum
Insert, Delete	SORLCUR_TERM_CODE_CTLG	Catalog term code for the learner curriculum
Insert, Delete	SORLCUR_ADMT_CODE	Admit code for the learner's admission to the curriculum
Insert, Delete	SORLCUR_CAMP_CODE	Campus code for the curriculum
Insert, Delete	SORLCUR_PROGRAM	Program code for the curriculum

## ***Business Cases***

### **Business Cases Using**

SB\_CURRICULUM\_VBS

### **Business Case Issues**

#### **Restrict recruits by curriculum**

```
SORLCUR_LMOD_CODE =  
sb_curriculum.f_recruit AND  
SORLCUR_LEVL_CODE = 'X' AND  
SORLCUR_COLL_CODE = 'XX'
```

Need to restrict various campus offices that recruit different populations for different programs

```
SORLCUR_LMOD_CODE = sb_curriculum.f_admissions AND  
SORLCUR_LEVL_CODE = 'X' AND  
SORLCUR_COLL_CODE = 'XX'
```

## Other Business Case Examples Using SB\_CURRICULUM\_VBS

---

### Learners by curriculum

```
SORLCUR_LMOD_CODE = sb_curriculum.f_learner AND  
SORLCUR_LEVL_CODE = 'X' AND  
SORLCUR_COLL_CODE = 'XX'
```

### Outcome by curriculum

```
SORLCUR_LMOD_CODE = sb_curriculum.f_outcome AND  
SORLCUR_LEVL_CODE = 'X' AND  
SORLCUR_COLL_CODE = 'XX'
```

### *Impacted Objects*

#### Objects that may be impacted by restrictions \*

#### Possible Impacts \*\*

---

SRAQUIK	Cannot save the recruit, application, or learner record if primary curriculum cannot be saved
SAAADMS	Cannot save the application if primary curriculum cannot be saved
SGASTDN	Maintenance of the learner's curriculum
SAAQUIK	Cannot create the learner record, application, or recruit record since the curriculum cannot be saved
SRARECR	Cannot save the recruit record if primary curriculum cannot be saved
SFAREGS	Maintenance of the learner's curriculum
SHADEGR	Maintenance of the learner's outcome curriculum
SRIPREL	Cannot create the recruit or application for prospect
SAADCRV	Cannot add a decision to applicant that will result in a learner record being created
SAADCBT	Cannot add a decision to applicant that will result in a learner record being created
SAAEAPS	Cannot push the application for an electronic applicant
Online Grade Roll	Cannot create the outcome record or add unrolled curriculum during the online grade rolls
SOVLCUR	Selection of curriculum information

\* Impacted objects do not include Banner batch objects. All job type objects are listed in the Banner General FGAC GORFEOB object. Banner security turns VBS using FGAC off when an object exists in the GORFEOB table.

\*\* This list may not include all possible impacts. This needs to be reviewed by each institution based on the type of restrictive rule coded on GOAFGAC.

### Field of Study Domain

Domain	Description	Driver	Tables
SB_FIELDOFSTUDY_VBS	Recruiting, Admissions, Learner, Outcome, Base Fields of Study	SORLFOS	SORLFOS

### Restrictions

Restriction Mode	Columns Used in Restrictions	Column Description
Insert, Delete	SORLFOS_MAJR_CODE_ATTACH	Major code to which the concentration is attached
Insert, Delete	SORLFOS_MAJR_CODE	Major code for the field of study
Insert, Delete	SORLFOS_DEPT_CODE	Department code associated with the major field of study
Insert, Delete	SORLFOS_TMST_CODE	Time status code used to indicate the intent of the student's pursuit of the field of study

### Business Cases

#### Business Cases Using

SB\_FIELDOFSTUDY\_VBS

#### Business Case Issues

Restrict any learner module by major  SORLFOS_DEPT_CODE = 'XXX' AND SORLFOS_MAJR_CODE = 'XXX' AND SORLFOS_LFST_CODE = sb_fiel dofstudy_str.f_major	Need to restrict major changes to certain departments by department
---	---

## Other Business Cases

### Other Business Case Examples Using SB\_FIELDOFSTUDY\_VBS

---

#### Recruits by department or major

```
SORLFOS_DEPT_CODE = 'XXX' AND  
SORLFOS_MAJR_CODE = 'XXX' AND  
EXISTS (SELECT 'X' FROM SORLCUR WHERE  
SORLCUR_PIDM = SORLFOS_PIDM AND SORLCUR_SEQNO = SORLFOS_LCUR_SEQNO AND  
SORLCUR_LMOD_CODE = sb_curriculum_str.f_recruit)
```

#### Applicants by department or major

```
SORLFOS_DEPT_CODE = 'XXX' AND  
SORLFOS_MAJR_CODE = 'XXX' AND  
EXISTS (SELECT 'X' FROM SORLCUR WHERE SORLCUR_PIDM = SORLFOS_PIDM AND  
SORLCUR_SEQNO = SORLFOS_LCUR_SEQNO AND SORLCUR_LMOD_CODE = sb_curriculum_str.f_admissions)
```

#### Learners by department or major

```

SOILCUR	View recruiting information
SRASUMI	View recruiting information
SOASBSM	View recruiting information
SOAPCSM	View recruiting information
Banner Student and Banner Financial Aid product views with policy tables for SB_RECRUIT_VBS	View recruiting information

**Admissions Domain**

Domain	Description	Driver	Tables
SB_ADMISSIONS_VBS	Admissions Application	SARADAP	SARADAP, SARAPPD, SARCHKL, SARCHRT, SARDSL, SARQUAN, SARRRAT, SARRSRC

The Admissions domain predicates built on non-curriculum items are meant to control the selection, insertion, updating, and deletion of the application data. Predicates that include the primary or secondary curriculum items should only be used to control selection, updating, or deletion of the application.

In addition, the curriculum data is null until the backfill has been run, and any predicate that checks the application curriculum should also check alternatively if the curriculum fields are null. This is required for the curriculum APIs to complete, because one of the checks in the curriculum insert is that the host record must exist.

**Restrictions**

Restriction Mode	Columns Used in Restrictions	Column Description
Select, Insert, Update, Delete	SARADAP_TERM_CODE_ENTRY	Term associated with the information on applicant record
Select, Insert, Update, Delete	SARADAP_APST_CODE	Status of the application

<b>Restriction Mode</b>	<b>Columns Used in Restrictions</b>	<b>Column Description</b>
Select, Insert, Update, Delete	SARADAP_ADMT_CODE	Admission type of the applicant
Select, Insert, Update, Delete	SARADAP_STYP_CODE	Type of student the applicant will become if admitted
Select, Insert, Update, Delete	SARADAP_SITE_CODE	Site to which applicant is applying
Select, Insert, Update, Delete	SARADAP_RESD_CODE	Residency classification of the applicant
Select, Insert, Update, Delete	SARADAP_FULL_PART_IND	Identifies if applicant intention is for full or part time enrollment
Select, Insert, Update, Delete	SARADAP_SESS_CODE	Session applicant is applying for
Select, Insert, Update, Delete	SARADAP_RATE_CODE	Specific assessment rate assigned to the student
Select, Insert, Update, Delete	SARADAP_RECR_CODE	Recruiter code for the applicant
Select, Insert, Update, Delete	SARADAP_RTYP_CODE	Recruit type code for the applicant
Select, Update, Delete	SARADAP_LEVL_CODE	Level for which the applicant is applying
Select, Update, Delete	SARADAP_CAMP_CODE	Campus to which applicant is applying
Select, Update, Delete	SARADAP_COLL_CODE_1	Primary college to which applicant is applying
Select, Update, Delete	SARADAP_DEGC_CODE_1	Primary degree for which applicant is applying
Select, Update, Delete	SARADAP_MAJR_CODE_1	Primary major for which applicant is applying
Select, Update, Delete	SARADAP_DEPT_CODE	Department to which applicant is applying

<b>Restriction Mode</b>	<b>Columns Used in Restrictions</b>	<b>Column Description</b>
Select, Update, Delete	SARADAP_PROGRAM_1	Curriculum 1 program code for which applicant is applying
Select, Update, Delete	SARADAP_TERM_CODE_CTLG_1	Curriculum 1 catalog term code for which applicant is applying

### ***Business Cases***

<b>Business Cases Using SB_ADMISSIONS_VBS</b>	<b>Business Case Issues</b>
Restrict by instate applicants (using Select, Insert, Update, Delete)  SARADAP_RESD_CODE = '<value for instate>'	Need to restrict creation of the application based on if applicant is instate or out of state
Restrict applications by primary level and college (using Select, Update, Delete)  (SARADAP_LEVEL_CODE = 'UG' AND SARADAP_COLL_CODE_1 = 'AS') OR (SARADAP_LEVEL_CODE IS NULL AND SARADAP_COLL_CODE_1 IS NULL)	Need to restrict selection, updating, and deletion of the application based on the primary curriculum level and college

#### Possible Impacts

---

SOATEST	Selection of test scores
SAADCRV	Decision calculator
SRIPREL	Insertion of test scores during creation or updating of recruit and application from electronic prospect
SAAEAPS	Insertion of test scores during creation or updating of application from electronic applicant
Banner Student and Banner Financial Aid views with queries against SORTEST	Selection of records

### Student Test Scores Domain

Domain	Description	Driver	Tables
SB_TESTSCORES_STUDENT_VBS	Test Scores for Learner for Which User has Access	SORTEST	SORTEST

This domain comes with a built-in function that limits access to test scores based on the existence of recruit, applicant, or learner records. If the learner has one of these module records and the user has access to one of them, then they will have access to the associated test scores for the student. If the learner does not have one of these module records, then the user has access to the test scores.

## ***Restrictions***

<b>Restriction Mode</b>	<b>Columns Used in Restrictions</b>	<b>Column Description</b>
Select, Insert, Update, Delete	SORTEST_TESC_CODE	Test score code associated with various tests, i.e., SAT, ACT
Select, Insert, Update, Delete	SORTEST_TSRC_CODE	Test source or how the test score was entered, i.e., data load or self-reported
Select, Insert, Update, Delete	SORTEST_TADM_CODE	Administrative type of a particular test, i.e., locally or nationally administered
Select, Insert, Update, Delete	SORTEST_ADMR_CODE	Admissions checklist item code which is cross-referenced

## ***Business Cases***

### **Business Cases Using**

SB\_TESTSCORES\_STUDENT\_VBS

### **Business Case Issues**

Restrict access to test scores (using Insert, Update, Delete)

Limit user access to test scores if the learner has a record in their processing area (recruiting, application, or general student), and they have access to that record. If the learner does not have one of these records, the user then has access to all test scores.

No restrictive predicate is required for the above.

## ***Other Business Cases***

### **Other Business Case Examples Using** SB\_TESTSCORES\_STUDENT\_VBS

By admission request checklist code

```
SORTEST_ADMR_CODE in ('1','2','3')
```

## *Impacted Objects*

### Objects that may be impacted by restrictions

Objects that may be impacted by restrictions	Possible Impacts
SOATEST	Selection of test scores
SAADCRV	Decision calculator
SRIPREL	Insertion of test scores during creation or updating of recruit and application from electronic prospect

## How to Use Banner General VBS Domains with Banner Student

The following section provides information about Banner General domains that use Banner Student drivers and tables and how they can be implemented.

### Addresses Domain

Domain	Description	Driver	Tables
GB_SPRADDR_VBS	Person Addresses	SPRADDR	SPRADDR

### Restrictions

Restriction Mode	Columns Used in Restrictions	Column Description
Select, Insert, Update, Delete	SPRADDR_ASRC_CODE	Address source code associated with the person
Select, Insert, Update, Delete	SPRADDR_ATYP_CODE	Type of address associated with the person
Select, Insert, Update, Delete	SPRADDR_STAT_CODE	State/province associated with the person's address
Select, Insert, Update, Delete	SPRADDR_ZIP	ZIP code associated with the person's address
Select, Insert, Update, Delete	SPRADDR_NATN_CODE	Nation/country associated with the person's address

## ***Business Cases***

### **Business Cases Using**

GB\_SPRADDR\_VBS

### **Business Case Issues**

---

Restrict by address type (using Select, Insert, Update, Delete)

```
SPRADDR_ATYP_CODE IN ('MA','W2')
```

## ***Other Business Cases***

### **Other Business Case Examples Using GB\_SPRADDR\_VBS**

---

By address maintenance by the address source

```
SPRADDR_ASRC_CODE IN ('SELF','POST')
```

By maintenance of addresses by state, ZIP, or nation

```
SPRADDR_STAT_CODE IN ('MA','VT','NH','ME','NY','RI')
```

## ***Impacted Objects - Banner Student***

### **Banner Student objects that may be impacted by restrictions**

Domain	Description	Driver	Tables
GB_SPRTELE_VBS	Person Telephone Numbers	SPRTELE	SPRTELE

**Restrictions**

Restriction Mode	Columns Used in Restrictions	Column Description
Select, Insert, Update, Delete	SPRTELE_TELE_CODE	Telephone type code for the person's telephone number
Select, Insert, Update, Delete	SPRTELE_ATYP_CODE	Optional address type code associated with telephone number

**Business Cases**

**Business Cases Using**

GB\_SPRTELE\_VBS

**Business Case Issues**

Restrict by telephone type (using Select, Insert, Update, Delete)

SPRTELE\_TELE\_CODE IN ('HOME', 'FAX')

**Other Business Cases**

**Other Business Case Examples Using** GB\_SPRTELE\_VBS

N/A

## Impacted Objects

### Objects that may be impacted by restrictions

	Possible Impacts
SPAIDEN	Maintenance of telephone number
SAAQUIK	Maintenance of telephone number
SRAQUIK	Maintenance of telephone number
SPATELE	Maintenance of telephone number

## Medical Domain

Domain	Description	Driver	Tables
GB_SPRMEDI_VBS	Person Medical Information	SPRMEDI	SPRMEDI

## Restrictions

Restriction Mode	Columns Used in Restrictions	Column Description
Select, Insert, Update, Delete	SPRMEDI_MEDI_CODE	Medical code associated with the person
Select, Insert, Update, Delete	SPRMEDI_MDEQ_CODE	Medical equipment code associated with the person
Select, Insert, Update, Delete	SPRMEDI_DISA_CODE	Disability type code associated with the person
Select, Insert, Update, Delete	SPRMEDI_SPSR_CODE	Disability service code available to the person

## Business Cases

### Business Cases Using

GB\_SPRMEDI\_VBS

### Business Case Issues

Restrict by medical code (using Select, Insert, Update, Delete)      Different health professionals are used for different medical issues

SPRMEDI\_MEDI\_CODE = 'DE'

## Other Business Cases

### Other Business Case Examples Using GB\_SPRMEDI\_VBS

---

N/A

### Impacted Objects - Banner Student

#### Objects that may be impacted by restrictions

#### Possible Impacts

---

SAAEAPS	Push application with medical information
Banner Student views	Selection of medical information

### Other Impacted Objects

#### Other product objects that may be impacted by restrictions

#### Possible Impacts

---

GOAMEDI	Maintenance of medical information
PEAEACC	Maintenance of employee accommodations
Banner Human Resources Payroll views	Selection of medical information

## Seed Data

The following seed data is used with Banner FGAC.

### Domain Driver Table Seed Data for GORFDMN

The following domain driver table seed data for each domain on the FGAC Domain Validation Form (GTVFDMN) is used with FGAC for Banner Student.

Domain	Description	Driver Table
SB_CATALOG_VBS	Catalog	SCBCRSE
SB_SCHEDULE_VBS	Schedule	SSBSECT
SB_CURRICULUM_VBS	Recruiting, Admissions, Learner, Outcome Base Curriculum	SORLCUR

Domain	Description	Driver Table
SB_FIELDOFSTUDY_VBS	Recruiting, Admissions, Learner, Outcome Base Fields of Study	SORLFOS
SB_RECRUIT_VBS	Recruiting	SRBRECR
SB_ADMISSIONS_VBS	Admissions	SARADAP
SB_LEARNER_VBS	General Student	SGBSTDN
SB_TESTSCORES_VBS	Test Scores	SORTEST
SB_TESTSCORES_STUDENT_VBS	Test scores for learners, user has access	SORTEST
SB_TESTCODES_VBS	Test Codes	STVTESC
SB_OTHERGPA_VBS	Other GPA	SORGPAT
SB_OTHERGPA_STUDENT_VBS	Other GPAs for learners, user has access	SORGPAT
SB_OTHERGPACODES_VBS	Other GPA Codes	STVGPAT
SB_FACULTY_PII	Faculty	SIBINST
SB_HOUSING_PII	Housing	SLBRMAP
SB_RECRUIT_PII	Recruiting	SARADAP
SB_ADMISSIONS_PII	Admissions	SARADAP
SB_GENSTUDENT_PII	General Student	SGBSTDN
SB_REGISTRATION_PII	Registration Enrollment	SFBETRM
SB_TRANSFER_PII	Transfer Course Maintenance	SHRTTRM

### VBS Policy Table Seed Data (GORFDPL)

The following domain policy table seed data is used with FGAC for Banner Student. Domains are listed by driver table and with the tables where predicate functions are built. This data is found on the FGAC VBS Table Rules Form (GORFDPL). Entries on this form are required for Oracle policy creation. The driver SQL joins the policy table to the domain driver table. VBS restrictions are written for the domain driver table.

Domain	Policy Table	Driver SQL
SB_CATALOG_VBS	SCBCRSE

# 15 FTES Reporting

## Reports Used in FTES Reporting

The following reports are in this chapter.

Weekly Student Contact Hours Report	(SADA3202)
Daily Student Contact Hours Report	(SADA3203)
Actual Hours of Attendance Contact Hours Report	(SADA3204)
Independent Study Weekly Student Contact Hours Report	(SADA3205)
Independent Study Daily Student Contact Hours Report	(SADA3206)
Faculty Contact Hours of Flex-Time Activities Report	(SADAFLEX)
FTES Reporting Print Program	(SADAPRNT)
Print Apportionment Detail by Course Report	(SERADAL)

Each SADA% report has a description and reporting domain, parameter information, output, summary, and calculation details, and sample output pages. SADAPRNT uses scripts to create four of the FTES reports: SADA3202, SADA3203, SADA3204, and SADAFLEX.

## Weekly Student Contact Hours Report (SADA3202)

**Description** This report provides section statistics for user selected attendance methods, as well as provides Weekly Contact Calculations for those sections.

The reporting domain is only those sections within the term specified which have not been excluded via the parameter selections. Report only registered students in those sections whose registration status has the **Count in Enrollment** checkbox on the Course Registration Status Code Validation Form (STVRSTS) checked or set to *Y*.

Parameters	Name	Required?	Description	Values
	Campus Code	Yes	Single Enter the campus code for which the data is to be extracted, or enter % for all.	Campus Code Validation Form (STVCAMP)
	Attendance Method	Yes	Single	Attendance Accounting Method Validation Form (STVACCT)
	First Period Calculation	Yes	The first period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 7/1 to 12/31.) Any course whose census one date is between 7/1 and 12/31 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple Regular terms to be used for determining first period courses. For example, Fall may be reviewed for first period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	First Period Beginning Date	Yes	Single Format DD-MON-YYYY	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	First Period Ending Date	Yes	Single Format DD-MON-YYYY	
	First Period ADA Annualizer	Yes	Single Format 99.9999	
	Term Length Multiplier 1 (TLM1)	Yes	Single Format 99.99	
	Second Period Calculation	Yes	The second period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 1/1 to 4/15.) Any course whose census one date is between 1/1 and 4/15 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple Regular terms to be used for determining second period courses. For example, Fall and Spring may be reviewed for second period courses.	Term Code Validation Form (STVTERM)
	Second Period Beginning Date	Yes	Single Format DD-MON-YYYY	
	Second Period Ending Date	Yes	Single Format DD-MON-YYYY	
	Second Period ADA Annualizer	Yes	Single Format 99.9999 Required if Second Period Calculation is set to Y.	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Term Length Multiplier 2 (TLM2)	Yes	Single  Format 99.99  Required if Second Period Calculation is set to <i>Y</i> .	
	Third Period Calculation	Yes	The third period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 4/16 to 6/30.) Any course whose census one date is between 4/16 and 6/30 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple  Regular terms used for determining the Third Period Calculation. For example, Spring may be reviewed for third period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	Third Period Beginning Date	Yes	Single  Format DD-MON-YYYY	
	Third Period Ending Date	Yes	Single  Format DD-MON-YYYY	
	Term Length Multiplier 3 (TLM3)	Yes	Single  Format 99.99  Required if Third Period Calculation is set to <i>Y</i> .	
	Unused Parameter			
	Foreign Residence Codes	No	Multiple	Residence Code Validation Form (STVRESL)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	State Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)
	Outside State Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)
	Non-Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Schedule Type Codes to be Excluded	No	Multiple Sections with those codes are excluded from the report. If Null, all Schedule Types are included.	Schedule Type Code Validation Form (STVSCHD)
	Exclude Co-operative Education Courses	No	Single Enter Y to exclude sections with these codes from the report.	Y Exclude co-oped sections N Do not exclude co-oped sections
	Classification Codes to be Excluded	No	Multiple May be %. Sections with these codes are excluded from the report.	Classification Code Validation Form (STVCCSL)
	Occupational Course Codes to be Excluded	No	Multiple Sections with these codes are excluded from the report. This will be used to exclude work experience courses.	Occupational Course Code Validation Form (STVOCCS)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Contract Codes to be Excluded	No	Multiple May be %.  Sections with these codes are excluded from the report.	Schedule Contract Code Validation Form (STVSCCD)
	Section Attribute Codes to be Excluded	No	Multiple	Attribute Validation Form (STVATTR)
	Day Session Codes	Yes	Multiple  Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)
	Ext. Day Session Codes	Yes	Multiple  Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)
	In-Service Section Attributes	No	Multiple  If entered then the courses with these attributes will be reported separately as in-service courses.	Attribute Validation Form (STVATTR)
	Basic Skills Attributes	No	Multiple  If entered then the courses with these attributes will be reported separately as Basic Skills courses.	Attribute Validation Form (STVATTR)
	Unused Parameter			
	Citizenship Type	No	Single  This field is used for the amnesty totals for Basic Skills courses.	Citizen Type Code Validation Form (STVCITZ)
	Debug - Print Extract Record?	Yes	Single  When this parameter is <i>Y</i> , the extract record will be printed to the log file.	Y Print to log file N Do not print to log file

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Part-of-Term	Yes	Single Enter the code for the part-of-term for which data is to be extracted, or enter % to extract records for all parts-of-term.	Part of Term Code Validation Form (STVPTRM)
	Academic Year	Yes	Single Enter the academic year for the reporting period.	Academic Year Validation Form (STVACYR)
	Collect Course Detail Data	Yes	Single When this parameter is <i>Y</i> , course data will be collected and stored in a temporary table.	Y Collect and store data N Do not collect and store data
	Leased (Building) Facilities Codes	No	Multiple Enter the codes for leased facilities to report separately on courses that are taught there.	Building/Room Attribute Code Validation Form (STVRDEF)

Parameters	Name	Required?	Description	Values
	Registration Status Codes to Exclude Students from Enrollment Counts	Yes	Multiple Enter the registration status codes for students who are not to be included in enrollment counts.	Course Registration Status Code Validation Form (STVRSTS)
	Count in Enrollment Indicator	Yes	Multiple Enter <i>R</i> (Registered), <i>W</i> (Withdrawal), <i>D</i> (Drop), or <i>L</i> (Waitlisted) to set the value of the <b>Status Type</b> field (STVRSTS_VOICE_TYPE) on STVRSTS.  The value selected is used to determine which course registration status codes on STVRSTS are to be counted in enrollment when the registration status date is prior to the section's census one date.  <b>Note:</b> You should select the values your institution wishes to use, to be counted as enrollment for state reporting. Adding these values will not change your institutions's existing Banner® Voice Response setup and/or functionality.	R Registered W Withdrawal D Drop L Waitlisted

### Page Breaks:

Page breaks are produced by term.

Page breaks are produced for:

- Basic Skills sections
- Basic Skills sections - Amnesty Students
- Leased Facilities sections

### Report Headings:

Term

Campus

Attendance Method

**Sort By:**

Subject, Course Number within Section Number

**Detail Elements on Report:**

Credit/Non-Credit Indicator (CN)

Day/Ext. Day Indicator (S)

Course Reference Number (SECTION IDENTIFIER)

Subject code and Course number (SECTION IDENTIFIER)

Section Number (SECTION IDENTIFIER)

Section Credit Hours (CR HRS)

\* Census Week One Section Enrollment (ENROLLMENT)

\* Section Weekly Contact Hours (sum of all session meetings)

\* Section Total Contact Hours (sum of all session meetings)

\* Enrollment Census Week One

\* Weekly Contact Hours Census Week One (WSCH1) (calculated)

\* Contact Hours for California Residents broken down by:

- In-state
- Total

\* Contact Hours for Non-residents broken down by:

- Out-of-State

- Foreign
- Total

\* Summary Totals are produced at the end of the report for:

- Weekly Contact Hours Day Sections
- Weekly Contact Hours Extended Day Sections
- Weekly Contact Hours Credit Sections
- Weekly Contact Hours Non-Credit Sections

### **Report Calculations for the Detail Information:**

Weekly Contact Hours for Census Week One (WSCH1) equals:

Section Weekly Contact Hours \* Census Week 1 Enrollment

*Example:*

Section Weekly Contact Hours = 3

Census Week One (CW1) = 25

WSCH1 = 3 \* 25

This is a rounded Calculation.

#### **Note**

TLM1 and ADA Annualizer are all obtained from the parameter values entered by the user. ■

### **Summary Elements on Report:**

WSCH1 for Day Session Sections broken down by State Residents and Non-residents.

WSCH1 for Ext. Day Session sections broken down by State Residents and Non-residents.

## Report Calculations for the Summary Information:

If the First Period calculation has been requested, then the following is performed at the end of the report for each regular term in the parameter selection:

### ***First Period FTES equals:***

$$\frac{(\text{WSCH1}) * \text{TLM1} * \text{First Period ADA Annualizer}}{525}$$

If the Second Period calculation has been requested, then the following is performed at the end of the report for each regular term in the parameter selection:

### ***Second Period FTES equals:***

$$\frac{(\text{WSCH1 Term 1} * \text{TLM1}) + (\text{WSCH1 Term 2} * \text{TLM 2}) * \text{Second Period ADA Annualizer}}{525}$$

If the Third Period Calculation has been requested, then the following is performed at the end of the report:

### ***Third Period FTES equals:***

$$\frac{(\text{WSCH1 Term 1} * \text{TLM1}) + (\text{WSCH1 Term 2} * \text{TLM 2}) + (\text{WSCH1 Term 3} * \text{TLM3})}{525}$$

## Daily Student Contact Hours Report (SADA3203)

**Description** This report provides sections statistics for user selected attendance methods, as well as Daily Contact Calculations for those sections.

The reporting domain is only those sections within the term specified which have not been excluded via the parameter selections. Report only registered students in those sections whose registration status has the **Count in Enrollment** checkbox on the Course Registration Status Code Validation Form (STVRSTS) checked or set to *Y*.

Parameters	Name	Required?	Description	Values
	Campus Code	Yes	Single Enter the campus code for which the data is to be extracted, or enter % for all.	Campus Code Validation Form (STVCAMP)
	Attendance Method	Yes	Single	Attendance Accounting Method Validation Form (STVACCT)
	First Period Calculation	Yes	The first period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 7/1 to 12/31.) Any course whose census one date is between 7/1 and 12/31 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	No	Multiple Regular terms to be used for determining first period courses. For example, Fall may be reviewed for first period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	First Period Beginning Date	Yes	Single Format DD-MON-YYYY	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	First Period Ending Date	Yes	Single Format DD-MON-YYYY	
	First Period ADA Annualizer	Yes	Single Format 99.9999	
	First Period Multiplier	Yes	Single This field displays the term length multiplier used for period calculations.	
	Second Period Calculation	Yes	The second period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 1/1 to 4/15.) Any course whose census one date is between 1/1 and 4/15 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	No	Multiple Regular terms to be used for determining second period courses. For example, Fall and Spring may be reviewed for second period courses.	Term Code Validation Form (STVTERM)
	Second Period Beginning Date	Yes	Single Format DD-MON-YYYY	
	Second Period Ending Date	Yes	Single Format DD-MON-YYYY	
	Second Period ADA Annualizer	Yes	Single Format 99.9999 Required if Second Period Calculation is set to Y.	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Second Period Multiplier	Yes	Single  This field displays the term length multiplier used for period calculations.	
	Third Period Calculation	Yes	The third period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 4/16 to 6/30.) Any course whose census one date is between 4/16 and 6/30 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	No	Multiple  Regular terms used for determining the Third Period Calculation. For example, Spring may be reviewed for third period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	Third Period Beginning Date	Yes	Single  Format DD-MON-YYYY	
	Third Period Ending Date	Yes	Single  Format DD-MON-YYYY	
	Third Period Multiplier	Yes	Single  This field displays the term length multiplier used for period calculations.	
	Outside State Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)
	Foreign Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	District Residency Codes	Yes	Multiple This field is used for residence codes for district students.	Residence Code Validation Form (STVRES D)
	Out of District Residency Codes	No	Multiple This field is used for residence codes for out-of-district students.	Residence Code Validation Form (STVRES D)
	Non-Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Schedule Type Codes to be Excluded	No	Multiple Sections with those codes are excluded from the report. If Null, all Schedule Types are included.	Schedule Type Code Validation Form (STVSCHD)
	Exclude Co-operative Education Courses	No	Single Enter Y to exclude sections with these codes from the report.	Y Exclude co-oped sections N Do not exclude co-oped sections
	Classification Codes to be Excluded	No	Multiple May be %. Sections with these codes are excluded from the report.	Classification Code Validation Form (STVCCSL)
	Occupational Course Codes to be Excluded	No	Multiple Sections with these codes are excluded from the report. This will be used to exclude work experience education courses.	Occupational Course Code Validation Form (STVOCCS)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Contract Codes to be Excluded	No	Multiple May be %.  Sections with these codes are excluded from the report.	Schedule Contract Code Validation Form (STVSCCD)
	Section Attribute Codes to be Excluded	No	Multiple  Sections with these codes are excluded from the report.	Attribute Validation Form (STVATTR)
	Day Session Codes	Yes	Multiple  Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)
	Ext. Day Session Codes	Yes	Multiple  Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)
	In-Service Section Attributes	No	Multiple  If entered then the courses with these attributes will be reported separately as in-service courses.	Attribute Validation Form (STVATTR)
	Basic Skills Attributes	No	Multiple  If entered then the courses with these attributes will be reported separately as Basic Skills courses.	Attribute Validation Form (STVATTR)
	Flex Date	No	Multiple  This field displays multiple dates to be used in determining faculty contract hours of flex. Enter in format DD-MON-YYYY.	
	Citizenship Type	No	Single  This field is used for the amnesty totals for Basic Skills courses.	Citizen Type Code Validation Form (STVCITZ)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Debug - Print Extract Record?	No	Single When this parameter is <i>Y</i> , the extract record will be printed to the log file.	Y Print to log file N Do not print to log file
	Part-of-Term	Yes	Single Enter the code for the part-of-term for which data is to be extracted, or enter % to extract records for all parts-of-term.	Part of Term Code Validation Form (STVPTRM)
	Academic Year	Yes	Single Enter the academic year for the reporting period.	Academic Year Validation Form (STVACYR)
	Collect Course Detail Data	Yes	Single When this parameter is <i>Y</i> , course data will be collected and stored in a temporary table.	Y Collect and store data N Do not collect and store data
	Leased (Building) Facilities Codes	No	Multiple Enter the codes for leased facilities to report separately on courses that are taught there.	Building/Room Attribute Code Validation Form (STVRDEF)

Parameters	Name	Required?	Description	Values
	Registration Status Codes to Exclude Students from Enrollment Counts	Yes	Multiple Enter the registration status codes for students who are not to be included in enrollment counts.	Course Registration Status Code Validation Form (STVRSTS)
	Count in Enrollment Indicator	Yes	Multiple Enter <i>R</i> (Registered), <i>W</i> (Withdrawal), <i>D</i> (Drop), or <i>L</i> (Waitlisted) to set the value of the <b>Status Type</b> field (STVRSTS_VOICE_TYPE) on STVRSTS.  The value selected is used to determine which course registration status codes on STVRSTS are to be counted in enrollment when the registration status date is prior to the section's census one date.  <b>Note:</b> You should select the values your institution wishes to use, to be counted as enrollment for state reporting. Adding these values will not change your institutions's existing Banner Voice Response setup and/or functionality.	R Registered W Withdrawal D Drop L Waitlisted

### Page Breaks:

Page breaks are produced by term.

Page breaks are produced for:

- Basic Skills sections
- Basic Skills sections - Amnesty Students
- Leased Facilities sections

### Report Headings:

Term

Campus

Attendance Method

**Sort By:**

Subject, Course Number within Section Number

**Detail Elements on Report:**

Credit/Non-Credit Indicator (CN)

Day/Ext. Day Indicator (S)

CRN - Course Reference Number (SECTION IDENTIFIER)

Subject code and Course number (SECTION IDENTIFIER)

Section Number (SECTION IDENTIFIER)

Section Credit Hours (CR HRS)

Total Number of all section meetings (sum of all session meetings) (MEETINGS)

\* Section Weekly Contact Hours (sum of all session meetings)

\* Section Total Contact Hours (sum of all session meetings)

\* Enrollment Census One (ENROLLMENT)

\* Daily Contact Hours Census One (DSCH1) (calculated)

\* Contact Hours for California Residents broken down by:

- In-state
- Total

\* Contact Hours for Non-residents broken down by:

- Out-of-State

- Foreign
- Total

\* Summary Totals are produced at the end of the report for:

- Daily Contact Hours Day Sections
- Daily Contact Hours Extended Day Sections
- Daily Contact Hours Credit Sections
- Daily Contact Hours Non-Credit Sections

### **Report Calculations for the Detail Information:**

Daily Contact Hours for Census One Enrollment (DSCH1) equals:

Section Daily Contact Hours \* Term Length Multiplier \* Census One Enrollment

*Example:*

Section Daily Contact Hours = 2

Term Length Multiplier = 17.5

Census One Enrollment = 15

DSCH1 = 2 \* 17.5 \* 15 = 525

### **Summary Elements on Report:**

The following totals are produced at the completion of the report by term:

DSCH1 for Day Session Sections broken down by State Residents and Non-residents.

DSCH1 for Ext. Day Session sections broken down by State Residents and Non-residents.

### **Report Calculations for the Summary Information:**

If the First Period calculation has been requested, then the following is performed at the end of the report:

***First Period FTES equals:***

Total DSCH1 for all Sections (Day and Ext. Day \* First Period ADA Annualizer  
525

If the Second Period calculation has been requested, then the following is performed at the end of the report:

***Second Period FTES equals:***

Total DSCH1 Term 1 + Total DSCH1 Term 2 \* Second Period ADA Annualizer  
525

If the Third Period Calculation has been requested, then the following is performed at the end of the report:

***Third Period FTES equals:***

Total DSCH1 Term 1 + Total DSCH1 Term 2 + Total DSCH1 Term 3  
525

## Report Sample—Daily Student Contact Hours Report (SADA3203)

## Actual Hours of Attendance Contact Hours Report (SADA3204)

**Description** This report provides section statistics for user selected attendance methods, as well as Actual Hours of Attendance Contact Hours Calculations for those sections.

The reporting domain is only those sections within the term specified which have not been excluded via the parameter selections. Report only registered students in those sections whose registration status has the **Count in Enrollment** checkbox on the Course Registration Status Code Validation Form (STVRSTS) checked or set to *Y*.

Parameters	Name	Required?	Description	Values
	Campus Code	Yes	Single Enter the campus code for which the data is to be extracted, or enter % for all.	Campus Code Validation Form (STVCAMP)
	Attendance Method	Yes	Single	Attendance Accounting Method Validation Form (STVACCT)
	First Period Calculation	Yes	The first period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 7/1 to 12/31.) Any course whose census one date is between 7/1 and 12/31 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple Regular terms to be used for determining first period courses. For example, Fall may be reviewed for first period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	First Period Beginning Date	Yes	Single Format DD-MON-YYYY	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	First Period Ending Date	Yes	Single Format DD-MON-YYYY	
	First Period ADA Annualizer	Yes	Single Format 99.9999	
	Unused Parameter			
	Second Period Calculation	Yes	The second period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 1/1 to 4/15.) Any course whose census one date is between 1/1 and 4/15 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple Regular terms to be used for determining second period courses. For example, Fall and Spring may be reviewed for second period courses.	Term Code Validation Form (STVTERM)
	Second Period Beginning Date	Yes	Single Format DD-MON-YYYY	
	Second Period Ending Date	Yes	Single Format DD-MON-YYYY	
	Second Period ADA Annualizer	Yes	Single Format 99.9999 Required if Second Period Calculation is set to Y.	
	Unused Parameter			

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Third Period Calculation	Yes	The third period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 4/16 to 6/30.) Any course whose census one date is between 4/16 and 6/30 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple  Regular terms used for determining the Third Period Calculation. For example, Spring may be reviewed for third period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	Third Period Beginning Date	Yes	Single  Format DD-MON-YYYY	
	Third Period Ending Date	Yes	Single  Format DD-MON-YYYY	
	Unused Parameter			
	Unused Parameter			
	Foreign Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)
	State Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)
	Outside State Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Non-Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Schedule Type Codes to be Excluded	No	Multiple Sections with those codes are excluded from the report. If Null, all Schedule Types are included.	Schedule Type Code Validation Form (STVSCHD)
	Exclude Co-operative Education Courses	Yes	Single Enter Y to exclude sections with these codes from the report.	Y Exclude co-oped sections N Do not exclude co-oped sections
	Classification Codes to be Included	No	Multiple May be %. Sections with these codes are included in the report.	Classification Code Validation Form (STVCCSL)
	Occupational Course Codes to be Included	No	Multiple Sections with these codes are included in the report.	Occupational Course Code Validation Form (STVOCCS)
	Contract Codes to be Excluded	No	Multiple May be %. Sections with these codes are excluded from the report.	Schedule Contract Code Validation Form (STVSCCD)
	Section Attribute Codes to be Excluded	No	Multiple	Attribute Validation Form (STVATTR)
	Day Session Codes	Yes	Multiple Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Ext. Day Session Codes	Yes	Multiple Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)
	In-Service Section Attributes	No	Multiple If entered then the courses with these attributes will be reported separately as in-service courses.	Attribute Validation Form (STVATTR)
	Basic Skills Attributes	No	Multiple If entered then the courses with these attributes will be reported separately as Basic Skills courses.	Attribute Validation Form (STVATTR)
	Unused Parameter			
	Citizenship Type	No	Single This field is used for the amnesty totals for Basic Skills courses.	Citizen Type Code Validation Form (STVCITZ)
	Debug - Print Extract Record?	Yes	Single When this parameter is Y, the extract record will be printed to the log file.	Y Print to log file N Do not print to log file
	Part-of-Term	Yes	Single Enter the code for the part-of-term for which data is to be extracted, or enter % to extract records for all parts-of-term.	Part of Term Code Validation Form (STVPTRM)
	Academic Year	Yes	Single Enter the academic year for the reporting period.	Academic Year Validation Form (STVACYR)
	Collect Course Detail Data	Yes	Single When this parameter is Y, course data will be collected and stored in a temporary table.	Y Collect and store data N Do not collect and store data

Parameters	Name	Required?	Description	Values
	Leased (Building) Facilities Codes	No	Multiple Enter the codes for leased facilities to report separately on courses that are taught there.	Building/Room Attribute Code Validation Form (STVRDEF)
	Registration Status Codes to Exclude Students from Enrollment Counts	Yes	Multiple Enter the registration status codes for students who are not to be included in enrollment counts.	Course Registration Status Code Validation Form (STVRSTS)
	Count in Enrollment Indicator	Yes	Multiple Enter <i>R</i> (Registered), <i>W</i> (Withdrawal), <i>D</i> (Drop), or <i>L</i> (Waitlisted) to set the value of the <b>Status Type</b> field (STVRSTS_VOICE_TYPE) on STVRSTS.  The value selected is used to determine which course registration status codes on STVRSTS are to be counted in enrollment when the registration status date is prior to the section's census one date.  <b>Note:</b> You should select the values your institution wishes to use, to be counted as enrollment for state reporting. Adding these values will not change your institutions's existing Banner Voice Response setup and/or functionality.	R Registered W Withdrawal D Drop L Waitlisted

### Page Breaks:

Page breaks are produced by term.

Page breaks are produced for:

- Basic Skills sections
- Basic Skills sections - Amnesty Students
- Leased Facilities sections

## **Report Headings:**

Term

Campus

Attendance Method

## **Sort By:**

Subject, Course Number within Section Number

## **Detail Elements on Report:**

Credit/Non-Credit Indicator (CN)

Day/Ext. Day Indicator (S)

Course Reference Number (SECTION IDENTIFIER)

Subject code and Course number (SECTION IDENTIFIER)

Section Number (SECTION IDENTIFIER)

Section Credit Hours (CR HRS)

\* Section Attendance Hours (ATTND Hours)

\* Enrollment

\* Attendance Hours for California Residents broken down by:

- In-state
- Total

\* Attendance Hours for Non-residents broken down by:

- Out-of-State

- Foreign
- Total

\* Summary Totals are produced at the end of the report.

**Note**

No report calculations for the detail information are required. ■

**Summary Elements on Report:**

Attendance Hours for Non-credit courses broken down by residents and non-residents.

Attendance Hours for Credit courses broken down by residents and non-residents, then by Day and Ext. Day within residents and non-residents.

Non-Credit and Credit break downs are also provided.

**Report Calculations for the Summary Information:**

If the First Period calculation has been requested, then the following is performed at the end of the report:

***Non-Credit Actual Hours of Attendance Procedure Courses FTES equals:***

Total Non-Credit Contact Hours for Period 1 \* First Period ADA Annualizer  
525

***Credit Actual Hours of Attendance Procedure Courses FTES equals:***

Total Credit Contact Hours for Period 1 \* First Period ADA Annualizer  
525

If the Second Period calculation has been requested, then the following is performed at the end of the report:

***Second Period FTES equals:***

Total Non-Credit Contact Hours for Period 1 and Period 2 \* Second Period ADA Annualizer  
525

Total Credit Contact Hours for Period 1 and Period 2 \* Second Period ADA Annualizer  
525

If the Third Period calculation has been requested, then the following is performed at the end of the report:

***Third Period FTES equals:***

(Total Non-Credit Contact Hours for Periods 1, 2 and 3)  
525

(Total Credit Contact Hours for Periods 1, 2 and 3)  
525

# Independent Study Weekly Student Contact Hours Report (SADA3205)

**Description** This report provides section statistics for user selected attendance methods, as well as provides Weekly Contact Calculations for those sections.

The reporting domain is only those sections within the term specified which have not been excluded via the parameter selections. Report only registered students in those sections whose registration status has the **Count in Enrollment** checkbox on the Course Registration Status Code Validation Form (STVRSTS) checked or set to Y.

Parameters	Name	Required?	Description	Values
	Campus Code	Yes	Single  Enter the campus code for which the data is to be extracted, or enter % for all.	Campus Code Validation Form (STVCAMP)
	Attendance Method	Yes	Single	Attendance Accounting Method Validation Form (STVACCT)
	First Period Calculation	Yes	The first period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 7/1 to 12/31.) Any course whose census one date is between 7/1 and 12/31 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple  Regular terms to be used for determining first period courses. For example, Fall may be reviewed for first period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	First Period Beginning Date	Yes	Single  Format DD-MON-YYYY	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	First Period Ending Date	Yes	Single Format DD-MON-YYYY	
	First Period ADA Annualizer	Yes	Single Format 99.9999	
	Term Length Multiplier 1 (TLM1)	Yes	Single Format 99.99	
	Second Period Calculation	Yes	The second period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 1/1 to 4/15.) Any course whose census one date is between 1/1 and 4/15 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple Regular terms to be used for determining second period courses. For example, Fall and Spring may be reviewed for second period courses.	Term Code Validation Form (STVTERM)
	Second Period Beginning Date	Yes	Single Format DD-MON-YYYY	
	Second Period Ending Date	Yes	Single Format DD-MON-YYYY	
	Second Period ADA Annualizer	Yes	Single Format 99.9999 Required if Second Period Calculation is set to Y.	

<i>Parameters</i>	<i>Name</i>	<i>Required?</i>	<i>Description</i>	<i>Values</i>
	Term Length Multiplier 2 (TLM2)	Yes	Single  Format 99.99  Required if Second Period Calculation is set to <i>Y</i> .	
	Third Period Calculation	Yes	The third period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 4/16 to 6/30.) Any course whose census one date is between 4/16 and 6/30 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple  Regular terms used for determining the Third Period Calculation. For example, Spring may be reviewed for third period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	Third Period Beginning Date	Yes	Single  Format DD-MON-YYYY	
	Third Period Ending Date	Yes	Single  Format DD-MON-YYYY	
	Term Length Multiplier 3 (TLM3)	Yes	Single  Format 99.99  Required if Third Period Calculation is set to <i>Y</i> .	
	Unused Parameter			
	Foreign Residence Codes	No	Multiple	Residence Code Validation Form (STVRES)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	State Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)
	Outside State Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)
	Non-Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Schedule Type Codes to be Excluded	No	Multiple Sections with those codes are excluded from the report. If Null, all Schedule Types are included.	Schedule Type Code Validation Form (STVSCHD)
	Exclude Co-operative Education Courses	No	Single Enter Y to exclude sections with these codes from the report.	Y Exclude co-oped sections N Do not exclude co-oped sections
	Classification Codes to be Excluded	No	Multiple May be %. Sections with these codes are excluded from the report.	Classification Code Validation Form (STVCCSL)
	Occupational Course Codes to be Excluded	No	Multiple Sections with these codes are excluded from the report. This will be used to exclude work experience courses.	Occupational Course Code Validation Form (STVOCCS)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Contract Codes to be Excluded	No	Multiple May be %.  Sections with these codes are excluded from the report.	Schedule Contract Code Validation Form (STVSCCD)
	Section Attribute Codes to be Excluded	No	Multiple	Attribute Validation Form (STVATTR)
	Day Session Codes	Yes	Multiple  Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)
	Ext. Day Session Codes	Yes	Multiple  Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)
	In-Service Section Attributes	No	Multiple  If entered then the courses with these attributes will be reported separately as in-service courses.	Attribute Validation Form (STVATTR)
	Basic Skills Attributes	No	Multiple  If entered then the courses with these attributes will be reported separately as Basic Skills courses.	Attribute Validation Form (STVATTR)
	Unused Parameter			
	Citizenship Type	No	Single  This field is used for the amnesty totals for Basic Skills courses.	Citizen Type Code Validation Form (STVCITZ)
	Debug - Print Extract Record?	Yes	Single  When this parameter is <i>Y</i> , the extract record will be printed to the log file.	Y Print to log file N Do not print to log file

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Part-of-Term	Yes	Single Enter the code for the part-of-term for which data is to be extracted, or enter % to extract records for all parts-of-term.	Part of Term Code Validation Form (STVPTRM)
	Academic Year	Yes	Single Enter the academic year for the reporting period.	Academic Year Validation Form (STVACYR)
	Collect Course Detail Data	Yes	Single When this parameter is <i>Y</i> , course data will be collected and stored in a temporary table.	Y Collect and store data N Do not collect and store data
	Leased (Building) Facilities Codes	No	Multiple Enter the codes for leased facilities to report separately on courses that are taught there.	Building/Room Attribute Code Validation Form (STVRDEF)
	Registration Status Codes to Exclude Students from Enrollment Counts	Yes	Multiple Enter the registration status codes for students who are not to be included in enrollment counts.	Course Registration Status Code Validation Form (STVRSTS)

### Page Breaks:

Page breaks are produced by term.

Page breaks are produced for:

- Basic Skills sections
- Basic Skills sections - Amnesty Students
- Leased Facilities sections

## **Report Headings:**

Term

Campus

Attendance Method

## **Sort By:**

Subject, Course Number within Section Number

## **Detail Elements on Report:**

Credit/Non-Credit Indicator (CN)

Day/Ext. Day Indicator (S)

Course Reference Number (SECTION IDENTIFIER)

Subject code and Course number (SECTION IDENTIFIER)

Section Number (SECTION IDENTIFIER)

Section Credit Hours (CR HRS)

\* Census Week One Section Enrollment (ENROLLMENT)

\* Enrollment Census Week One

\* Credit Hours for California Residents broken down by:

- In-state
- Total

\* Credit Hours for Non-residents broken down by:

- Out-of-State

- Foreign
- Total

\* Summary Totals are produced at the end of the report for:

- Weekly Credit Hours Day Sections
- Weekly Credit Hours Extended Day Sections
- Weekly Credit Hours Credit Sections
- Weekly Credit Hours Non-Credit Sections

### **Report Calculations for the Detail Information:**

Weekly Credit Hours for Census Week One (WSCH1) equals:

Section Weekly Credit Hours \* Census Week 1 Enrollment

*Example:*

Section Weekly Credit Hours = 3

Census Week One (CW1) = 25

WSCH1 = 3 \* 25

This is a rounded Calculation.

#### **Note**

TLM1 and ADA Annualizer are all obtained from the parameter values entered by the user. ■

### **Report Calculations for the Summary Information:**

If the First Period calculation has been requested, then the following is performed at the end of the report for each regular term in the parameter selection:

***First Period FTES equals:***

$(\text{WSCH1}) * \text{TLM1} * \text{First Period ADA Annualizer}$   
525

If the Second Period calculation has been requested, then the following is performed at the end of the report for each regular term in the parameter selection:

***Second Period FTES equals:***

$(\text{WSCH1 Term 1} * \text{TLM1}) + (\text{WSCH1 Term 2} * \text{TLM 2}) * \text{Second Period ADA Annualizer}$   
525

If the Third Period Calculation has been requested, then the following is performed at the end of the report:

***Third Period FTES equals:***

$(\text{WSCH1 Term 1} * \text{TLM1}) + (\text{WSCH1 Term 2} * \text{TLM 2}) + (\text{WSCH1 Term 3} * \text{TLM3})$   
525

# Independent Study Daily Student Contact Hours Report (SADA3206)

**Description** This report provides sections statistics for user selected attendance methods, as well as Daily Contact Calculations for those sections.

The reporting domain is only those sections within the term specified which have not been excluded via the parameter selections. Report only registered students in those sections whose registration status has the **Count in Enrollment** checkbox on the Course Registration Status Code Validation Form (STVRSTS) checked or set to *Y*.

Parameters	Name	Required?	Description	Values
	Campus Code	Yes	Single Enter the campus code for which the data is to be extracted, or enter % for all.	Campus Code Validation Form (STVCAMP)
	Attendance Method	Yes	Single	Attendance Accounting Method Validation Form (STVACCT)
	First Period Calculation	Yes	The first period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 7/1 to 12/31.) Any course whose census one date is between 7/1 and 12/31 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple Regular terms to be used for determining first period courses. For example, Fall may be reviewed for first period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	First Period Beginning Date	Yes	Single Format DD-MON-YYYY	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	First Period Ending Date	Yes	Single Format DD-MON-YYYY	
	First Period ADA Annualizer	Yes	Single Format 99.9999	
	Unused Parameter			
	Second Period Calculation	Yes	The second period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 1/1 to 4/15.) Any course whose census one date is between 1/1 and 4/15 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple Regular terms to be used for determining second period courses. For example, Fall and Spring may be reviewed for second period courses.	Term Code Validation Form (STVTERM)
	Second Period Beginning Date	Yes	Single Format DD-MON-YYYY	
	Second Period Ending Date	Yes	Single Format DD-MON-YYYY	
	Second Period ADA Annualizer	Yes	Single Format 99.9999 Required if Second Period Calculation is set to Y.	
	Unused Parameter			

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Third Period Calculation	Yes	The third period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 4/16 to 6/30.) Any course whose census one date is between 4/16 and 6/30 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple  Regular terms used for determining the Third Period Calculation. For example, Spring may be reviewed for third period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	Third Period Beginning Date	Yes	Single  Format DD-MON-YYYY	
	Third Period Ending Date	Yes	Single  Format DD-MON-YYYY	
	Unused Parameter			
	Unused Parameter			
	Foreign Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)
	State Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)
	Outside State Residence Codes	No	Multiple	Residence Code Validation Form (STVRES D)

<b>Parameters</b>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Non-Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Credit Approval Codes	No	Multiple If no match, default to C.	Catalog Approval Code Validation Form (STVAPRV)
	Schedule Type Codes to be Excluded	No	Multiple Sections with those codes are excluded from the report. If Null, all Schedule Types are included.	Schedule Type Code Validation Form (STVSCHD)
	Exclude Co-operative Education Courses	No	Single Enter Y to exclude sections with these codes from the report.	Y Exclude co-oped sections N Do not exclude co-oped sections
	Classification Codes to be Excluded	No	Multiple May be %. Sections with these codes are excluded from the report.	Classification Code Validation Form (STVCCSL)
	Occupational Course Codes to be Excluded	No	Multiple Sections with these codes are excluded from the report. This will be used to exclude work experience education courses.	Occupational Course Code Validation Form (STVOCCS)
	Contract Codes to be Excluded	No	Multiple May be %. Sections with these codes are excluded from the report.	Schedule Contract Code Validation Form (STVSCCD)
	Section Attribute Codes to be Excluded	No	Multiple	Attribute Validation Form (STVATTR)

<b>Parameters</b>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Day Session Codes	Yes	Multiple Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)
	Ext. Day Session Codes	Yes	Multiple Not required for Selection but used in totaling.	Session Code Validation Form (STVSESS)
	In-Service Section Attributes	No	Multiple If entered then the courses with these attributes will be reported separately as in-service courses.	Attribute Validation Form (STVATTR)
	Basic Skills Attributes	No	Multiple If entered then the courses with these attributes will be reported separately as Basic Skills courses.	Attribute Validation Form (STVATTR)
	Unused Parameter			
	Citizenship Type	No	Single This field is used for the amnesty totals for Basic Skills courses.	Citizen Type Code Validation Form (STVCITZ)
	Debug - Print Extract Record?	Yes	Single When this parameter is <i>Y</i> , the extract record will be printed to the log file.	Y Print to log file N Do not print to log file
	Part-of-Term	Yes	Single Enter the code for the part-of-term for which data is to be extracted, or enter % to extract records for all parts-of-term.	Part of Term Code Validation Form (STVPTRM)
	Academic Year	Yes	Single Enter the academic year for the reporting period.	Academic Year Validation Form (STVACYR)

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Collect Course Detail Data	Yes	Single  When this parameter is <i>Y</i> , course data will be collected and stored in a temporary table.	Y Collect and store data N Do not collect and store data
	Leased (Building) Facilities Codes	No	Multiple  Enter the codes for leased facilities to report separately on courses that are taught there.	Building/Room Attribute Code Validation Form (STVRDEF)
	Registration Status Codes to Exclude Students from Enrollment Counts	Yes	Multiple  Enter the registration status codes for students who are not to be included in enrollment counts.	Course Registration Status Code Validation Form (STVRSTS)

### **Page Breaks:**

Page breaks are produced by term.

Page breaks are produced for:

- Basic Skills sections
- Basic Skills sections - Amnesty Students
- Leased Facilities sections

### **Report Headings:**

Term

Campus

Attendance Method

### **Sort By:**

Subject, Course Number within Section Number

## Detail Elements on Report:

Credit/Non-Credit Indicator (CN)

Day/Ext. Day Indicator (S)

CRN-Course Reference Number (SECTION IDENTIFIER)

Subject code and Course number (SECTION IDENTIFIER)

Section Number (SECTION IDENTIFIER)

Section Credit Hours (CR HRS)

\* Enrollment Census One (ENROLLMENT)

\* Contact Hours for California Residents broken down by:

- In-state
- Total

\* Contact Hours for Non-residents broken down by:

- Out-of-State
- Foreign
- Total

\* Summary Totals are produced at the end of the report for:

- Daily Credit Hours Day Sections
- Daily Credit Hours Extended Day Sections
- Daily Credit Hours Credit Sections
- Daily Credit Hours Non-Credit Sections

### Report Calculations for the Detail Information:

Daily Credit Hours for Census One Enrollment (DSCH1) equals:

Section Daily Credit Hours \* Term Length Multiplier \* Census One Enrollment

*Example:*

Section Daily Credit Hours = 2

Term Length Multiplier = 17.5

Census One Enrollment = 15

DSCH1 = 2 \* 17.5 \* 15 = 525

### Report Calculations for the Summary Information:

If the First Period calculation has been requested, then the following is performed at the end of the report:

***First Period FTES equals:***

Total DSCH1 for all Sections (Day and Ext. Day) \* First Period ADA Annualizer  
525

If the Second Period calculation has been requested, then the following is performed at the end of the report:

***Second Period FTES equals:***

Total DSCH1 Term 1 + Total DSCH1 Term 2 \* Second Period ADA Annualizer  
525

If the Third Period Calculation has been requested, then the following is performed at the end of the report:

***Third Period FTES equals:***

Total DSCH1 Term 1 + Total DSCH1 Term 2 + Total DSCH1 Term 3  
525

## Faculty Contact Hours of Flex-Time Activities Report (SADAFLEX)

**Description** This report provides section information based on user selected attendance methods, as well as Flex Time Contract information.

The reporting domain is only those sections within the term specified which have not been excluded via the parameter selections.

Parameters	Name	Required?	Description	Values
	Campus Code	Yes	Single Enter the campus code for which the data is to be extracted, or enter % for all.	Campus Code Validation Form (STVCAMP)
	Attendance Method	Yes	Single	Attendance Accounting Method Validation Form (STVACCT)
	First Period Calculation	Yes	The first period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 7/1 to 12/31.) Any course whose census one date is between 7/1 and 12/31 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple Regular terms to be used for determining first period courses. For example, Fall may be reviewed for first period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	First Period Beginning Date	Yes	Single Format DD-MON-YYYY	
	First Period Ending Date	Yes	Single Format DD-MON-YYYY	

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Unused Parameter			
	Unused Parameter			
	Second Period Calculation	Yes	The second period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 1/1 to 4/15.) Any course whose census one date is between 1/1 and 4/15 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation
	Term	Yes	Multiple  Regular terms to be used for determining second period courses. For example, Fall and Spring may be reviewed for second period courses.	Term Code Validation Form (STVTERM)
	Second Period Beginning Date	Yes	Single  Format DD-MON-YYYY	
	Second Period Ending Date	Yes	Single  Format DD-MON-YYYY	
	Unused Parameter			
	Unused Parameter			
	Third Period Calculation	Yes	The third period report will include all sections which are held during the time period specified by the user. (The existing reporting dates are 4/16 to 6/30.) Any course whose census one date is between 4/16 and 6/30 will be included in the report. Each term will be reported separately.	Y Include period calculation N Do not include period calculation

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Term	Yes	Multiple Regular terms used for determining the Third Period Calculation. For example, Spring may be reviewed for third period courses.	Term Code Validation Form (STVTERM)
	Unused Parameter			
	Third Period Beginning Date	Yes	Single Format DD-MON-YYYY	
	Third Period Ending Date	Yes	Single Format DD-MON-YYYY

# FTES Reporting Print Program (SADAPRNT)

**Description** This program is used to print the various FTES reports.

A separate shell script has been created for each report as follows:

<b>Script</b>	<b>Report</b>
sadapr02.shl	Weekly Student Contact Hours Report
sadapr03.shl	Daily Student Contact Hours Report
sadapr04.shl	Actual Hours of Attendance Contact Hours Report
sadaprfx.shl	Faculty Contact Hours of Flex-Time Activities Report

This program also requires two parameter cards. These cards are found in the `sadaprnt.prm` file.

<b>Parameters</b>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	P00 Parameter Card	Yes	The P00 card should be modified to reflect the USERID and PASSWORD used when the data was extracted.	N/A
	P01 Parameter Card	Yes	The P01 card should be modified to reflect the term the user wishes to print in the heading of the report.	N/A

## Print Apportionment Detail by Course Report (SERADAL)

**Description** This report prints section detailed information on the user-selected academic year, campus, period, and course reference number. This is a C program that can be run from the host or from job submission.

<i>Parameters</i>	<b>Name</b>	<b>Required?</b>	<b>Description</b>	<b>Values</b>
	Academic Year	Yes	Enter the academic year for the reporting section.	Academic Year Validation Form (STVACYR)
	Campus	Yes	Enter the campus code for the reporting section.	Campus Code Validation Form (STVCAMP)
	Report Number	Yes	Enter the report number for which the detail section was collected: 02, 03, 04, 05, or 06.	02, 03, 04, 05, 06
	Section	Yes	Enter the course reference number(s), or enter % for all.	

# Report Sample—Print Appointment Detail by Course Report (SERADAL)

# 16 Interfaces

## Interfaces Used With Banner Student

---

### Banner Accounts Receivable Interface to Banner Finance

This documentation is contained in the *Banner® Accounts Receivable User Guide*. Please refer to this guide for the interface information.

### Banner Accounts Receivable Interface to Banner Financial Aid

This documentation is contained in the *Banner Accounts Receivable User Guide*. Please refer to this guide for the interface information.

### Banner Student Interface to Banner Advancement

This documentation is contained in the *Banner Advancement User Guide*. Please refer to this guide for the interface information. Here is an introduction to this interface.

The Student-Advancement Interface Process (APPSTDI) loads information for selected individuals from Banner Student to Banner Advancement. Students can be selected for processing based on current, non-current, or degree awarded categories. They can then have data loaded to Banner Advancement based on the APPSTDI selection parameters for their respective category. The report output details the information that is loaded from Banner Student to Banner Advancement, including the number of records processed or not processed due to missing data and the number of new and updated database records.

A person is identified in Banner Advancement when information for that person exists on the Advancement Individual Information Form (APACONS). This information constitutes an advancement individual record. When the data for a selected student is loaded to Banner Advancement, the process determines whether the student is created as a new advancement individual or is updated as an existing advancement individual. If an advancement individual record already exists for a person selected by the interface, new academic and employment information is added to the record. Depending on the setting of an APPSTDI parameter, the preferred college code and preferred class year can be updated in Banner Advancement. Otherwise, existing information in the record is *not* overwritten.

All Banner systems share identification, person, and address information. The interface does not affect this shared information. Student academic information is retrieved from the Admissions, Academic History, and Registration modules. Depending on the process parameters used, cooperative employment information and student activity information can also be retrieved from Banner Student.

Please note that before APPSTDI is run, the Banner Student grade roll process must be run to create academic history records for students. The grade roll process can be run either online from the Class Roster Form (SFASLST) or the Class Attendance Roster Form (SFAALST), or in batch using the Grade Roll to Academic History (SHRROLL). APPSTDI uses information created by the grade roll process, such as term header records, degree records, and hours earned by the students. If no term header record exists for a student, then APPSTDI does not select that student for processing.

The timing of when the grade roll and APPSTDI are run needs to be coordinated and depends on your institution's needs. For example, if your institution wants students to become advancement individuals after their first semester, then APPSTDI must be run *after* the grade roll for the semester to ensure that the term header records exist.

Your institution name must be entered in the **Institution** field on the Institution window of the Advancement Control Form (AGACTRL).

 **Note**

APPSTDI uses two GTVSDAX rules for processing, *ALUMPRAD* for address types and *ALUMPUNC* for prefixes and suffixes. ■

## Banner Student Interface to Banner Human Resources

The Banner Human Resources and Banner Student Systems interface includes the sharing of data entered through General Person Module forms in both systems. There are also a number of Faculty Load Module forms in the Banner Student System, as well as a reporting process in the Banner Human Resources System which compares and pulls data from both systems. This process identifies where the data entered does not match, and when it does match there is a calculation and recording of Total Contact Hours and FTE on the Human Resource side from the data entered on the Banner Student side.

### General Person Data

The General Person Identification Form (SPAIDEN) shares data pertaining to ID, name, address, and telephone information with the Identification Form (PPAIDEN) in the Banner Human Resources System. The Banner Human Resources Identification Form data is displayed on three forms in the Banner Student System: the General Person Identification Form (SPAIDEN), the General Person Form (SPAPERS), and the Emergency Contact Form (SPAEMRG).

The General Person Form (SPAPERS) shares personnel data with the Banner Human Resources Identification Form (PPAIDEN) with the exception of veteran disability, and

driver's license number information. These items are not available on forms within the Banner Student System.

The Emergency Contact Form (SPAEMRG) shares all of its data with the Banner Human Resources Identification Form (PPAIDEN).

The following chart details the shared data for the interface.

### Banner Student General Person to Banner Human Resources Data

Banner Student Form	Data Shared	Banner Human Resources Form
SPAIDEN - General Person Identification Form	Current ID and Name Previous ID(s) and Name(s) Address data Telephone data Prefix Suffix Preferred Name Legal Name	PPAIDEN - Identification Form
SPAPERS - General Person Form	Gender Date of Birth SS Number Ethnic Code Marital Status Religion Legacy Vet File Number Veteran Category Special Disability Veteran * Deceased Date Age * Driver's License Number *	PPAIDEN - Identification Form
SPAEMRG - Emergency Contact Form	All data	PPAIDEN - Identification Form

\* = Not available in the Banner Student System

### Faculty Load Data

There is an integration point between the Banner Student Faculty Load Module and the Banner Human Resources System which begins on the optional Faculty Personnel Form (SIAFPER). Reports verifying the connection point exist in Banner Human Resources.

The Faculty Personnel Form (SIAFPER) shares faculty history and personnel information with the Faculty Information Form (PEAFACD) and the Employee Form (PEAEMPL) in the Banner Human Resources System, with the exception of discipline and home organization information. These items are not available on forms within the Banner Student System. The data for home organization, displayed on PEAEMPL, is validated against the Organization Code List (FTVORGN), a Banner Finance System validation form. If Banner Finance is not installed, the home organization is validated against the Organization Code List (PTVORGN).

The Faculty/Advisor Information Form (SIAINST) displays the home college and department information, which is not available on forms within the Banner Human Resources System. This is where you may enter the ID of the faculty member (which was created on the General Person Identification Form (SPAIDEN) in the General Person module) and set up the details which change over time, i.e., contract and workload rule information.

 **Note**

Degree information for a faculty member may be entered on both the Prior College Form (SOAPCOL) and Faculty Degree Information Form (SIAFDEG). If your institution has the Banner Human Resources System installed, you will need to decide if the information contained in SOAPCOL and SIAFDEG will be maintained in both systems or only in the Banner Human Resources System. ■

The Faculty Degree Information Form (SIAFDEG) shares faculty academic history information with the General Information Form (PPAGENL), with the exception of publications and examinations information, which is not available on forms within the Banner Student System.

The Instructor Schedule Report (SIRASGQ) can display the faculty member's salary via an optional parameter. The salary information originates in the Banner Human Resources data. The process displays the total salary recorded for all positions stored within the Banner Human Resources System.

The Faculty Assignment Form (SIAASGN) permits the recording of a position and a suffix, information which should exist in the Banner Human Resources System; however, no validation is done online.

The Faculty Load Process (PEPFACL) updates the Faculty Load Form (PEAFACL) with the contact hours and FTE from Student Faculty Assignment Form (SIAASGN).

After the Faculty Load Process (PEPFACL) is run, the Faculty Load Comparison Report (PERFACL) should be generated. This report displays comparative data in four different formats.

- Identifies faculty members whose position and suffix match on the Faculty Assignment Form (SIAASGN) and the Employee Job Form (NBAJOBS).

- Identifies faculty members whose position and suffix are missing on the Faculty Assignment Form (SIAASGN).
- Identifies faculty members whose have a position and suffix on the Faculty Assignment Form (SIAASGN) but do not have a position and suffix on the Employee Job Form (NBAJOBS).
- Identifies faculty members whose position and suffix do not match on the Faculty Assignment Form (SIAASGN) and the Employee Job Form (NBAJOBS).

The following chart details the shared data for the interface.

### Faculty Load to Human Resources Data

Banner Student Form/Report	Shared Data	Banner Human Resources Form/Report
SIAPER - Faculty Personnel Form	Tenure Code Tenure Date Review Date AAUP Membership Years Experience Sabbatical Dates Title Discipline * Home Organization *	PEAFACD - Faculty Information Form  If data exists on the Faculty Action Tracking Form (PEAFAC), then PEAFACD is not used.  PEAEMPL - Employee Form  - <i>validates against</i> -  FTVORGN - Organization Code List (Banner Finance)
SIAINST - Faculty/Advisor Information Form	Home College ** Department **	
SIAFDEG - Faculty Degree Information Form	Institution Code Transcript Dates Degree Year GPA Hours Major Minor Area of Concentration Publications * Examinations *	PPAGENL - General Information Form

Banner Student Form/Report	Shared Data	Banner Human Resources Form/Report
SIRASGQ - Instructor Schedule Report	Show salary option	from Banner Human Resources
SIAASGN - Faculty Assignment Form	Position *** Suffix *** FTE Contact Hours	NBAJOBS - Employee Job Form  PEPFACL - Faculty Load Update Process (updates PEAFACT below, with data from Banner Student System)  PEAFACL - Faculty Load Form  PERFACL - Faculty Load Comparison Report (compares information between SIAASGN and NBAJOBS, - Position, Suffix, Contact Hours, and FTE)

- \* = Not available in the Banner Student System
- \*\* = Not available in the Banner Human Resources System
- \*\*\* = No validation is performed between the systems online

<b>List of Reports and Processes by Module . . . . .</b>	<b>.A-3</b>
C Reports . . . . .	.A-3
COBOL Reports. . . . .	.A-13
Oracle Report . . . . .	.A-15
Java Reports . . . . .	.A-15

## List of Reports and Processes by Module

### C Reports

Report/Module Name	Full Name	Description
<i>Catalog</i>		
SCRBULT	Bulletin Report	Used to print the catalog of courses with detail information including text, prerequisites, corequisites, etc.
SCRRICS	Course Catalog Extract	Used to extract course data and provide it in an XML format readable to third parties using IMS standards.
<i>Schedule</i>		
SSPMFEE	Section Fee Population Process	Examines course/section characteristics defined in SSADFEE, determines applicable sections, and inserts appropriate records in the SSRFEES table.
SSPRDEF	Schedule Open Learning Rule Default Process	Defaults open learning rules for sections, as defined on SOAORUL, for CRNs that have been created after the rules have been established.
SSPSCHD	Schedule Purge	Purges the schedule information.
SSRASTZ	Available Seats to Zero Process	Used to modify the available seats for a CRN by setting the number of available seats to zero.
SSRATSQ	Room Attribute Sequence Update Process	Used to automatically populate the sequence number of the room attribute information in the STVRDEF table.
SSRROLL	Term Roll	Rolls Sections of one term to another term.
SSRSECT	Class Schedule	Lists all sections for given term and/or part of term.

Report/Module Name	Full Name	Description
SSRSCMT	Update Building/Room Process	Reads the Scheduler Work Table (SSTSCHW) entries and updates the SSRMEET table with the room assignments generated in Schedule25
SSRSCPR	Schedule Work Table Purge Process	Used to delete Scheduler Work Table (SSTSCHW) data based on the term and/or campus specified in the parameters.
SSRSCRM	Schedule 25 Work File Creation Process	Used to create the building, room, partition, department (subject), class descriptor, and control files required to run the scheduling tool.
SSRSCUP	Scheduler Work Table Update Process	Reads the three Schedule25 export files (sortdp.dat, losers.dat, notposs.dat), updating the existing records in the Scheduler Work Table (SSTSCHW).
SSRTALY	Scheduled Section Tally	Produces detailed list of section information.
<i>General Person</i>		
SPRPDIR	Person Directory	Prints all persons by type (recruit, applicant, student, faculty).
<i>Support Services</i>		
SERLOAD	Support Services Load Process	Used to create service groups from a user-defined population selection.
<i>Faculty Load</i>		
SIPASGN	Faculty Load Purge	Purges instructional, non-instructional, and workload rules for a term.
SIRASGQ	Faculty Schedule Report	Used to print an instructor's schedule, with detailed information.
SIRCTAL	Faculty Load Contract Analysis Report	Used to calculate the Faculty Load contract analysis.
SIRTRAL	Faculty Load Term Analysis Report	Used to calculate and print the Faculty Load term analysis.
<i>Location Management</i>		
SLPHOUS	Housing Purge	Purges housing applications, housing, meal plan, and phone assignments for the user specified terms and activity dates.

Report/Module Name	Full Name	Description
SLRBACS	ACS Housing Interface	Produces file for ACS HIS for addresses of housing applicants.
SLRDADD	Dormitory Address Creation	Used to create dormitory addresses from the housing assignments.
SLRFASM	Batch Room/Meal/Phone Assessment	Used to assess room, meal, and phone charges in a batch mode.
SLRHLST	Active Housing Assignments Report	Lists all the active housing assignments.
SLRROLL	Assignment Roll Process	Used to roll the term's housing, meal, and phone assignments forward to a future term.
SLRSCHD	Batch Scheduler Report	Used to create housing assignments in batch based on the applicant's preferences.
<i>Recruiting</i>		
SRREMAL	Electronic Prospect Email Process	Used for sending out a mass mailing as an email letter to electronic prospects.
SRRENHR	Rec/Enroll Analysis - How Learned Report	Produces a statistical report of recruits, applicants, and enrollees by a How I Learned code for a term range.
SRRENRL	Recr/Enrl Analysis - Source/Recr Report	Produces a statistical report of recruits, applicants, and enrollees by source and recruiter for a term range.
SRRINQR	Recruits Never Applied to Inst. Report	Prints or deletes all recruits that expressed an interest in the institution but never applied.
SRRPREL	Migrate Electronic Prospects Process	Used to create or update Banner® recruiting records for the records in the Search Tape View (SRVPREL).
SRRSRIN	Prospect Tapeload Matching Process	Used to determine if a match exists between a record on the Search Tape View (SRVPREL) and Banner production data when loading search tape records en masse.
SRTLLOAD	Electronic Prospect Load	Loads data from an input file to temporary tables. Also creates an audit report detailing the status of each record on the input file.
SRTPURG	Electronic Prospect Purge	Used to delete records from the search tape temporary tables and designate which records to purge.

*Admissions*

Report/Module Name	Full Name	Description
SAPADMS	Admission Purge Report	Purges all the Admission records for a selected term.
SARACTM	Admissions Count by College/ Major	Prints admission application count by college/major.
SARADMS	Admissions Application Report	Prints admissions application report by ID or name and term, application number.
SARAMDP	AMCAS Date Purge	Used to purge the flat file of data that was electronically submitted to AMCAS.
SARAMXF	AMCAS Extract File Process	Used to create a flat file of data to be electronically submitted to AMCAS.
SARBDSN	Admissions Decision Calculation Report	Produces batch automated admissions decision.
SARDCBT	Rating Audit Report	Used to view applications that have been updated on the SAADCBT for a specific date or dates.
SARDCSN	Admissions Decision Criteria Report	Prints admissions decision criteria report and term roll with delete option.
SAREMAL	Batch Email for Elec. Apps. Process	Used for sending out a mass mailing as an email letter to electronic applicants.
SARETMT	Elec App Verify/Load Process	Used for matching electronic applicants to Banner production records by interface code, and SSN and Last Name, or all criteria.
SARETPG	Electronic App Purge Process	Used to purge old data from the electronic application holding tables by date range, application type, source, and term.
SAR189U	TS189 Upload to Banner	Used to receive an electronic (EDI) admissions application in SPEEDE format and to automate the entry of the admissions application data into the Banner Admissions module.
SARRATE	Admission Calculation Rating Report	Used to calculate the admissions rating for an ID or population.
<i>General Student</i>		
SGPCOOP	Cooperative Education Purge	Purges all the cooperative education data for all students.

Report/Module Name	Full Name	Description
SGPBLCK	Student Block Load Process	Associates a group of students defined through population selection to a block code for an effective term.
SGPHOLD	Hold Purge	Purges all expired holds which exist on the database.
SGPSTDN	General Student Purge	Purges the general student records for any non-registered students.
SGRCHRT	Cohort Load Process	Assigns cohort codes to a group via population selection.
SGRKNOW	Student Right to Know Report	Produces graduation/completion rates by cohort and sport for race and gender.
SGRSTDN	Student Report	Prints student list by term in alpha or ID order.
SGRVETN	Veteran Report	Prints veteran list by term.
<i>Registration</i>		
SFPAGRD	Auto Grade Assignment Process	Used to assign an incomplete or institutionally defined letter grade to long-standing, ungraded, open learning registration records.
SFPBLCK	Course Request Load Process	Tracks student populations by block schedule codes for effective and report terms.
SFPENRL	Enrollment Verification Request Purge	Used to purge all previously requested enrollment verification requests.
SFPFAUD	Purge Fee Assessment Audit Process	Used to purge audit history records from the database.
SFPREGS	Registration Purge	Purges all registration records for a selected term, as well as time status history.
SFPWAIT	Waitlist Enrollment Purge	Purges waitlist enrollment.
SFPWLRO	Waitlist Priority Reorder Process	Used to reorder positions in the waitlist queue based on the rules defined on SOAWLTC.
SFRBWLP	Batch Waitlist Notification Process	Used to produce waitlist notifications by term for new available seats based on entries in the SFRCOLW collector table.
SFRENRL	Enrollment Verification Request	Produces the pre-processed enrollment verification requests.

Report/Module Name	Full Name	Description
SFRFASC	Registration Fee Assessment Process	Used to run batch fee assessment.
SFRFEES	Fee Assessment Report	Used to assist in trouble shooting and debugging fee assessment processing.
SFRHCNT	Unduplicated Headcount Report	Prints headcount totals by level and major for a term, for students with a registration status and effective headcount activated.
SFRLINK	Unsatisfied Links Report	Produces a list of students who have unsatisfied or missing section links for a term.
SFRNSLC	Clearinghouse Extract Report	Extracts student enrollment information for reporting to the National Student Loan Clearinghouse (NSLC).
SFRRGAM	Registration Admin Messages Report	Tracks registration errors for administrative purposes, checks for in-progress prerequisites errors, views any potential schedule conflicts due to changes in class schedule, finds students who took in-progress prerequisites that may have not met the requirements.
SFRRNOP	Registered, Not Paid Process	Prints/purges all students registered but not paid for a term and their time status history.
SFRSCHD	Student Schedule	Prints student schedule for term.
SFRPINI	Compliance Listener Start Up Process	Initializes the SFRPIPE process to run in the background, listening for Oracle pipe calls to execute compliance for registration prerequisite processing.
SFRPIPE	Compliance Pipe Process	Used as a listening agent for Oracle pipes, to initiate compliance to perform prerequisite registration processing.
SFRSLST	Class Roster	Prints class list for term or part of term.
SFRSSCR	NSLDS SSCR Process	Reads and processes NSLDS Student Status Confirmation Report (SSCR) Roster and Error Notification files.
SFRMST	Time Status Calculation Update Process	Calculates student enrollment time statuses in batch mode and updates/inserts time status history records.
<i>Academic History</i>		
SHPTAEQ	Transfer Articulation Purge	Used to purge transfer articulation information.

Report/Module Name	Full Name	Description
SHPTRTC	Academic Transcript Request Purge	Used to purge the academic transcript request information.
SHRASTD	Calculate Academic Standing Report	Used to calculate academic standing for a selected term and group of students.
SHRCATT	Commencement Attendance Report	Used to print ceremony type and attendees, and cap, gown, hood order, pickup, and return information.
SHRCGPA	Calculate GPA Report	Used to calculate GPA for a selected term and group of students.
SHRCINC	Incomplete Grade Process	Used to automatically update incomplete grades to final grades.
SHRCOMM	Commencement Report	Prints camera-ready commencement program report.
SHRCONV	Calculate GPA Conversion Process	Calculates and stores campus GPAs calculated by term and level of the students.
SHRDEGS	Degree Status Update Report	Updates the existing degree status code to a new user-defined degree status.
SHRDEGV	Degree Verification Process	Used to collect degree data for a student at an institution for the NSC.
SHREDII	Electronic Data Interchange Institutions	Used to upload EDI Capable Institution file for matching of FICE codes.
SHREDIP	Upload of EDI Transcript	Used to load transcript data into interim Oracle tables in Banner, after the FLAT130 file produced by EDI.Smart has been uploaded to the host where Banner resides.
SHREDIR	Electronic Data Interchange Reconciliation	Used to reconcile EDI.Smart disposition files with transcript requests in the collector table.
SHREDIY	Electronic Data Interchange Extract	Used to produce Banner transcripts to be sent via EDI.Smart. Reads requests from the collector file and generates the flat file entries for the transcripts along with control and log file entries.
SHRETRP	Electronic Transcript Upload Purge Process	Used to purge electronic transcript data, after electronic transcripts have been processed in the Banner Student System.

Report/Module Name	Full Name	Description
SHRG PAC	GPA Recalculation Report	Used to calculate GPA for selected term for student or population selection.
SHRGRDE	Grade Mailer	Prints grade mailers by type (original, revised, and duplicate).
SHRIACT	IPEDS Total Activity Report	Prints institution's total student activity, required by Dept. of Education.
SHRIAGE	IPEDS Summary by Age Report	Used to produce the summary by age portion of the Fall Enrollment Reports.
SHRICIP	IPEDS Completion Report	Prints parts A, B, C, and D comprising IPEDS Completion Report.
SHRIETH	IPEDS Ethnic Status Report	Prints report by racial/ethnic category, attendance period, level, and sex of student.
SHRIGRS	Graduation Rate Survey Report	Tracks graduation, transfer, and withdrawal rates by cohort and with athletic aid by type of institution for IPEDS reporting.
SHRIPDS	IPEDS File Generation Process	Produces generation extract file, which is used to produce the Fall Enrollment Reports.
SHRIRES	First Time Residency Report	Prints a report on first time student's states of residency.
SHRPREV	Progress Evaluation Process	Used to determine progress evaluation and combined academic standing codes and print a report of the results.
SHRROLL	Grade Roll Process	Rolls grades entered on the Class Roster Form and creates Academic History.
SHRROUT	Roll Learner to Outcome Process	Used to roll learner curriculum records to the outcome curriculum and then insert new degree sequence records.
SHRRPTS	Repeat/Equivalency Course Check	Used to flag repeated courses.
SHRTAEQ	Transfer Equivalency Worksheet	Used to review the transfer equivalency for a student.
SHRTECA	Transfer Equivalency Catalog	Provides a listing of transfer courses entered for each institution.

Report/Module Name	Full Name	Description
SHRTPOP	Transcript Population Creation Process	Used to select a population from the student body for whom transcripts are to be printed.
SHRTRTC	Academic Transcript	Used to produce an academic transcript.
SHRTYPE	Student Type Update	Used to update the student type after completing the Grade Roll Process.
<i>CAPP</i>		
SMPCPRG	Compliance Purge Process	Used to purge compliance records.
SMRBCMP	Batch Compliance Process	Creates compliance and hardcopy requests from population, or performs outstanding compliance requests and produces outstanding hardcopy output. Calls <i>both</i> SMRCMPL and SMRCRLT.
SMRCMPL	Program Compliance Report	Checks courses taken by student against curriculum and program requirements.
SMRCRLT	Compliance Print Process	Prints hardcopy compliance output.
<i>Overall</i>		
SOPAPPT	Appointment Purge Process	Purges all appointment records for specified start and end dates.
SOPLCCV	Learner Curriculum Conversion Process	Used to read the input population and run the curriculum conversion process.
SOPLCPG	Learner Curriculum Purge Process	Used to purge SORLCUR rows and/or SORLFOS rows for Admissions and Recruiting records.
SOPMAUD	Purge Mass Entry Audit Process	Used to purge mass entry audit information displayed in SOAMAUD and keep the SORMAUD and SOBMAUD table sizes from getting too large.
SOPSATS	SAT Recentering Process	Recenters SAT scores for college board compliance.
SORAINF	Administrator Assignments Process	Allows institutions to use the rules defined on SOAADAS to assign administrators to recruit and applicant records.
SORCPLN	Communication Plan Processing Report	Shows person's movement from old to new communication plan.

Report/Module Name	Full Name	Description
SOREMAL	Student Email Process	Used for sending out a mass mailing as an email letter using population selection on IDs.
SORHSRP	Admissions High School Report	Prints totals and percentage for applicants, students, enrollment and GPA.
SORLCHG	Non-Destructive Curric Update Report	Used to show non-destructive updates made to curriculum and/or field of study records.
SORMEBP	Process Mass Entry Report	Used to execute mass entry updates that have been held for job submission processing using the Results window of a mass entry form.
SORSBSM	Source/Background Summary Report	Used to collect source/background institution summary information similar to what is found on SOASBSM.
SURDELT	Communication Removal Process	Used to perform a mass removal of mail records.
SURLOAD	Communication Load Process	Used to perform a mass entry of mail records.
<i>Course Request and Scheduling</i>		
SFPCREQ	Course Request Edit Report	Lists course request transactions containing errors, with error messages, and updates valid transactions for course request processing.
SFPFREQ	Course Request Update Report	Used to load course request and schedule data to registration tables and to update section counts in Banner Student System.
<i>FTES</i>		
SERADAL	Print Apportionment Detail by Course Report	Used to print section detailed information on the user-selected academic year, campus, period, and course reference number.

## COBOL Reports

Report/Module Name	Full Name	Description
<i>Location Management</i>		
SLRSCHE	Batch Housing Schedules Report	Processes housing assignments based on information on SLARMAP.
<i>Course Request and Scheduling</i>		<b>Note:</b> C% and D% reports for Course Request and Scheduling are generated by SCT% reports.
C1501	Course Schedule Load Control Report	Lists input/output file counts in program Load Course Database to Disk.
C2001	Course Request Update Control Report	Produces printer listing of file, transaction, and summary counts.
C2002	Course Request Audit Trail	Produces report of students with request set errors.
C3001	Print Requests Control Report	Produces printer listing of file counts in program Print Course Request Reports.
C3002	Section Request Tally/ Closed Section Tally	Lists sections on Reformatted Course Interface File and students requesting each section. Use to measure student demand for courses and specific sections.
C3003	Section Request List	Lists sections on Reformatted Course Interface File and students requesting each section. Use for quick identification of students requesting specific sections, and students in sections which are to be canceled or have restricted enrollment.
C3004	Student Request List	Lists request set of each student prior to scheduling and any errors found.
C3005	Request Segregated Error List	Produces printer listing of each registering student and course requests for that student with specific type of selected error in their request set.
C3007	Acknowledgment of Pre-Registration	Lists all section requests and error messages for pre-registered students.
C3008	Valid Requested Hours	Lists registering students and valid requests hours.
D0601	Student Scheduling Control Report	Lists summary totals and results of current Student Scheduling Cycle for evaluation of scheduling run.

Report/Module Name	Full Name	Description
D0603	Scheduling Results Matrix	Identifies counts of students by number of requests submitted versus number of requests satisfied for evaluation of scheduling run.
D3001	Print Scheduling Control Report	Produces printer listing of file counts in Print Scheduling Reports Program.
D3002	Scheduling Enrollment Tally	Lists capacity, total requests, and enrolled counts for each section, as a result of scheduling, for scheduling trial run modifications and/or late registration.
D3003	Section Enrollment List/Unscheduled Student By Section	Lists each section in Course Master File. Use as preliminary class list for Section Enrollment List. Use as wait list for drop and add for Unscheduled Student By Section.
D3008	Student Schedule Analysis	Lists counts of students by class level within major for evaluation of schedule type.
SCTC1000	Course Interface Extract	Used to extract course schedule data from Banner Student System.
SCTC1500	Course Schedule Load	Creates tables with restriction and relative course information for each section extracted from Banner Student System.
SCTC2000	Course Request Update	Used to begin Course Request Process and to produce audit trail/Change Register for request validation and error detection.
SCTC3000	Course Request Extract	Used to generate other reports for Course Request (edit mode) and Scheduling (update mode).
SCTD0600	Student Schedule Update	Used to begin student scheduling.
SCTH1000	Person Interface Extract	Used to extract course request and bio/demo data from Student System.
SCTSORT	CRS Sort Program	Used to sort file on specified order.
<i>FTES</i>		<b>Note:</b> FTES reports are produced after SADAPRNT is run.
SADA3202	Weekly Student Contact Hours Report	Produces section statistics for specified attendance methods and weekly contact calculations for those sections.

Report/Module Name	Full Name	Description
SADA3203	Daily Student Contact Hours Report	Produces section statistics for specified attendance methods and daily contact calculations for those sections.
SADA3204	Actual Hours of Attendance Contact Hours Report	Produces section statistics for specified attendance methods and actual hours of attendance contact hours calculations for those sections.
SADA3205	Independent Study Weekly Student Contact Hours Report	Produces section statistics for specified attendance methods and weekly contact calculations for those sections.
SADA3206	Independent Study Daily Student Contact Hours Report	Produces section statistics for specified attendance methods and daily contact calculations for those sections.
SADAFLEX	Faculty Contact Hours of Flex-Time Activities Report	Produces section statistics for specified attendance methods and flex time contract information.
SADAPRNT	FTES Reporting Print Program	Used to produce the FTES reports.
SADASORT	MIS Sort Program	Used to sort files on specified order.

## Oracle Report

Report/Module Name	Full Name	Description
<i>Admissions</i>		
SARETBL	Electronic Application Report	Used to view information about a student's electronic admissions application.

## Java Reports

Report/Module Name	Full Name	Description
<i>Catalog</i>		
SCRDATE	Course Catalog Data Extract Process	Used to extract course catalog data and create an XML output file for download or third party use.

### *Academic History*

Report/Module Name	Full Name	Description
SHRPESE	PESC/XML Transcript Export Process	Used to create electronic transcripts in XML format by producing a .xml file that can be read by the receiving institution.
SHRPESI	PESC/XML Transcript Import Process	Used to import XML transcript files into an institution from other institutions.
SHRTCIM	Transfer Catalog Data Import Process	Used to import an XML extract file of course catalog data into a Banner database and compare incoming records with transfer course records in the system.

# B EDI Job Aid

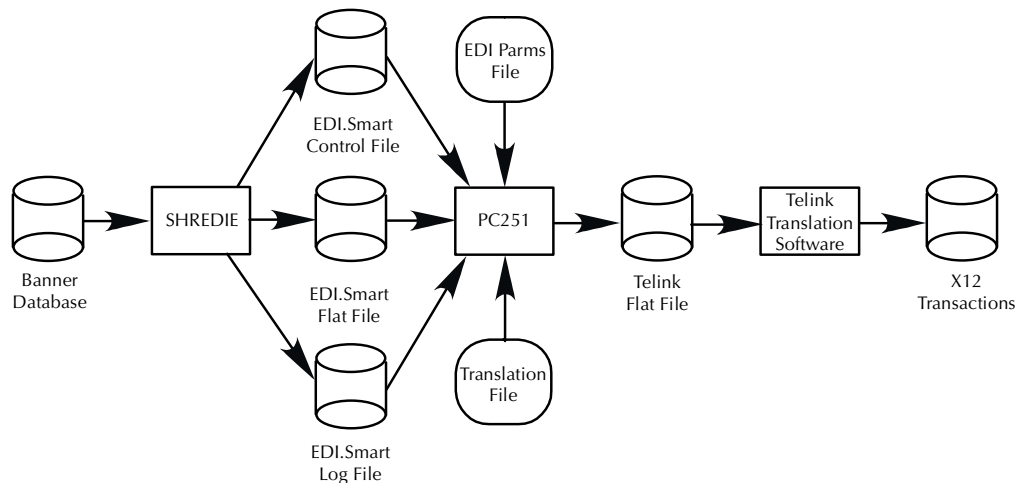

## Introduction

This job aid appendix is provided to assist you with the data mapping required to implement EDI.Smart. Before you start, it will be helpful to review the purpose of the data mappings.

As described in your *EDI.Smart Host System Integration Guide*, EDI.Smart extracts the student's transcript-related data from Banner® and performs a series of conversions to generate an ANSI X12-compliant electronic transcript -- transactions formatted and coded as per Academic Transcript Transaction Set 130 (TS130), which is defined in Version 1 of *A Guide to the Implementation of the SPEEDE/ExPRESS Electronic Transcript* (hereafter referred to as *SPEEDE*).

The process is represented below. The portion in bold is particularly relevant to this discussion.

SHREDIY extracts data from Banner and moves it into the EDI.Smart Flat File. This file is an intermediate file in the conversion process -- its record layout defines the information that can or must be extracted from Banner to generate the *SPEEDE* 130 transactions.

Thus, on one side, each field in the Flat File has been mapped to a corresponding TS130 field. This mapping of Flat File field to TS130 field, as delivered, is a given; you will not need to modify it.

On the other side, each pair of Flat File/TS130 fields has been mapped to a corresponding Banner element or elements. This is the mapping that requires your review; it was developed based on the Banner “Seed” Database which you may have modified by adding or changing data elements, as well as element values.

As you work your way through this job aid, you'll notice that for many of the Flat File fields, Banner has a data element that corresponds exactly. In these cases, the Electronic Date Interchange Extract (SHREDIY) simply moves the student's native *Banner value* into the Flat File field.

For other Flat File fields, however, Banner does not have a data element that corresponds exactly. In these cases, SHREDIY must perform an *interpolation* and values translation across multiple elements to derive the information needed to populate the Flat File field. The interpolation and translation takes this general form:

If Banner data element 1 =  $a$ , and Banner data element 2 =  $b$ , then populate Flat File field 1 with value  $z$  for X12 element  $nnn$ . [As you will recall from *SPEEDE*, each TS130 field references one of the X12 data elements for its set of valid values.]

Thus, in cases where an interpolation is needed, SHREDIY moves the *X12 value* into the Flat File field. It is important to note that, theoretically, the translated value does not have to be an X12 value. You could just as well develop your own translated values to serve as intermediate values in this conversion process. As delivered, however, SHREDIY does use X12 values for the translated values.

You should be aware that, in addition to interpolations, there are two other circumstances under which SHREDIY would need to be coded to perform a translation and move the translated value into the Flat File.

- If the field length of the Banner element is greater than the corresponding Flat File field (otherwise, the value would be truncated). Several Banner validation forms have been modified to allow entry of X12 equivalent values where field lengths vary, for example, Banner Nation code is five positions long and the X12 standard is only two positions. An X12 value needs to be entered for each nation code using the Nation Code Validation Form (STVNATN). For these elements SHREDIY moves the X12 equivalent value into the Flat File field.
- If the field characteristics (i.e., alpha vs. numeric) of the two fields are not the same.

Thus, SHREDIY reads the Banner database and builds the student's Flat File records, field-by-field, by either moving in the Banner value, or by performing an interpolation and translation to supply the appropriate X12 value. Referring back to Figure 1, you can see that this Flat File is one of the inputs into the next step of the process, which takes place on the PC Workstation.

The PC Workstation houses the EDI.Smart Translation Program -- PC251 -- and two additional input files -- the EDI Parms File and the Translation File. Using information from the EDI Parms File and the Translation File, PC251 processes the EDI.Smart Flat

File to complete the transformation of Banner data into correctly formatted 130 transactions coded with the appropriate X12 values. Specifically, it supplies both additional TS130 fields and the remaining Banner to X12 value translations. Let's look at those TS130 fields first.

As you go through this job aid and *SPEEDE*, you'll notice that certain mandatory TS130 fields are not represented in the EDI.Smart Flat File. This is because those fields are not populated with information from Banner. Rather, they describe or “qualify” the information in another TS130 field that is in the Flat File and populated from Banner. These TS130 qualifier types of fields fall into two groups:

- Some are not institution-specific. That is, there is one value which is valid for all users of Banner. A good example is the TS130 date qualifier field -- it must accompany each date field to indicate the format of the date. PC251 is hard-coded to supply the correct X12 value for this group of TS130 qualifier fields -- you don't need to review them or do anything about them.
- Others are institution-specific *installation options* for which you must specify the appropriate X12 value in the EDI Parm File (worksheets are provided to assist). As indicated in Figure 1, PC251 retrieves the specified value during processing.

Now, let's look at how PC251 supplies the remaining Banner to X12 value translations: As you will recall, SHREDIY has populated many of the Flat File fields with Banner values. For some fields, the Banner value does not need any translation -- dates, and text fields such as the student's street address, for example, will be passed directly to TELINK as is. Other fields, however, as noted in *SPEEDE*, require a translation to an X12 code.

Here is the translation rule: If a non-X12 value (i.e., a Banner value or some intermediate value) is moved into a Flat File field, and that field requires specific X12 codes as per *SPEEDE*, then a translation must be entered in the Translation File.

Again, worksheets are provided to assist you with changing and adding to the translations delivered in the Translation File.

Thus, in this job aid, you will:

- Review the delivered mappings of Banner elements to the TS130/Flat File fields and modify them to reflect your Banner Database.
- Review the interpolations and value translations performed by SHREDIY as delivered, and modify them as needed to reflect your Banner Database.
- Review the installation options as delivered in EDI Parm, and change them to reflect your Banner Database.
- Review the value mappings delivered in the Translation File, and modify them to reflect your Banner database.

# Procedures

---

## Prerequisites

- You should have read the “Introduction” to this job aid, as well as Chapter 1 and Chapter 2 in the *EDI.Smart Host System Integration Guide*.
- You should know how to use *A Guide to the Implementation of SPEEDE/ExPRESS Electronic Transcript*. And, you should be familiar with the segment and field descriptions in that guide for Academic Transcript Transaction Set 130.

## Materials

- Worksheet 1: Data Mapping
- EDI.Smart Flat File Notes
- Worksheets A - E: Installation Options
- Worksheets 2.10 - 2.62: Interpolations and Translations

This job aid provides the following Worksheets and Notes; they are designed to be used together throughout this procedure:

In addition, you will need:

- *A Guide to the Implementation of SPEEDE/ExPRESS Electronic Transcript* Version 1, dated March 1992 or later
- Access to your Banner Forms

## Participants

This procedure represents a collaborative effort between Administrative and Technical staff. We suggest that Administrative staff who are most familiar with your institutional transcript assume overall responsibility for the data mappings and value translations; they may need to work closely with Technical staff at various points. Technical staff necessarily assume responsibility for implementing SHREDIY code changes.

After your value mappings have been identified, the actual data entry required to build the Translation File could be performed by data entry staff with a few minutes of training on how to use the X12TRANS utility on the PC Workstation.

A suggested division of labor (tech vs. admin) is indicated at various points in the procedure. The procedure is divided into three parts. There is a bit of paper shuffling involved, and things will go more smoothly if worksheets are inserted back into this job aid, in order, as soon as they are completed.

## Part 1: Specifying Installation Options

1. Identify country codes (Admin).

Review Worksheet A in Chapter 3. *SPEEDE* values can be entered using the Banner Nation Code Validation Form (STVNATN) now.

2. Identify state/province codes (Admin).

Review Worksheet B in Chapter 3. If translations are needed, they can be entered into the Translation File now, using the X12TRANS Utility provided on the PC Workstation.

3. Identify high school code qualifier (Admin).

- 3.1. Review Worksheet C.

- 3.2. In the Wksht column on Worksheet 1, find all references to Worksheet C.

- 3.3. For each reference:

- Review the TS130 qualifier field in *SPEEDE*.
- Review the “qualified” field in *SPEEDE*.
- Review the Banner data element and the 2.nn Worksheet for the “qualified” field.

- 3.4. Complete the “paper and pencil” parts of Worksheet C.

- 3.5. If the delivered mapping for the “qualified” field must be changed, note the changes on both Worksheet 1 and the 2.nn Worksheet.

4. Identify college code qualifier (Admin).

Using Worksheet D instead, repeat Step 2 above.

5. Identify curriculum code qualifier (Admin).

Using Worksheet E instead, repeat Step 2 above.

6. Review with Technical staff all Worksheets that reflect any change from the delivered version.

7. Modify SHREDIY code if needed, based on code references cited on worksheets (Tech).

8. Modify EDI.Parms File if needed, based on Worksheets (Tech).

9. If high school, college, or curriculum code translations are needed, they can be entered into the Translation File now, using the X12TRANS Utility on the PC Workstation.

## Part 2: Modifying the Delivered Mappings, Interpolations, and Translations

Worksheet 1 is the “master” worksheet for this part of the procedure. Using it as your starting point, you will work your way, field-by-field, through the EDI.Smart Flat File. Here is a sample plan of attack . . .

1. Read the note indicated in the Note column associated with the EDI record name. (Admin) (Notes are in Chapter 5.)
2. For the first field (Admin):
  - 2.1. Review the TS130 segment and field description in *SPEEDE*.
  - 2.2. Read the associated note (if any) in Chapter 5.
  - 2.3. Review the associated worksheet (if any) in Chapter 6.
  - 2.4. Review the associated Banner data element (if any).
  - 2.5. Complete the “paper and pencil” portions of the 2.nn worksheet.
  - 2.6. If you are changing the associated Banner data element, update the Element column on Worksheet 1.
3. Repeat Step 2 for each field in the EDI record. After you complete one EDI record or so, stop and review completed worksheets with Technical staff. Record any adjustments on the worksheets and provide Technical staff with copies so they can begin modifications.

When all worksheets are completed and reviewed, Administrative staff can move on to Part 3 while Technical staff continue with modifications.

## Part 3: Building the Translation File

1. Gather all your 2.nn Worksheets together and sort them by the X12 data element number in the upper right corner.
2. Ensure that Translation File entries will be unique (Admin and Tech).

The Translation File is an indexed file; its key is the combination of X12 element # and Flat File value (which could be an Banner value, an X12 value, or any intermediate code, as discussed previously). PC251 reads the value in the Flat File field and attempts to find a match in the Translation File. If there is no match, it

passes the Flat File value without performing a translation. If there is a match, there must be *only one* match -- PC251 can't "choose" between two different translations for the same Flat File value.

Thus, for each X12 element:

- 2.1. Review all Banner (i.e., Flat File) values, including values for TS130 fields that don't require translation. Flag all duplicates.
- 2.2. Review duplicates with Technical staff who will need to modify SHREDIY to perform a translation for one of the duplicates.
- 2.3. After duplicates have been resolved, you can use the 2.nn Worksheets as source documents for adding translations and modifying delivered translations. You should delete the entries you will not be using.

## Worksheets

---

### Worksheet A: Country Codes #26

#### SHREDIY Processing

SHREDIY moves the EDI equivalent value for your Banner Nation Code (STVNATN) into the following EDI Flat File fields:

EDI-CITIZ-COUNTRY  
EDI-BIRTH-COUNTRY  
EDI-COUNTRY  
EDI-HS-COUNTRY  
EDI-SCH-COUNTRY

The Nation Code Validation Form (STVNATN) in Banner contains an **EDI Equivalent** field to hold the ANSI X12 standard values that equate to your Nation Code values. The *SPEEDE/ExPRESS Implementation Guide* lists the ANSI X12 values under data element #26.

Review the EDI Equivalent values on the Nation Code Validation Form (STVNATN) against the ANSI X12 values, and enter any values needing modification.

## Worksheet B: State/Province Codes #156

### SHREDIY Processing

SHREDIY moves the EDI equivalent value for your Banner State/Province Code (STVSTAT) into the following EDI Flat File fields:

EDI-BIRTH-STAT-PROV  
EDI-STATE-PROV  
EDI-HS-STATE  
EDI-SCH-ST-PROV

If the EDI equivalent value is blank, SHREDIY will move the first two characters of the **(State/Province) Code** field into the EDI Flat File fields.

The State/Province Code Validation Form (STVSTAT) in Banner contains an **EDI Equivalent** field to hold the ANSI X12 standard values that equate to your State/Province Code values. The *SPEEDE/ExPRESS Implementation Guide* lists the ANSI X12 values under data element #156.

Review the EDI Equivalent values on the State/Province Code Validation Form (STVSTAT) against the ANSI X12 values and enter any values needing modification.

## Worksheet C: High School Code Qualifier #66

### SHREDIY Processing

SHREDIY moves your Banner values for High School Institution Code (SORHSCH\_SBGI\_CODE) into the only Flat File field requiring a High School Code: EDI-HS-CODE.

The High School Code Qualifier (X12 element #66) indicates which standard code set your institution is using to populate EDI-HS-CODE. It must be sent, along with the High School Code if you want the ability to send the EDI Last High School Record. The High School Code Qualifier is specified in the EDI Parms File. PC251 reads the Parms File and supplies the specified qualifier when it processes the Flat File.

This value has been delivered in the Parms File for High School Code Qualifier:

72 The College Board's Admissions Testing Program administered by the ETS

If you use ETS codes for high schools, you don't need to change anything.

If you don't use ETS codes, here are some alternatives:

1. Review the other values for X12 element #66. If you use one of the other code sets:
  - 1.1. Specify the qualifier here.
  - 1.2. Enter it in the EDI Parms File.
2. If you use FICE codes to populate the **FICE (Code)** field on the Banner Source/Background Institution Code Validation Form (STVSBGI):
  - 2.1. Specify the FICE code qualifier here.
  - 2.2. Enter the qualifier in EDI Parms File.
  - 2.3. Modify SHREDIY: Function `GENERATE_TRANSCRIPT` and `SELECT_HIGH_SCH_DESC` to retrieve the FICE code from the STVSBGI table.
3. If all else fails, for each of your Institution Codes for High Schools enter an X12 translation into the Translation File for element #66.

## Worksheet D: College Code Qualifier #66

### SHREDIY Processing

SHREDIY moves Banner Student Institution Codes (`SHRTRIT_SBG_CODE`) for colleges into these Flat File fields:

```
EDI - PD - SCHOOL  
EDI - SCH - CODE
```

The College Code Qualifier (X12 element #66) indicates which standard code set your institution is using to populate those fields. If a college code is sent, it must be accompanied by the qualifier. The Code Qualifier for colleges is specified in the EDI Parms File. PC251 reads the Parms File and supplies the specified qualifier when it processes the Flat File.

This value has been delivered in the Parms File for College Code Qualifier:

```
72 ETS
```

If you use ETS codes for colleges, you don't need to change anything.

If you don't use ETS codes, here, in order from most to least desirable, are some alternatives:

1. Review the other values for element #66. If you use one of the other code sets:
  - 1.1. Specify the qualifier here.
  - 1.2. Enter it in the EDI Parms File.
2. If you use FICE codes to populate the **FICE (Code)** field on the Banner Source/Background Institution Code Validation Form (STVSBGI):
  - 2.1. Specify the FICE code qualifier here.
  - 2.2. Enter the qualifier in EDI Parms File.
  - 2.3. Modify SHREDIY: Function GET\_TRANSFER\_COURSES and SELECT\_TRANS\_INST\_DESC to retrieve the FICE code from the STVSBGI table.
3. If all else fails, for each of your Institution Codes for colleges, you will need to enter an X12 translation into the Translation File for element #66.

## Worksheet E: Curriculum Code Qualifier (1 of 2) #66

### SHREDIY Processing

SHREDIY uses these Banner database fields (for major or subject area) to populate the following Flat File fields:

STVMAJR\_CIPC\_CODE to EDI-SES-CURRIC-CODE  
SHRTCKN\_SUBJ\_CODE to EDI-CRS-SUBJ-CODE  
SSBSECT\_SUBJ\_CODE to EDI-CRS-SUBJ-CODE  
SHRTRCE\_SUBJ\_CODE to EDI-CRS-SUBJ-CODE  
SHRDGMR\_MAJR\_CODE\_(all extensions) to EDI-DEG-FOS-CODE

The curriculum code must be accompanied by a Curriculum Code Qualifier (X12 element #66) to indicate which standard code set your institution is using for curriculum codes. The Curriculum Code Qualifier is specified in the EDI Parms File. PC251 reads the Parms File and supplies the specified qualifier when it processes the Flat File.

Accordingly, this value has been delivered in the Parms File for Curriculum Code Qualifier:

81 CIP

If you store CIP numbers on majors (SHRDGMR\_MAJR\_CODE\_(all extensions) and STVMAJR\_CIPC\_CODE) and on subject areas (SHRTCKN\_SUBJ\_CODE, SSBSECT\_SUBJ\_CODE, and SHRTRCE\_SUBJ\_CODE), you don't need to change anything.

## Worksheet E: Curriculum Code Qualifier (2 of 2) #66

If you do not store CIP numbers, here are some alternatives:

1. Review the other values for X12 element #66. If you use one of the other code sets:
  - 1.1. Specify the qualifier here.
  - 1.2. Enter it in the EDI Parm File.
2. If you use one of the code sets to populate a different database column name:
  - 2.1. Specify the qualifier here.
  - 2.2. Specify the Banner database table column name(s) here.
  - 2.3. Enter the qualifier in EDI Parm File.
  - 2.4. Modify SHREDIY: Functions CREATE\_DEGREE\_AWD\_RECORD, CREATE\_SESSION\_RECORD, CREATE\_TRANS\_COURSE\_REC, GET\_STUDENT\_COURSES, GET\_TRANSFER\_COURSES, PROCESS\_IN\_PROGRESS, SELECT\_DEGREES\_AWARDED, SELECT\_IN\_PROGRESS, SELECT\_MAJOR\_CIPC\_CODE, SELECT\_STUDENT\_COURSES, and SELECT\_TRANS\_COURSE.
3. If all else fails, for each major and for each subject area, you will need to enter an X12 translation into the Translation File for element #66.

# Worksheet Data Map

---

## Worksheet 1: Explanation of Mapping Data Elements

### Key

*na* in any column means “not applicable.”

### EDI Smart Flat File Columns

*Len* indicates the length of the flat file field.

### TS130 Record Columns

*Ref* is the Reference Designator ID in *SPEEDE* for the TS 130 field. Use this ID to locate the description of the field in *SPEEDE*.

*Status* indicates whether the TS 130 segment/field is M(andatory) or C(onditionally required), as per *SPEEDE*. For example, O/C means that the segment is optional and, if the segment is sent, the field may be required, based on which other elements are sent. See the segment description in *SPEEDE* for specific conditions.

*Page* is the page number of the segment description in *SPEEDE*, Version 1 of March 31, 1992.

### Banner Student Columns

*Table Column Name* indicates the table and column name in the Banner Student Database that is read by SHREDIY to populate the flat file field with Banner Student values. If no table column is listed, it indicates that SHREDIY performs an interpolation among multiple database elements to populate the Flat File field with TS130 values; see the worksheet listed in the worksheet column.

*Len* indicates the length of the segment.

*Note* is the number of an associated note in the Worksheet 1 Processing Notes packet delivered with this workbook.

*Wksht* A worksheet is provided if you need to review a mapping of Banner Student values to TS130 values in the Indexed Translation File, or if you need to review a SHREDIY interpolation and the resulting mapping of TS130 values to TS 130 values in the Indexed Translation File.

## Worksheet 1: Mapping Data Elements

EDI Smart Flat File Record		TS130 Record (SPEEDE ExPRESS)			Banner Student	Note	Wksht
		Ref	Status	Name	Pg	Table Column Name	Len

# Flat File Notes

---

The EDI.Smart Flat File record layout reflects the typical range of requirements for post-secondary transcripts. It should *not* be modified. It is divided into logical segments or “records.” Each is described briefly below, along with notes about specific fields that did not require the more lengthy explanation provided on individual 2.nn Worksheets. The notes are numbered, and the numbers have been entered in the Notes column on Worksheet 1 to provide easy cross-reference.

## 1. *EDI Bio/Demo Record*

One EDI Bio/Demo record is sent. It provides the information required to uniquely identify the student.

2. ELIG-TO-RETURN and ELIG-TO-RETURN-DATE are not stored in Banner and cannot be interpolated from data that are stored in Banner. Therefore, SHREDIY cannot populate this field.
3. All dates will be converted from the Banner format of dd-mon-yyyy to the yyyymmdd standard format for EDI.
4. BIRTH-COUNTY is not populated by SHREDIY; as per *SPEEDE*, it is rarely sent in the post-secondary transcript.

## 5. *EDI Name Record*

One Name record is sent. Although *SPEEDE* does permit more than one type of transcript entity (such as parent or guardian), transcripts from post-secondary institutions are always sent by student name.

6. Accordingly, ENTITY-TYPE is hard-coded in SHREDIY to an X12 value of **1** (person) and NAME-CODE is hard-coded to an X12 value of **04** (name of record).
7. SPRIDEN\_LAST\_NAME is sixty characters, the first twenty will be used to populate LAST-NAME. The first ten characters of SPBPERS\_NAME\_SUFFIX and SPBPERS\_NAME\_PREFIX will be used to populate SUFFIX and PREFIX, respectively.
8. Multiple occurrences of the TS130 Name field can be sent for the student; each occurrence is populated from a different field in the Flat File. PC251 on the Workstation side supplies the appropriate Name Component Qualifier (IN201) for each field.

## 9. *EDI Address Record*

One Address record is sent. SHREDIY selects the address by using the view SPVADDR.

10. The last character of city information will be truncated to fit in the EDI standard.

**11.** To reduce the ten character ZIP/Postal code to nine characters for EDI, ZIP/Postal codes will be parsed to remove a blank at the end or a dash in the middle.

**12.** *EDI Last High School Record*

A maximum of one Last High School record is sent. SHREDIY uses the first high school returned from the select on table SORHSCH.

**13.** HS-ENTITY is hard-coded in SHREDIY to an X12 value of HS (high school).

**14.** *EDI Immunization Record*

As per *SPEEDE*, this information is not typically sent as part of the post-secondary transcript; therefore, SHREDIY as delivered does not populate this record. If this information is stored or could be interpolated from information stored in the Banner database, SHREDIY can be modified to populate it in the flat file.

**15.** *EDI Reference Record*

The purpose of this record is to provide an alternative identifier for the student. If you store student identification numbers other than the one stored in SPRIDEN\_ID, you may wish to modify SHREDIY to select this information from the database and send this record.

**16.** *EDI Prior Degree Record*

SHREDIY creates one Prior Degree record for each Previous Degree from a prior institution stored in Banner. Thus, all prior degrees from each previous institution are reported.

**17.** Previous college school name is populated from STVSBGI\_DESC unless the SBGI code is 999999 then SHRTRIT\_SBGI\_DESC will be used.

**18.** *EDI Session Record*

EDI Session records are sent for each Term in which the student has course work.

**19.** SES-SEQUENCE is not populated: It is assumed that “Session” is analogous to the Banner “Term”. For example, 199201 (Fall of 1992) is an EDI “Session.” Courses (Course 1 and 2 record), Statistics (Academic Summary record) and Degrees Awarded (Degree record) are reported by EDI Session; no further sub groupings are provided.

**20.** SES-CODE is populated using STVTERM\_TRMT\_CODE for the term or the default SHBCGPA\_TRMT\_CODE, if STVTERM\_TRMT\_CODE is null.

**21.** *EDI Academic Summary Record*

One Academic Summary record is sent for each EDI Session record at each academic level. Additional Academic Summary records are sent by level for cumulative

statistics. Pre-system institutional statistics are included in the cumulative statistics summary record for the level. Currently, *SPEEDE* has no other way of handling pre-system statistics.

22. SUM-CUMULATIVE is hard-coded to a value of *N* (No, means term statistics) for the academic summary for each term. Also, SUM-CUMULATIVE is hard-coded to a value of *Y* (Yes, means cumulative statistics) for each cumulative academic summary record.
23. The transcript lists all courses awarded transfer credit, as well as all courses taken at the home institution. Note that the term and cumulative statistics for each EDI Session -- the EDI Academic Summary records -- reflect *only* those courses that were applied to the transcript level. Pre-system statistics will be included in the cumulative statistics for each academic level.
24. For term statistics SHREDIY will use the table SHRTGPA to populate the academic summary record. For cumulative statistics by level SHREDIY will use the table SHRLGPA to populate EDI-SUM-QHRS, EDI-SUM-AHRS, EDI-SUM-EHRS, EDI-SUM-GPA and EDI-SUM-QPTS.
25. As per *SPEEDE*, EDI-SUM-RANK, EDI-SUM-CLASS-SIZE, and EDI-RANK-DATE are not populated for the post-secondary transcript.
26. *EDI Course 1 Record and Course 2 Record*

The Course 2 record is a continuation of the Course 1 record. SHREDIY creates one Course 1 and one Course 2 record for each internal (home institution) course and for each transfer course.

Different fields are populated (and populated differently) depending on whether the course is internal or transfer. Looking at Worksheet 1, you'll see that many of the fields have individual 2.nn worksheets which provide details. Among the fields that don't have worksheets:

27. CRS-AHRS is computed by multiplying SHRTCKG\_CREDIT\_HOURS, for courses in history, or SFRSTCR\_CREDIT\_HR, for courses in progress, times the decoded value of SHRGRDE\_ATTEMPTED\_IND, or is populated from SHRTRCE\_CREDIT\_HOURS for transfer courses.
28. CRS-EHRS is computed by multiplying SHRTCKG\_CREDIT\_HOURS times the decoded value of SHRGRDE\_COMPLETED\_IND times the decoded value of SHRTCKN\_REPEAT\_COURSE\_IND, or is populated from SHRTRCE\_CREDIT\_HOURS for transfer courses.
29. CRS-GRADE is populated from SHRTCKG\_GRDE\_CODE\_FINAL for courses in history, or SFRSTCR\_GRDE\_CODE for courses in progress or not yet moved to history, or SHRTRCE\_GRDE\_CODE for transfer courses.
30. Information is not available in the base Banner database to indicate if a course is an honors course, therefore CRS-HONORS is not populated.

31. CRS-LVL-CODE is populated from SHRTCKL\_LEVL\_CODE for courses in history, SFRSTCR\_LEVL\_CODE for courses in progress or not yet moved to history, or SHRTRCE\_LEVL\_CODE for transfer courses.
32. CRS-TITLE is populated from SHRTCKN\_CRSE\_TITLE for courses in history, SSBSECT\_CRSE\_TITLE for courses in progress or not yet moved to history, or SHRTRCE\_CRSE\_TITLE for transfer courses.
33. CRS-SUBJ-ABBREV is populated from SHRTCKN\_SUBJ\_CODE for courses in history, or SSBSECT\_SUBJ\_CODE for courses in progress or not yet moved to history, or SHRTRCE\_SUBJ\_CODE for transfer courses.
34. CRS-LEVL-NUMBER is populated from SHRTCKN\_CRSE\_NUMB for courses in history, or SSBSECT\_CRSE\_NUMB for courses in progress or not yet moved to history, or SHRTRCE\_CRSE\_NUMB for transfer courses.
35. CRS-OR-SOURCE: “TC” for transfer courses, not sent for institutional courses.
36. CRS-SUPPL-SUBJ, CRS-SUPPL-LEVL, CRS-SUPPL-START, CRS-SUPPL-END, and CRS-ALTERNATE-ID are not sent.
37. *EDI Degree Record*

One Degree record is sent for each degree awarded by the home institution within the EDI Session.
38. A student may have multiple institutional and/or departmental honors for a degree. *SPEEDE* standard allows for only one honors code per degree. Therefore institutional honors will take precedence over departmental honors and the institutional honor marked as EDI default will be used over other institutional honors.
39. *EDI Field of Study Record 1 and Record 2*

EDI Degree Field of Study record pertains to the EDI Degree record. The students primary major code and the major description will be used to denote Field of Study.
40. *EDI School Record*

One occurrence of this record is sent for each institution from which transfer credit has been accepted.
41. PC251 is hard-coded to supply the N101 value of **OS** (Override School) for EDI-SCH-IDENTIFIER (N101).

# Worksheets 2.10-2.62

---

## Worksheet 2.10: EDI-PAPER-COPY #641

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY checks for the existence of pre-Banner statistics for the transcript level, at your institution. If found, SHREDIY populates EDI-PAPER-COPY with Y which PC251 will translate to the X12 value below:

ERP02 (641)

<i>Code</i>	<i>Description</i>
B44	“Part of requested record is being sent; remainder to be sent by hard-copy.”

### Translation File Entry

None.

### Modification

If you wish to handle pre-Banner statistics differently:

1. Describe the processing here:
2. Change SHREDIY: Function `GENERATE_TRANSCRIPT` and `SELECT_PRE_SYSTEM_STATS`.

## Worksheet 2.12: EDI-SEX #1068

### SHREDIY Interpolation

None.

### Translation File Entry

PC251 translates the Banner values in *EDI-SEX* based on these entries for X12 element #1068:

<i>Code</i>	<i>Description</i>	<i>Value</i>
F	Female	F
M	Male	M
U	Unknown or not available	N

### Modification

If your Banner table column name or values for Sex are different:

1. Specify your mapping below:

<i>Code</i>	<i>Description</i>	<i>Value</i>
F	Female	
M	Male	
U	Unknown or not available	

2. Change SHREDIY: Function `SELECT_BIO_DEMO_INFO`, if table column name is different.
3. Enter your mapping in the Translation File for element #1068.

## Worksheet 2.14: EDI-MARITAL-STAT #1067

### SHREDIY Interpolation

None.

### Translation File Entry

PC251 translates the Banner values in EDI-MARITAL-STAT based on these entries for X12 element #1067:

DMG04 (1067)		SPBPERS_MRTL_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
D	Divorced	D
I	Single	S
K	Unknown	blank
M	Married	M
R	Unreported	not sent
S	Separated	P
U	Unmarried	not sent
W	Widowed	W
X	Legally separated	not sent

### Modification

1. If your Banner table column name or values for Marital Status are different, cross out the delivered mappings and specify yours in the table above.
2. Change SHREDIY: Function SELECT\_BIO\_DEMO\_INFO, if table column name is different.
3. Enter your mapping in the Translation File for element #1067.

## Worksheet 2.16: EDI-ETHNICITY #1109

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY moves the EDI equivalent value for your Banner Ethnic Code into EDI-ETHNICITY.

The Ethnic Code Validation Form (STVETHN) contains an **EDI Equiv(alent)** field to hold the ANSI X12 standard values that equate to your Ethnic Code values. The *SPEEDE/ExPRESS Implementation Guide* lists the X12 values under data element #1109.

### Translation File Entry

None.

### Modification

Match your Ethnic Code values to the ANSI X12 values:

1. Specify your mapping below:

<i>Code</i>	<i>Description</i>	<i>Value</i>
DMG05 (1109)		SPBPERS_ETHN_CODE
A	Asian/Pacific Islander	
N	Black -- non-Hispanic	
O	White -- non-Hispanic	
H	Hispanic	
I	American Indian/Alaskan Native	

2. Modify values on the Ethnic Code Validation Form (STVETHN).

## Worksheet 2.18: EDI-CITIZ-STATUS #1066

### SHREDIY Interpolation

None.

### Translation File Entry

PC251 translates the Banner values in EDI-CITIZ-STATUS based on these entries for X12 element #1066:

DMG06 (1066)		SPBPERS_CITZ_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
1	US Citizen	US
2	Non-resident alien	N
3	Resident alien	not sent
4	Illegal alien	not sent
5	Alien	not sent
6	US Citizen - non-resident	not sent
7	US Citizen- resident	not sent

### Modification

1. If your Banner table column name or values for Citizenship Status are different, specify your mapping below:

DMG06 (1066)		SPBPERS_CITZ_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
1	US Citizen	
2	Non-resident alien	
3	Resident alien	
4	Illegal alien	
5	Alien	
6	US Citizen - non-resident	
7	US Citizen- resident	

2. Change SHREDIY: Function SELECT\_BIO\_DEMO\_INFO, if table column name is different.
3. Enter you mapping in the Translation File for element #1109.

## Worksheet 2.20: EDI-RESIDENCY #1073

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY reads the Residency code `SGBSTDN_RESD_CODE` for the student's effective term.

### Translation File Entry

PC251 translates the Banner values in `EDI-RESIDENCY` based on these entries for X12 element #1073:

SST09 (1073)		SGBSTDN_RESD_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
N	No, not a legal resident for fee purposes	N
Y	Yes, a legal resident for fee purposes	R

### Modification

If your Banner table column name or values for Residency are different:

1. Specify your mapping below:

SST09 (1073)		SGBSTDN_RESD_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
N	No, not a legal resident for fee purposes	
Y	Yes, a legal resident for fee purposes	
U	Residency unknown/not available	

2. Change SHREDIY: Function `SELECT_RESIDENCY_STATUS`, if table column name is different.
3. Enter your mapping in the Translation File for element #1109.

## Worksheet 2.22: EDI-ENROLLED-NOW (1 of 2) #641

### SHREDIY Interpolation

SHREDIY determines whether the student is currently enrolled by selecting student courses that have not been graded in any term less than or equal to the in-progress cut off term entered by the user on the transcript request.

It populates EDI-ENROLLED-NOW with codes for X12 element #641 (SST07) as follows:

SST07 (641)

<i>Code</i>	<i>Description</i>	<i>Banner Interpolation</i>
B31	Not currently enrolled	No in-progress courses found
B34	Currently enrolled; transcript includes courses in progress	Ungraded course exists in a term less than or equal to the in-progress cut off term

### Translation File Entry

None.

### Modification

If you need to modify the delivered interpolation:

1. Enter your interpolation below:

SST07 (641)

<i>Code</i>	<i>Description</i>	<i>Banner Interpolation</i>
B30	Currently enrolled; transcript does not include courses in progress	
B31	Not currently enrolled	
B34	Currently enrolled; transcript includes courses in progress	

2. Change SHREDIY: Functions COUNT\_IN\_PROGRESS\_COURSES, GENERATE\_TRANSCRIPT, GET\_INSTITUTION\_COURSES, PROCESS\_IN\_PROGRESS and SELECT\_IN\_PROGRESS.

Note that no entry is required in the Translation File.

## Worksheet 2.24: EDI-HS-CODE #67

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY uses the first high school returned from the select on table SORHSCH and populates EDI-HS-CODE with the Banner SORHSCH\_SBGI\_CODE Institution Code for the school.

### SHREDIY Modification/Translation File Entry

None, unless you are changing the High School Code Qualifier delivered in the EDI Parns File; see “Worksheet C: High School Code Qualifier” or if a change is needed to the selection criteria for the High School; change SHREDIY: Function SELECT\_HIGH\_SCHOOL.

## Worksheet 2.26: EDI-HS-GRAD-TYPE #641

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY moves the EDI equivalent value for your Banner student Diploma Type Code into EDI-HS-GRAD-TYPE.

The Diploma Type Validation Form (STVDPLM) contains an **EDI Equivalent** field to hold the ANSI X12 standard values that equate to your Diploma Type values. The *SPEEDE/ExPRESS Implementation Guide* lists the X12 values under data element #641.

### Translation File Entry

None.

### Modification

Match your Diploma Type Code values to the ANSI X12 standard values:

1. Specify your mapping below:

SST01 (641)		STVDPLM_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
B18	Standard high school diploma	
B33	Unreported	
B17	No degree received	

2. Modify values using the Diploma Type Validation Form (STVDPLM).

## Worksheet 2.28: EDI-PD-SCHOOL #67

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY selects the Banner SHRTRIT\_SBG\_CODE (Institution code) for each school where transfer course work is present for the student and populates EDI-PD-SCHOOL with the SHRTRIT\_SBG\_CODE.

### Translation File Entry/Modification

None required unless you need to change the College Code Qualifier; see “Worksheet D: College Code Qualifier” and SHREDIY Functions GET\_TRANSFER\_COURSES and SELECT\_TRANSFER\_INST.

## Worksheet 2.30: EDI-PD-CODE and EDI-DEG-CODE #1126

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY creates one Prior Degree record for each prior institution the student attended and one Degree Awarded record for each degree received at your institution.

SHREDIY reads the SHRTRAM\_DEGC\_CODE for prior institutions or the SHRDGMR\_DEGC\_CODE for your institution. Then selects the Degree Category Code (STVDEGC\_ACAT\_CODE) from the Degree Code Validation Table (STVDEGC) based on the value in SHRTRAM\_DEGC\_CODE or SHRDGMR\_DEGC\_CODE. This degree category code is then formatted 9.9 and used to populate EDI-PD-CODE or EDI-DEG-CODE.

### Translation File Entry

None.

### Modification

If your Banner Degree Category Code values are different than the ANSI X12 standard values:

1. Specify your mapping below:

PCL05 & DEG01(1126)		STVDEGC_ACAT_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
2.1	Postsec. certificate - under 1 yr	
2.2	Postsec. certificate - over 1 yr	
2.3	Associates Degree	
2.4	Baccalaureate Degree	
3.1	First Professional Degree	
3.2	Post Professional Degree	
4.1	Graduate Certificate	
4.2	Masters Degree	
4.3	Intermediate Graduate Degree	
4.4	Doctoral Degree	

2. There are two options for change:
  - 2.1. Change your Banner Degree Category Codes, using the Degree Code Validation Form (STVDEGC) to match the X12 values.
  - OR
  - 2.2. Enter your mapping in the Translation File for element #1126.

## Worksheet 2.32: EDI-SES-CODE #1139

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY moves the Term Type value designated for your Banner Term Code into EDI-SES-CODE.

The Term Type Validation Form (STVTRMT) contains all the ANSI X12 standard values that can be assigned to your Term Codes on the Term Code Validation Form (STVTERM). If you do not designate a term type for each term on STVTERM, SHREDIY will use the default term type specified on the Academic History Control Form (SHACTRL). The *SPEEDE/ExPRESS Implementation Guide* lists the X12 values under data element #1139.

### Translation File Entry

None.

### Modification

Your Term Type values must match the ANSI X12 values:

1. Check your mapping below:

SES04 (1139)		STVTRMT_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
1	Full Year	
2	Semester	
3	Trimester	
4	Quarter	
5	Trimester	
6	Mini-term	
7	Summer Session	
8	Intersession (Year Round Schools)	
9	Long Session	

2. Modify values on the Term Type Validation Form (STVTRMT).
3. Determine which term type will be the default for your institution and enter it on the Academic History Control Form (SHACTRL).

## Worksheet 2.34: EDI-SES-STUDENT-LEVEL #1131

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY moves the EDI equivalent value for your Banner Class Code into EDI-SES-STUDENT-LEVEL based on a summary of earned hours in academic history, for the student, compared against the classification hours set in the database table SGRCLSR.

The Class Code Validation Form (STVCLAS) contains an **EDI Eqv (Equivalent)** field to hold the ANSI X12 standard values that equate to your Class Code values. The *SPEEDE/EXPRESS Implementation Guide* lists the X12 values under data element #1131.

### Translation File Entry

None.

### Modification

Match your Banner Class Code values to the ANSI X12 values:

1. Specify your mapping below:

SES10 (1131)		STVCLAS_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
20	Non-degree, temporary undergraduate	
21	Post secondary, 1st year	
22	Postsecondary, sophomore	
23	Postsecondary, junior	
24	Postsecondary, senior	
25	Postsecondary post baccalaureate	
26	Postsecondary, non-degree graduate	
27	Postsecondary professional	
28	Postsecondary masters	
29	Postsecondary doctoral	
30	Post doctoral	

2. Modify values on the Banner Class Code Validation Form (STVCLAS).

## Worksheet 2.36: EDI-SES-STATUS #641

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY moves the EDI Equivalent value for your Banner student Academic Standing Code into EDI-SES-STATUS.

The Academic Standing Code Validation Form (STVASTD) contains an **EDI Eqv (Equivalent)** field to hold the ANSI X12 standard values that equate to your Academic Standing Code values. The *SPEEDE/ExPRESS Implementation Guide* lists the X12 values under data element #641.

### Translation File Entry

None.

### Modification

Match your Academic Standing Code values to the ANSI X12 values:

1. Specify your mapping below:

SES14 (641)		STVASTD_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
B35	Highest honors	
B36	Second highest honors	
B37	Third highest honors	
B38	Dropped	
B39	Probation	
B40	Suspended	

2. Modify values on the Academic Standing Code Validation Form (STVASTD).

## Worksheet 2.38: EDI-SUM-CREDIT-TYPE and EDI-CRS-CRED-TYPE #1141

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY is hard-coded to supply an X12 value of S (semester hours) or C (CEU hours) for EDI-SUM-CREDIT-TYPE (SUM01) and EDI-CRS-CRED-TYPE (CRS02). This assumes that your institution is a semester school and, although you may also have mini-sessions etc., it is appropriate to characterize your credit type for courses and summary statistics as “semester.” CEU credit type is used for courses taken at the CEU level.

### SHREDIY Modification

If your credit type is not “semester,” select the appropriate value from among the X12 values for element 1139, and modify the SUM01/CRS02 value for CREDIT\_TYPE in SHREDIY: Function MAIN.

### Translation File Entry

None.

## Worksheet 2.40: EDI-SUM-LEVEL-CODE and EDI-CRS-LVL-CODE #1142

### SHREDIY Interpolation

None.

### Translation File Entry

PC251 translates the Banner values in EDI-SUM-LEVEL-CODE and EDI-CRS-LVL-CODE based on these entries for X12 element #1142:

SUM02 & CRS08 (1142)		SHRLGPA_LEVEL_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
G	Graduate	02
I	Institutional Credit	05
P	Professional	03
U	Undergraduate	01

### Modification

1. If your Banner values for Level are different, specify your mapping below:

SUM02 & CRS08 (1142)		SHRLGPA_LEVEL_CODE
<i>Code</i>	<i>Description</i>	<i>Value</i>
G	Graduate	
H	Higher/Upper Division	
I	Institutional Credit	
L	Lower Division	
M	Work in Major or Program	
P	Professional	
R	Remedial	
T	Summary Transfer Only	
U	Undergraduate	

2. Enter your mapping in the Translation File for element #1142.

## Worksheet 2.42: EDI-SUM-EXC-GPA #1073

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY is hard-coded to supply an X12 value of N (No) for EDI-SUM-EXC-GPA (SUM10), indicating that no grade (i.e., an A+) has a value higher than the highest possible GPA as reported in EDI-SUM-GPA-MAX (see “Worksheet 2.44”).

### SHREDIY Modification

If this is not the case at your institution, change the SUM10 value to Y (Yes) for EXE\_GPA in SHREDIY: Function MAIN.

### Translation File Entry

None.

## Worksheet 2.44: EDI-SUM-GPA-MIN and EDI-SUM-GPA-MAX #740 and #741

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY is hard-coded to supply X12 values of *0000000* for EDI-SUM-GAP-MIN (SUM07) and *0000004* for EDI-SUM-GPA-MAX (SUM08).

### SHREDIY Modification

If this does not reflect the minimum and maximum possible GPAs at your institution, change the SUM07 and SUM08 values for MIN\_GPA and MAX\_GPA in SHREDIY: Function MAIN.

### Translation File Entry

None.

## Worksheet 2.46: EDI-CRS-CRED-BASIS #1147

### SHREDIY Interpolation

SHREDIY is hard coded to supply X12 values of R (regular enrollment) or T (transfer credit) for EDI\_CRS\_CREDIT\_BASIS. R is used for all internal institution courses and T for all transfer courses.

### Modification

If your institution needs additional or different values:

**Change SHREDIY Functions:** CREATE\_TRANS\_COURSE\_REC, GET\_STUDENT\_COURSES, and PROCESS\_IN\_PROGRESS or values for variables CRS\_CRED\_BASIS and TRANS\_CRED\_BASIS in the define statements for flat file course record 1.

### Translation File Entry

None.

## Worksheet 2.48: EDI-CRS-GRADE-QUALIFIER #1148

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY selects grade qualifier based on the level, grading mode and effective term, of the course, from entries on the EDI Academic Grade Qualifier Form (SHAGEDI), to populate EDI-CRS-GRADE-QUALIFIER. If no valid entries are found, SHREDIY will default to the X12 value of 01. See Element #1148, in Appendix B of *SPEEDE*.

For course work in progress, SHREDIY populates EDI-CRS-GRADE-QUALIFIER with the X12 value of 500 (current enrollment, course in progress).

### SHREDIY Modification

If your grade qualifier defaults are different:

1. Determine grade qualifiers for your level, grading mode, and effective term combinations and enter them with the appropriate X12 value, from Element #1148 in Appendix B of *SPEEDE*, on the EDI Academic Grade Qualifier Form (SHAGEDI).
2. Determine normal grading and in progress defaults from Element #1148 in Appendix B of *SPEEDE*.
3. Change SHREDIY: Function MAIN - values for variables EDI\_GRADE\_QUAL\_DEFAULT and IN\_PROGRESS\_GRADE\_QUAL.

### Translation File Entry

None.

## Worksheet 2.50: EDI-CRS-RPT-CNT #1150

### SHREDIY Interpolation

SHREDIY translates the Banner values for excluding or including repeated courses and populates EDI-CRS-RPT-CNT with codes for X12 element #1150 (CRS09) as follows:

CRS09 (1150)		SHRTCKN_REPEAT_COURSE_IND
<i>Code</i>	<i>Description</i>	<i>Value</i>
N	Repeated, Not counted in GPA	E
R	Repeated, Counted in GPA	I

### Translation File Entry

None.

### Modification

If your Banner table column name or values for Repeat Indicator are different:

1. Specify your mapping below:

CRS09 (1150)		SHRTCKN_REPEAT_COURSE_IND
<i>Code</i>	<i>Description</i>	<i>Value</i>
N	Repeated, Not counted in GPA	
R	Repeated, Counted in GPA	
X	Other, Not Counted in GPA	

2. Change SHREDIY: Function SELECT\_STUDENT\_COURSES and/or SELECT\_DEGREE\_INST\_TOTALS.

## Worksheet 2.52: EDI-DEG-HONORS #641

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY moves the EDI equivalent value for your Banner Honors Code into EDI-DEG-HONORS.

The Institutional Honors Code Validation Form (STVHONR) contains an **EDI Equivalent** field to hold the ANSI X12 standard values that equate to your Honor Code values. The *SPEEDE/ExPRESS Implementation Guide* lists the X12 values under data element #641.

### Translation File Entry

None.

### Modification

Match your Degree Honors Code values to the ANSI X12 values:

1. Specify your mapping below:

<i>Code</i>	<i>Description</i>	<i>Value</i>
DEG05 (641)		STVHONR_COD
B35	Highest Honors	
B36	Second Highest Honors	
B37	Third Highest Honors	

2. Modify values on the Institutional Honors Code Validation Form (STVHONR).

## Worksheet 2.54: EDI-DEG-FOS-TYPE #1153

### SHREDIY Interpolation

None.

### SHREDIY Processing

EDI Field of Study records are generated for each EDI Degree Record. As delivered, SHREDIY creates one Field of Study record for each major and minor associated with the degree. It populates EDI-DEG-FOS-TYPE with the following X12 code for element #1153:

M Major

N Minor

### Translation File Entry

None.

## Worksheet 2.56: EDI-DEG-FOS-CODE #67

### SHREDIY Interpolation

None.

### SHREDIY Processing

**SHREDIY** populates EDI-DEG-FOS-CODE with the Banner Major and Minor database fields:

- SHRDGMR\_MAJR\_CODE\_1
- SHRDGMR\_MAJR\_CODE\_1\_2
- SHRDGMR\_MAJR\_CODE\_2
- SHRDGMR\_MAJR\_CODE\_2\_2
- SHRDGMR\_MAJR\_CODE\_MINR\_1
- SHRDGMR\_MAJR\_CODE\_MINR\_1\_2
- SHRDGMR\_MAJR\_CODE\_MINR\_2
- SHRDGMR\_MAJR\_CODE\_MINR\_2\_2

### Translation File Entry

None, unless you need to change the Curriculum Code Qualifier in EDI Params; see “Worksheet E: Curriculum Code Qualifier”.

## Worksheet 2.58: EDI-SCH-CODE #67

### SHREDIY Interpolation

None.

### SHREDIY Processing

SHREDIY populates EDI-SCH-CODE with the Banner Transfer Institution Code.

### Translation File Entry

None, unless you are changing the delivered value of 72 (ETS) in EDI Parm File for College Code Qualifier; see “Worksheet D: College Code Qualifier” and Function GET\_TRANSFER\_COURSES and SELECT\_TRANS\_INST\_DESC in SHREDIY.

## Worksheet 2.60: SOBSEQN SEQUENCE NUMBER

### Banner Database Modification

Insert the following record into your Banner database Sequence Number Base Table (SOBSEQN):

```
INSERT INTO SATURN.SOBSEQN
VALUES ('EDIREQUESTID', '',1,'01-JUN-93');
```

This record is needed by SHREDIY for creating a sequential request number for each transcript generated from the Transcript Request Form (SHARQTC). In the statement above you may change the starting sequence number, if you wish, and the date. The value of EDIREQUESTID must be entered exactly as is or if a different name is needed then SHREDIY must be modified in Function SELECT\_NEXT\_REQUEST\_ID to reflect the new name.

### Translation File Entry

None.

## Worksheet 2.62: ELECTRONIC STATUS CODE

### SHREDIR Processing

SHREDIR moves the Electronic Status Code, for a student transcript request, from the Disposition file and updates it in the Transcript Request Temporary Table (SHTTRAN). The status codes can then be viewed on the Transcript Request Form (SHARQTC), for the student. In order to display a description of the status code, the status codes and their descriptions need to be entered on the Electronic Status Code Validation Form (STVEDIS). These status codes are defined in the definition of the Disposition file in EDI.Smart and are shown below.

### Translation File Entry

None.

### Modification

Your EDI Status Code values must match the Disposition file values:

1. Check the mapping below:

#### Electronic Status Codes

<i>Code</i>	<i>Description</i>
00	Transcript request record created
05	All schedule conditions met
10	Batch ID recorded
15	Download completed
20	Host log records processed, PC251 input created
25	PC251 run completed
30	PC251 log records processed, no errors logged
31	Transaction set 131 records were created or are not required
35	PF251 run completed
40	PF251 log records processed, no errors logged
45	Combined all EDI flat files
50	Generation completed without errors
52	Communications initiated
53	Communications completed successfully and any required acknowledgment(s) have been received
55	Acknowledgement(s) received or not required - no errors returned
60	Acknowledgement(s) received - errors reported
99	Transcript canceled
ZZ	Error reporting, waiting for recovery

2. Modify values on the Electronic Status Code Validation Form (STVEDIS).

## Using Concurrent Curricula Processing

Concurrent curricula processing allows an institution to record and use multiple curricula for a person who is moved through the student cycle. This functionality is used by the Recruiting, Admissions, General Student, Registration, and Academic History modules in the Banner® Student System. This appendix focuses on the structure used by concurrent curricula to store the multiple curricula. This structure provides a means to maintain a complete historical picture of a person's curricula and allows you to store unlimited curricula.

### Processing Summary

Curriculum data is being moved out of the Recruiting, Admissions, General Student, and Academic History tables (SRBRECR, SARADAP, SGBSTDN, and SHRDGMR), into two separate, distinct, centralized curriculum tables. One table (SORLCUR) allows for the entry of unlimited curricula (base curriculum), while the other (SORLFOS) stores unlimited majors, minors, and concentrations per curriculum (fields of study). Each row of curriculum data is associated with its corresponding module. Curricula can be prioritized as primary, secondary, etc. and are controlled by rules on SOACTRL as to the number of curricula, majors, minors, and concentrations that can be attached to a record.

Application Programming Interfaces (APIs) are used to update the original curricula columns so that existing processes will continue to recognize and reference the original curriculum data (two majors, two minors, six concentrations). These Recruit, Applicant, General Learner, and Learner Outcome APIs create, update, and delete rows from the corresponding tables and provide separate table APIs for the curriculum tables (SORLCUR and SORLFOS). They work with the SRARECR, SRAQUIK, SAAADMS, SAAQUIK, SGASTDN, SFAREGS, and SHADEGR forms.

#### Note

In a 7.x release, functionality and rules will be implemented to allow for the tracking and use of concurrent curricula. At that time, the APIs used to update the original curricula columns will be desupported. ■

Banner views are used in the selection process for the curriculum table structure and for non-destructive update processing to facilitate tracking of priority and current and active records by effective term. These views can process curriculum and field of study records

for recruits, applicants, learners, and learner outcomes, that are specific to a module's curriculum information.

Concurrent curricula processing also builds a bridge back to the curriculum fields on the SRBRECR, SARADAP, SGBSTDN, and SHRDGMR tables. The data is inserted by backfilling the curriculum columns in these tables with the data from the SORLCUR and SORLFOS tables. Forms and reports reference the SRBRECR, SARADAP, SGBSTDN, SHRDGMR table structure for curriculum information.

The SRARECR, SRAQUIK, SAAADMS, SAAQUIK, SFAREGS, SGASTDN, and SHADEGR forms are used to maintain curriculum data through a central curriculum window or curriculum blocks. The Learner Curriculum Query Form (SOILCUR) is used to reference the same information through query-only searches.

The SRARECR, SRASUMI, SAAADMS, SAASUMI, SGASTDN, SGASTDQ, SHADEGR, SHADGMQ, SHQTERM, SOAIDNS, SFARQST forms are used to query data via Curriculum Summary and Field of Study Summary blocks. The SRAQUIK and SAAQUIK forms contain Curriculum and Field of Study mini-blocks so you can quickly enter or update curriculum data.

In the Admissions module, users can enter separate applicant acceptance decision codes on multiple admissions applications for the same applicant within the same term. In the General Student module, certain learner status values are used with the curriculum table so they can be associated with a specific program.

## Concepts

Concurrent curricula processing uses the following concepts:

- specific terminology
- curriculum tables
- assignment of priorities to curricula and fields of study
- backfill of curriculum data
- non-destructive updates
- **Attached to Major** field
- status codes
- Curriculum/Field of Study windows
- Curriculum/Field of Study blocks

## Terminology

Students are referred to as "learners," General Student is referred to as the "Learner" module, and academic history is referred to as the "learner outcome."

- "Learner" encompasses both the traditional student (someone 18 - 22 years of age pursuing an undergraduate degree), as well as the person pursuing additional education for a variety of reasons such as work or personal fulfillment.
- "Outcome" identifies the result a learner expects to obtain after their educational experience with the institution (i.e., degree, certificate, etc.).

## Curriculum Tables

Two separate tables (SORLCUR and SORLFOS) are used to store base curriculum data and field of study data. Base curriculum data stored in the SORLCUR table includes: program, level, college, degree, and campus, while the SORLFOS table stores the majors, minors, and concentrations. The SORLCUR table contains a Module field which identifies the module (*RECRUIT*, *ADMISSIONS*, *LEARNER*, *OUTCOME*) in which the curriculum data was created.

In addition, the SORLCUR table contains a Key Sequence Number field that ties the curriculum record to its corresponding recruiting (recruit sequence number), application (application number), or degree (degree sequence number) record. The SORLFOS table includes a Type field which indicates if the row is for a major, minor, or concentration. The table structure allows for unlimited occurrences of both types of information.

### Note

With Release 8.3, the key sequence number in the learner curriculum record ties the curriculum to a study path.

See *Appendix E - Study Path Processing* for more information on using study paths. ■

SORLCUR also includes certain general student/learner data that can be specific to each curriculum record. This allows you to enter a student type code, rate code, site code, leave of absence code with from and to dates, and graduation term/date on each learner curriculum record. The original fields for these data will remain on the general student record, but you have the option of tracking these codes for each curriculum. Data on the curriculum record will override the values on the general student record when a specific curriculum is being processed.

You can decide the number of curricula and fields of study you want to allow to be entered per module. The data counts for the maximums currently allowed are delivered as seed data. They are: two curricula (one for recruiting), two majors, two minors, and six concentrations. These counts can be increased or decreased on SOACTRL, in the Number of Curricula Allowed block, where you can specify by module the number of curricula, majors, minors, and concentrations that can be entered, and in the Number of Fields of Study Allowed block, where you can specify the number of fields of study that can be

entered. Curricula are backfilled to the existing Banner Student tables up to the delivered counts. SunGard® Higher Education suggests that clients continue to restrict the number of curriculum records that can be active concurrently to just a primary and secondary curriculum.

 **Note**

The CAPP compliance request is populated with the primary or first secondary curriculum record from SORLCUR along with the first two majors, two minors, and six concentrations from SORLFOS. The compliance request can be created in baseline from the Compliance Request Management Form (SMARQCM) or the Batch Compliance Process (SMRBCMP) for a population selection and from the Degree Evaluation Record page in Banner Student Self-Service. The compliance process pulls the curriculum data from the request and does not refer back to concurrent curriculum data. ■

## Assigning and Using Priorities

When a learner is enrolled in multiple concurrent curricula, a method must exist to categorize or organize those multiple curricula as they relate to one another. The **Priority** field is used to accomplish this. The **Priority** field is also used to identify which curriculum is the primary curriculum, which is the secondary curriculum, and so forth. This is necessary to support the backfill of the new curriculum information into the existing curriculum columns in the Recruiting, Admissions, Learner (General Student), and Outcome (Academic History degree) table structures (the structures as they exist in Banner 6.X).

All Banner 8.0 baseline processes use the SORLCUR and SORLFOS curriculum tables. (CAPP and Object:Access views will continue to reference curriculum information from the Banner 6.X tables, the existing primary and secondary curriculum fields). Institutions can enter more curriculum records than will be backfilled into the existing curriculum fields. The unrestricted number of active, concurrent curriculum records allows users to process as many curriculum and field of study records as needed, instead of just the records for the primary and secondary curricula. To define institution limits, use the Number of Curricula Allowed and Number of Fields of Study Allowed blocks on SOACTRL to enter the maximum number of curricula and fields of study by learner module.

## Backfilling Curriculum Data

The backfill of curriculum information into the existing table structures is handled by the Curriculum API (application programming interface). The API will update the original curriculum columns so that existing processes will continue to function in the same way as in Banner 6.X. The Banner 6.X curriculum structure allows for two concurrent active curricula, each with up to two majors, two minors, and six concentrations, with the exception of Recruiting. Recruiting allows for one curriculum.

All Banner 8.0 baseline processes use the SORLCUR and SORLFOS curriculum tables. (CAPP and Object:Access views will continue to reference curriculum information from the Banner 6.X tables, the existing primary and secondary curriculum fields). Institutions can enter more curriculum records than will be backfilled into the existing curriculum fields. The unrestricted number of active, concurrent curriculum records allows users to process as many curriculum and field of study records as needed, instead of just the records for the primary and secondary curricula. To define institution limits, use the Number of Curricula Allowed and Number of Fields of Study Allowed blocks on SOACTRL to enter the maximum number of curricula and fields of study by learner module.

 **Note**

Even if your institution changes the values in SOACTRL to allow more curricula, majors, minors, and/or concentrations than are currently allowed in Banner 6.X, only the number allowed in Banner 6.X will be backfilled. The backfill only populates fields that existed in Banner 6.X. ■

## Non-Destructive Updates

The Curriculum window supports non-destructive updates. The purpose of non-destructive updates is to maintain a history of all changes to a learner's curriculum. For this reason, no updates are allowed to existing curriculum and field of study records. The process to update existing curriculum information is to duplicate the existing record and then update the newly created record with the appropriate changes (i.e., to inactivate the record and indicate why it was inactivated). Then the user must add a new record to represent the learner's new or current curriculum. The user is allowed to delete curriculum and field of study records. Institutions are encouraged to establish a policy on retaining historical records.

## Tracking Non-Destructive Updates

The Non-Destructive Curric Update Report (SORLCHG) is used to show non-destructive updates made to curriculum and/or field of study records. This report may be used to track changes made in curriculum, attempt to establish trends, and determine curriculum retention. The process selects SORLFOS rows independently of the associated SORLCUR rows.

 **Note**

Users are allowed to delete curriculum and field of study records. Deleted records are not considered non-destructive and will not be displayed on the report. ■

The system will determine if a record has a non-destructive update using the following criteria:

- If a row is non-current, the SOVLCUR\_CURRENT\_IND and/or the SOVLFOS\_CURRENT\_IND fields are set to *N*.

*or*

- If a row has a curriculum activity status of type *INACTIVE* (the SOBCACT\_ACTIVE\_IND is set to *N*).

 **Note**

A row can be inactive and still be current. Conversely, a row can be non-current and still be active. ■

SORLCHG is run for an ID, all IDs, or a population selection, by term and/or learner module, by start and end dates, by curriculum status and/or curriculum activity status, and by searches on SORLCUR, SORLFOS or both.

The report sort order is based on the following criteria:

- Records are sorted by last name, first name, middle name, and Banner ID (in ascending order).
- Within each returned ID, the curriculum non-destructive updates are sorted by module (Recruiting, Admissions, Learner, Outcome), term code (in descending order), key sequence number (in ascending order), and then by curriculum sequence number (in descending order).
- The SORLFOS rows are sorted by type (major first, minor second, concentration third, user-defined SORLFOS types fourth (in alpha ascending order)), priority (in ascending order), and sequence number (in descending order).

The Report Type parameter allows you to define output three ways. Enter *A* to run the search against SORLCUR and SORLFOS, *L* to run the search against SORLCUR only, or *F* to run the search against SORLFOS only. The default is *A*.

### Value of *L*

If you enter the value *L*, the output appears as follows when the curriculum with the non-destructive update is current and active:

- The current, active curriculum and its current, active field of study are followed by all previous (non-current) curriculum occurrences with the same priority. These print in descending curriculum sequence order.
- The non-current curriculum has the word “OLD” printed to the right of its learner type module.
- All fields of study are printed for the non-current curriculum.

If you enter the value *L*, the output appears as follows when the curriculum with the non-destructive update is *not* active. Only the inactive curriculum is printed along with all of its fields of study.

### Value of *F*

If you enter the value *F*, the output appears as follows. The curriculum with the non-destructive field of study change is printed along with all its fields of study.

## Value of A

This option combines the options for the values *L* and *F*. If you enter the value *A*, the output appears as follows:

- If the curriculum has a non-destructive update, then processing follows the same rules as described above for the value *L*.
- If the field of study has a non-destructive update and the curriculum does not, then processing follows the same rules as described for the value *F*.

## Non-Destructive Updates and Term Code Records that are Non-Current or Inactive

When using the term code to search for records with non-destructive updates, SORLCHG retrieves records with non-destructive updates for that term. It does not check the term code value when retrieving non-current records from SORLCUR and SORLFOS.

When processing *non-current* records by term, the process does not look at the term code of a non-current row when matching the entered term code. It looks at the term of the record that caused the row to become non-current. This is particularly significant for Learner and Outcome type modules. The term code will always be the same on the non-destructive update curriculum and the current curriculum, if the module is Admissions or Recruit.

*For example:*

A student has the following Learner module curriculum.

Program	Priority	Term	Current	Status
BA-MATH	1	200510	Y	Active

If the learner decided to change his program in Term 200610 to BS-ECONOMICS, but the institution wanted to retain the record of the original program, the record would look as follows:

Program	Priority	Term	Current	Status
BA-ECONOMICS	1	200610	Y	Active
BA-MATH	1	200510	N	Active

If you run SORLCHG for term 200510, you will not retrieve the student shown above, since the change that caused the row to become non-current occurred in 200610. If you run the report for term 200610, you will retrieve the SORLCUR row for BA-MATH. Term 200610 is the term in which the non-destructive update took place and caused the BA-MATH program to be non-current.

When processing *inactive* records by term, the process uses the term code of the inactive row that is current to determine if the row can be included. The only way a row can be made inactive is to insert a row of type *INACTIVE*.

## Non-Destructive Updates and Start/End Dates for Records that are Non-Current or Inactive

When using the start and/or end dates to search for records with non-destructive updates, the report retrieves records as follows.

When processing *non-current* records by start and/or end date, the report takes into consideration that updates are not allowed on a curriculum row, and the activity (start or end) date of the non-current row is not an indicator of when the row became non-current. Therefore, the parameters do not look for the activity date of the non-current row.

*For example*, if a user creates an SORLCUR record with a priority of 1 in January, and then inserts a second SORLCUR record with a priority of 1 in March, the SORLCUR record from January would now be non-current (since the later entry of March has the same priority and a higher sequence number). However, the activity date on the non-current record is still January. It does not get updated, although the row was made non-current in March.

When determining if a non-current row falls within the entered date range, the report will use the activity date of the highest sequence number of the row with the same priority that is current. Therefore, the report looks for when a row was made non-current, not the activity date of the non-current row.

When processing *inactive* records by start and/or end date, the report uses the activity date of the inactive row that is current to determine if the row can be included.

## Attached to Major Field

The Field of Study block in the Curriculum window contains a field called **Attached to Major**. This field is used to identify the major to which a concentration is attached. If a field of study row is being entered, and the **Type** field has a value of *CONCENTRATION*, then the **Attached to Major** field will be enabled. If curriculum checking is turned on (using SOACTRL), when the user selects the **Search** feature on the **Attached to Major** field, those majors will be displayed:

- that have been entered so far in the Field of Study block
- and*
- that the concentration is attached to based on the corresponding curriculum rule.

*For example:*

<b>Table</b>	<b>Program/Major/ Concentration</b>	<b>Priority</b>
SORLCUR	BS program	Priority 1 for the base curriculum
SORLFOS	Mathematics (Major)	Priority 2 for the BS
	Computer Science (Major)	Priority 5 for the BS
	Ethnographics (Concentration)	Priority 7 for the BS
	Attached to Major (Computer Science)	

In the above example, if curriculum checking is turned on (using SOACTRL) when the user enters a field of study row for the Ethnographics concentration and selects the **Attached to Major Search** feature, the only majors that will be displayed are Mathematics and Computer Science, as they are the only majors that have been entered so far. These two majors will then only be displayed if, on SOACURR, the concentration of Ethnographics is attached to either of them. If Ethnographics was also attached to the Biochemistry major, Biochemistry would not be displayed as one of the majors to use in the **Attached to Major** field, as the Biochemistry major had not been entered.

## Status Codes

Status codes provide information for each curriculum and/or field of study row. Activity status codes indicate if a row (either curriculum or field of study) is active or not. Curriculum status codes are used to indicate the status of each individual field of study row. Seed data values such as *INPROGRESS*, *PENDING*, or *CHANGED* are delivered, but you can create your own curriculum status codes which specify the status of each field of study row.

Specifically, to indicate that a currently enrolled learner has changed their major, it may be desirable to use a curriculum status of “changed” or “changed major” on the SORLFOS row associated with the original major row (after it has been duplicated and inactivated). Also, in certain circumstances Banner will automatically create a new SORLFOS row.

*For example*, when a recruiting record is pulled forward to admissions and an application is created for it, a new SORLFOS row will automatically be inserted for the module code of *RECRUIT* with a curriculum status of *APPLIED*, indicating that the recruiting SORLFOS row has been moved forward to the applicant stage.

## Curriculum/Field of Study Windows

There are a number of ways to view curriculum and field of study information with concurrent curricula processing.

### Curriculum Window

Use the Curriculum window on SRARECR, SAAADMS, SGASTDN, SFAREGS, and SHADEGR to enter and display curriculum data for a specific module, (i.e., Recruiting, Admissions, etc.). Use the Curricula tab to access this window.

When you select the Curricula tab, a set of secondary tabs is displayed for Curriculum and Field of Study. The Curriculum window displays a detailed curriculum record. The Field of Study window displays a summary of the curriculum record you were on when you accessed the Curriculum window, as well as field of study records.

In the Curriculum window you can:

- use an indicator to select the display of only current and active curriculum records,
- use a button to copy the curriculum record, inactivate it, and insert a new blank record that can be changed,
- use a button to copy the curriculum record and perform a non-destructive update, and
- use a button to copy the curriculum record, inactivate it, and insert a duplicate record.

### Field of Study Window

Use the Field of Study window on SRARECR, SAAADMS, SGASTDN, SFAREGS, and SHADEGR to enter and display field of study data for a specific module, (i.e., Recruiting, Admissions, etc.). Use the Field of Study tab from the Curriculum window to access this window.

This window displays the most recent record for each priority if that record is active. In addition, the data will indicate which row has been backfilled to the primary curriculum and secondary curriculum fields.

You can use a button to display a list of the attached concentrations, when the cursor is on a field of study record for a major with attached concentrations. The button is not enabled if the cursor is on a record for a major with no attached concentrations, or if the record is for a minor or a concentration.

You can also use a button to insert a copy of that field of study record with an *INACTIVE* activity and a *REMOVED* status.

## Curriculum/Field of Study Blocks

Summary and “mini” blocks can be used to query curriculum and field of study information.

### **Curriculum Summary and Field of Study Summary Blocks**

Use the Curriculum Summary and Field of Study Summary blocks to query information. These blocks are located in the main windows of: SRARECR, SRASUMI, SAAADMS, SAASUMI, SGASTDN, SGASTDQ, SHADEGR, SHADGMQ, SHQTERM, and SOAIDNS, and in the General Student and Curriculum window on SFARQST.

These blocks display the most recent record for each priority if that record is active. In addition, they will indicate which row has been backfilled to the primary curriculum and secondary curriculum fields.

You can use a button to display a list of the attached concentrations, when the cursor is on a field of study record for a major with attached concentrations. The button is not enabled if the cursor is on a record for a major with no attached concentrations, or if the record is for a minor or a concentration.

### **Curriculum and Field of Study Mini-Blocks**

Use the Curriculum and Field of Study mini-blocks on SRAQUIK and SAAQUIK to quickly enter or update curriculum data.

## Additional Curriculum Forms

These forms are also used with curriculum processing.

### **Learner Curriculum Query Form (SOILCUR)**

Use the Learner Curriculum Query Form (SOILCUR) to query on and display curriculum data for all modules for a given ID.

### **Archived Learner Curriculum Query Form (SOIHCUR)**

Use the Archived Learner Curriculum Query Form (SOIHCUR) to query and display archived curriculum and field of study rows for all learner module codes for a specified ID. These records can provide historical data for the user, even after they have been purged from the main curriculum and field of study tables.

### **Curriculum User Default Form (SORLCDF)**

Use the Curriculum User Default Form (SORLCDF) to create default values used for the key curriculum and field of study fields when new curriculum and field of study (major) records are inserted.

## Curriculum Event Status Rules Form (SORCSTS)

Use the Curriculum Event Status Rules Form (SORCSTS) to record the translation of curriculum status codes during curriculum events, such as a non-destructive update.

## Details of Concurrent Curricula

This section describes the following topics in more detail:

- curriculum tables
- priorities
- curriculum and field of study sort order
- status codes
- curricula status and curricula activity status defaults
- default values for key fields
- backfilling existing curriculum fields
- backfill algorithm

## Curriculum Tables

The two curriculum tables (SORLCUR and SORLFOS) allow for the storage of an unlimited quantity of curriculum data. The SORLCUR table stores the curriculum data (i.e., program, level, college, campus, and degree), while the SORLFOS table stores the majors, minors, and concentrations. Each entry in both the SORLCUR and SORLFOS tables has a unique one-up sequence number. This sequence number allows each row to be distinct. In addition, the rows in the SORLFOS table are linked to their corresponding SORLCUR table entries by the SORLCUR row's sequence number. The module code (*RECRUIT*, *ADMISSIONS*, etc.) and key sequence number associated with each SORLFOS field of study row are derived from the SORLCUR row to which they are linked.

## Using Priorities

A Priority field exists on both the SORLCUR and SORLFOS tables. In both tables, the Priority field allows you to specify the relevant importance of one record over another record. In SORLCUR, the priority number determines which curriculum row is most important and which row is the next most important. In SORLFOS, the priority number determines which major is most important, which minor is most important, and which concentration is most important. The lower a priority number is (for example, 1 is lower than 3), indicates that the row with a priority of 1 is more important than the row with priority of 3.

The Priority field also has a secondary use. It is used to determine how to backfill curriculum data from the curriculum tables to the existing primary and secondary curriculum fields. The backfill algorithm and its use of the priority number are discussed later in this section.

Priorities are numbered starting at one (1) for each field of study type, as shown in the following pattern:

- Major 1 Priority 1
- Major 2 Priority 2
- Minor 1 Priority 1
- Minor 2 Priority 2
- Concentration 1 Priority 1
- Concentration 2 Priority 2

## Examples of the Curriculum Tables And Using Priorities

In the example, the following processing occurs:

1. The SORLCUR row with a priority of 1 (Program is BA\_UG) will be selected by the backfill algorithm to become the primary curriculum for application number 1, because: it has the lowest priority number, it is the row with the highest SORLCUR sequence number for that priority, and it is active. This curriculum is for application number 1, because the STVLMOD code is *ADMISSIONS*, and the key sequence number is 1.
2. The SORLFOS row for a Major of ART is tied to its SORLCUR row by use of the SORLCUR sequence number field. (See **1 \*\*** in the examples below.) Each SORLCUR sequence number is unique, so it can only refer to one SORLCUR row. This row will become the Major1 for the primary curriculum, because: it has the lowest priority, it has the highest SORLFOS sequence number row for that priority, and it is active.
3. The SORLFOS row for a Major of ENGL is also tied its SORLCUR row by its SORLCUR sequence number. (See **1 \*\*** in the examples below.) It will become Major2 for the primary curriculum, because it has the next lowest priority number after the Major of ART row, it has a learner field of study type of *MAJOR*, and it is active.
4. The SORLCUR row with a priority of 2 (Program is BS\_UG) will be selected by the backfill algorithm as the secondary curriculum, because its row has the next lowest priority number after the BA\_UG row. It will have a Major1 of BUSI, because there is only one SORLFOS row attached to it (by the SORLCUR sequence number of 2) that is the most recent and is active. (See **2 \*\*\*** in the examples below.)

### SORLCUR:

LMOD	Term	Key Seq	LCUR Seq	Priority	Program	Level	Camp	College	Degree	Activity Status
ADM *	200510	1	1 **	1	BA_UG	UG		AS	BA	ACTIVE
ADM *	200510	1	2 ***	2	BS_UG			AS	BS	ACTIVE

\* In the LMOD column, the “ADM” value is an abbreviation for the learner module code *ADMISSIONS*.

### SORLFOS:

LFOS Type	Term	LFOS Seq	LCUR Seq	Priority	LFOS Code	Activity Status	Curriculum Status
MAJOR	200510	1	1 **	1	ART	ACTIVE	INPROGRESS
MAJOR	200510	2	1 **	2	ENGL	ACTIVE	INPROGRESS
MAJOR	200510	3	2 ***	1	BUSI	ACTIVE	INPROGRESS

## Curriculum and Field of Study Sort Order

All current rows are displayed before non-current rows on SRAQUIK, SRARECR, SAAQUIK, SAAADMS, SGASTDN, SFAREGS, SHADEGR, and SOILCUR.

- With field of study rows, the sort hierarchy is: major, active and current, priority (in ascending order), inactive or non-current, sequence number (in descending order).
- The same is true for current minor, current concentration, and current user-defined rows, which follow in that order.
- Non- current or inactive rows are displayed after current and active rows in the same order.
- Curriculum rows are sorted by term code, key sequence number, active and current, priority number, inactive or non-current, and then curriculum sequence (in descending order).

*For example*, if a student had the following SORLFOS rows:

SORLFOS	Type	Current	Active	Priority
Math	Major	Y	Y	2
Environmental Studies	Major	Y	N	1

SORLFOS	Type	Current	Active	Priority
Vector Analysis	Concentration	Y	Y	1
Physics	Major	N	Y	1
Space Travel	Minor	N	Y	1
Fusion Techniques	Concentration	Y	Y	2
Mechanics	Vocation	Y	Y	1

The sort order would be displayed as follows.

- All majors are displayed first, then all minors, then all concentrations, and then whatever else remains. Field of study types are grouped together.
- The next grouping is all active and current rows. Within the active and current rows, the fields of study are sorted by priority.
- Next, the inactive or non-current rows are sorted together within the field of study type. Those are then sorted by priority and then by field of study sequence in descending order.

SORLFOS	Type	Current	Active	Priority
Math	Major	Y	Y	2
Environmental Studies	Major	Y	N	1
Physics	Major	N	Y	1
Vector Analysis	Concentration	Y	Y	1
Fusion Techniques	Concentration	Y	Y	2
Space Travel	Minor	N	Y	1
Mechanics	Vocation	Y	Y	1

The sort order on SOILCUR separates curricula records by learner module (STVLMOD) unless a specific module is queried. The modules are sorted in the following order: Recruit, Admissions, Learner (General Student), Outcome (Academic History), and then any user-defined modules in alpha, ascending order. Records can be sorted within module by current or all, depending on the setting of the **Current** field, which indicates if the curriculum displayed is the most current for the priority (Y) or is not the most recent for the priority (N).

## Status Codes

Two kinds of status codes are used with concurrent curricula processing.

- Curriculum activity status codes are maintained on the Curriculum Activity Status Validation Form (STVCACT). These status codes are assigned a value of active or inactive on SORCACT. A curriculum or field of study row can be designated as active or inactive using the Curriculum Activity Status Code field. Possible values are: *ACTIVE*, *INACTIVE*, or *REMOVED*.
- Curriculum statuses codes are maintained on the Curriculum Status Validation Form (STVCSTS). These statuses are used to associate actions on the student's record with an SORLFOS record and exist only on the Field of Study block.

*For example*, when a learner initially applies for a major of English, the curriculum status code on the SORLFOS row will be *INPROGRESS*. If the student decides to instead apply for Art History, the user might now set the curriculum status code on the English row to be *CHANGED* or *CHANGED MAJOR*. Delivered values are: *APPACCEPT*, *APPLIED*, *AWARDED*, *CHANGED*, *COMPLETED*, *DENIED*, *INPROGRESS*, *INSTACCEPT*, *PENDING*, or *SOUGHT*.

Automatic curriculum status code updates take place in Recruiting, Admissions, and Academic History. When status codes are “updated” or decisions entered, the appropriate rows in the SORLCUR and SORLFOS tables are duplicated, and a new curriculum status is entered on the new row. You can determine which curriculum status codes are to be mapped to each status or decision code. If none are mapped, then default values will be used instead.

- The curriculum status code for a recruit's major is automatically “updated” to *APPLIED* if the recruit applies for admission to the same curriculum (term, college, level, and degree).
- The curriculum status for the applicant is “updated” in Admissions when a decision is entered on an application. When a decision is entered, the active SORLFOS rows for the application are duplicated. The curriculum status code entered on these duplicated rows comes from the curriculum status code associated with the decision code on STVAPDC. If no curriculum status code has been associated with the decision code, then seed data values are used for applications that are accepted by the institution or applicant or are denied.
- The curriculum status for the learner is based on the student status. These codes come from STVSTST. If no valid codes exist on STVSTST, then the default status is used. Learner curriculum field of study rows are automatically copied and updated when the General Student status is changed on SGASTDN or SFAREGS or when SHRDEGS is run.
- The curriculum status for the learner outcome is updated in Academic History when the degree status is modified. These codes come from STVDEGS. Seed data values are used when a degree status is changed to awarded, and no valid codes exist on STVDEGS.

*For example*, when a student’s application is institutionally accepted, the most recent SORLFOS rows with that application sequence number (key sequence number) will be duplicated if they are active, and the new curriculum status will be derived from STVAPDC. If no curriculum status code has been associated with the “institution acceptance” decision code, a curriculum status code of *INSTACCEPT* will be used. This gives the institution a complete picture of the student’s curriculum.

You have the ability to capture the sequence of changes and use an audit trail for all changes by date and user ID using non-destructive updates. You can also push the current and active learner curriculum forward with the new curriculum status as indicated on STVSTST. The curriculum status codes are advanced when applications are accepted and degrees are awarded. In both cases, the current and active fields of study for the application and outcome are copied, and the curriculum status inserted is based on the new decision or degree status code.

The current and active curriculum/field of study records are copied to the new curriculum status code when the student status (STVSTST) changes. The new curriculum status is derived from the STVSTST table. The procedure is called where the learner student status is processed using SHRDEGS, SGASTDN, and SFAREGS. If the term on SGASTDN is greater than the term on the curriculum, a new curriculum record will be created for the new term. A Banner view is used to pull the student status codes first from the curriculum being processed (if they exist), and then from the general student record.

The user can change the translation code value for the rules on SORCSTS to determine the initial default curriculum status (STVCSTS) for field of study records. The system performs a look up on SORCSTS. It will return the translation code value if it is not blank; otherwise, it will return the input parameter value. To change the curriculum status code used, the user must change the translation code on SORCSTS.

The required values on SORCSTS are as follows:

<b>Curriculum Status Code</b>	<b>Description</b>	<b>System Required</b>
<i>ADMITREPLACE</i>	Application replaces learner	Y
<i>APPACCEPT</i>	Application acceptance	Y
<i>APPLIED</i>	Application Exists and Applied	Y
<i>AWARDED</i>	Outcome Awarded	Y
<i>CHANGED</i>	Changed	Y
<i>DENIED</i>	Application has been rejected	Y
<i>INPROGRESS</i>	In Progress	Y
<i>INSTACCEPT</i>	Institution acceptance	Y

<b>Curriculum Status Code</b>	<b>Description</b>	<b>System Required</b>
<i>NOPUSH</i>	Self-Service No Push to Learner	Y
<i>OVERLOAD</i>	Count exceeded	Y
<i>PENDING</i>	Pending	Y
<i>REMOVED</i>	Inactivate field of study	Y
<i>SOUGHT</i>	Degree has sought status	Y
<i>STUDYPATH</i>	Study Path Created	Y

## Curricula Status and Curricula Activity Status Defaults

The following table illustrates how the curriculum status codes and curriculum activity status codes are defaulted during processing.

<b>Activity</b>	<b>Module</b>	<b>Object</b>	<b>Description</b>	<b>Status Source</b>	<b>Activity Status</b>	<b>Curriculum Status</b>
Create Record	Recruiting	SRARECR, SRAQUIK	New curriculum or field of study added		<i>ACTIVE</i>	<i>INPROGRESS</i>
Duplicate Record	Recruiting	SRARECR, SRAQUIK	Curriculum or field of study duplicated		Values cleared on new record	Values cleared on new record
New recruit created	Recruiting	SAAQUIK, SAKQADM Web quick admit	Request to add recruit during quick admit		<i>ACTIVE</i>	<i>APPLIED</i>
New recruit created	Recruiting	SAAQUIK, SAKQADM Web quick admit	Request to add recruit during quick admit, but application is <i>not</i> created		<i>ACTIVE</i>	<i>INPROGRESS</i>
New application created	Recruiting	SAKMODS. p_create_ applica tion, SAAADMS	New application created, recruit field of study with same major, curriculum term, level, and degree is duplicated		<i>ACTIVE</i>	<i>APPLIED</i>
New recruit added	Recruiting	SRKPREL	New recruit added via data load or Web prospects, application not created		<i>ACTIVE</i>	<i>INPROGRESS</i>

Activity	Module	Object	Description	Status Source	Activity Status	Curriculum Status
New recruit added	Recruiting	SRKPREL	New recruit added via data load or Web prospects, application created		<i>ACTIVE</i>	<i>APPLIED</i>
Recruit record converted	Recruiting	SOILCUR, SRARECR, SRAQUIK, SRKPREL, SAAQUIK, SORLCCV	Conversion from SRBRECR to SORLCUR, SORLFOS	Queries SARADAP to find match with term, level, degree, major	<i>ACTIVE</i>	<i>APPLIED</i>
Recruit record converted	Recruiting	SOILCUR, SRARECR, SRAQUIK, SRKPREL, SAAQUIK, SORLCCV	Conversion from SRBRECR to SORLCUR, SORLFOS	No SARADAP match	<i>ACTIVE</i>	<i>INPROGRESS</i>
Create Record	Admissions	SAAADMS	New curriculum or field of study added		<i>ACTIVE</i>	<i>INPROGRESS</i>
Duplicate Record	Admissions	SAAADMS	Curriculum or field of study duplicated		Values cleared on new record	Values cleared on new record
New application created	Admissions	SAAQUIK	Request to add application during quick admit, use admission application decision code on SAAQUIK		<i>ACTIVE</i>	<i>STDNACCEPT</i>
New application created	Admissions	SAKL010	Push Web application		<i>ACTIVE</i>	<i>INPROGRESS</i>
New application created	Admissions	SRKPREL	New application added through data load		<i>ACTIVE</i>	<i>INPROGRESS</i>
Decision made	Admissions	SAADCRV, SARDCSN, SAADCBT, SARBDSN, SAKQADM (Web quick admit)	Decision entered for application, admissions field of study copied, new status entered		<i>ACTIVE</i>	Derived from STVAPDC. *

\* If no curriculum status code has been associated with the decision code entered, the curriculum status defaults to *INSTACCEPT* if the decision is significant decision and institution accept. It defaults to *STDNACCEPT* if the decision is significant decision and student accept. It defaults to *DENIED* if the decision is significant decision and rejected. If none apply, no action is taken.

Activity	Module	Object	Description	Status Source	Activity Status	Curriculum Status
Application record converted	Admissions	SOILCUR, SAAADMS, SAAQUIK, SAADCRV, SAADCBT, SAKL010, SORLCCV	SARADAP rows converted to SORLCUR and SORLFOS		ACTIVE	Derived from STVAPDC **
<p>** If no decisions are made for the application, use <i>INPROGRESS</i>. If the decision has been made, use curriculum status mapped to latest decision code entered on STVAPDC. If no values exist on STVAPDC, defaults to <i>INSTACCEPT</i> if significant decision and institution accept. Defaults to <i>STDNACCEPT</i> if significant decision and student accept. Defaults to <i>DENIED</i>, if decision is significant decision and is rejected.</p>						
Create Record	Learner	SAAQUIK, SGASTDN, SFAREGS, SAKQADM (Web quick admit)	New curriculum or field of study added		ACTIVE	Derived from STVSTST, if no value exists, use <i>INPROGRESS</i>
Duplicate Record	Learner	SAAQUIK, SGASTDN, SFAREGS	Curriculum or field of study duplicated		Values cleared on new record, make Rolled Indicator <i>NULL</i>	Values cleared on new record, make Rolled Indicator <i>NULL</i>
Learner record converted	Learner	SOILCUR, SAAQUIK, SAADCRV, SAADCBT, SGASTDN, SAKL010, SORLCCV	SGBSTDN rows converted to SORLCUR and SORLFOS		ACTIVE	Derived from STVSTST, if no value exists, use <i>INPROGRESS</i>
Student status updated	Learner	SGASTDN, SFAREGS, SHRDEGS	Student status updated, field of study copied for learner curriculum, curriculum status updated		ACTIVE	Derived from STVSTST, if no value exists, use <i>INPROGRESS</i>
Do not create learner record during Quick Start process	Admissions	SAKQADM	Learner record is not to be created from application during Quick Start process; decision process will see <i>NOPUSH</i> status on application and not create learner curriculum from the application		ACTIVE	<i>NOPUSH</i>

Activity	Module	Object	Description	Status Source	Activity Status	Curriculum Status
Curriculum change	Recruiting, Admissions, Learner, Registration, Outcome	SRARECR, SAAADMS, SGASTDN, SFAREGS, SHADEGR	Select the <b>Replace</b> button or the <b>Update</b> button to copy, inactivate, and create a new curriculum		<i>INACTIVE</i>	<i>CHANGED</i>
Remove field of study	Recruiting, Admissions, Learner, Registration, Outcome	SRARECR, SAAADMS, SGASTDN, SFAREGS, SHADEGR	Select the <b>Inactivate</b> button on a field of study to copy and inactivate a field of study		<i>INACTIVE</i>	<i>REMOVED</i>
Create Record	Outcome	SHADEGR	New curriculum or field of study added	SOQOLIB, NEW_SORLCUR_INST calls p_default_status	<i>ACTIVE</i>	Derived from STVDEGS, if no value exists, use <i>SOUGHT</i> (if degree status is <i>NULL</i> ), use <i>PENDING</i> if status is <i>PN</i> , use <i>AWARDED</i> if status is <i>AW</i>
Duplicate Record	Outcome	SHADEGR	Curriculum or field of study duplicated		Values cleared on new record	Values cleared on new record
Degree status updated	Outcome	SHADEGR, SHRDEGS	Degree status updated to next value, field of study copied for the degree, and curriculum status updated to that value		<i>ACTIVE</i>	Derived from STVDEGS, if no value exists, use <i>SOUGHT</i> (if degree status is <i>SO</i> ), use <i>PENDING</i> if status is <i>PN</i> , use <i>AWARDED</i> if status is <i>AW</i>
New degree and curriculum created from grade roll	Outcome	SHKROLS	New degree, curriculum, and field of study added, copied from Learner module		<i>ACTIVE</i>	Derived from STVDEGS, if no value exists, use <i>SOUGHT</i> (if degree status is <i>SO</i> ), use <i>PENDING</i> if status is <i>PN</i> , use <i>AWARDED</i> if status is <i>AW</i>
Field of study added via grade roll	Outcome	SHKROLS	New field of study added to existing degree, copied from Learner module field of study		Derived from STVDEGS, if no value exists, use <i>ACTIVE</i>	Derived from STVDEGS, if no value exists, use <i>SOUGHT</i> (if degree status is <i>SO</i> ), use <i>PENDING</i> if status is <i>PN</i> , use <i>AWARDED</i> if status is <i>AW</i>
Learner outcome record created	Outcome	SOILCUR, SHADEGR, SHRDEGS, SORLCCV	SHRDGMR rows converted to SORLCUR and SORLFOS		Derived from STVDEGS, if no value exists, use <i>ACTIVE</i>	Derived from STVDEGS, if no value exists, use <i>SOUGHT</i> (if degree status is <i>SO</i> ), use <i>PENDING</i> if status is <i>PN</i> , use <i>AWARDED</i> if status is <i>AW</i>

## Default Values for Key Fields

Default values are used for the key curriculum and field of study fields when new curriculum and field of study (major) records are inserted. This occurs when no records exist, an Insert Record function is performed, or a Next Record is performed that inserts a new record. The **Duplicate** button in the Curriculum window does not default curriculum values from the user defaults.

The default values are defined for the user and the learner module and are maintained in the SORLCDF table and on the The Curriculum User Default Form (SORLCDF). These values include: user ID, learner module code, campus code, college code, level code, program, degree code, major code, and department code. The **User ID** value defaults to the ID of the person currently using SOALCDF. Data queried is displayed for that person. Multiple records may be inserted, one for each learner module code (STVLMOD).

### Note

There is no curriculum program validation from SMAPRLE for SORLCDF when data elements are entered, except to ensure that the program is valid on SMAPRLE. ■

On all the data entry forms where curriculum records are entered (SRAQUIK, SRARECR, SAAQUIK, SAAADMS, SGASTDN, SFAREGS, and SHADEGR), there is always an attempt made by the system to default values into all the curriculum fields based on the program rule in SMAPRLE. When the user default value rules for the Admissions, Recruiting, General Student, and Academic History modules are set up on their corresponding data entry forms, these rules may or may not override the default program rule on SMAPRLE.

Values defined on SAAQKER that are used on SAAQUIK, and values in the Default Value window on SRAQUIK will take precedence over these values. The user-defined default values will take precedence over defaulted values on the recruiting record on SRARECR when the level value equals to 00, the degree value equals to 000000, the college value equals to 00, and the primary major and department values equal 0000.

The default values for the priority are defined at the institution level and include the initial priority number and the incremented priority value for any new record that is added. These values are maintained on SOACTRL. The learner field of study type code is entered before the priority value in the Field of Study window. Since the learner field of study type determines the priority number, the **Priority** value will automatically be defaulted in when the user leaves the **Type** field.

## Backfilling Existing Curriculum Fields

The Backfill procedure (p\_backload\_curr) is used to update the curriculum fields on the existing curriculum tables (SRBRECR, SARADAP, SGBSTDN, and SHRDGMR) with the data that has been inserted into the SORLCUR and SORLFOS tables.

The Curriculum API calls the Backfill procedure for the appropriate modules and inserts or updates the existing curriculum columns. Inserts are performed based on the priority of the curriculum row from highest to lowest (i.e., 1 is a higher priority than 3).

Module/Forms	Table Curriculum Fields
Recruiting (SRAQUIK, SRARECR, SAAQUIK)	SRBRECR
Admissions (SAAQUIK, SAAADMS)	SARADAP
Learner (SAAQUIK, SGASTDN, SFAREGS)	SGBSTDN
Outcome (SHADEGR)	SHRDGMR

 **Note**

Currently, the curriculum data structures will not impact report processing, as the data will be backfilled. All existing processes will find the data where it is expected to be stored. ■

## Backfill Algorithm

The algorithm used to backfill curriculum data into existing tables is as follows:

1. Beginning with the lowest priority number, select the SORLCUR row with the highest sequence number and see if the activity status for the row is active.
2. If it is active, make that row the primary curriculum. If it is not active, continue to the next lowest priority SORLCUR row and repeat.
3. Repeat the same process for the SORLFOS rows associated with the selected SORLCUR row, to fill in the Major1, Major2, Minor1, and Minor2 fields.
  - 3.1. Concentrations 1 through 3 for Major1 and Major2 are backfilled by first selecting the SORLFOS concentration rows that have an **Attached to Major** value of either the Major1 or Major2.
  - 3.2. Once all concentrations that are attached to either Major1 or Major2 have been backfilled, the remaining SORLFOS concentration rows are backfilled to the remaining concentration fields.
4. Then, using the next lowest priority number, select the SORLCUR row with the highest sequence number and determine if it is active.
5. If it is active, make that row the secondary curriculum. If it is not active, continue to the next lowest priority SORLCUR row and repeat.

6. Repeat the process for the SORLFOS rows associated with the selected SORLCUR row, to fill in the Major1, Major2, Minor1, and Minor2 fields.
  - 6.1. Concentrations 1 through 3 for Major1 and Major2 are backfilled by first selecting the SORLFOS concentration rows that have an **Attached to Major** value of either the Major1 or Major2.
  - 6.2. Once all concentrations that are attached to either Major 1 or Major 2 have been backfilled, the remaining SORLFOS concentration rows are backfilled to the remaining concentration fields.

## Recruiting

Curriculum data is entered in the Curriculum window on SRARECR or in the Curriculum mini-block on SRAQUIK, or a row is created automatically through the Banner Student Self-Service admissions or prospects processing. The Curriculum window uses edits to enforce existing restrictions (such as, at least one active major must be created). When the curriculum records are saved, the Curriculum API is run to insert and save the data. It then calls the Backfill procedure, which performs the following tasks:

1. The Backfill procedure selects the lowest priority row on SORLCUR having the highest sequence number, for the learner module of *RECRUIT*, for the given administrative sequence number, and checks for an *ACTIVE* status. If the status is *ACTIVE*, this record is made the primary curriculum on SRBRECR for that recruit, and the appropriate values are copied to the SRBRECR curriculum fields. If the status is *INACTIVE*, the next lowest priority row on SORLCUR for the module of *RECRUIT* is selected and processed using the same criteria.
2. The Backfill procedure then selects the lowest priority row on SORLFOS having the highest sequence number, for the learner module of *RECRUIT*, for the type of *MAJOR*, and the same SORLCUR sequence number as above (just entered in Step 1), and checks for an *ACTIVE* status. If the status is *ACTIVE*, this record is designated as Major1 for the primary curriculum chosen above for that recruit, and the field values are copied to the SRBRECR curriculum fields.

This process is repeated to find the next lowest priority SORLFOS row with the highest SORLFOS sequence number that is active for the SORLCUR sequence number with a type of *MAJOR*. This is designated as Major2 for the primary curriculum.

3. The Backfill procedures selects the lowest priority rows on SORLFOS having the highest sequence numbers for the learner module of *RECRUIT*, for the type of *MINOR*, and the same SORLCUR sequence number as chosen above, and checks for an *ACTIVE* status. If the status is *ACTIVE*, this record is designated as Minor1 for the primary curriculum chosen above for that recruit.

This process is repeated to find the next lowest priority SORLFOS row with the highest SORLFOS sequence number that is active for the SORLCUR sequence

number with a type of *MINOR*. This is designated as Minor2 for the primary curriculum.

4. The Backfill procedure then repeats the algorithm described above to backfill up to six concentrations.

The maximum number of SORLCUR rows that will be selected from any curriculum for backfilling is two. (Only one is for Recruiting.)

## Admissions

This processing is the same as it is in Recruiting, but uses the SARADAP table and the learner module of *ADMISSIONS*, with the added processing to also insert data for a secondary curriculum.

The maximum number of SORLCUR rows that will be selected for backfilling is two. If you want to have four majors associated with the same curriculum, and you want two of those majors to display in the primary curriculum fields and two to display in the secondary curriculum fields, then you will need to insert two SORLCUR rows that are identical except for their priority numbers. Then two of the majors should be associated with one SORLCUR row, and the other two majors should be associated with the second SORLCUR row.

## General Student

This processing is similar to Recruiting, but uses the SGBSTDN table and the learner module of *LEARNER*.

When decision codes are entered and/or SGBSTDN records are created, the following processing takes place.

1. A record is inserted into SGBSTDN using the data from the accepted application.
2. The Curriculum API is run to create entries in SORLCUR and SORLFOS for a module of *LEARNER* using the curriculum data from the accepted application.
3. The Backfill procedure is called to insert data into the curriculum fields on SGBSTDN.
4. If study paths are in use, the SGRSTSP record is created.

See *Appendix E - Study Path Processing* for more information on using study paths.

If rows are created using SAAQUIK, and a student record is created and not rolled from Admissions, then only rows with a learner module of *LEARNER* would be inserted into SORLCUR and SORLFOS. If SAAQUIK is used to create not only a student record but also a recruiting and/or application record, then the appropriate SORLCUR and

SORLFOS rows would be inserted with a learner module of *RECRUIT* and/or *ADMISSIONS*.

Records are selected for backfilling by using the lowest priority SORLCUR row with the highest sequence number, for the learner module of *LEARNER*. If the row is *ACTIVE* and has a term code that is less than the To Term on the student record being backfilled, the row is backfilled into the primary curriculum fields. Then each of the SORLFOS rows attached to the backfilled SORLCUR row is examined in a similar fashion. This process is repeated to determine if a secondary curriculum exists for the selected student record.

Since student records (SGASTDN) are effective term driven, a new student record needs to be created whenever a new SORLCUR and/or SORLFOS record is created for a term that does not match the effective term on any of the existing student records. This is to ensure that the Backfill process works correctly and only backfills the appropriate curriculum rows to the appropriate student record.

SFAREGS is used to update any student term or curriculum information if the student is registered for the term. Like SGASTDN, since it is effective term driven, a new student record must exist or be created whenever a new SORLCUR and/or SORLFOS record needs to be created for a term that does not match the effective term of any existing student record. SFAREGS will automatically create a new student record whenever a new SORLCUR and/or SORLFOS record is created for a Key Block term that does not match the effective term on any of the existing student records. This is to ensure that the backfill process works correctly and only backfills the appropriate curriculum rows to the appropriate student record.

### Academic History

This processing is the same as Recruiting, but uses the SHRDGMR table and the learner module of *OUTCOME*.

### Backfilling Examples

If a recruit applied to History (priority 1) and Biology (priority 2) in the Bachelor of Arts undergraduate program (BA\_UG), and the Web application is pushed, the following takes place:

- A row is inserted into SORLCUR to track the base curriculum (BA\_UG) for the Admissions module.
- Two rows are inserted into SORLFOS for the field of study data, one for each major (History and Biology).
- The data entered into SORLCUR and SORLFOS is backfilled to the appropriate primary curriculum fields in SARADAP.

#### Note

The values in the Module and Key Sequence fields displayed for the SORLFOS table are for demonstration purposes only. That data is

actually determined by mapping an SORLFOS row to its parent SORLCUR row using the SORLCUR sequence number. Columns holding curriculum rule numbers have been left out of the example. ■

**SORLCUR:**

LMOD	Term	Key Seq	LCUR Seq	Priority	Program	Level	Camp	College	Degree	Activity Status
ADM *	200510	1	1	1	BA_UG	UG		AS	BA	ACTIVE

\* In the LMOD column, the “ADM” value is an abbreviation for the learner module code *ADMISSIONS*.

**SORLFOS:**

LMOD	LFOS Type	Term	Key Seq	LCUR Seq	Priority	LFOS Seq	LFOS Code	Att'd Conc Majr Rule	Activity Status	Curriculum Status
ADM *	MAJR	200510	1	1	1	1	HIST		ACTIVE	INPROGRESS
ADM *	MAJR	200510	1	1	2	2	BIOL		ACTIVE	INPROGRESS

\* In the LMOD column, the “ADM” value is an abbreviation for the learner module code *ADMISSIONS*.

**SARADAP - Primary Curriculum:**

Term	Appl No	Term Ctlg	Program	Level	Degree	College	Major 1	Major 2	Campus
200510	1	200510	BA_UG	UG	BA	AS	HIST	BIOL	

To continue the example, if a student is accepted by the institution and wishes to have two majors, the following takes place:

- The Admissions field of study rows for History and Biology are duplicated, and the status on the new rows is updated to *INSTACCEPT*.
- A new SORLCUR row is created for the General Student (Learner) record to track the student’s curriculum, and new SORLFOS (field of study) rows are created for History and Biology to track the student’s majors.
- The Backfill procedure back fills the General Student (Learner) record (SGBSTDN) with the appropriate curriculum and field of study data.

**SORLCUR:**

LMOD	Term	Key Seq	LCUR Seq	Priority	Curric Rule	Program	Lvl	Camp	College	Degr	Activity Status
ADM *	200510	1	1	1	240	BA_UG	UG		AS	BA	ACTIVE
LEARNER	200510	99	2	1	240	BA_UG	UG		AS	BA	ACTIVE

\* In the LMOD column, the “ADM” value is an abbreviation for the learner module code *ADMISSIONS*.

**SORLFOS:**

LMOD	LFOS Type	LCUR Seq	Priority	LFOS Seq	LFOS Code	LFOS Rule	Att'd Conc Majr Rule	Activity Status	Curriculum Status
ADM *	MAJR	1	1	1	HIST	81		ACTIVE	INPROGRESS
ADM *	MAJR	1	2	2	BIOL	73		ACTIVE	INPROGRESS
ADM *	MAJR	1	1	3	HIST	81		ACTIVE	INSTACCEPT
ADM *	MAJR	1	2	4	BIOL	73		ACTIVE	INSTACCEPT
LEARNER	MAJR	2	1	1	HIST	81		ACTIVE	INPROGRESS
LEARNER	MAJR	2	2	2	BIOL	73		ACTIVE	INPROGRESS

\* In the LMOD column, the “ADM” value is an abbreviation for the learner module code *ADMISSIONS*.

**SGBSTDN - Primary Curriculum:**

Effective Term	Term Ctlg	Program	Level	Degree	College	Major 1	Major 2	Campus
200510	200510	BA_UG	UG	BA	AS	HIST	BIOL	

## Curricula Checking

The curriculum and field of study APIs are used to validate the curriculum according to the rules on SOACURR. An in and out parameter exists on the curriculum and field of study p\_create APIs to override any raised failure and to return the severity level so the user interface can manage the message if necessary.

- If the override is blank or *F*, the API will abort if there is a fatal curriculum error, and the API error message handler will display the error.
- If the override value has a value of *N* (No Curriculum Checking), the API will not fail, and it will insert the data.

In all cases, the real severity level and error number are returned so the user interface can display any messages.

It should be noted that validation of curriculum elements occurs in the `sb_curriculum` and `sb_fieldofstudy` APIs, regardless of curriculum checking activity. The columns for level, college, degree, program, and campus data must be valid in their respective validation tables. The value entered in the field of study major must be valid on the `STVMAJR` table.

- If the field of study type is *MAJOR*, the valid major checkbox must be checked on the `STVMAJR` table.
- If the field of study type is *MINOR*, the valid minor checkbox must be checked.
- If the field of study type is *CONCENTRATION*, the valid concentration checkbox must be checked.

If the field of study type is something other than the above three choices, the value must be valid on `STVMAJR`.

The following is a list of places where the curriculum data is checked and the type of error interaction that occurs as a result. If the API is allowed to fail, the object will display a standard Banner API error message window with the error.

Object	Banner Activity	Curriculum Checking	API Override Indicator
SRARECR	Insert new Recruiting curriculum data	Allow API failure if the curriculum is in error and the Recruiting severity level on <code>SOACTRL</code> is <i>F</i> . User interface will display a warning if severity level is a warning, but API will not fail.	<i>NULL</i>
SRAQUIK	Insert new Recruiting curriculum data	Allow API failure if the curriculum is in error and the Recruiting severity level on <code>SOACTRL</code> is <i>F</i> . User interface will display a warning if severity level is a warning, but API will not fail.	<i>NULL</i>
SRKPREL	Call <code>sakmods.p_create_recruit</code>	Do not perform any curriculum checking. Call <code>p_create_recruit</code> with an override to any curriculum checking and error reporting from the API.	<i>N</i>

Object	Banner Activity	Curriculum Checking	API Override Indicator
SRKPREL	Call sakmods.p_create_application	Do not perform any curriculum checking. Call p_create_application with an override to any curriculum checking and error reporting from the API.	<i>N</i>
SAAADMS	Insert new Admissions curriculum data	Allow API failure if the curriculum is in error and the Admissions severity level on SOACTRL is <i>F</i> . User interface will display a warning if severity level is a warning, but API will not fail.	<i>NULL</i>
SAAQUIK	Insert new Recruiting curriculum data	Allow API failure if the curriculum is in error and the Recruiting severity level on SOACTRL is <i>F</i> . User interface will display a warning if severity level is a warning, but API will not fail.	<i>NULL</i>
SAAQUIK	Insert new Admissions curriculum data	Allow API failure if the curriculum is in error and the Admissions severity level on SOACTRL is <i>F</i> . User interface will display a warning if severity level is a warning, but API will not fail.	<i>NULL</i>
SAAQUIK	Insert new Learner curriculum data	Allow API failure if the curriculum is in error and the Learner severity level on SOACTRL is <i>F</i> . User interface will display a warning if severity level is a warning, but API will not fail.	<i>NULL</i>
SAADCBT	Insert new Learner row when student is admitted	Display curriculum error in the message line for both fatal and warning errors. If there is a fatal error, abort the API, but not the remaining commit processing.	<i>NULL</i>
SAADCBT	Duplicate/change curriculum and activity statuses in Admissions fields of study, based on new admission application decision codes	Do not perform any curriculum checking.	<i>N</i>
SAADCRV	Insert new Learner row when student is admitted	Allow API failure if the curriculum is in error and the Learner severity level on SOACTRL is <i>F</i> . User interface will display a warning if severity level is a warning, but API will not fail.	<i>NULL</i>

Object	Banner Activity	Curriculum Checking	API Override Indicator
SAADCRV	Duplicate/change curriculum and activity statuses in Admissions fields of study, based on new admission application decision codes	Do not perform any curriculum checking.	N
SARBDSN	Call sakdcsn.p_process_decsn to insert new learner curriculum	Call sakdcsn.p_process_decsn with IN parameter to indicate API should not process curriculum errors.	N
SARBDSN	Duplicate active learner curriculum and field of study, and apply new curriculum status and activity status, if the student status code has different codes then those current on SORLCUR and SORLFOS	Do not perform any curriculum checking.	N
SARETMT	Call sakmods.p_create_recruit	Do not perform any curriculum checking. Call p_create_recruit with an override to any curriculum checking and error reporting from the API.	N
SAAEAPS	Call sakmods.p_create_recruit	Do not perform any curriculum checking. Call p_create_recruit with an override to any curriculum checking and error reporting from the API.	N
SAKMODS	p_create_recruit	Use IN parameter in p_create_recruit to indicate if API should abend if a fatal curriculum error is found. Use OUT parameter in the procedure to return the first fatal error number found. If the user interface requires this should be processed, the error will exist and the processing can be halted.	Calling process sends appropriate value
SAKMODS	p_create_application	Use IN parameter in p_create_application to indicate if API should abend if a fatal curriculum error is found. Use OUT parameter in the procedure to return the first fatal error number found. If the user interface requires this should be processed, the error will exist and the processing can be halted.	Calling process sends appropriate value

Object	Banner Activity	Curriculum Checking	API Override Indicator
SAKMODS	p_create_student	Use IN parameter in p_create_student to indicate if API should abend if a fatal curriculum error is found. Use OUT parameter in the procedure to return the first fatal error number found. If the user interface requires this should be processed, the error will exist and the processing can be halted.	Calling process sends appropriate value
SAKDCSN	Call p_process_decsn procedure and f_create_learner function from SAADCRV, SAADCBT, SARBDSN, and SAKQADM to process admissions decisions and insert new learner curriculum. p_decision_processing calls sakdcsn.p_auto_decision which then calls p_process_decsn.	Use IN parameter to indicate if API should abend if a fatal curriculum error is found. Use OUT parameter in the procedure to return the fatal errors found. If the user interface requires this should be processed, the error will exist, and the processing can be halted.  The SARBDSN process is the only one of the four that does not require processing curriculum errors and will send a value of <i>N</i> in the IN parameter to not process curriculum.	Calling process sends appropriate value
SAKL010	Insert application and curriculum data	Curriculum fatal error messages are not displayed, and the curriculum is allowed to be inserted.	<i>S</i>
SGASTDN	Insert new Learner curriculum data	Allow API failure if the curriculum is in error and the Learner severity level on SOACTRL is <i>F</i> . User interface will display a warning if severity level is a warning, but API will not fail.	<i>NULL</i>
SGASTDN	Duplicate active curriculum and field of study data and apply new curriculum and activity statuses if the student status code is changed on SGBSTDN	Do not perform any curriculum checking.	<i>N</i>
SFAREGS	Duplicate active curriculum and field of study data and apply new curriculum and activity statuses if the student status code is changed on SGBSTDN	Do not perform any curriculum checking.	<i>N</i>

Object	Banner Activity	Curriculum Checking	API Override Indicator
SHADEGR	Insert new Outcome curriculum data	Allow API failure if the curriculum is in error and the Outcome severity level on SOACTRL is <i>F</i> . User interface will display a warning if severity level is a warning, but API will not fail.	<i>NULL</i>
SHADEGR	Duplicate active curriculum and field of study data and apply new curriculum and activity statuses if the degree status code is changed on SHRDGMR	Do not perform any curriculum checking.	<i>N</i>
SHKMODS	Insert outcome (degree) and curriculum	Do not perform any curriculum checking.	<i>N</i>
SHRDEGS	Update outcome with new degree status code. Go to duplicate active curriculum and field of study and apply new curriculum status and activity status, if they are different from previous versions.	Do not perform any curriculum checking.	<i>N</i>
SHRDEGS	Duplicate active curriculum and field of study data and apply new curriculum and activity statuses if the student status code is changed on SGBSTDN	Do not perform any curriculum checking.	<i>N</i>
SHRTYPE	Update or insert learner with new student status. Go to duplicate active curriculum and field of study and apply new curriculum status and activity status, if they are different from previous versions.	Do not perform any curriculum checking.	<i>N</i>

Object	Banner Activity	Curriculum Checking	API Override Indicator
SOKLCUR	Convert curriculum data on SRBRECR, SARADAP, SGBSTDN, and SHRDGRM to SORLCUR and SORLFOS.	Do not perform any curriculum checking.	N
BWSKXMIS (Banner Self-Service)	If a student updates their major for the same curriculum, the curriculum is copied to a new term, and all other fields of study are copied forward. If curriculum is turned on, the new major comes from the list of valid majors on SOACURR that are part of the curriculum.	Do not perform any curriculum checking.	N

## Curriculum API

The Curriculum API is used to insert data into the curriculum tables (SORLCUR and SORLFOS) and to also call the Backfill procedure. The SORLCUR and SORLFOS tables use APIs and DML procedures to do the following:

- select the SORLCUR sequence number for the primary curricula for the module record,
- select the SORLCUR sequence number for the secondary curricula for the module record,
- select the major 1, major 2, minor 1, minor 2, concentration 1, concentration 2, concentration 3, concentration 4, concentration 5, and concentration 6 for the module record,
- view of primary curricula from SORLCUR and SORLFOS, and
- view of secondary curricula from SORLCUR and SORLFOS.

Admissions decision processing, using the grade roll from General Student to Academic History, and using the Roll Indicator on SORLCUR are also discussed in this section.

## Recruiting

When a new row is inserted in SORLCUR:

- The learner module code is automatically set to *RECRUIT*.

- The key sequence number is set to the same number as the administrative sequence number of the recruiting record.
- The activity status is set to *ACTIVE*.

When a new row is inserted in SORLFOS:

- If the insert is automatic (i.e., via Prospects Self-Service or tape load), the activity status is populated with a status of *ACTIVE*, and the curriculum status is populated with a status of *INPROGRESS*.
- If the insert is manual, the activity status is populated with a status of *ACTIVE*, and the curriculum status is populated with a status of *INPROGRESS*. However, you can change these values before saving the record.

When a row is to be changed in SORLCUR and/or SORLFOS:

- To inactivate an existing SORLCUR record and add a new one, select the SORLCUR row to be inactivated, and select the **Replace** button. This will automatically duplicate and inactivate the selected row, and a new row will be inserted for the user to enter curriculum data.
- To inactivate or change an existing SORLCUR or SORLFOS row, select the row to be inactivated or changed. Perform an Insert Record function and then a Duplicate Record function. If an SORLCUR row is duplicated, all of its corresponding SORLFOS rows are duplicated as well. All the fields from the selected row are duplicated. You can then modify the row with the appropriate curriculum.

In the example below, the user wants to change the English major to an Art major. The user selects the active SORLFOS English row, performs an Insert Record and then a Duplicate Record. The user then inserts another SORLFOS row for the new major of Art.

Table	Curriculum Record	Result
SORLFOS	200510, ENGL, ACTIVE, PENDING	Row to be changed
SORLFOS	200510, ENGL, INACTIVE, CHANGE MAJOR	Row that was duplicated
SORLFOS	200510, ART, ACTIVE, PENDING	New field of study (major)

## Admissions

When a new row is inserted in SORLCUR:

- The learner module code is automatically set to *ADMISSIONS*.
- The key sequence number is set to the same number as the admissions application number of the application record.
- The activity status is set to *ACTIVE*.

When a new row is inserted in SORLFOS:

- If the insert is automatic (i.e., Admissions Self-Service or tape load), the activity status is populated with a status of *ACTIVE*, and the curriculum status is populated with a status of *INPROGRESS*.
- If the insert is manual, the activity status is populated with a status of *ACTIVE*, and the curriculum status is populated with a status of *INPROGRESS*. However, you can change these values before saving the record.
- If a matching recruiting record exists (i.e., the term, major, level, and degree of the application match an existing recruit record), the recruit SORLFOS row is duplicated with an activity status of *ACTIVE* and a curriculum status of *APPLIED*.

When a row is to be changed in SORLCUR and/or SORLFOS:

- To inactivate an existing SORLCUR record and add a new one, select the SORLCUR row to be inactivated, and select the **Replace** button. This will automatically duplicate and inactivate the selected row, and a new row will be inserted for the user to enter curriculum data.
- To inactivate or change an existing SORLCUR or SORLFOS row, select the row to be inactivated or changed. Perform an Insert Record function and then a Duplicate Record function. If an SORLCUR row is duplicated, all of its corresponding SORLFOS rows are duplicated as well. All of the fields from the selected row are duplicated. You can then modify the row with the appropriate curriculum.

 **Note**

If a decision code has been assigned to an application and a student record has been created, and the user attempts to insert an additional curriculum row for that application (i.e., with a learner module of *ADMISSIONS*), then a warning message is displayed indicating that the data will be saved, but the corresponding student record will not be updated. ■

## Admissions Decision

Because admission decision codes are user-defined, you can choose which curriculum status code to map to your institution's decision codes. This allows you to automatically create a complete history of curriculum activity, showing how the applicant has moved through each phase of the decision process. Use the `STVAPDC_CSTS` field on `STVAPDC`, which is validated against `STVCSTS` and is nullable.

When a decision code is entered for an application, a new row or rows will be automatically inserted into SORLFOS for that application (with a module equal to *ADMISSIONS*, etc.) for all SORLFOS rows that are currently active for that application. These new rows will have an activity status of *ACTIVE* and a curriculum status that is derived from the new `STVAPDC_CSTS` field on `STVAPDC` for the decision code entered. If no value is entered in this field on `STVAPDC`, then the following values will be defaulted:

- The **Significant Decision** and **Institution Acceptance (Indicators)** are checked for the decision code, the curriculum status is *INSTACCEPT*, and the activity status is *ACTIVE*.
- The **Significant Decision** and **Applicant Acceptance (Indicators)** are checked for the decision code, the curriculum status is *APPACCEPT*, and the activity status is *ACTIVE*.
- The **Significant Decision** and **Institution Rejection (Indicators)** are checked for the decision code, the curriculum status is *DENIED*, and the activity status is *ACTIVE*.

Rows will only be automatically inserted into the SORLFOS table based on the decision codes, when a decision code is inserted into SARAPPD for a given application via SAAQUIK, SAADCRV, SAADCBT, or Quick Start Admissions processing.

*For example, in Admissions:*

<b>Table</b>	<b>Curriculum Record</b>
SORLCUR	200510, BA_UG, ACTIVE
SORLFOS	200510, ENGL, ACTIVE, INPROGRESS
SORLFOS	200510, ENGL, ACTIVE, INSTACCEPT
SORLFOS	200510, ENGL, ACTIVE, APPACCEPT

*For example, in General Student:*

<b>Table</b>	<b>Curriculum Record</b>
SORLCUR	200510, BA_UG, ACTIVE
SORLFOS	200510, ENGL, ACTIVE, INPROGRESS

## General Student - Learner

When a new row is inserted in SORLCUR:

- The learner module code is automatically set to *LEARNER*.
- The key sequence number is set to *99*, since learner records do not have sequence numbers, unless study paths are in use and are created.
- The activity status is set to *ACTIVE*.

When a new row is inserted in SORLFOS:

- If the insert is automatic, the curriculum status is populated with the value that has been assigned on STVSTST for the corresponding student status. If no value has been assigned on STVSTST, then the activity status is populated with a status of *ACTIVE*, and the curriculum status is populated with a status of *INPROGRESS*.
- If the insert is manual, the curriculum status is populated with the value that has been assigned on STVSTST for the corresponding student status. If no value has been assigned on STVSTST, then the activity status is populated with a status of *ACTIVE*, and the curriculum status is populated with a status of *INPROGRESS*. However, you can change these values before saving the record.

When a row is to be changed in SORLCUR and/or SORLFOS:

- To inactivate an existing SORLCUR record and add a new one, select the SORLCUR row to be inactivated, and select the **Replace** button. This will automatically duplicate and inactivate the selected row, and a new row will be inserted for the user to enter curriculum data.
- To inactivate or change an existing SORLCUR or SORLFOS row, select the row to be inactivated or changed. Perform an Insert Record function and then a Duplicate Record function. If an SORLCUR row is duplicated, all of its corresponding SORLFOS rows are duplicated as well. All of the fields from the selected row are duplicated. You can then modify the row with the appropriate curriculum.

## Grade Roll to Learner Outcome (Academic History)

The following processing is used to roll Learner (General Student) information from SBGSTDN to the Learner Outcome (Academic History) and update records on SHADEGR via the Grade Roll to Academic History Process (SHRROLL).

1. The most current SGBSTDN record for the person is read. This is determined by checking for the maximum learner effective term record that is less than or equal to the term on the course.
2. The SORLCUR table is read, and the highest sequence number row for each priority is selected, beginning with the lowest priority number row first. All rows are selected where the term code on SORLCUR is less than the To Term of the selected SGBSTDN record.
3. If the SORLCUR\_ROLLED\_IND is set to *N*, processing will end. Otherwise, continue to the next step.

The setting of the SORLCUR\_ROLLED\_IND is not considered if the learner curriculum record (SORLCUR) is being manually rolled from the Curriculum window or through the SHRROUT process. If the SORLCUR\_ROLLED\_IND is set to *N*, and the curriculum is being manually rolled, processing will continue to the next step.

4. If the `SORLCUR_ROLLED_SEQNO` is set to *Y*, or if the curriculum is being manually rolled, the following may occur.

- 4.1. A new `SHADEGR` record is created if the learner `SORLCUR` row is active and,

No outcome `SORLCUR` row exists with the same college, degree, level, or program.

*or*

An outcome `SORLCUR` row exists with the same college, degree, level, or program with status of *AW* (awarded).

*or*

An outcome `SORLCUR` row exists with the same college, degree, level or program, and a graduation application exists for the outcome record or the learner curriculum record.

- 4.2. An existing `SHADEGR` record is updated if:

An outcome `SORLCUR` row exists with the same college, degree, level and program or major with a status that is not equal to *AW* (awarded). This is also dependent on the settings on `SHACTRL` used for study paths.

See *Appendix E - Study Path Processing* for more information on using study paths.

- If the learner `SORLCUR` row is active, use the `SHRDGMR_KEY_SEQNO` field on the matched outcome row to determine which outcome row can be updated. (This is used if a curriculum was started, inactivated, and then re-started).
- If the learner `SORLCUR` row is inactive, check for the last rolled learner `SORLCUR` row for the same priority (i.e., the `SORLCUR_ROLLED_SEQNO` field will not be null). Select the `SHRDGMR_LCUR_SEQNO` value from the `ROLLED_SEQNO` field of the last rolled learner record to determine which outcome row is to be updated. If no rolled learner `SORLCUR` row exists for that priority, do not process the `SORLCUR` record. (You only need to roll an inactive record, if the record was previously rolled to academic history while it was active).

- 4.3. The copy process for a new or updated `SHRDGMR` record is as follows.

The learner `SORLCUR` row is copied, and the module is changed to *OUTCOME*.

The `SORLCUR_ROLLED_SEQNO` field on the learner `SORLCUR` row is updated to that of the `SORLCUR` sequence number of the new `SORLCUR` row for the *OUTCOME* module.

All the active SORLFOS rows attached to the rolled learner SORLCUR row (the highest sequence number for each priority) are read and copied to the new outcome curriculum.

The SORLFOS rolled sequence number (SORLFOS\_ROLLED\_SEQNO) is updated with the new outcome SORLFOS sequence number.

The curriculum status on the newly created SORLFOS outcome rows is defaulted from STVDEGS. If none exists there, the delivered defaults are used.

5. If the SORLCUR\_ROLLED\_SEQNO is not blank (i.e., it was previously rolled), the following may occur.
  - 5.1. The SORLCUR rows' corresponding SORLFOS rows are read to find rows with blank rolled sequence numbers, and the highest sequence number per priority is selected.
  - 5.2. If the selected SORLFOS row is inactive, then it is not rolled if the same field of study type and priority were not previously rolled. (You can determine if the row was previously rolled by selecting the last rolled learner SORLFOS row for the same SORLCUR priority. If none exists, it was not previously rolled.)
  - 5.3. Copy all other SORLFOS rows to the outcome SORLFOS rows for the outcomes curriculum previously rolled, (using the SORLCUR\_ROLLED\_SEQNO value of the learner SORLCUR row to which this SORLFOR row is attached). Update the SORLFOS\_ROLLED\_SEQNO field with the new outcome SORLFOS\_SEQNO value. The curriculum status on the newly created SORLFOS outcome rows is defaulted from STVDEGS. If none exists there, the delivered defaults are used.

*Example:*

Here is an example of how the SORLCUR\_ROLLED\_SEQNO and SORLFOS\_ROLLED\_SEQNO fields are used when grade roll processing is run.

A student has an English major in the BA\_UG program and does not have a graduation application:

<b>Table</b>	<b>Curriculum Record</b>
SORLCUR	200510, BA_UG, ACTIVE, ROLLED_SEQNO field is <i>NULL</i>
SORLFOS	200510, ENGL, ACTIVE, INPROGRESS, ROLLED_SEQNO field is <i>NULL</i>

Grades are rolled at end of first semester.

*For the student:*

<b>Table</b>	<b>Curriculum Record</b>
SORLCUR	200510, BA_UG, ACTIVE, ROLLED_SEQNO field is <i>1</i>
SORLFOS	200510, ENGL, ACTIVE, INPROGRESS, ROLLED_SEQNO field is <i>1</i>

*For academic history:*

<b>Table</b>	<b>Curriculum Record</b>
SORLCUR	200510, BA_UG, ACTIVE, LCUR_SEQ field is <i>1</i>
SORLFOS	200510, ENGL, ACTIVE, SOUGHT, LFOS_SEQ field is <i>1</i>

The student changes their major to Art:

*For the student:*

<b>Table</b>	<b>Curriculum Record</b>
SORLCUR	200510, BA_UG, ACTIVE, ROLLED_SEQNO field is <i>1</i>
SORLFOS	200510, ENGL, ACTIVE, INPROGRESS, ROLLED_SEQNO field is <i>1</i>
SORLFOS	200510, ENGL, INACTIVE, CHANGED, ROLLED_SEQNO field is <i>NULL</i>
SORLFOS	200510, ART, ACTIVE, INPROGRESS, ROLLED_SEQNO field is <i>NULL</i>

The next time SHRROLL is run, the process will take into account the newly duplicated SORLFOS row for English (activity status is *INACTIVE*) with a ROLLED\_SEQNO field that is *NULL*.

It will check the corresponding SORLCUR row (to find its rolled sequence number value - 1), and it will use that value to insert an SORLFOS row with a learner module of *OUTCOME* and an activity status of *INACTIVE*, and in so doing will inactivate the existing active ENGL row in Academic History for sequence number *1*.

It will then take into account the next LEARNER row in SORLFOS for ART, which also has a ROLLED\_SEQNO field that is *NULL*. It will check that this SORLFOS row also has an associated SORLCUR row with a ROLLED\_SEQNO field that is *1*, and it will now insert a new SORLFOS row with a learner module of *OUTCOME* for a major of ART with a status of *ACTIVE*.

The activity status on the newly created *OUTCOME* rows will be set to *ACTIVE* or *INACTIVE* depending on the curriculum status of the corresponding General Student row which had the ROLLED\_SEQNO field set to *NULL*.

*For academic history:*

<b>Table</b>	<b>Curriculum Record</b>
SORLCUR	200510, BA_UG, ACTIVE, LCUR_SEQ field is 1
SORLFOS	200510, ENGL, ACTIVE, SOUGHT, LFOS_SEQ field is 1
SORLFOS	200510, ENGL, INACTIVE, CHANGED, LFOS_SEQ field is 2
SORLFOS	200510, ART, ACTIVE, SOUGHT, LFOS_SEQ field is 3

*For the student:*

<b>Table</b>	<b>Curriculum Record</b>
SORLCUR	200510, BA_UG, ACTIVE, ROLLED_SEQNO field is 1
SORLFOS	200510, ENGL, ACTIVE, SOUGHT, ROLLED_SEQNO field is 1
SORLFOS	200510, ENGL, INACTIVE, CHANGED, ROLLED_SEQNO field is 2
SORLFOS	200510, ART, ACTIVE, SOUGHT, ROLLED_SEQNO field is 3

## Grade Roll Package (SHKROLS) Processing

The Grade Roll Package (SHKROLS) is used to pull the graduation values from the curriculum table. The graduation information entered on the curriculum, if present, will populate the SHRDGMR record.

*For example:*

<b>Graduation data exist on SGBSTDN</b>	<b>Graduation data exist on SORLCUR</b>	<b>What is rolled to SHRDGMR</b>
Y	Y	Graduation data on SORLCUR
N	Y	Graduation data on SORLCUR
Y	N	Graduation data on SGBSTDN
N	N	No graduation data will be rolled

The following table describes how the roll process works if the learner has two active and current learner curriculum records with the same level, college, degree, and program, and both are set to roll to academic history.

Graduation data exist on SGBSTDN	Graduation data exist on SORLCUR 1	Graduation data exist on SORLCUR 2	What is rolled to SHRDGMR
Y	Y	N	Graduation data on SORLCUR 1
Y	N	Y	Graduation data on SORLCUR 2
Y	N	N	Graduation data on SGBSTDN
Y	Y	Y	If the graduation data associated with the two SORLCUR records are identical, one SHRDGMR record will be created with the SORLCUR graduation data and both curricula attached to it.  If the graduation data associated with the SORLCUR records are different, two separate SHRDGMR records will be created, each populated with the graduation data from one of the SORLCUR records.
N	Y	Y	If the graduation data associated with the two SORLCUR records are identical, one SHRDGMR record will be created with the SORLCUR graduation data and both curricula attached to it.  If the graduation data associated with the SORLCUR records are different, two separate SHRDGMR records will be created, each populated with the graduation data from one of the SORLCUR records.
N	Y	N	Graduation data on SORLCUR 1
N	N	Y	Graduation data on SORLCUR 2
N	N	N	It will be blank on the degree record.

The insert degree procedure in SHKROLS is called before the first curriculum record is created. It uses the curriculum values or the SGBSTDN record if the curriculum is null. The generate API procedure is used to insert API-reported errors into the SOTPRNT table, so that SHRROLL will list all API errors on the report and continue processing the remaining grades. The SOTPRNT\_ERR\_MSG column stores the API error message.

## Using the Roll Indicator on SORLCUR

The Roll Indicator (SORLCUR\_ROLL\_IND) on SORLCUR (**Roll Learner** radio group on SOILCUR) is only applicable to the General Student (Learner) module. Therefore, the **Roll Learner** radio group on SGASTDN and SFAREGS should be used to set the value of the Roll Indicator and to designate which learner curriculum records are to be rolled to history (outcome).

When the curriculum is rolled, the outcome record is created (SHADEGR), and the learner curriculum inserted for the outcome. A new outcome is not created if a previous outcome exists that has not been awarded and has a curriculum record with the same level, degree, college, and program. In this case, the curriculum is rolled to the existing outcome.

The **Roll Learner** radio group choices on SOILCUR are *Yes*, *No*, or *Default*. The default value originates first from the setting of the **Primary (Indicator)** or the **Secondary (Indicator)** on SOACURR. If a curriculum has not been defined, the default value then originates from the **Create or Update Outcome Record with Primary Learner Curriculum** radio group or the **Create or Update Outcome Record with Secondary Learner Curricula** radio group on SOACTRL.

- Select *Yes* to roll the learner record to academic history (outcome).
- Select *No* to not roll the learner record.
- Select *Default* to use the curriculum rules defined on SOACURR (**Primary** or **Secondary** checkboxes) and SOACTRL (**Create or Update Outcome Record with Primary Learner Curriculum** radio group or **Create or Update Outcome Record with Secondary Learner Curricula** radio group).

### Note

All non-learner modules (Recruiting, Admissions, Academic History) will display a value of *No* in this field. ■

The curriculum API (sb\_curriculum.p\_create) for non-learner module forms and processes sets the SORLCUR\_ROLL\_IND to *D* (set p\_roll\_ind = *D*) when a curriculum record is created. You can change the setting of the Roll Indicator from *D* to a *Y* or *N*, using the **Roll Learner** field.

SAAQUIK and the admissions decision process, that create a learner curriculum using SAKDCSN, set the Roll Indicator to *D* so the values from SOACURR or SOACTRL are used. The BWSKXMIS process in self-service copies the value from the previous sequence of the curriculum. That way, it can be determined if the user had previously checked *Y* or *N* accurately. The *D* tells the system to use the value from SOACURR or SOACTRL. If the user checks *Y* or *N*, the user is overriding the default. The API then determines if the module is *LEARNER* or not and sets the value of the Roll Indicator on SORLCUR appropriately.

All inserts of new curricula will set the value of the SORLCUR\_ROLL\_IND field to *D*. The API determines the final value for the field based upon learner module (STVLMOD) and

the settings on SOACURR and SOACTRL. It is important to note that *D* is only used as an initial value. No records will be written to the database with a value of *D* in the SORLCUR\_ROLL\_IND field. All modules other than Learner (General Student) will be set to *N*.

## Academic History - Learner Outcome

When a new row is inserted in SORLCUR:

- The learner module code is automatically set to *OUTCOME*.
- The key sequence number is set to the same number as the degree sequence number of the learner outcome record.
- The activity status is set to *ACTIVE*.

When a new row is inserted in SORLFOS:

- If the insert is automatic, the curriculum status is populated with the value that has been assigned on STVDEGS for the corresponding degree status. If no value has been assigned on STVDEGS, then the activity status is populated with a status of *ACTIVE*, and the curriculum status is populated with a status of *INPROGRESS*.
- If the insert is manual, the curriculum status is populated with the value that has been assigned on STVDEGS for the corresponding degree status. If no value has been assigned on STVDEGS, then the activity status is populated with a status of *ACTIVE*, and the curriculum status is populated with a status of *INPROGRESS*. However, you can change these values before saving the record.

When a row is to be changed in SORLCUR and/or SORLFOS:

- To inactivate an existing SORLCUR record and add a new one, select the SORLCUR row to be inactivated, and click on the **Replace** button. This will automatically duplicate and inactivate the selected row, and a new row will be inserted for the user to enter curriculum data.
- To inactivate or change an existing SORLCUR or SORLFOS row, select the row to be inactivated or changed. Perform an Insert Record function and then a Duplicate Record function. If an SORLCUR row is duplicated, all of its corresponding SORLFOS rows are duplicated as well. All of the fields from the selected row are duplicated. You can then modify the row with the appropriate curriculum.

If a degree record already exists (i.e., one exists with a status of *PENDING*), and the degree status is changed to some other status (such as *SOUGHT*), the form will automatically insert new SORFLOS rows for the given degree record with the appropriate curriculum status codes from STVDEGS based on the new degree status code entered. If no value has been assigned on STVDEGS for the curriculum status, then the curriculum status value will default based on the **Awarded Indicator** setting associated with the degree status code.

- If the newly added degree status has an **Awarded Indicator** of *A (AWARDED)*, then the curriculum status will be set to *AWARDED*.
- If the degree status entered has an **Awarded Indicator** of *P (PENDING)*, then the curriculum status will be set to *PENDING*.
- If the degree status entered has an **Awarded Indicator** of *NULL*, then the curriculum status will be set to *SOUGHT*.

The default activity status for these three options will be set to *ACTIVE*.

When the Degree Status Update Report (SHRDEGS) is run, degree records are automatically created, as well as student records. When this report creates a new degree record (based on the parameter values), the API will use the curriculum status code stored on STVDEGS for the given degree status code of the degree record that is created. This allows you to determine which curriculum status code should be assigned based on the degree status code. In addition, if SHRDEGS creates a new student record, the API will use the curriculum status code assigned on STVSTST when the New Student Status parameter is selected.

## Conversion of Curriculum Data

Curriculum data that resides in Banner pre-7.0 base tables (i.e., SRBRECR, SARADAP, etc.) will be automatically converted to the SORLCUR and SORLFOS tables when the person's ID is accessed from SRARECR, SRAQUIK, SAAADMS, SAAQUIK, SGASTDN, SFAREGS, or SHADEGR.

When the ID is accessed from any of these forms and a Next Block is performed from the Key Block, the conversion program, `soklcur.p_convert_curriculum`, will convert all existing curriculum data in these base tables to the SORLCUR and SORLFOS tables, if no rows exist in the SORLCUR and SORLFOS tables for the specified ID.

Banner views are used to select the primary, current and active curriculum and field(s) of study for the conversion process. Columns for communication plan rules, admissions decision calculator rules, admissions rating factor rules, and admissions checklist rules tables provide flexibility when rules are defined based upon curriculum elements. These views are discussed in the “Banner Views Used in Concurrent Curricula Processing” section.

To convert data for a single ID or a larger population, your institution can run the Learner Curriculum Conversion Process (SOPLCCV). The process can be run for an individual ID or for a population selection.

### **Warning**

Prior to implementing any post 7.0 releases, *all* Banner curriculum rows *must* be converted to use the SORLCUR and SORLFOS tables. ■

This section also discusses the following:

- running SOPLCCV conversion for use with Release 7.3
- reporting data errors using scripts
- SOBLMOD maximums allowed by module
- SORLMFS and maximum field of study counts
- forms/processes that call the conversion process
- copying records from General Student to Academic History
- Key Block conversion

## Running SOPLCCV Conversion for Release 7.3

The 7.3 release delivers numerous reports and forms, as well as Self-Service display pages that use the concurrent curricula tables. As such, this release *requires* the execution of the Learner Curriculum Conversion Process (SOPLCCV) for the Recruiting, Admissions, and General Student (Learner) modules. Users moving from a 6.X release to Release 7.3 *must* run SOPLCCV before the upgrade can be completed. Other users should run SOPLCCV before installing the 7.3 release. This situation does not require that SOPLCCV be re-run.

This conversion process is used to move curriculum data from the base tables in the Recruiting, Admissions, General Student, and Academic History modules to the curriculum tables (SORLCUR and SORLFOS) which were delivered in Banner Student Release 7.0. The ramifications of not running the conversion process during the upgrade are that certain forms and reports will include missing curriculum data.

## Data Error Reporting For SOPLCCV

Three SQL\*PLUS scripts are delivered to report potential issues with data on SGBSTDN, SARADAP, SRBRECR, and SHRDGMR. You can track information about curriculum records that cannot be converted or when missing or invalid data exists.

The three scripts are as follows:

- `srsoplccv2.sql`

This script reports majors, minors, and concentrations that are no longer valid on STVMAJR. In addition, it shows program codes that do not exist in SMRPRLE, level codes that are no longer valid on STVLEVL, college codes that are no longer valid on STVCOLL, degree codes that are no longer valid on STVDEGC, and campus codes that are no longer valid on STVCAMP.

- `srsoplccv.sql`

This script reports missing key data such as:

- the PIDM on SPRIDEN,

- the level, college, degree, and major 1 on the primary curriculum on SARADAP, SHRDGMR, and SGBSTDN,
  - the level, degree, and major 1 on SRBRECR,
  - the level, college, degree, and major 1 on the secondary curriculum on SARADAP and SGBSTDN, and
  - the college and major 1 on the secondary curriculum on SHRDGMR.
- `srsorchlg.sql`

This script reports discrepancies (errors) between the key backfilled data on SRBRECR, SARADAP, SGBSTDN, and SHRDGMR. Key backfill data includes the level, college, degree, program, campus, and the primary major. The college is not included in the comparison for SRBRECR.

This script can be executed for a population selection. The prompts include Application Code, Selection Identifier, Creator ID, and User ID.

The SOTFCUR table is used to store the data that is selected and compared to the curriculum. This data can be displayed in report format.

## Examining SOBLMOD Maximums during Conversion Process

The conversion process looks at the SOBLMOD maximum allowed for a module when converting curricula records and does not produce an error when the maximum is exceeded. The conversion process will convert all curriculum records from the base table to SORLCUR and SORLFOS. When the base table number of curricula exceeds the SOBLMOD maximum number, the conversion process will take the curricula that exceed the maximum and make those records inactive with a status of *OVERLOAD*.

### Note

The value of *OVERLOAD* on STVCSTS is used with processing maximum curriculum records on SOBLMOD and rolling the records to the General Student module. ■

## Using SORLMFS for Maximum Field of Study Counts

Maximum counts for all types of fields of study are recorded, not just the fields of study for the major, minor, and concentration. The maximum current and active fields of study allowed are coded for each module on SOACTRL for any field of study type.

The SORLMFS table is used to store the maximum counts per field of study type and module. The keys to the table are the module code (LMOD\_CODE) and the field of study type (LFST\_CODE). The types for *MAJOR*, *MINOR*, and *CONCENTRATION* are required. The table allows a count of zero, which means none are allowed for that field of study type. A value of *1* is required for the major type, because the curriculum currently requires at least one major.

#### Note

An SOBLMOD record which defines the learner module and number of curriculum allowed *must* exist prior to defining fields of study counts on SORLMFS. ■

## Forms and Processes that Call the Conversion Process

To convert data for a single ID or a larger population, you can run the Learner Curriculum Conversion Process (SOPLCCV). The process can be run for an individual ID, for all IDs with curricula records (using a parameter value of %), or for a population selection. The conversion process is called as well from the following forms and processes: SRARECR, SRAQUIK, SAAADMS, SAAQUIK, SOILCUR, SGASTDN, SFAREGS, SHADEGR, the grade roll process in SFAALST, SFASLST, and SHRROLL, the electronic prospect push process from SRIPREL, the electronic applicant push process from SAAEAPS, the decision process from SAADCBT and SAADCRV, the end of term processing in SHRTYPE and SHRDEGS, the Self-Service Quick Admit, and the Self-Service Registration Term Update (BWSKXMIS).

## Copying from One Learner Module to Another (General Student to Academic History)

Processing for how each of the processes validates the number of curricula allowed and how they process any overload is standardized. Certain processes roll or push curriculum data from one learner module to another. For example, the grade roll process from SFAALST and SFASLST rolls Learner (General Student) information to the Learner Outcome (Academic History) and updates records on SHADEGR.

All curricula records are rolled from one module to another. This handles overload processing and alerts the user that records were or were not rolled to the Learner module. If the conversion process determines that the maximum number of curricula allowed is less than the number of curricula to be rolled, it will make the "overload" curricula records inactive. The overload curricula records will be the records with the lowest priority. The process will inactivate curriculum records until the number of curricula equals the maximum count allowed.

In order to differentiate between a curriculum row that was made inactive due to the overload scenario and one that was made inactive manually by a user, when the system inactivates a curriculum row, it will set the **Activity** field (SORLCUR\_CACT\_CODE and/or SORLFOS\_CACT\_CODE) to *OVERLOAD*. (This value in on STVCSTS, is system-required, and is inactive.

*For example*, on SOACTRL, the rules are set up so that the **Learner Module** field for a value of *LEARNER* allows three majors. The **Learner Module** field for a value of *OUTCOME* allows two majors. A student with a general student record has three active majors for a curriculum. The majors for *LEARNER* would appear as follows:

Priority	Major Name	Status
1	Math	<i>ACTIVE</i>
2	Engineering	<i>ACTIVE</i>
3	Statistics	<i>ACTIVE</i>

When grades are entered and rolled, the following data is captured for the curriculum record in the Outcome module:

Priority	Major Name	Status
1	Math	<i>ACTIVE</i>
2	Engineering	<i>ACTIVE</i>
3	Statistics	<i>OVERLOAD</i>

Since the Statistics major had the lowest priority, and the receiving SOBLMOD record only allowed for two majors, the major was rolled, but it was changed to an inactive status of *OVERLOAD*.

## Conversion from the Key Block of Forms

The forms that process curriculum data and allow conversion from the Key Block (SRAQUIK, SRARECR, SAAQUIK, SAAADMS, SGASTDN, SFAREGS, SHADEGR, and SOILCUR) allow you to insert a record which exceeds the maximum number of curricula allowed in SOBLMOD.

When an application is being created, and a record from SRASUMI or SAASUMI is used to populate the form, any excess curricula records will be inactivated. Also, when performing a Duplicate Record function, any excess curriculum records will be inactivated. If a user is manually creating or inserting a curriculum record on a form, and enters more SORLCUR or SORLFOS types than are allowed on SOACTRL, the form will display an error. The overload processing is only used when records are created or populated by processes, from summary forms, or by duplicate record functionality.

## Determining Which Curriculum Rows are Current

SORLCUR and SORLFOS both contain Current Indicator fields which are used to determine which curriculum and field of study rows are the most recent or current for a priority. The `CURRENT_IND` and `ACTIVE_IND` columns in the `SOVLCUR` and

SOVLFOS views contain fields that tell which curriculum and field of study rows are current and active.

- The value in the `CURRENT_IND` field is calculated for values of *Y* and *N*.
- The value in the `ACTIVE_IND` field is derived from the curriculum status rules defined on `SORCACT` and is based on the values in the `SORLCUR_CACT_CODE` and `SORLFOS_CACT_CODE` fields.

Current rows for the Recruiting, Admissions, and Academic History (Outcome) curriculum records are calculated by selecting the most recent row for each given priority, (i.e., the highest sequence number for each priority).

The following section describes how current and active concurrent curriculum rows are selected by learner module. Recruiting, Admissions, and Outcome use the same processing. General Student (Learner) has some extra processing to discuss.

## Recruiting

1. For Recruiting, select the recruit record from `SRBRECR`.
2. Select the current and active base recruiting concurrent curriculum rows where the recruit term and key sequence number match those on `SOVLCUR`, and where the `SOVLCUR_CURRENT_IND` is *Y* and the `SOVLCUR_ACTIVE_IND` is *Y*.
3. Select all current and active field of study rows for the base curriculum where the `SOVLFOS_CURRENT_IND` is *Y* and the `SOVLFOS_ACTIVE_IND` is *Y*.

## Admissions

1. For Admissions, select the application record from `SARADAP`.
2. Select the current and active base admissions concurrent curriculum rows where the application term and application number match the `SOVLCUR` term and key sequence number and where the `SOVLCUR_CURRENT_IND` is *Y* and the `SOVLCUR_ACTIVE_IND` is *Y*.
3. Select all current and active field of study rows for the base curriculum where the `SOVLFOS_CURRENT_IND` is *Y* and the `SOVLFOS_ACTIVE_IND` is *Y*.

## Academic History (Outcome)

1. For Academic History (Outcome), select the degree record from `SHRDGMR`.

The Current Indicator can be based on the term or the curriculum sequence. Check the **Display current outcome curriculum by term** checkbox on `SOACTRL` to control the current by term, and uncheck the checkbox to control the current by outcome curriculum sequence.

### *Current by Curriculum Sequence*

The Current Indicator setting is based on the outcome curriculum sequence within a priority number. The highest sequence number is the most current. The term code on the curriculum record is not considered when determining the setting of the Current Indicator for the outcome curriculum record.

#### **Note**

When older learner curriculum records are rolled to an existing degree, they may supersede the current curriculum records. It is advised that users change the **Rolled to Outcome (Indicator)** setting to *N* on these older learner curriculum records so this does not occur.

Outcome curriculum records should not be deleted, but rather duplicated, and the status changed to *INACTIVE* to prevent older learner curriculum records from being re-rolled and replacing newer outcome curriculum records. ■

### *Current by Term*

The Current Indicator setting is based on the term code on the outcome record within a priority number. The highest sequence number on the highest term code is the most current. The curriculum records are sorted by current and active and then by curriculum sequence to identify the order in which they were entered.

2. Select the current and active base history concurrent curriculum rows where the degree sequence number matches the SOVLCUR key sequence number and where the SOVLCUR\_CURRENT\_IND is *Y* and the SOVLCUR\_ACTIVE\_IND is *Y*.
3. Select all current and active field of study rows for the base curriculum where the SOVLFOS\_CURRENT\_IND is *Y* and the SOVLFOS\_ACTIVE\_IND is *Y*.

## General Student (Learner)

For General Student (Learner), the process is much more complex due to the use of effective term processing. Concurrent curricula processing considers effective term usage when determining the most current row on SORLCUR. When a student had an existing general student record and another general student record was created for a prior term, the effective term was not included in the process to prioritize the learner curriculum records.

*For example*, when a student enrolled in the fall semester, and a general student record was created for term 200510 with the following curriculum, the record would look like the following.

Curriculum Type	Curriculum Name	Priority	Terms	Activity field	Current
Curriculum	BS in Physics	1	200510 - 99999	ACTIVE	Y
Major	Vector Physics	1		ACTIVE	Y

However, if the student then decided to take courses over a summer semester, a general student record would be created for the prior term of 200440. The curriculum record for that term would appear as follows.

Curriculum Type	Curriculum Name	Priority	Terms	Activity field	Current
Curriculum	BS in Chemistry	1	200440 - 200510	ACTIVE	Y
Major	Bio-Chemistry	1		ACTIVE	Y

Since the curriculum process did not look at the effective term correctly, the curriculum record for 200510 would appear as follows.

Curriculum Type	Curriculum Name	Priority	Activity field	Current
Curriculum	BS in Chemistry	1	ACTIVE	Y
Major	Bio-Chemistry	1	ACTIVE	Y
Curriculum	BS in Physics	1	ACTIVE	N
Major	Vector Physics	1	ACTIVE	N

The 200510 curriculum is no longer current, since the curriculum that was entered last (200440) has the same priority number and a higher sequence number. So looking at the student's record for 200510 would show that the BS in Chemistry is the primary curriculum.

The processing evaluates the curriculum records with terms that are less than the end term of the General Student record to determine which rows are current. In curriculum records for other modules, current or non-current status does not vary based on the term code, but is determined within the sequence number of the record you are reviewing.

*For example*, an Admissions SORLCUR row is current for a 200510 application. If a second application is created for the student, it does not impact the status of the initial application. The two applications are exclusive and have their own current rows.

Learner (general student) records are not tied to key sequence numbers. Therefore, a Learner row on SORLCUR can be current for one term and non-current for another, or primary for one term and secondary for another.

*For example*, a Learner record is created for term 200510 with an end term of 999999 and a priority one curriculum. The student registers for a summer course in term 200440 with a different priority one curriculum, thereby creating a second learner record for effective term 200440 with an end term of 200510. If you consider the learner record for term 200440 in processing, the curriculum entered for that term is primary and current. However, if you consider the term 200510 in processing, the curriculum entered in 200440 is now non-current, since the 200510 record has the same priority.

It is important to note that the SORLCUR row for the term code of 200440 is not inactivated by the end date of the associated SGBSTDN record. It is still an active curriculum record for the term of 200510. If the SORLCUR row entered for 200440 was a higher priority than the one entered in 200510, the 200440 row on SORLCUR would be the primary term of 200510.

To summarize:

- All curriculum records with a term that is less than the SGBSTDN end term are grouped by priority.
- For each priority, find the maximum term of the SORLCUR records that is less than the end term of the SGBSTDN record.

Current and active concurrent curricula rows are selected by learner module as follows:

1. For General Student, select the learner record from SGBSTDN.
2. The system inserts the record into the SOTVCUR temporary table for the learner current calculation.

This step is only necessary if you want to select active concurrent curriculum records based on a specific SGBSTDN effective term. The process used to determine the current indicator uses the highest SGBSTDN effective term if this step is not performed.

 **Note**

If the SOTVCUR record is not created, the Current Indicator setting is going to be based on the highest SGBSTDN effective term.

The Current Indicator setting is based on the key column values for the module record. In the case of the general student record, there is no base except the effective term.

The calculation of the Current Indicator for the learner curriculum is based on the highest SORLCUR sequence number for the lowest SGBSTDN effective term, or the highest curriculum term for a given priority that is less than the SGBSTDN end term. The term added to SOTVCUR

defines the SGBSTDN effective term being processed, the default term being the highest SGBSTDN term. ■

3. Then select the current and active base concurrent curriculum rows by term and sequence number from SOVLCUR, where the SOVLCUR\_CURRENT\_IND is Y and the SOVLCUR\_ACTIVE\_IND is Y.
4. Then select all current and active field of study rows for the base curriculum where the SOVLFOS\_CURRENT\_IND is Y and the SOVLFOS\_ACTIVE\_IND is Y.

The curriculum prioritizing process looks at the effective term for a curriculum record when the **Learner Module** is set to *LEARNER*, to determine what the highest priority curriculum is for an effective term. Therefore, the `sb_curriculum` API determines if the **Learner Module** is set to *LEARNER*. If yes, the process determines the effective term for the curriculum. Within that effective term, the process takes the highest sequence number of the lowest priority and sets it as "primary" for the effective term. This means that a learner can have multiple primary curriculum records, depending on the effective term.

The Curriculum blocks on SGASTDN and SFAREGS display all curriculum records where the term (SORLCUR\_TERM\_CODE) is less than the end term of the SGBSTDN record.

*For example:*

Curriculum	SORLCUR			Effective Term	End Term
	Term	Priority	Sequence		
BA-Math	200510	1	1	200510	999999
BS-Biology	200440	1	2	200440	200510

In the above case, the curriculum record for the earlier term was entered last, so it has a higher sequence number. If term 200440 was entered in the Key Block of SGASTDN, you would only see the BS-Biology curriculum, since the BA-Math effective term is not less than the end term.

If term 200510 was entered in the Key Block, curriculum BA-Math would display as primary and current, and BS-Biology would display as non-current. The processing would determine that there were multiple active priority one curriculum records for this term. However, instead of selecting the one with the highest sequence number (as in other SOBLMOD rows), the curriculum with the greatest SORLCUR\_TERM\_CODE value is selected.

## Creating and Updating Curriculum Data

This section outlines the steps you need to follow to create new curriculum and field of study records, to change a major (or minor or concentration) within the same curricula, or to change a major to one within a different curricula.

### Note

When you are inserting a new curriculum or field of study record, at least one row with a **Type** of *MAJOR* must exist.

If you are entering a field of study row for a concentration, then the Option List for the **Field of Study** field will display the choices All Concentrations or Attached Concentrations. The Attached Concentrations option will display all concentrations that are attached either to the base curriculum or to any of the majors entered so far.

In addition, if you are entering a field of study row for a concentration, then the **Attached to Major** field will be enabled, and the List of Values for the field will display a list of the majors to which this concentration is attached that have already been entered in the Field of Study block. ■

## Creating a Primary Curriculum with One Major and One Minor

Use the following steps to create a primary curriculum record with one major and one minor:

1. Use Next Block or select the Curricula tab (from the main window of SRARECR, SAAADMS, SGASTDN, SFAREGS, or SHADEGR) to access the Curriculum window.
2. Enter curriculum data in the Curriculum block fields including:
  - 2.1. Set the **Priority** field to *1*.
  - 2.2. Set the **Program** field to the code for your program.
  - 2.3. If the program entered allows multiple campuses, enter the correct campus code in the **Campus** field.
3. Use Next Block to access the Field of Study block.
4. Enter field of study data in the Field of Study block fields including:
  - 4.1. Set the **Priority** field to *1*.
  - 4.2. Set the **Type** field to *MAJOR*.
  - 4.3. Use the default value in the **Status** field or select a different one.

- 4.4. Set the **Field of Study** field to the appropriate major code.
5. Perform a Next Record or Insert function.
6. Repeat Step 4 with the **Priority** field set to *1* and the **Type** field set to *MINOR*.
7. Save your changes.

## Creating a Secondary Curriculum with One Major and One Concentration

Use the following steps to create a secondary curriculum record with one major and one concentration:

1. Use Next Block or select the Curricula tab (from the main window of SRARECR, SAAADMS, SGASTDN, SFAREGS, or SHADEGR) to access the Curriculum window.
2. Enter curriculum data in the Curriculum block fields including:
  - 2.1. Set the **Priority** field to a number at least one greater than the number entered in example above for primary curriculum (for example, 3).
  - 2.2. Set the **Program** field to the code for your program.
  - 2.3. If the program entered allows multiple campuses, enter the correct campus code in the **Campus** field.
3. Use Next Block to access the Field of Study block.
4. Enter field of study data in the Field of Study block fields including:
  - 4.1. Set the **Priority** field to *1*.
  - 4.2. Set the **Type** field to *MAJOR*.
  - 4.3. Use the default value in the **Status** field or select a different one.
  - 4.4. Set the **Field of Study** field to the appropriate major code.
5. Perform a Next Record or Insert function.
6. Repeat Step 4 with the **Priority** field set to *1* and the **Type** field set to *CONCENTRATION*.
7. If the concentration is attached to a major, then the **Attached to Major** field will be enabled, and you can choose the major code for the major to which the concentration is attached.

8. Save your changes.

## Changing a Major to One within the Same Program

You can use one of the following two options when changing a major to one within the same program. You can choose to maintain a complete history of the curricula changes, or you can choose to maintain a minimal history of the curricula changes.

### Option 1 - Maintaining a Complete History of the Changes

Use the following steps to change a major to one that is within the same program while keeping a complete history of the change:

1. Use Next Block or select the Curricula tab (from the main window of SRARECR, SAAADMS, SGASTDN, SFAREGS, or SHADEGR) to access the Curriculum window.
2. Use Next Block from the Curriculum block to access the Field of Study block.
3. Perform an Insert Record and then a Duplicate Record function from the field of study row with the major you wish to change.
4. On the duplicated record, change the **Activity** status code to *INACTIVE*, and change the **Status** field value to a status code that describes why the major is being changed.
5. Insert a new record and fill in the **Priority**, **Type**, **Status** (optional), and **Field of Study** fields for the new major.
6. Save your changes.

### Option 2 - Maintaining a Minimal History of the Changes

Use the following steps to change a major to one that is within the same program while keeping a minimal history of the change:

1. Use Next Block or select the Curricula tab (from the main window of SRARECR, SAAADMS, SGASTDN, SFAREGS, or SHADEGR) to access the Curriculum window.
2. Use Next Block from the Curriculum block to access the Field of Study block.
3. Perform an Insert Record and then a Duplicate Record function from the field of study row with the major you wish to change.
4. On the duplicated record, enter an appropriate activity status, status code, and field of study code for the new major. The key is that the priority number remains the same as the priority for the major row that is no longer to be active.

5. Save your changes.

## Changing a Major to One within a Different Program

You can use one of the following two options when changing a major to one within a different program. You can choose to maintain a complete history of the curricula changes, or you can choose to maintain a minimal history of the curricula changes.

### Option 1 - Maintaining a Complete History of the Changes

Use the following steps to change a major to one that is within a different program while keeping a complete history of the change:

1. Use Next Block or select the Curricula tab (from the main window of SRARECR, SAAADMS, SGASTDN, SFAREGS, or SHADEGR) to access the Curriculum window.
2. Select the curriculum row to be changed.
3. Select the **Replace** button. The following will occur automatically:
  - 3.1. The selected curriculum record and all of its dependent field of study records will be duplicated with an activity code of *INACTIVE*.
  - 3.2. The Insert Record function will create a new curriculum record which you will have to complete before it can be saved.
4. Use Next Block to access the Field of Study block. Enter the data (priority, type, field of study, etc.) for the new major.
5. Save your changes.

### Option 2 - Maintaining a Minimal History of the Changes

Use the following steps to change a major to one that is within a different program while keeping a minimal history of the change:

1. Use Next Block or select the Curricula tab (from the main window of SRARECR, SAAADMS, SGASTDN, SFAREGS, or SHADEGR) to access the Curriculum window.
2. Insert a new row for the curriculum associated with the new major in the Curriculum block. Ensure that you enter the same priority number as that on the curriculum row that is no longer valid.
3. Use Next Block to access the Field of Study block.

4. Insert a new field of study row for the new major code. Because this new field of study row is tied to a different SORLCUR row, the priority does not need to be the same as the inactivated field of study row.
5. Save your changes.

## Changing a Campus Code

You can use one of the following two options when changing a campus code. You can choose to maintain a complete history of the campus changes, or you can choose to maintain a minimal history of the campus changes.

### Option 1 - Maintaining a Complete History of the Campus Changes

Use the following steps to change a campus code while keeping a complete history of the change:

1. Use Next Block or select the Curricula tab (from the main window of SRARECR, SAAADMS, SGASTDN, SFAREGS, or SHADEGR) to access the Curriculum window.
2. Select the curriculum row to be changed.
3. Select the **Replace** button. The following will occur automatically:
  - 3.1. The selected curriculum record and all of its dependent field of study records will be duplicated with an activity code of *INACTIVE*.
  - 3.2. The Insert Record function will create a new curriculum record which you will have to complete before it can be saved.
4. Use Next Block to access the Field of Study block. Enter the data (priority, type, field of study, etc.) for the new field of study.
5. Save your changes.

### Option 2 - Maintaining a Minimal History of the Campus Changes

Use the following steps to change a campus code while keeping a minimal history of the change:

1. Use Next Block or select the Curricula tab (from the main window of SRARECR, SAAADMS, SGASTDN, SFAREGS, or SHADEGR) to access the Curriculum window.
2. Select the curriculum row to be changed.

3. Perform an Insert Record and then a Duplicate Record function from the curriculum row with the campus you wish to change.
4. Enter the appropriate campus code on the newly created curriculum row.
5. Use Next Block to access the Field of Study block. Enter the appropriate activity and curriculum status codes.
6. Save your changes.

## Inactivating a Curriculum Record (Without Adding a New Record)

Use the following steps to inactivate an existing curriculum record without creating a new record:

### Note

This will only work if another active curriculum record already exists. ■

1. Use Next Block or select the Curricula tab (from the main window of SRARECR, SAAADMS, SGASTDN, SFAREGS, or SHADEGR) to access the Curriculum window.
2. Select the curriculum row to be changed.
3. Perform an Insert Record and then a Duplicate Record function from the curriculum row that is to be inactivated.
4. On the newly duplicated row, change the activity status to *INACTIVE*.
5. Use Next Block to access the Field of Study block.
6. On the duplicated field of study row, enter the appropriate activity status to inactivate the field of study row, along with a curriculum status code that explains why the row was inactivated.
7. Save your changes.

## Purging Curriculum and Field of Study Rows

The Learner Curriculum Purge Process (SOPLCPG) is used to purge SORLCUR rows and/or SORLFOS rows for all module records - Recruiting, Admissions, General Student (Learner), and Academic History (Outcome). Since users may not want to maintain inactive and non-current curriculum records on a student, they can use SOPLCPG to purge inactive and non-current student curricula. This process deletes an SORLCUR row and its associated SORLFOS row(s).

Non-current curriculum rows are defined as rows that have a value of *N* in the **Current** field in the Curriculum or Field of Study blocks. The value that populates the field is located in the SOVLCUR\_CURRENT\_IND and SOVLFOS\_CURRENT\_IND view fields.

The SOPLCPG process ensures that if a curriculum record (SORLCUR) is removed, all related field of study rows (SORLFOS) are also removed. This process only purges curriculum rows that are non-current. Field of study rows are only purged in association with their respective curriculum record. Therefore, if a curriculum record is current and has an associated SORLFOS row that is non-current and inactive, the SORLFOS row will not be purged. Also, when a *LEARNER* curriculum record that is targeted to be purged is non-current for the processing term and is current in a different term, it will not be purged.

This process is run for an ID or a population selection, by term and/or learner module, and can be run in update or audit mode.

## Archiving Curriculum and Field of Study Rows

The Learner Curriculum Purge Process (SOPLCPG) can be used to archive curriculum records to curriculum and field of study history tables (SORHCUR and SORHFOS). This provides historical data for reference, even after the records have been purged from the main curriculum and field of study tables.

## Banner Views Used in Concurrent Curricula Processing

The SOKCCUR package is used by the curriculum views to read the student's curriculum and store it in memory, thereby eliminating the redundant selection of data. Functions exist to return the order and other values for a specific curriculum. Functions also exist to return the curriculum in a PL/SQL table for processes that require the entire curriculum.

### SOVLCUR

The Curriculum Base View (SOVLCUR) is used to select curriculum records based on the current and active statuses. Current means the record has the highest sequence number for the priority. Active means the **Active Indicator** for the curriculum activity status (STVCACT) on SOBCACT is set to *Y*.

The following columns are in this view.

- SOVLCUR\_PIDM
- SOVLCUR\_SEQNO
- SOVLCUR\_LMOD\_CODE
- SOVLCUR\_TERM\_CODE
- SOVLCUR\_KEY\_SEQNO
- SOVLCUR\_PRIORITY\_NO
- SOVLCUR\_ROLL\_IND

SOVLCUR\_CACT\_CODE  
 SOVLCUR\_USER\_ID  
 SOVLCUR\_DATA\_ORIGIN  
 SOVLCUR\_ACTIVITY\_DATE  
 SOVLCUR\_LEVL\_CODE  
 SOVLCUR\_COLL\_CODE  
 SOVLCUR\_DEGC\_CODE  
 SOVLCUR\_TERM\_CODE\_CTLG  
 SOVLCUR\_TERM\_CODE\_END  
 SOVLCUR\_TERM\_CODE\_MATRIC  
 SOVLCUR\_TERM\_CODE\_ADMIT  
 SOVLCUR\_ADMT\_CODE  
 SOVLCUR\_CAMP\_CODE

 SOVLCUR\_ACTIVITY\_DATE\_UPDATE  
 SOVLCUR\_GAPP\_SEQNO  
 SOVLCUR\_CURRENT\_CDE

## SOVLFOS

The Field of Study View (SOVLFOS) is used to select fields of study based on the current and active statuses. Current means the record has the highest sequence number for the priority and field of study type. Active means the **Active Indicator** for the curriculum activity status (STVCACT) on SOBCACT is set to *Y*.

The following columns are in this view.

SOVLFOS\_PIDM  
SOVLFOS\_LCUR\_SEQNO  
SOVLFOS\_SEQNO  
SOVLFOS\_LFST\_CODE  
SOVLFOS\_TERM\_CODE  
SOVLFOS\_PRIORITY\_NO  
SOVLFOS\_CSTS\_CODE  
SOVLFOS\_CACT\_CODE  
SOVLFOS\_DATA\_ORIGIN  
SOVLFOS\_USER\_ID  
SOVLFOS\_ACTIVITY\_DATE  
SOVLFOS\_MAJR\_CODE  
SOVLFOS\_TERM\_CODE\_CTLG  
SOVLFOS\_TERM\_CODE\_END

## SOVCCUR

This view is used to return all current and active curriculum records for the Recruiting, Admissions, and Academic History modules and contains the new calculated order column. This view can be used to select the primary curriculum by using the `SOVCCUR_ORDER = 1` clause in the WHERE clause. To select all current and active curriculum records using this view, add the phrase `SOVCCUR_ORDER > 0` to the WHERE clause.

### Note

This data was available from SOVLCUR, but you had to include the arguments `SOVLCUR_ACTIVE_IND = 'Y'` and `SOVLCUR_CURRENT_IND = 'Y'` to return these rows. You also had to add a sub-query to select the minimum priority if you wanted to return the primary curriculum. ■

The following columns are in this view.

SOVCCUR\_PIDM  
 SOVCCUR\_SEQNO  
 SOVCCUR\_LMOD\_CODE  
 SOVCCUR\_TERM\_CODE

## SOVCFOS

This view is used to return all current and active fields of study. This view can be used to select the primary curriculum by using the `SOVCFOS_ORDER = 1` clause in the WHERE clause. You can also select the first secondary curriculum records by using the `SOVCFOS_ORDER = 2` clause in the WHERE clause and all secondary curriculum records by using the `SOVCFOS_ORDER > 1` clause. Use the phrase `sovcfos_order > 0` to select all current and active rows.

### Note

This data was available from SOVLFOS, but you had to include the arguments `SOVLFOS_ACTIVE_IND = 'Y'`, `SOVLFOS_CURRENT_IND = 'Y'`, to return these rows. You also had to add a sub-query to select the minimum

priority if you wanted to return the primary curriculum or secondary curriculum. ■

## SGVCCUR

This view is used to return all current and active curriculum records for a learner for the learner's effective term. This view can be used to select the primary curriculum by using the `SGVACUR_ORDER = 1` clause in the WHERE clause. You can also select all current and active rows using `SGAVCUR_ORDER > 0`. This view will select the student status codes from the curriculum tables first, and if those values are not filled in, the view will select data from the SGBSTDN record. This view is also used with student centric periods.

### Note

This data was available from SOVLCUR, but you had to include the arguments `SOVLCUR_ACTIVE_IND = 'Y'`, `SOVLCUR_CURRENT_IND = 'Y'`, and `SOVLCUR_LMOD_CODE = sb_curriculum_str.f_learner` to return these rows. You also had to add an insert into SOTVCUR to set the

effective term to a specific SGBSTDN term so SOVLCUR could return the current record. ■

## View Examples for Recruiting, Admissions, and Academic History Current and Active Curriculum Records

Banner views are used in Recruiting, Admissions, and Academic History to simplify the selection process used with the curriculum table structure and the non-destructive update processing for highest priority and current and active records.

The following example shows records in SORLCUR where the learner module code is *ADMISSIONS*, the key sequence number is application *01*, the term code is *200443*, and the data is sorted by priority and sequence number. The sequence number makes the primary key for the curriculum.

Priority	Sequence Number	Curriculum Activity Status Code	Program
1	1	<i>ACTIVE</i>	BA-HISTORY
1	3	<i>ACTIVE</i>	BA-ARTS
1	6	<i>ACTIVE</i>	BA-HISTORY
2	2	<i>ACTIVE</i>	CE-ARTS
2	4	<i>INACTIVE</i>	CE-ARTS
2	5	<i>ACTIVE</i>	CE-GRAPHICARTS

In the above example, sequence number 6 is the current and active primary curriculum. Sequence number 5 is the current and active secondary curriculum. To select the primary current and active curriculum, you need to select the highest sequence number for the lowest curriculum priority (i.e., numerical value), and it has to have a curriculum activity status code that is active. The Active Indicator setting is determined on SOBACT.

The Banner views let you make one select to return the primary current and active records. The following code demonstrates how to select the primary current and active curriculum for an admissions application.

```
Select *
From sovccur, saradap
Where sovccur_pidm = saradap_pidm
And sovccur_lmod_code = sb_curriculum_str.f_admissions
And sovccur_key_seqno = saradap_appl_no
And sovccur_term_code_entry = saradap_term_code_entry
And sovccur_order = 1
```

## View Examples for General Student Current and Active Curriculum Records

The process to select the current and active curriculum records for the learner is based on the value of an input term, which is usually the SGBSTDN effective term. The rule for selecting the current and active learner curriculum is: the maximum SORLCUR sequence number, for a given priority, that has the highest curriculum term, that is less than the SGBSTDN end term. See the following example.

<b>SGBSTDN Effective Term</b>	<b>SORLCUR Term</b>	<b>Priority</b>	<b>Sequence</b>	<b>Curriculum Activity Status Code</b>	<b>Program</b>
200443	200443	1	1	<i>ACTIVE</i>	BA-HISTORY
200443	200443	2	2	<i>ACTIVE</i>	CE-ARTS
200520	200520	1	3	<i>ACTIVE</i>	BA-HISTORY
200530	200530	1	4	<i>ACTIVE</i>	BA-HISTORY

When SGBSTDN is selected for term 200443, the current and active curricula are sequence numbers 1 and 2. The primary curriculum is sequence number 1. When SGBSTDN is selected for term 200520, the current and active curricula are sequence numbers 2 and 3. When term 200530 is selected, the current and active curricula are sequence numbers 2 and 4.

The following code demonstrates how to select the primary current and active curriculum for a learner record.

```
Select *
From sgvccur, sgbstdn
Where sgvccur_stdn_rowid = sgbstdn.rowid
And sgvccur_order = 1;
```

## Using the Recruiting Views

Use the list below to query on specific recruiting curriculum information by view.

<b>Curriculum Query</b>	<b>View Used</b>
To reference curriculum columns such as level, college, degree, campus or program	SRVCCUR

<b>Curriculum Query</b>	<b>View Used</b>
To reference curriculum (level, college, degree, campus, or program) and the primary major	SRVCCUR, SOVCFOS
To reference curriculum (level, college, degree, campus, or program) and several fields of study	SRVACUR

## Using the Admissions Views

Use the list below to query on specific admissions curriculum information by view.

<b>Curriculum Query</b>	<b>View Used</b>
To reference curriculum columns such as level, college, degree, campus or program	SAVCCUR
To reference curriculum (level, college, degree, campus, or program) and the primary major	SAVCCUR, SOVCFOS
To reference curriculum (level, college, degree, campus, or program) and several fields of study	SAVACUR

## Using the General Student Views

Use the list below to query on specific general student/learner curriculum information by view.

<b>Curriculum Query</b>	<b>View Used</b>
To reference curriculum columns such as level, college, degree, campus, or program	SGVCCUR
To reference curriculum (level, college, degree, campus, or program) and the primary major	SGVCCUR, SOVCFOS
To reference curriculum (level, college, degree, campus, or program) and several fields of study	SGVACUR
To reference curriculum (level, college, degree, campus, or program) and several fields of study	SGVACUR

## Using the Academic History Views

Use the list below to query on specific academic history/outcome curriculum information by view.

Curriculum Query	View Used
To reference curriculum columns such as level, college, degree, campus or program	SHVCCUR
To reference curriculum (level, college, degree, campus, or program) and the primary major	SHVCCUR, SOVCFOS
To reference curriculum (level, college, degree, campus, or program) and several fields of study	SHVACUR

## Banner Student Admissions Self-Service and Curriculum Processing

Banner Student Self-Service processing can select and push minors and/or concentrations into Banner. The Planned Course of Study page in Banner Student Self-Service allows for the selection of multiple majors, as well as multiple minors and/or concentrations within each major. In baseline Banner, all entered majors, minors, and concentrations will be pushed to whatever record(s) the user has requested be created. The curriculum data will be pushed into the SORLCUR and SORLFOS curriculum tables. All controls in place for curriculum will be adhered to when the data are pushed.

Self-Service Admissions functionality ties into existing rules which allow institutions to determine how many of each curriculum component can be entered. For example, concurrent curricula processing provides rules to determine how many active majors can be entered for each curriculum. You can also decide, by Web application type and module, the maximum number of majors, minors, and concentrations that can be entered using the Web. This number should usually be less than or equal to the corresponding rules set on SOACTRL for each module code. However, if it is not, when the record is pushed into Banner, all data entered by the person will be pushed to the curriculum tables, but any data over the limits set on SOACTRL will be inactivated and given a status of *OVERLOAD*. For example, if a recruit is allowed to have three majors, and has entered three majors, but Admissions only allows for two majors, then all three majors are pushed to Admissions, but the third major is inactivated and given a status of *OVERLOAD*.

The *ONEAPPORTWO* rule on SAAERUL allows an institution to decide that when two majors are entered by the applicant, whether one application record should be created with two majors or whether two applications should be created with one major each. This also applies to recruits. Instead of using one rule (*ONEAPPORTWO*) on SAAERUL, an indicator that can be set by Web application type is used for applicants on SAAWADF. If the indicator is checked (*Y*), then one recruiting and/or application record will be created, and all curricula entered will be associated with that one record. If the indicator is

unchecked (*N*), then a new record (recruiting or application) will be created for each major entered by the Web user.

You can select multiple curricula (majors, minors, and/or concentrations) in Self-Service based on baseline concurrent curricula functionality. You can also assign a curriculum priority and application preference for multiple applications. The Planned Course of Study page allows a user to first select a major, and then the user is given a choice of selecting another major or selecting a multiple of minors and/or concentrations to be associated with the first major. You can enter any number of majors, minors, and concentrations based on maximums set for a specific Web application type. When concentrations are displayed, all base concentrations for the given Web type/selected major will be displayed, along with any concentrations attached to the major, when that major has been selected by the user. This works in the same way as baseline processing but minimizes Web users having to know anything about the concept of “attached majors”.

## Pushing Curriculum Data

The SAKL010 package is used to push curriculum data to the SORLCUR and SORLFOS tables. Before inserting rows into SORLCUR and SORLFOS, this package first determines if the curriculum conversion routine should be run. If a person is matched to an existing Banner ID, the process determines if any rows exist in SORLCUR/SORLFOS for that ID/PIDM. If none exist, then the curriculum conversion is run to ensure that all pre-7.0 curriculum data is now stored in SORLCUR and SORLFOS. If the person is new, then the conversion does not need be run.

Curriculum data is moved or pushed from the temporary tables to Banner in a backward process. When a major (or minor or concentration beginning with Release 7.3) is entered in Banner Student Self-Service, a row is stored in SARETRY (for the curriculum), and another row is stored in SAREFOS for the major, (minor or concentration). These rows contain data for the degree and field of study from SOBCURR. A function is then called which matches that data (the degree and field of study identifier) to the corresponding curriculum row/major in SOBCURR/SORCMJR. This process also handles minors and concentrations. As fields of study (majors, minors, and concentrations) are selected/entered in Banner Student Self-Service, an entry will be made into the SARETRY table for curriculum and the SAREFOS table for majors, minors and concentrations.

The logic for creating a single application record is as follows:

1. The process determines the SOBCURR rule to be used for the entered field of study (i.e, major, minor, or concentration).
2. If the SARWADF\_ONE\_REC\_APPL\_IND field is set to *Y*, then all majors, minors, and/or concentrations entered will be stored on one application instead of on multiple applications. If this indicator is set to *N*, skip to step 5.
3. If the curriculum rule that is returned already exists for the application in SORLCUR (and is active and current), it will not exist for the first field of study. However, the

process will loop, and if two majors from the same curriculum are entered, only one row will exist on SORLCUR.

- 3.1. If no matching curriculum rule already exists for the record, the process inserts an SORLFOS row for the field of study type (SAREFOS\_FLVL\_CDE cross-referenced against GTVLFST) and the field of study using the next value from a counter as the priority for the SORLFOS row.
- 3.2. If a matching curriculum rule already exists for the record so there is no need to insert one, the process inserts an SORLFOS row for the field of study type (SAREFOS\_FLVL\_CDE) and field of study using the incremented counter value.
4. Steps 1 - 3 are repeated by the process by SARETRY\_SEQNO value, and within each SARETRY\_SEQNO value by SAREFOS\_SEQNO value. At this point, the storage of all curricula data for this application will be complete.

The logic for creating a multiple application records (i.e., one record per major entered instead of one record containing all curricula data) is as follows:

1. The process selects the first major (SARETRY\_SEQNO is 1) and creates a new record.
2. The process inserts an SORLFOS row for the field of study type (SAREFOS\_FLVL\_CDE cross-referenced against GTVLFST) and the field of study using the next value from a counter as the priority for the SORLFOS row.
3. When all the SAREFOS records for a given SARETRY row have been entered, the process determines if another SARETRY row exists. If one does exist, a new record is created, and step 2 above is repeated. If no additional SARETRY rows exist, the process is finished.

 **Note**

The SAREFOS\_FLVL\_CDE field value determines what type of SORLFOS row should be inserted. This value *must* be cross-referenced using SORXREF (with a cross-reference label of *GTVLFST*) to determine the correct row type (major, minor, or concentration). The values for *MAJOR*, *MINOR*, and *CONCENTRATION* are delivered as seed data. If additional types are developed at your institution for Self-Service, and/or you use EDI applications with other values, then those values *must* also be cross-referenced using the SOAXREF form and *GTVLFST* label. ■

Field	Value	Description
SAREFOS_FLVL_CDE	<i>M</i>	Major
SAREFOS_FLVL_CDE	<i>N</i>	Minor
SAREFOS_FLVL_CDE	<i>C</i>	Concentration

## Setting Up Curriculum Processing for Self-Service Applications

Use the following steps to set up curriculum processing when applications are completed online.

1. Establish major codes on the Major, Minor, Concentration Code Validation Form (STVMAJR).
2. Create programs on the Program Definition Rules Form (SMAPRLE).
3. Create curriculum rules on the Curriculum Rules Form (SOACURR).
4. Set up the EDI values on SOACURR, and make sure that the **Display on Self-Service** checkbox is checked (set to *Y*) so the item is displayed on the Web.
5. Assign majors to be displayed in Self-Service on SOACURR.
  - 5.1. Use the **Display on Self-Service** checkbox to indicate that the major can be displayed in the self-service pulldown lists.
  - 5.2. The **Auto Student** checkbox is usually optional but is required if you are setting up a Quick Start application with an applicant acceptance decision. When this field is checked, the curriculum will be created on the learner curriculum record.
  - 5.3. Use the **EDI Degree**, **EDI Level** (qualifier), and **EDI Identification** fields for setting up EDI data.

Prior to this release, the self-service application required that EDI codes be set up for each major that was available on the Web. All three EDI components were required: the **EDI Degree** value, the **EDI Level** (qualifier) value, and the **EDI Identification** value. All three fields had to contain valid values that had been defined on SOAXREF using the following labels:

- EDI degree values and SOAXREF label *DEGRLEVL*
- EDI level (qualifier) values and SOAXREF label *FSTYIDQL*
- EDI identification and SOAXREF label *STVMAJR*

The three codes make up the combination received from EDI that define the degree, level, and field of study. The EDI degree and EDI level remain constant. The EDI identification defines the field of study and the program of which it is a part. There may be many EDI identification values.

As of Release 7.3, the only requirement for ensuring a curriculum is valid for the self-service processing is to check **Display on Self-Service** checkbox on SOACURR.

Here is more information about each of the three EDI components, starting with the EDI level qualifiers.

The following is from the TS189 EDI application documentation and lists the code values for valid EDI level codes, also referred to as the Identification Code Qualifiers.

*Identification Code Qualifier*

Description: Field of Study Code Set Indicator

<b>Code</b>	<b>Description</b>
81	Classification of Instructional Programs (CIP) coding structure maintained by the U.S. Department of Education's National Center for Education Statistics
82	Higher Education General Information Survey (HEGIS) maintained by the U.S. Department of Education's National Center for Education Statistics
CA	Statistics Canada Canadian College Student Information System Course Codes
CC	Statistics Canada University Student Information System Curriculum Codes
ZZ	Mutually Defined

This relates back to SOAXREF and the *FSTYIFQL* label.

The following is from the EDI TS189 documentation for degree level codes. These codes have to be used if EDI processing is being used. It seems that EDI does not have a list of valid major codes. You could use the web application type value in this field.

*Data Element 1126 - Academic Degree Code*

Indicates the level of academic award being described. The decimal is part of the code and is to be sent.

<b>Code</b>	<b>Description</b>
2.1	Postsecondary Certificate or Diploma (less than one year)
2.2	Postsecondary Certificate or Diploma (one year or more but less than four years)
2.3	Associate Degree
2.4	Baccalaureate Degree
2.5	Baccalaureate (Honors) Degree
2.6	Postsecondary Certificate or Diploma (one year or more but less than two years)

Code	Description
2.7	Postsecondary Certificate or Diploma (two years or more but less than four years)
3.1	First Professional Degree
3.2	Post Professional Degree
4.1	Graduate Certificate
4.2	Master's Degree
4.3	Intermediate or Specialist Graduate Degree
4.4	Doctoral Degree
4.5	Post-Doctoral Award

This relates back to SOAXREF and the *DEGRLEVL* label.

The EDI identification defines the actual field of study. The new **Generate Identification** button on SOACURR creates these values for you. The entries will be found under the *STVMAJR* label on SOAXREF. The button performs the following tasks:

- generates a unique value for the curriculum and the field of study, and
- inserts degree and level qualifiers into SOAXREF under the *STVMAJR* label.

6. Assign minors and concentrations to be displayed in Self-Service.
7. Set up the EDI values on SOACURR, and make sure that the **Display on Self-Service** checkbox is checked (set to *Y*) so the items are displayed on the Web. (The EDI degree will be derived from the primary major.)
8. View the majors, minors, and concentrations by curriculum on the EDI Cross-Reference Curriculum Rules Form (SOAXCUR).

With the exception of the **Restrict to Type** checkbox on SAAWCUR, SAAWCUR and SOAXCUR are query only forms. SOACURR is used to customize Web application data.

9. Set up restrictions on Web Application Customized Curriculum Form (SAAWCUR). This step is not required, but it can be used to restrict the curriculum to a particular Web application type.

With the exception of the **Restrict to Type** checkbox on SAAWCUR, SAAWCUR and SOAXCUR are query only forms. SOACURR is used to customize Web application data.

Keep in mind that all curricula that have a checked **Web Display (Indicator)** and have the same level as the Web application type will appear in the list of valid programs, unless some have a checked **Restrict to Type (Indicator)**. A restriction on at least one curriculum restricts the list of available curriculum to just the ones with a checked **Web Display (Indicator)**.

 **Note**

Restrictions are available only on the major and apply only to the primary major, otherwise known as the Planned Course of Study page in Self-Service. ■

**10.** Restrict curricula from being pushed to a general student (learner) record.

Use the **Auto Student** checkbox (in the EDI and Self-Service block of the Majors and Departments window on SOACURR) to prohibit a particular planned course of study from creating a learner curriculum.

This means that if the **Auto Student** checkbox (in the EDI and Self-Service block of the Majors and Departments window on SOACURR) is not checked for a particular major, and it appears on a Quick Start application that has an applicant acceptance decision, the learner curriculum will not be created if an applicant selects that program.

You can also restrict which curriculum will result in the creation of a learner curriculum, based on what the applicant has already been accepted into, by setting up equivalents on the Existing or Incoming Student Data Mapping Form (SOAEQUI).

## Using Mass Entry Processing

Mass entry processing is used with Admissions, General Student, Registration, Academic History graduation, and athletic compliance processing. Mass entry forms are used to search on data, perform updates, and then display the results for review.

Mass entry processing is based on user-defined search and update criteria and includes curriculum elements where appropriate. Users can select students based on form search criteria and update their data based on the update criteria. The selected students can be reviewed and the updates selectively processed. Updates can be processed immediately or held for later processing in job submission using a batch process. An audit form is used to view processing results for the mass entry forms, whether the results are processed immediately on the mass entry form or via batch.

The mass entry forms retain audit information such as the user ID, date, timestamp, search criteria, update criteria, and the students that were processed. Audit information can be purged. The mass entry forms can also be used to only query student information, in which case the audit information is not retained.

## Processing

The following forms and processes are used with mass entry processing:

- Mass Entry Column Validation Form (STVMECL)
- Admissions Mass Entry Form (SAAMAPP)
- Mass Entry Athletic Compliance Form (SGAMSPT)
- General Student Mass Entry Form (SGAMSTU)
- Registration Mass Entry Form (SFAMREG)
- Mass Entry Graduation Form (SHAMDEG)
- Mass Entry Ceremony Attendance Form (SHAMCAT)
- Mass Entry Diploma Form (SHAMDIP)
- Mass Update Ceremony Attendance Form (SHAMUCA)
- Mass Update Diploma Form (SHAMUDI)

- Mass Entry Audit Form (SOAMAUD)
- Process Mass Entry Report (SORMEBP)
- Purge Mass Entry Audit Process (SOPMAUD)

The mass entry forms allow you to enter search and query criteria to select IDs for update. Depending on the mass entry form used, the parent records of selected IDs can have specific values updated, as well as a pending letter inserted in SUAMAIL. Search and update validation is performed using mass entry column codes from the Mass Entry Column Validation Form (STVMECL). Updates can be submitted immediately on the mass entry form or held for batch processing using the Process Mass Entry Report (SORMEBP). Immediate and pending updates can then be viewed on the Mass Entry Audit Form (SOAMAUD). Result messages are captured when updates occur and can be reviewed directly on the mass entry form at the time of the update and/or on the mass entry audit form after the updates are submitted in batch. Reviewing update result messages allows for failed inserts and updates to be resolved. The Purge Mass Entry Audit Process (SOPMAUD) is used to delete mass entry audit records.

When updates occur or when updates are held for batch submission, mass entry forms retain the user ID, date and timestamp, search and update criteria, and IDs, which are selected for audit purposes. When the forms are used for query only, no updates are processed, and audit information is not collected.

## Population Selection

Population selection can be used in conjunction with search criteria. The only search criteria required when using population selection is the search term, but other search criteria can be used as well. The population selection is created using GLBDATA for an application ID, selection ID, creator ID, and user ID. Each mass entry form offers the use of population selection in the Search window. The search processes an “intersect” and only considers records that meet the basic search requirements of the mass entry form and are included in the population selection.

For example, for records to be presented on SHAMDEG, a degree record must exist, so only students with degree records will be returned. When search criteria are used along with a population selection on SHAMDEG, the search results require the records presented to have degree records and be included in the population selection.

## Mail Submission

Mail submission can be used to update letters in SUAMAIL for all mass entry processing except registration mass entry. Updating letters does not require additional update criteria. The update exceptions are:

- When no ceremony code or ceremony term values exist on SHAMCAT in the update criteria, letters are not updated.
- When no processing term exists on SGAMSTU in the update criteria, letters are not updated.

When letters are updated in SUAMAIL using the mass entry graduation forms, they will have a module of *Student* and a term of 999999. Letters updated using SAAMAPP will have an admissions module with the application term and application number selected for update. Letters updated using SGAMSPT will display a term code on SUAMAIL that reflects the copy, insert, or update term from the mass entry criteria.

When the **Initiated Date** field on the mass entry form is null, the value defaults to the system date, but it may be submitted with a different date. When the **Print Date** field on the mass entry form is null, SUAMAIL is updated with a null value, which signifies the existence of a pending letter. The **Print Date** may also be submitted with a valid date. Letter generation will not produce a letter if the **Print Date** field has a value.

Mass entry letters are inserted into SUAMAIL with a source of *Generated*. Letter updates are dependent on the setting of the **Allow Duplicates** checkbox on GTVLETR.

When the **Allow Duplicates** field is set to *Y*:

- A new letter for the same term can be entered, as long as a pending letter does not exist for the same letter name and term.
- A new letter can be entered for a different term, even if a letter of the same name is pending.
- A different letter can be entered for any term when a print date has been entered in the update criteria, even if a letter with the same name exists.

When the **Allow Duplicates** field is set to *N*:

- A new letter cannot be entered for the same letter name and term, whether the letter is pending or not.
- A new letter can be entered for the same letter name in a different term, whether the letter is pending or not.
- A new letter cannot be entered with the same letter name and term, even when the print date has been entered in the update criteria.
- A new letter of the same name for a different term can be entered when the print date has been entered in the update criteria, whether or not the letter is pending on SUAMAIL.

When a letter is requested through the Mail Submission section of a mass entry form, SUAMAIL is updated with the origin, as are SAAADMS (Fees, Mail Submission, Withdrawal Data window) and SAADCRV (Application Decision Letter window).

The mass entry process holds the insertion of letters until all other processing has occurred for the mass entry form. The results of the insert/update criteria can affect the insertion of the letters.

- Letters are not inserted if all other processing updates have failed.
- Letters can be inserted when the mass entry form is submitted with only letter information and no other update criteria.
- When a form requires update criteria, such as term code (SAAMAPP, SGAMSTU, SGAMSPT) or term and ceremony (SHAMCAT), letters are not inserted without valid criteria.
- Letters are inserted when the updates are partially successful.
- Letters are inserted when the updates are completely successful.

 **Note**

Materials and communication plans are not used with mass entry mail submission. ■

## Communication Plans

When SAAMAPP or SGAMSTU are updated, records are placed in the Communication Plan Collector Form (SOACCOL). If you do not use communication plan processing or prefer to remove records from SOACCOL, you may use the Communication Plan Processing Report (SORCPLN) to process all SORCCOL records in batch.

## Holds

Holds are presented for informational purposes only and do not prevent updates from taking place during mass entry processing. Graduation mass entry presents graduation holds. General Student mass entry presents accounts receivable and enrollment verification holds. Admissions mass entry presents application holds.

 **Note**

When error checking is set to *Fatal* for holds on SFAMREG, and holds exist for the student, when the student is processed for registration, an error message is displayed in the Results window that the student has holds and cannot register. ■

## Updates

Once the search results have been reviewed and selected for mass entry processing, you can save and submit the updates immediately or hold them to be run later in batch through job submission using SORMEBP. When the updates are submitted from the Results window of a mass entry form, you can review whether the updates were successful or not. You can also access SOAMAUD to review the audit information for the search and update criteria, as well as the success and results of the updates.

The audit information is stored in the SOBMAUD and SORMAUD tables with result codes and associated result messages once updates have taken place. The **Update** radio group in the Results window shows whether the updates were: successful (*Yes*), partially successful (*Partial*), not successful (*No*), or that no updates were considered (*None*). The **Message** field displays related result messages.

 **Note**

You can navigate to directly display and review individual result messages for consecutive records without using Next Record and tabbing to the **Message** field. When you are in the **Message** field for a record, use the **Edit** button to open the Edit window. Click *OK* when you are done, and then press the Tab key to view the message for the next record. Continue to click *OK* and press the Tab key to review as many messages as you want. ■

While records should not be written to the audit tables when no updates take place, header records may be written to the audit tables if a connection is lost during the search process. A review of SOAMAUD will show sessions that are missing a complete date and batch process ID.

When the updates are held for processing in batch using SORMEBP, a batch identifier is generated when the submission information is saved on the mass entry form. The pending updates are still written to the SOBMAUD and SORMAUD audit tables and can be reviewed on SOAMAUD, prior to running SORMEBP through job submission. If users wish to use batch processing for all mass entry updates, masking can be used to hide the **Submit** checkbox for specific users and/or on specific forms.

You must either submit the updates or hold them for job submission before leaving the Results window in a mass entry form. If you leave the window without submitting or holding the job, a warning message is displayed, stating that all non-manually added students are being cleared from the Results window. No data is written to the audit tables unless the job is submitted, either immediately or for later job submission processing. If a mass entry form is being used in query mode, both options are disabled, and the data is not written to SOBMAUD and SORMAUD.

 **Note**

You can use the Extract Data option on the Oracle Help menu from the Results window to extract data to an Excel spreadsheet. ■

In addition to the potential update of letters in SUAMAIL, the mass entry criteria that are updated also can update parent forms as follows.

Mass Entry Form	Record Required	Parent Form Updated
SAAMAPP	SAAADMS (term and application number)	SAAADMS
SFAMREG	SFAREGS	SFAREGS, TSAAREV
SGAMSPT	SGASPRT	SGASPRT

Mass Entry Form	Record Required	Parent Form Updated
SGAMSTU	SGASTDN (active in effective term being searched)	SGASTDN, SGASADD
SHAMDEG	SHADEGR	SHADEGR, TSAAREV
SHAMCAT	SHADEGR, but cannot have SHACATT record	SHACATT, TSAAREV
SHAMDIP	SHADEGR, but cannot have SHADIPL record	SHADIPL, SHACATT, TSAAREV
SHAMUCA	SHACATT	SHACATT, SHADIPL
SHAMUDI	SHADIPL	SHADIPL, SHACATT

## Admissions Mass Entry

The Admissions Mass Entry Form (SAAMAPP) is used for mass entry admissions processing. You can search and update admissions application records on SAAMAPP when an admissions application record exists for the student on SAAADMS for the application term and application number.

When the admissions decision is used in the search criteria, you can do the following:

- Enter the **Application Decision** value.  
*or*
- Enter the **Application Decision** value, and check the **Select if Application Decision is the Most Recent Decision** checkbox.  
*or*
- Enter the **Application Decision Date** value, and check the **Select if Application Decision is the Most Recent Decision** checkbox.  
*or*
- Enter the **Application Decision** value, the **Application Decision Date** value, and check the **Select if Application Decision is the Most Recent Decision** checkbox.  
*or*
- Select an option from the **Most Recent Decision** radio group.  
*or*
- Enter the **Application Decision Date** value, check the **Select if Application Decision is the Most Recent Decision** checkbox, and select an option from the **Most Recent Decision** radio group.  
*or*

- Enter the **Application Decision Date** value only.

You cannot use the **Application Decision** and the **Most Recent Decision** radio group together.

Updates will take place for new and existing applications, regardless of any holds the students may have. Updates will also take place whether or not data previously existed in the update criteria, when the admissions application number in the Results window is selected for update. Deceased applicants will never be presented in the Results window as a result of the search criteria. However, manually entered records can display the setting of the **Deceased** checkbox. Updates cannot be performed when the **Deceased** checkbox is checked for the student. Records that are manually entered in the Results window require an ID, admissions term, and application number to be processed.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## General Student Mass Entry

The General Student Mass Entry Form (SGAMSTU) is used for mass entry general student processing. You can search and update general student records on SGAMSTU when a general student record exists for the student on SGASTDN for the effective term that is entered in the search criteria. The effective term is required when any other search criteria are entered in order to proceed to the Results window.

Updates can be made for the processing term in the update criteria. Depending on the learner effective term entered in the Update window, updates will take place for new and existing student records, regardless of any holds the students may have. When only a learner effective term is entered in the update criteria, no updates will take place. Updates will take place whether or not data previously existed in the update criteria, when the student ID in the Results window is selected for update.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

When no search criteria are entered, you can still manually enter students for update. Records that are manually entered require that the student has a general student record and a valid effective term. Updates cannot be performed when the student has a registration record for the update criteria learner effective term. The learner effective term in the Update window is the term that is checked for registration. Mail submission information is also not updated when a student has a registration record for the search criteria effective term.

## Athletic Compliance Mass Entry

The Mass Entry Athletic Compliance Form (SGAMSPT) is used to perform mass entry athletic compliance processing for athletes with compliance (sport) records. Compliance records must exist on SGASPT to be updated on this form. Updates can be made even when holds exist. You can search on specific criteria, perform copy, insert, or update processing, and then view the results. You cannot perform the copy, insert, or updates processes at the same time. When the copy functionality is used, existing sport values will be copied by default, or you can overwrite existing values, insert a new attribute, and optionally copy the attributes from the current term to a future term. Current competition data can be copied to the future term.

If no search criteria is entered, the Results window will not display any records. If search criteria is entered that does not include the athletic compliance term, results will only be displayed for queries. A search criteria athletic compliance term code is always required to perform the copy, insert, or update process. When copy, insert, or update criteria is entered, you can manually enter IDs for students with athletic compliance records and then perform updates and process those records from the Results window.

### Search on SGAMSPT

Before you can copy, insert, or update compliance data on SGAMSPT using mass entry processing, you need to enter the search criteria or provide a population selection. You must enter an athletic compliance term in the search criteria to use the copy, insert, or update processes. You can leave the athletic compliance term in the search criteria null when SGAMSPT is used in query mode.

The search criteria sport is not required. When the copy process is used and the search criteria sport is null, *all* sports in the search criteria with the athletic compliance term are copied to the future term. When the insert process is used and the search criteria sport is null, the sport will only be inserted one time, but it will be inserted for any athlete with any sport in that term. When the update process is used and the search criteria sport is null, *all* sports will be updated in that term. It is suggested that a search sport be used for the copy, insert, or update processes. Only the current competition record is considered, regardless of the setting of the **Season of Competition Used in this Term** radio group (*Yes* or *No*) in the search criteria.

### Copy on SGAMSPT

The Copy window on SGAMSPT is used to copy athletic compliance and current competition information (if it exists) from the current term to a future term. The copy, insert, or update processes cannot be performed at the same time.

Compliance data is copied as follows:

- Existing compliance values are copied by default, but those values can be modified before the copy process is performed.

- The sport code, sport status, athletic eligibility, and academic eligibility values are copied to the future term.
- When status, athletic eligibility, or academic eligibility values are not entered for the copy process, existing data is used and is copied to the future term.
- When status, athletic eligibility, or academic eligibility values are entered for the copy process, those values will supersede the existing values when the copy is performed.
- Attributes are copied to the future term when requested during the copy process.
- Beginning and ending terms of eligibility and the number seasons of competition available are copied to the future term if current competition data exists for the sport.
- The reason code for the current competition record is *not* copied to the future term.
- Athletic comments are *not* copied to the future term.
- The setting of the **Athletic Aid (Indicator)** is copied to the future term as unchecked or *N*. This setting can be changed to *Yes* in the Insert or Update window for *update* processing using the **Athletic Aid** radio group.
- The setting of the **Season of Competition Used (Indicator)** is copied to the future term as unchecked or *N*, regardless of the setting on the current competition record in the current term. This setting can be changed to checked or *Yes* in the Insert or Update window for *update* processing using the **Season of Competition Used in this Term** radio group.

## Insert or Update on SGAMSPT

The Insert or Update window on SGAMSPT is used to insert or update athletic compliance data. The copy, insert, or update processes cannot be performed at the same time.

Use the Athletic Compliance Insert or Update Values section of the window to insert a new compliance record or update existing compliance values for athletic compliance records based on the search criteria entered in the Search window. You must enter an athletic compliance term in the search criteria in order to continue with an insert or update function, and then go on to process the results.

- For inserts and updates, the athletic compliance term for the search criteria is required. This prevents a different sport than the one on the current term compliance record from being copied or updated and then compromising the data and audited competition records. You can use a mass insert or update for compliance records for a selected group of athletes that are not associated with a particular sport.
- For updates, the search sport and athletic compliance term are required and cannot be changed in the Insert or Update window, once they have been entered in the Search window. To make a change, you would need to return to the Search window and re-enter a different sport or term. You also cannot change the number of

seasons available or the number of seasons of competition used. This will cause those future term values to be incorrect.

Inserts and updates are performed as follows:

- The athletic compliance term in the insert or update criteria reflects the value for the athletic compliance term in the search criteria and cannot be modified.
- The value in the **Sport** field is defaulted from the search criteria for the selected term. This value cannot be changed. (The **Athletic Compliance Term** value is also defaulted from the search criteria.)
- When the **Sport** field in the search criteria is null, the **Sport** field in the update criteria will also be null. In this circumstance, *all* sports in the search criteria athletic compliance term will be updated. It is suggested that a search criteria sport be provided so that specific sport updates take place.
- When the **Sport** field in the search criteria is null, the **Insert New Sport** value will only be inserted one time. Duplicate sport records cannot exist for a term.
- The insert process does not insert competition data. Current competition data must be copied to a future term.
- The insert process does not insert the number of seasons of competition used in the term.
- When **Athletic Aid** radio group set to *No* in the search criteria, the **Athletic Aid** radio group must be set to *Yes* for the update process.
- When **Athletic Aid** radio group set to *Yes* in the search criteria, the **Athletic Aid** radio group must be set to *No* for the update process.
- When the **Season of Competition Used in this Term** radio group is set to *No* in the search criteria, the **Season of Competition Used in this Term** radio group must set to *Yes* for the update process.
- When the **Season of Competition Used in this Term** radio group is set to *Yes* in the search criteria, the **Season of Competition Used in this Term** radio group must set to *No* for the update process.

For more information on athletic compliance processing, please refer to the “Athletic Compliance Processing” section of the “General Student” chapter.

## Registration Mass Entry

The Registration Mass Entry Form (SFAMREG) is used for mass entry registration processing. Mass entry registration allows you to manage data for a chosen population of students based on predetermined registration parameters such as registration term and date and search criteria (student and curriculum data). You can then use update criteria and review and process those updates based on the results that are returned. Registration mass

entry processing works differently in some respects from Admissions, General Student, and Academic History graduation mass entry processing.

SFAMREG handles the following scenarios:

- moving students from one CRN to another CRN,
- performing a mass add of students into a CRN,
- performing a mass drop of students from a CRN,
- performing initial registration for students based on their block code assignments,
- performing initial registration for students with a particular attribute into a specific course, such as registering all new freshmen for an orientation class, and
- removing registration records for students who have not paid for the course.

The value entered in the **Registration Status Code** field in the Update window is validated against the Course Registration Status Code Validation Form (STVRSTS). When a block is processed or a course is added, only registration status codes with a type of “registered” can be used. When courses are dropped, only registration status codes that have types of “dropped” or “withdrawn” can be used.

Registration eligibility checking can be turned on and off for students selected for mass registration updates using the **Bypass Registration Eligibility Check** checkbox. When this indicator is unchecked, eligibility requirements must be met. When this indicator is checked, all students who meet the search criteria are displayed in the Results window, whether or not they are eligible to register. During registration progressing, each student’s eligibility will be checked. Those students who are not eligible to register will only be processed if dropped courses are processed, and the “dropped” course registration status code (STVRSTS) has the following four indicators unchecked (set to *N*): **Count in Enrollment, Count in Assessment, Waitlist Indicator, and Extension Indicator.**

Time status calculations are performed as specified by the **Calculate Time Status** checkbox on the Term Control Form (SOATERM). You may view the time status history for a student in the Time Status History window of the Student Course Registration Form (SFAREGS).

Mass entry registration can be performed for a specific CRN (course reference number) or block code. Courses can be added, dropped, or added and dropped at the same time for a selected group of students. This processing also uses registration error checking and online fee assessment. The results can be submitted for update through job submission or held for later batch processing. Batch processing can be used during heavy registration periods so that online and self-service response times are not impacted.

Immediate and pending updates can be viewed on SOAMAUD. Result messages are captured when updates occur and can be reviewed directly on SFAMREG at the time of the update or on SOAMAUD after the updates have been submitted in batch using SORMEBP. Reviewing update result messages allows for failed inserts and updates to be resolved.

When updates occur or when updates are held for batch submissions, SFAMREG retains audit information such as the user ID, date, timestamp, search criteria, update criteria, and the students that were processed. Audit information can be purged using SOPMAUD. The mass entry form can also be used to query student information only, in which case the audit information is not retained.

Traditional and open learning courses can be used with SFAMREG. You can use the Options Menu items to access general student summary information, student account detail information, registration holds, and registration record details.

DegreeWorks prerequisite checking is called by SFAMREG for mass registration, but individual DegreeWorks errors must be viewed from the Course Information block SFAREGS in the Messages window. DegreeWorks prerequisite error messages are *not* displayed in the **Message** field in the Results window.

 **Note**

SFAMREG does not allow waitlisting. ■

## Search Criteria

Use the Search Criteria window in SFAMREG to search on data by term. You can specify student information such as registration status, class, attribute, cohort, block code, grade mode, and CRN for which current registration and enrollment records exist. You can also search by all the curriculum elements. Curriculum information is determined by using the current, active learner records selected by the search. You can turn registration eligibility checking on and off as needed. If no data is entered for the search criteria, the Results window will be blank. You can manually add student IDs in the Results window.

## Block Scheduling

The Block Processing information in the Update window of SFAMREG is used to mass process the current block code of the selected students. When block code processing is used, the Registration Course Add Values and Registration Course Drop Values sections of the form are disabled. When the course add and drop processing options are used, the Block Processing information is disabled.

Use the **Mass Process Block** checkbox to designate the use of block processing. Block processing is validated in the same way as it is on SFAREGS. Only traditional courses are processed by mass block scheduling. If open learning courses exist in the block, they are skipped, and a message is generated to that effect. If the student level does not match on any courses in the block, the block is not processed. Blocks are also not processed when

fatal registration errors exist. Warning messages are displayed for non-fatal errors when processing is completed.

## Drop and Add Courses

Use the Registration Course Add Values section in the Update window to enter the CRN to be added. Values for other fields are defaulted, but you can update the **Grade Mode** and **Level** fields if multiple values exist for the course. You can also update the **Credit Hours** and **Billing Hours** fields if variable hours exist for the section. The **Registration Status** field defaults to *RE*, but you can change it to any “registered” course registration status code. When block code processing is used, the Registration Course Add Values block is disabled.

Use the Registration Course Drop Values section in the Update window to enter the CRN to be dropped. The **Registration Status** defaults to *DD*, but you can change it to any “dropped” or “withdrawn” course registration status code. You can also elect to drop all CRNs for the selected group of students by checking the **Drop All CRNs** checkbox. If you have entered a CRN to be dropped, this checkbox is disabled. To use the checkbox, you must clear the **CRN** field. The **Remove Registration Record** checkbox specifies that the registration record should be deleted from the student’s schedule after the drop code has been applied. If this checkbox is unchecked, the dropped course will remain on the student's schedule. When block code processing is used, the Registration Course Drop Values block is disabled.

Using these two sections together allows you to drop students from a CRN and then add them into another CRN. Drops are processed first, then adds are processed. Errors are displayed if actions are taken that do not comply with registration rules. An error is displayed if you try to add and drop the same CRN at the same time. When a course is added, and that course already exists on the student’s schedule with a course registration status code for “dropped” or “withdrawn”, an error is displayed, and no processing occurs.

- You cannot enter a CRN to be added in the Registration Course Add Values information and then check the **Drop All CRNs** checkbox in the Registration Course Drop Values information. An error is displayed.
- You cannot check the **Drop All CRNs** checkbox in the Registration Course Drop Values information and then access the Registration Course Add Values information and attempt to add a CRN. An error is displayed.
- When the **Drop All CRNs** checkbox is checked, and any of the student’s courses have been rolled to history, none of the courses is dropped.

## Registration Error Checking

The Error Checking window on SFAMREG allows you to change student and section registration error checking options for the group of students that is being processed. Registration error checking and fee assessment processing rules are defaulted from

SOATERM for the registration term, but they can be overridden in this window. Fee assessment options are also set up in this window.

## Registration Results

The Results window of SFAMREG lists the students found in the search. Students are returned by the search when they meet all student eligibility requirements for registration. Requirements are based on term criteria, acceptable student status, enrollment status, academic standing, combined academic standing, and re-admit term criteria.

The process adds and/or drops courses for each student and creates an enrollment record for the term (SFBETRM) if one is needed, after all error checking has been performed and no errors exist. If an error is returned for a student, the error is displayed, and that student cannot register for the section. No interactive registration error overrides can be performed on SFAMREG. They can only be performed on the Student Course Registration Form (SFAREGS).

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update or deselected by using the associated radio buttons. Individual records can also be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Graduation Mass Entry

The set of mass entry graduation forms is used to perform mass entry of information for degree, diploma, and ceremony attendance records, as well as mass updates for diploma and ceremony attendance records.

Please refer to the “Graduation Procedures” section of the “Academic History” chapter for more information on using mass entry and update functionality with graduation processing.

## Degree Mass Entry

You can search for and update degree records on Mass Entry Graduation Form (SHAMDEG) when a degree record exists for the student on SHADEGR. The search uses criteria associated with SHADEGR, except for the graduation application status code, which is associated with the degree record on SHAGAPP.

Degree records returned by the search can update SHADEGR graduation information. Updates will take place, regardless of any holds the students may have. Updates will also take place whether or not data previously existed on SHADEGR for the degree sequence number in the Results window that is selected for update.

The **Authorize** field on SHADEGR is updated when changes are made on SHAMDEG. This field displays the user ID of the person who updated the graduation status for the student.

Fees can be added on SHAMDEG and viewed on TSAAREV when no previous charges have been applied on SHADEGR. When a fee is added on SHAMDEG and a fee already exists on SHADEGR, the new fee will not be charged, and no new TSAAREV record is created during the mass update. A message is displayed that the fee has already been applied. You must select *Charge Fee* or *Waive Fee* from the **Fee** radio group in order to access the other fee fields.

When a student has a degree outcome status of awarded, (the **Awarded Indicator** on STVDEGS is set to *Awarded* for the degree status code), graduation criteria (term, status, year, date) and fees selected for the mass update will not be applied. A message is displayed that the degree has been awarded, and updates are not allowed. Mail submission updates will also not be processed.

When the outcome status is changed, the existing curriculum status code for the field of study is updated to the new curriculum status code based on the rules on STVDEGS and SORCSTS. When the graduation status is changed, and the **Update Next Degree Status** checkbox is checked (set to *Y*) for the graduation status rule on STVGRST, the outcome status on SHADEGR is updated based on the STVGRST rule.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Ceremony Attendance Mass Entry

The Mass Entry Ceremony Attendance Form (SHAMCAT) will present search results when a degree record exists for the student on SHADEGR, and no ceremony record exists on SHACATT for the ceremony and term entered in the update criteria. An update ceremony and term are required for any updates to occur. The ceremony and ceremony term will be inserted on SHACATT. Updates will take place, regardless of any holds the students may have.

The search can be refined by requesting that a graduation application exist on SHAGAPP and that the response for ceremony attendance be considered. When the **Select Graduation Application** checkbox is checked (set to *Y*), the records returned by SHAMCAT must also have an associated SHAGAPP record. The graduation application record must in turn have a ceremony attendance value that matches the setting of the **Attend Ceremony** radio group on SHAMCAT. When the **Select Graduation Application** checkbox is unchecked (set to *N*), the value of the **Attend Ceremony** radio group is not considered by the search.

When a student has a degree record with an assigned ceremony and term on SHACATT, a second record cannot be added for the same ceremony and term. The record will not be inserted, and a message will be displayed that the ceremony already exists and updates will not take place.

Fees cannot be applied a second time for the ceremony and ceremony term on SHACATT. Fees cannot be updated or changed. You must select *Charge Fee* or *Waive Fee* from the **Fee** radio group in order to access the other fee fields. Fee information can be viewed on TSAAREV.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Diploma Mass Entry

The Mass Entry Diploma Form (SHAMDIP) will present search results when a degree record exists for the student on SHADEGR and no diploma record exists on SHADIPL. Updates will insert diploma records in SHADIPL and optionally insert ceremony records on SHACATT. Updates will take place, regardless of any holds the students may have. Once a SHADIPL record exists based on the search criteria entered, those records will not be presented by a search and cannot be updated using SHAMDIP.

In order for the update criteria ceremony and ceremony term entered on the SHAMDIP to be processed successfully on SHADIPL, a ceremony attendance record (SHACATT) must exist, or the update of the ceremony and ceremony term will fail. SHADIPL also requires that the SHACATT record exist. SHAMDIP provides the option to create the ceremony/ceremony term record on SHACATT in order to update SHADIPL.

When the **Create Ceremony Attendance** checkbox is checked (set to *Y*), a ceremony attendance record is inserted in SHACATT for the term and ceremony on SHAMDIP. The record on SHACATT will have the ceremony, ceremony term, and activity date. Additional ceremony information may be added to the record when mass ceremony attendance updates are performed on SHAMUCA. The ceremony and term are also updated on SHADIPL when the **Create Ceremony Attendance** checkbox is checked.

Fees updated on SHAMDIP are always new fees. You must select *Charge Fee* or *Waive Fee* from the **Fee** radio group in order to access the other fee fields. Fee information can be viewed on TSAAREV.

### Note

When a diploma address type is included in the update criteria, the active mailing address from SPAIDEN (SPRADDR) is updated, but the address type is not updated or displayed on SHADIPL. ■

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Ceremony Attendance Mass Update

You can search for and update ceremony attendance records on the Mass Update Ceremony Attendance Form (SHAMUCA) when a ceremony attendance record exists for the student on SHACATT. Update criteria on SHAMUCA updates ceremony attendance records on SHACATT and diploma information on SHADIPL. The **Diploma Pickup Date** is updated on SHADIPL when the ceremony and term in the search criteria match the student, and the **Diploma Pickup Date** is entered in the update criteria. Updates will take place, regardless of any holds the students may have.

Updates for cap and gown sizes are based on the rules on SHASIZE. If measurements exist on SHACATT that meet SHASIZE rules, cap and gown size values will default when they are updated on SHAMUCA. When SHASIZE rules exist that meet the student's measurements for cap and/or gown, the cap and/or gown cannot be updated without calculating the sizes.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Diploma Mass Update

You can search for and update diploma records on the Mass Update Diploma Form (SHAMUDI) when a diploma record exists for the student on SHADIPL. Records returned by the search can have the diploma record (SHADIPL) updated. Updates will take place, regardless of any holds the students may have. Updates will also take place whether or not data previously existed.

In order for the update criteria ceremony and ceremony term entered on the SHAMUDI to be processed successfully on SHADIPL, a ceremony attendance record (SHACATT) must exist, or the update of the ceremony and ceremony term will fail. SHADIPL also requires that the SHACATT record exist. SHAMUDI provides the option to create the ceremony/ ceremony term record on SHACATT in order to update SHADIPL.

When the **Create Ceremony Attendance** checkbox is checked (set to *Y*), a ceremony attendance record is inserted in SHACATT and SHADIPL for the term and ceremony on SHAMUDI. The record on SHACATT will have the ceremony, term, and activity date. Additional ceremony information can be added to the record when mass ceremony attendance updates are performed on SHAMUCA.

The search results are displayed by ID and name based on the data required by the mass entry form, the search criteria, and the population selection, if used. All records returned in the Results window can be selected for update, all deselected, or not selected. Individual records can be selected for update. Records can be added or deleted manually. Fields for records returned by the search can be queried prior to the manual entry of records.

## Audit of Mass Entry Information

The Mass Entry Audit Form (SOAMAUD) is used to query mass entry event information by session. The audit data that is displayed comes from the SOBMAUD and SORMAUD tables. You can query mass entry sessions by mass entry form name, user ID, and date the event was entered. You can then view associated search criteria and the updated and inserted values in the Search/Update window. Depending on whether the updates have been processed directly on the mass entry form or by batch processing (SORMEBP), the processing results can be displayed in the Results window with any associated result messages and whether the record was manually added. The results detail that is displayed in this window changes based on the mass entry form used in the session.

- When SAAMAPP is used, the **Application Number** and **Admission Term** fields are displayed.
- When SGAMSTU is used, the **Effective Term** field is displayed.
- When SGAMSPT is used, the **Sport** and **Search Term** fields are displayed.
- When SHAMDEG, SHAMCAT, SHAMDIP, and SHAMUDI are used, the **Sequence Number** field for the learner outcome is displayed.
- When SHAMUCA is used, the **Ceremony** and **Ceremony Term** fields are displayed.

The mass entry process updates the mass entry tables with result codes and associated result messages once updates have taken place. The **Update** radio group in the Results window shows whether the updates were successful (*Yes*), partially successful (*Partial*), not successful (*No*), or that no updates were considered (*None*). The **Message** field displays related result messages for the update.

### **Note**

You can navigate to directly display and review individual result messages for consecutive records without using Next Record and tabbing to the **Message** field. When you are in the **Message** field for a record, use the **Edit** button to open the Edit window. Click *OK* when you are done, and then press the Tab key to view the message for the next record. Continue to click *OK* and press the Tab key to review as many messages as you want. ■

The SOBMAUD and SORMAUD audit tables are updated when the mass entry updates are processed in real time on a mass entry form. In this case, the session record will have a value in the **Date Completed** field and a null value in the **Batch Process ID** field. The tables are also updated when job submission batch processing (SORMEBP) is run for

updates that have been held for later processing. In this case, the session record can have a null value in the **Date Completed** field and a value in the **Batch Process ID** field. Once the update has been requested through SORMEBP, the **Date Completed** field will be updated, as well as the results status and associated messages.

 **Note**

While records should not be written to the audit tables when no updates take place, header records may be written to the audit tables if a connection is lost during the search process. A review of SOAMAUD will show sessions that are missing a complete date and batch process ID. ■

## Batch Update Process for Mass Entry

The Process Mass Entry Report (SORMEBP) is used to process mass entry updates in batch that are held for job submission processing in the Results window of the mass entry forms. When the process is held for job submission, records are written to the SORMAUD and SOBMAUD tables without a date completed or an update result but with a batch process identifier. The batch process ID can be submitted through job submission using SORMEBP when you are ready to process the updates.

This report processes the mass entry updates based on the mass entry form name, the ID of the user who initiated the updates, the date and time the records were saved for batch update, the batch process ID, and whether completion dates exist. Only records with no completion date are considered for update. Output is listed in alphabetical order and can show summary, detail, or totals information.

This report can be run in Audit or Update Mode. When run in Audit Mode, the update results and associated messages are not shown on the report output. When run in Update Mode, updates are made to the parent forms of the mass entry forms, and the SORMAUD table is updated with the ID of the user who ran the report, the date completed, the results (successful updates, failed updates, incomplete updates, no updates, or partial updates), and the setting of the **Process Indicator** on SOAMAUD.

## Purge Process for Mass Entry

The Purge Mass Entry Audit Process (SOPMAUD) is used to delete mass entry records from the SOAMAUD form and the SORMAUD and SOBMAUD tables. Records can be selected for deletion based on mass entry form, user ID, from and to dates, delete option (update status to be deleted), or batch process ID. The update status can be: all completed updates, failed updates, incomplete updates (no completion date), no updates, partial updates, or successful updates. The process can be run in Audit or Update Mode and can show summary, detail, or totals information.

## Mass Entry Column Codes

The mass entry column codes from the Mass Entry Column Validation Form (STVMECL) are used by all the mass entry forms (SAAMAPP, SGAMSPT, SGAMSTU, SFAMREG, SHAMDEG, SHAMDIP, SHAMCAT, SHAMUDI, SHAMUCA) for search and update validation. Here is the breakdown by form of how these columns are used.

### Admissions Mass Entry Form (SAAMAPP)

This form uses mass entry columns in the Search and Update windows.

#### Search Window

These columns are used in the Search Criteria.

Search Criteria	STVMECL Code	Parent Search Table/Field
Admission Term	TERM_CODE_APPL  If Search Criteria is entered, the Admission Term is required. Must be entered for automatic search.	SARADAP_TERM_CODE_ENTRY
Admission Type	ADMT_CODE	SARADAP_ADMT_CODE
Application Status	APST_CODE	SARADAP_APST_CODE
Application Status Date	APST_DATE	SARADAP_APST_DATE
Application Decision	APDC_CODE	SARAPPD_APDC_CODE
Select if Application Decision is the Most Recent Decision	APDC_CODE_MOST_RECENT	Can only check this if the APDC_CODE or APDC_DATE was entered
Application Decision Date	APDC_DATE	SARAPPD_APDC_DATE
Most Recent Decision	Institution Acceptance ACCEPT_APDC_IND is <i>IA</i>	STVAPDC_INST_ACC_IND
	Institution Rejection REJECT_APDC_IND is <i>IR</i>	STVAPDC_REJECT_IND
	Applicant Acceptance CONFIRM_APCD_IND is <i>AA</i>	STVAPDC_STDN_ACC_IND
Applicant Withdrawn	WITHDRAWN_IND	SARADAP_WRSN_CODE
Cohort	CHRT_CODE	SGRCHRT_CHRT_CODE

Search Criteria	STVMECL Code	Parent Search Table/Field
Attribute	ATTS_CODE	SGRRATT_ATTS_CODE
Level	LCUR_LEVL_CODE	SORLCUR_LEVL_CODE
Campus	LCUR_CAMP_CODE	SORLCUR_CAMP_CODE
College	LCUR_COLL_CODE	SORLCUR_COLL_CODE
Degree	LCUR_DEGC_CODE	SORLCUR_DEGC_CODE
		Selects the current and active curriculum for the application
Program	LCUR_PROGRAM	SORLCUR_PROGRAM
Field of Study Type	LCUR_LFST_CODE	SORLFOS_LFST_CODE
Field of Study Code	LCUR_MAJR_CODE	SORLFOS_MAJR_CODE
Department	LCUR_DEPT_CODE	SORLFOS_DEPT_CODE
Curricula	LCUR_CURRICULA	SORLCUR_PRIORITY_NO
	(Ignored if no other curriculum elements are entered)	

### Population Selection

These columns are used for population selection.

Search Criteria	STVMECL Code	Parent Search Table/Field
Application	POPSEL_APPLICATION_ID	GLBEXTR_APPLICATION
Selection ID	POPSEL_SELECTION_ID	GLBEXTRA_SELECTION
	Must enter the application ID to enter the selection ID	
Creator ID	POPSEL_CREATOR_ID	GLBEXTR_CREATOR_ID
	Must enter the application ID and selection ID to enter the creator ID	
User ID	POPSEL_USER_ID	GLBEXTR_USER_ID
	Must enter the application ID and selection ID to enter the user ID	

## Update Window

These columns are used in the Update and Insert Criteria.

Update Criteria	STVMECL Code	Parent Search Table/Field
<i>Update Values:</i>		
Admission Type	ADMT_CODE	SARADAP_ADMT_CODE
Student Type	STYP_CODE	SARADAP_STYP_CODE
Residence	RESD_CODE	SGBSTDN_RESD_CODE
Admission Status	APST_CODE	SARADAP_APST_CODE , SARADAP_APST_DATE  <b>The APST_DATE will be always be populated with the current date.</b>
<i>Insert Values:</i>		
Admission Checklist Request (ADMR code)	ADMR_CODE	SARCHKL_ADMR_CODE
Mandatory Checklist Indicator (indicates if ADMR code should be mandatory)	MANDATORY_IND	SARCHKL_MANDATORY_IND  <b>Can only set this if the ADMR_CODE is entered.</b>
Checklist System Generated	CHKL_SOURCE	SARCHKL_SOURCE  <b>Defaults to S (system) if value not selected.</b>
Checklist Origin	CKSR_CODE	SARCHKL_CKSR_CODE  <b>Can only set this if the ADMR_CODE is entered.</b>
Application Decision	APDC_CODE	SARADAP_APDC_CODE
Attribute	ATTS_CODE	SGRRATT_ATTS_CODE
Cohort	CHRT_CODE	SGRCHRT_CHRT_CODE
Interest	INTS_CODE	SORINTS_INTS_CODE

## Mail Submission

These columns are used for mail submission.

Update Criteria	STVMECL Code	Parent Search Table/Field
Letter Code	LETR_CODE	GURMAIL_LETR_CODE
Initiated Date	LETR_DATE	GURMAIL_DATE_INIT
Print Date	LETR_PRINT_DATE	GURMAIL_DATE_PRINTED
Initials	LETR_INIT_CODE	GURMAIL_INIT_CODE
Wait Days	LETR_WAIT_DAYS	GURMAIL_WAIT_DAYS

## General Student Mass Entry Form (SGAMSTU)

This form uses mass entry columns in the Search and Update windows.

### Search Window

These columns are used in the Search Criteria.

Search Criteria	STVMECL Code	Parent Search Table/Field
Effective Term	TERM_CODE_EFF Must be entered for any search to occur	SGBSTDN_TERM_CODE_EFF
Admission Term	LCUR_ADMIT_TERM Admission term associated with the curriculum	SORLCUR_TERM_CODE_ADMIT
Admission Type	ADMT_CODE	SORLCUR_ADMT_CODE
Student Type	STYP_CODE	SGBSTDN_STYP_CODE
Student Status	STST_CODE	SGBSTDN_STST_CODE
Residence	RESD_CODE	SGBSTDN_RESD_CODE

Wait Days	LETR_WAIT_DAYS	GURMAIL_WAIT_DAYS

### Mass Entry Athletic Compliance Form (SGAMSPT)

This form uses mass entry columns in the Search, Copy, and Insert or Update windows.

### Search Window

These columns are used in the Search Criteria.

Search Criteria	STVMECL Code	Parent Search Table/Field
Athletic Compliance Term	TERM_CODE_ATHL_COMP	SGRSPRT_TERM_CODE
	Must be entered for any search to occur	
Sport	ACTC_CODE	SGRSPRT_ACTC_CODE
Status	SPST_CODE	SGRSPRT_SPST_CODE
Eligible	ELIG_CODE	SGRSPRT_ELIG_CODE
Academic Eligibility	SAEL_CODE	SGRSPRT_SAEL_CODE
Athletic Attribute	SAAT_CODE	SGRSPRT_SAAT_CODE

Search Criteria	STVMECL Code	Parent Search Table/Field
Athletic Aid	ATHL_AID_IND	SGRSPRT_ATHL_AID_IND
Season of Competition Used in this Term	SEASON_USED_IND	SGRATHC_SEASON_USED_IND

### Population Selection

These columns are used for population selection.

Search Criteria	STVMECL Code	Parent Search Table/Field
Application	POPSEL_APPLICATION_ID	GLBEXTR_APPLICATION
Selection ID	POPSEL_SELECTION_ID Must enter the application ID to enter the selection ID	GLBEXTRA_SELECTION
Creator ID	POPSEL_CREATOR_ID Must enter the application ID and selection ID to enter the creator ID	GLBEXTR_CREATOR_ID
User ID	POPSEL_USER_ID Must enter the application ID and selection ID to enter the user ID	GLBEXTR_USER_ID

### Copy Window

These columns are used in the Copy Criteria.

Update Criteria	STVMECL Code	Parent Search Table/Field
Athletic Compliance Term	TERM_CODE_ATHL_COMP	SGVATPT_TERM_CODE
Sport	COPY_ACTC_CODE	SGRSPRT_ACTC_CODE
Status	COPY_SPST_CODE	SGRSPRT_SPST_CODE
Eligible	COPY_ELIG_CODE	SGRSPRT_ELIG_CODE
Academic Eligibility	COPY_SAEL_CODE	SGRSPRT_SAEL_CODE

Update Criteria	STVMECL Code	Parent Search Table/Field
Athletic Attribute	COPY_SAAT_CODE	SGRSPRT_SAAT_CODE
Copy previous term attributes	COPY_ATTRIBUTES	SGRATHA_SAAT_CODE

### Insert or Update Window

These columns are used in the Insert or Update Criteria.

Update Criteria	STVMECL Code	Parent Search Table/Field
Athletic Compliance Term	TERM_CODE_ATHL_COMP  Must be entered for updates to occur. A new SGRSPRT record is created if the term does not match the term for the student and any of the SGRPSRT columns are being updated. All updates are ignored (including mail) if the person is registered for the learner effective term (SFBETRM record exists).	SGRSPRT_TERM_CODE
Sport	ACTC_CODE	SGRSPRT_ACTC_CODE
Insert New Sport	INSERT_ACTC_CODE	SGRSPRT_ACTC_CODE
Status	SPST_CODE	SGRSPRT_SPST_CODE
Eligible	ELIG_CODE	SGRSPRT_ELIG_CODE
Academic Eligibility	SAEL_CODE	SGRSPRT_SAEL_CODE
Athletic Attribute	SAAT_CODE	SGRATHA_SAAT_CODE
Athletic Aid	ATHL_AID_IND	SGRSPRT_ATHL_AID_IND
Season of Competition Used in this Term	SEASON_USED_IND	SGRATHC_SEASON_USED_IND

## Mail Submission

These columns are used for mail submission.

Update Criteria	STVMECL Code	Parent Search Table/Field
Letter Code	LETR_CODE	GURMAIL_LETR_CODE

## Overview

---

The section discusses the use of study paths. Study paths provide a means by which a learner can associate specific course registration records to learner curriculum records during registration. The study path records allow the institution to track separate student status codes and academic standings (along with various other data) based on the student's curriculum. Likewise, a study path term enrollment record permits the tracking of enrollment eligibility that is separate from a student's overall enrollment status. The grade roll uses study paths to keep courses with an associated study path within the degree sequence created for that study path.

Study paths may be created when an applicant is accepted with a decision code that creates the general student record. A study path can also be created from an existing curriculum record. The study path record is a child record of the general student record but is also linked to the curriculum record through the curriculum sequence number. Thus, study paths are also sibling records to curriculum records. The study path records are used to track certain information that is currently tracked only on the general student record, and therefore allows the institution to restrict registration for a specific curriculum through the study path data. In addition, enrollment eligibility can be tracked by study path from the Student Study Path Enrollment Table (SFRENSP).

Curriculum records can be tagged for use as study paths and tracked from applicant acceptance, to general student, to registration, and then the courses are rolled with their study paths to a degree sequence. A study path can be created for an applicant upon acceptance, and when the learner registers for classes, the curriculum record can be associated with courses using the study path. Since the study path is a child record of the general student record, a learner may have a general student record student status and also a study path status. Permission to register by status on a study path may differ from the overall student status. As mentioned previously, a new study path enrollment record permits separate enrollment status by study path. The cohort (SGRCHRT) and student attribute (SGRSATT) tables allow these codes to be associated with specific study paths for the learner. Study paths are used only in baseline Banner Student registration.

# Set up Study Paths

---

Use these steps to set up study paths.

1. Build study path status codes on STVSTSP.
2. Check the **Active and Allow Registration** indicator on STVSTSP for study path codes that permit registration.
3. Check the **Enable Study Paths** indicator for the curriculum rules on SOACTRL.
4. Define the study path naming convention in the Study Path Name Components Window on SOACTRL.
  - 4.1. Enter the sequence number for the column order in the study path name.
  - 4.2. Enter the columns from SOVSPNM that are used in the study path name.
  - 4.3. Enter separators for the column values in the study path name.
5. Check the **Study Path** indicator on SOACURR to enable study paths for the curriculum rule during admissions acceptance.
6. Check the **Study Path Required** indicator on SOATERM if you wish to require study paths on all registered courses.
7. Set up study path information for students in the Study Path window on SGASTDN.
  - 7.1. Enter status information in the Study Path Status block.

When study paths are created, the default status is *AS* (active study paths).
  - 7.2. Enter any pertinent student information in the Study Path Student Information block.
8. Use the **Study Path** field on SGASADD to include student cohorts in the study path.
9. Use the **Study Path** field on SGASADD to include student attributes in the study path.
10. Use the Enrollment Study Path block on SFAREGS to enter the enrollment study path status and allow study paths to be associated with courses during registration.
11. Set up study path information in the Study Path window on SFAREGS.
  - 11.1. Enter status information in the Study Path Status block.
  - 11.2. Enter student information in the Study Path Student Information block.

12. Check the **Roll and Apply Courses by Study Path** indicator on SHACTRL to include the study path code in the match between the learner and outcome curriculum records for the outcome record creation.

13. Use SHRROLL to roll grades to history with or without study paths.

## Name Study Paths

---

Study paths can be named for easy identification by users and students using the Study Path Name Components window on SOACTRL. This window allows you to select the data fields used for the study path name from a list of columns, set the order by row, and add punctuation to specify how the name is displayed. This data is stored in the SORSPNM table.

The following data elements can be selected for use in the study path name.

- study path status
- study path status description
- study path sequence number
- level code
- level description
- college code
- college description
- degree code
- degree description
- program
- program name
- campus
- campus name
- major 1
- major 1 description
- major 2
- major 2 description

A separator can be used for punctuation between the data elements when the study path name is displayed, such as a ^ for a blank space. If no separator is entered, the elements are

concatenated without spaces or characters between them. The name is generated dynamically wherever it is displayed in the forms and is not stored.

For example, the learner curriculum consists of:

- Program Code: BA-HISTORY
- Program Description: Bachelor Arts History
- College Code: AS
- College Description: Arts & Sciences
- Level Code: UG
- Level Description: Undergraduate
- Major 1 Code: ARTH
- Major 1 Description: Art History

By selecting Program Code, Level Code, and Major 1 Description as the fields to use in the study path name, and using a colon as the separator, the form will display the study path name to the user as:

*BA-HISTORY:UG:Art History*

If no punctuation is inserted, the fields will be concatenated such as:

*BA-HISTORYUGArtHistory*

Once the information in this window has been set up, when a study path is created, the study path name is displayed in the study path record next to the study path sequence number. When a study path has no current or active learner curriculum record, the study path name will be blank.

## Processing

---

Study paths can be generated in the Admissions module through the admissions acceptance process and in the General Student module via the curriculum records. Study paths can also be generated in the Registration module through the Curriculum window on SFAREGS. A student cannot have a study path created in Self Service and cannot register for courses with study paths in the Registration module of Student Self-Service at this time.

## Admissions

You can control whether or not study paths are created during the admissions acceptance process using the **Enable Study Paths** indicator for curriculum rules on SOACTRL. This indicator must be checked to allow study paths to be created.

### Create Study Paths During Admissions Acceptance

Study paths can be created for a specific curriculum rule during the admissions acceptance process by checking the **Study Path** indicator for the curriculum rule on SOACURR. This allows you to control which curriculum rules can become study paths, so that different colleges, faculties, and departments can choose whether or not to create study paths. A study path name can be generated using the rules in the Study Path Name Components window on SOACTRL. The study path name is displayed in the lists of valid values for the **Study Path** fields and in the Study Path window on SGASTDN and SFAREGS.

Study paths can be created when the **Enable Study Paths** indicator is checked on SOACTRL and the **Study Path** indicator is checked on SOACURR for the curriculum selected. When the curriculum in use does not have a valid curriculum rule, the study path will still be created.

Study paths are created when:

- The **Enable Study Paths** indicator on SOACTRL is checked (*Y*), the curriculum on SOACURR is valid, and the **Study Path** indicator on SOACURR is checked (*Y*) for the curriculum.
- The **Enable Study Paths** indicator on SOACTRL is checked (*Y*), and the curriculum is not valid per SOACURR rules.

Study paths are not created when:

- The **Enable Study Paths** indicator on SOACTRL is unchecked (*N*).
- The **Enable Study Paths** indicator on SOACTRL is checked (*Y*), the curriculum on SOACURR is valid, but the **Study Path** indicator on SOACURR is unchecked (*N*).

#### **Note**

The **Study Path** indicator on SOACURR is delivered set to unchecked (*N*) for all curriculum rules. ■

Study paths can be created through admissions acceptance from SAAADMS and SAAQUIK and using Quick Start processing. One study path is created per application that is accepted. This occurs when both the **Significant Decision** and **Applicant Acceptance** indicators are checked on STVAPDC for the decision code, and when a person is admitted through SAAQUIK and no previous applications exist for the ID and term.

When the study path is created from an admissions acceptance, miscellaneous general student data is updated in the Study Path Table (SGRSTSP) for the study path and term. The SGRSTSP record is linked to the learner curriculum record through the sequence number. The study path becomes the method used to track specific information about the learner's status and data related to the course of study when the general student record is created. This data is stored in the SGRSTSP table, which is a child table of SGBSTDN and a sibling of the learner curriculum. Specific student data from the application is used to populate the general student record (SGBSTDN) and the study path record (SGRSTSP) when the study path is first created.

## Use Curriculum Records and Study Paths

If an application has multiple curriculum records with differing priorities, all curricula go to the same study path. To create multiple study paths, you must create multiple applications with acceptance codes that will generate the general student record.

If there are two valid curriculum records per the SOACURR rules on one application, and the first record has the **Study Path** indicator checked on SOACURR, and the second record does not, a study path is created for the first record, but not for the second record. The second record is associated with the overall SGBSTDN record, with no study path (SGRSTSP record), and the curriculum will have a sequence number of 99. The first curriculum will have a sequence number other than 99, and that sequence number will correspond to the study path record that was created.

Controls for the maximum allowable number of curriculum records apply to all records and not to a single study path. When the curriculum priority is the same, controls for the creation of the learner curriculum record in a current or future term are handled as they were previously.

When the application has a sequence number of *I*, with a priority of one, and has one curriculum record, the SGBSTDN record is created with a priority of one on the curriculum record. The study path sequence is then created during the creation of the learner curriculum record. If the study path is the first study path and curriculum for the learner, the curriculum sequence number is *I*, and the study path sequence number is *I*. The label for the **Key Sequence** field in the Curriculum window for SGASTDN and SFAREGS changes to **Study Path** when the **Enable Study Paths** indicator is checked on SOACTRL.

The curriculum associated with the study path is the curriculum for the application that was used to create the study path. The priority for the study path curriculum is still the priority generated by the application priority. The priority for the study path is determined by the priority for the curriculum used to create the study path. Therefore, you will never have two study paths with the same priority. This is the same way that priority is handled for curriculum records for admissions applications. If two applications have the same preference, and the second application is accepted, the second acceptance inactivates the first application.

The learner curriculum record inherits the study path sequence number, instead of having a sequence number of 99. This is how the study path record and the curriculum record are associated. An unassigned curriculum record (key sequence of 99) can be assigned to a new study path using the **Search** button or the List function from the **Study Path** field for the learner curriculum record in the Curriculum window on SGASTDN and SFAREGS. The **Study Path** field that displays the study path sequence number can be found in the Curricula Summary block on SGASTDN and SAAQUIK.

If the learner curriculum was previously rolled, the user will receive the message: *\*ERROR\* The learner has been rolled, this functionality is not available.* The curriculum will need to be duplicated, updated, or replaced and then rolled again. It is important to note that the creation of a study path using this method does not observe the setting of the **Study Path** indicator on SOACURR. If the user decides to create a study path for any curriculum, as long as the **Enable Study Paths** indicator on SOACTRL is checked, a study path will be created. The **Search** button or the List function for the **Study Path** field will never be activated if the **Enable Study Paths** indicator on SOACTRL is unchecked.

The **Current** indicator for the curriculum is calculated across all learner priorities for a general student effective term, not within a study path. Each study path will have one current and active curriculum. The minimum and maximum number of curriculum records allowed applies across all learner curriculum records and is not tracked by individual study paths. The study path status, along with the study path enrollment status (if changed), and the study path academic standing values (academic standing and combined academic standing) determine if the student is eligible to register for the study path.

## General Student

Study paths can be created for general student records automatically through applicant acceptance as described above, manually on existing curriculum records in SGASTDN, or by using the delivered conversion scripts. It is recommended that institutions who want to use study paths convert or create study paths prior to opening registration for a new term. Students who have registered for courses prior to study paths being turned on will not have study paths assigned to the existing registration records.

### Create Study Paths for Learners

Study paths can be created from existing curriculum records for students who have already been admitted to the institution. The study path record can be generated on SGASTDN in the Curriculum window by using the **Search** button or the List function from the **Study Path** field that displays the key sequence number. Scripts are delivered to assist with converting many student records at once for learners who have already registered or for those who have been admitted and accepted but have not yet registered.

- The `susgrstsp_applicant.sql` script is delivered to read the SARADAP table and the SGBSTDN records for the term and create study path records for each current and active curriculum record.

The field of study record is inserted with a curriculum status code of *STUDYPATH* from STVCSTS.

- The `susgrstsp_enroll.sql` script is delivered to read the SFBETRM records for a term and create study path records for each current and active curriculum record.

Please see the “Conversion Scripts” section of this appendix for more information on running these scripts.

As noted above, study paths can also be created manually on existing curriculum records when they were not already created through admissions acceptance (SAAADMS or SAAQUIK) or converted using the delivered scripts. A study path can be assigned to an existing curriculum record while in the Curriculum window on SGASTDN using the **Search** button or the List function from the **Study Path** field that displays the key sequence number. When you click on the **Search** button, an Option List is displayed with a Create New Study Path option. Selecting that option will insert the study path and update the curriculum record with the study path sequence number. (The key sequence will no longer be 99.)

If study paths already exist for a learner, but there are additional current and active curriculum records that do not have study paths, when you click on the **Search** button for that curriculum sequence, an Option List is displayed with options to Create New Study Path or Assign Curriculum to Existing Study Path.

- Selecting the Create New Study Path option will insert a new study path with a different sequence number from any that currently exists and update the curriculum record with the study path sequence number that is generated. (The key sequence will no longer be 99.)
- Selecting the Assign Curriculum to Existing Study Path option will display a list of existing study paths (if more than one exists). You may select one, and the curriculum in use will have that study path sequence assigned to it. (The key sequence will no longer be 99.)

When a study path exists for a curriculum record, the study path sequence number and name are displayed in the Study Path window.

## Change Learner Curriculum Records

When a new curriculum record is inserted, you can do the following:

- create a new study path for the new curriculum record
- associate the new curriculum record with an existing study path.
- create the curriculum record with no study path (sequence number will be 99)

If you replace or copy a learner curriculum record that is the only curriculum for a study path, and the curriculum status is changed to inactive, this can leave the study path without a current and active learner curriculum. When this happens, a warning message is displayed that the study path no longer has a current and active learner curriculum. You will need to update the status on the study path manually to inactivate it. If you replace or copy the learner curriculum record for a study path to a new term, and the curriculum status is changed, the study path record is pushed to the new term for the new curriculum record. The study path status is maintained manually and is not set by the curriculum status.

## Track Information on Study Paths

Updates can be made to student data fields that can be tracked with the study path. If the learner has already registered, updates must be made to the study path through registration. You can activate or inactivate a study path using a study path status code on the Study Path Status Code Validation Form (STVSTSP). Status codes can be created that are active and allow registration or that prevent registration. This allows you to start and stop study paths for students and determine which study paths are valid for a student in a term.

Changing the study path status does not change the curriculum status for the field of study. The user would need to update the curriculum and/or field of study status separately. The study path status will only prevent a student from registering for that specific study path. The Study Path window on SGASTDN and SFAREGS can be used to view and update student data for each study path. This window is displayed and enabled when the **Enable Study Paths** indicator is checked on SOACTRL. You can scroll through all existing study paths for a learner in this window. You can also set up tab level security on GURATAB to hide the Study Paths tab/window for specific users if this functionality is not implemented.

When study paths are used, the study path can be inactivated using the study path status code. This allows you to inactivate a student for registration purposes within the specific study path, but allows the student to remain active for the general student record or for other study paths you will permit the student to register for.

The study path can be used to maintain separate academic standings for academic standing, progress evaluation, and combined academic standing. While reviewing the study path information, you can also easily review the curriculum records for the student in the Curriculum window.

The Study Path Status block in the Study Path window is used to record the academic standing information on a study path for a student. This allows each study path to have a different academic standing (STVASTD), progress evaluation (STVPREV), and combined academic standing (STVCAST) from that of the general student record. The academic and combined standings must be updated manually.

The **Academic Standing** field and the **Combined Code** field are used to determine eligibility for registration. They use the setting of the **Proh Reg** indicator on STVASTD and the **Prohibit Registration** indicator on STVCAST to prevent registration. When

either of these fields is populated, that value will be used. If both fields are *Null*, registration is permitted for the study path. When a study path is duplicated through the duplication of the general student record, the academic standings are not copied for the study path.

Other student data that is related to the study path can also be maintained in the Study Path window, such as:

- residence
- block code
- full or part time
- session
- basic skills
- practical training
- orientation
- career planning
- education level
- expected education
- transfer credit
- vocational training
- education goal
- apprentice
- employee and training
- income

## Include Study Paths with Cohorts and Attributes

Use the **Study Path** field in the Student Cohort block on SGASADD to create or modify a student cohort for a study path so that this element can be tracked by study paths. If an admissions application for a term has an associated cohort record, and the application is accepted and confirmed, and the study path is created for the term, then the cohort record is created for that study path and effective term.

Use the **Study Path** field in the Student Attribute block on SGASADD to create or modify a student attribute for a study path so that this element can be tracked by study paths.

### **Note**

Registration restriction checking is not specific to study paths associated with cohorts or attributes. ■

## Registration

A study path can be assigned to an existing curriculum record while in the Curriculum window on SFAREGS using the **Search** button or the List function from the **Study Path** field that displays the key sequence number. When you click on the **Search** button, an Option List is displayed with a Create New Study Path option. Selecting that option will insert the study path and update the curriculum record with the study path sequence number. (The key sequence will no longer be 99.) The study path values set up on SOACURR and SOACTRL are not evaluated for this option. It is recommended that users create or add study paths prior to opening registration for a new term when your institution is starting to use study path functionality.

### Create Study Paths for Registration

It is recommended that institutions who want to use study paths convert or create study paths prior to opening registration for a new term. The conversion scripts for enrolled students and for accepted applicants described in the previous section may be used to assist in this process. Please see the “Conversion Scripts” section of this appendix for more information on running these scripts.

Students who have registered prior to the activation of study paths will not have study paths assigned to the existing registration records. You may add enrollment study path records and study path sequences to existing registration records manually.

### Register in a Study Path

To use study paths in registration you must have the **Enable Study Paths** indicator checked on SOACTRL. When the indicator is checked, you will see the **Study Path** field in the Key Block of SFAREGS, as well as in the Course Information block. Also, the Enrollment Study Path block is displayed after the Enrollment Information block. The Enrollment Study Path block is used to create the study path term enrollment status for the learner before registration occurs for courses with study paths. When the **Enable Study Paths** indicator on SOACTRL is unchecked, the form will not display any study path fields, and the Enrollment Study Path block will not be displayed.

You may optionally require that study paths be used in registration. Check the **Study Path Required** indicator on SOATERM to require a study path on all new registration records. When a study path is required, you will not be permitted to enter the Course Information block unless at least one enrollment study path record that allows registration exists for the student in the registration term. If the **Study Path** field in the Key Block has a value, an enrollment study path record must exist for the Key Block study path, in order for the user to enter the Course Information block. When a study path is required per SOATERM, you will not be able to save a registration record if no study path sequence has been entered for the CRN.

The **Study Path** field in the Key Block of SFAREGS is used to select a study path for the registration session. The field can be left *Null* if you wish to register for multiple study

paths during the registration session. To register for a single study path, you may enter a study path sequence number. If multiple study paths exist, you can use the List function from the **Study Path** field to view and select a study path to associate with the registration records.

The list of valid values for the **Study Path** field displays all study paths for the learner with information about the eligibility to register. The Enroll column on the left side of the display shows a value of *Y* if there are no conditions on the study path that prevent the student from registering. It displays an *N* if there is a status or standing that prevents registration for that study path, or if there is no current and active curriculum for the study path. If only one study path exists, attempting to use the List function for the field will default the study path value into the field. If only one study path exists for the student, and study paths are required per the setting of the **Study Path Required** indicator in SOATERM, the study path sequence is defaulted in when the **Term** and **ID** fields in the Key Block are entered.

## Enrollment Status and Registration

When you navigate from the Key Block to the Enrollment Information block, existing enrollment study path records are queried and displayed below the overall enrollment record (SFBETRM). Only one enrollment study path record is displayed at a time, but all existing records can be viewed by scrolling through them. If the **Study Path** field in the Key Block has a value, and no enrollment study path record exists for that study path, the study path will default into the **Study Path** field when you navigate to the Enrollment Study Path block. The overall enrollment status from the Enrollment Information block is defaulted into the **Enrollment Status** field for the study path whenever a new enrollment study path record is added. If the study path is eligible for registration and the study path enrollment status permits registration, the **Registration Allowed** indicator will be checked. This indicator is informational only and cannot be changed.

If the student's overall enrollment status (SFBETRM) or enrollment study path status (SFRENSP) does not allow registration, an error message is displayed, and you cannot enter the Course Information block. An enrollment study path record can be deleted only if no registration records exist for that study path. If no registration records exist for the term and the overall enrollment record is deleted, all the enrollment study path records for that term are also deleted.

As mentioned previously, the setting of the **Study Path Required** indicator on SOATERM determines whether study paths are optional or required for registration in a term.

- When the **Study Path Required** indicator on SOATERM is unchecked, a study path can be entered in the Key Block. If the **Study Path** field in the Key Block is set to *Null*, courses can be associated with any of the student's study paths that permit enrollment, as long as the study path enrollment records are created before the student attempts to register.
- When the **Study Path Required** indicator on SOATERM is checked, you may set the **Study Path** field in the Key Block to *Null*, but you must create an enrollment record for at least one of the student's study paths, to proceed to the Course

Information block. If no enrollment study path record exists, the message *Error: Student has no study path record that allows registration* is displayed. You must insert a study path enrollment record to proceed to the Course Information block, where you must associate each course that is added with a study path in order to save new registration records. Pre-existing registration records do not require that a study path be added. However, once a study path has been added to a pre-existing registration and saved, that CRN can no longer be saved without a study path.

## Registration Restrictions

Registration can be restricted when the academic standing for the study path prevents registration. Registration eligibility is based on academic standing codes by study path. Academic standing codes can be applied to each study path individually. The overall academic standing is checked first for the term for the student's academic history term information viewed on SHAINST. (The SHRTTRM record is checked first, since that academic standing can prevent registration for all study paths.) The override academic standing is then checked in the student's general student record (SGBSTDN). Lastly, the academic standing for study paths is checked for the student for the term on the study path record (SGRSTSP). If the academic standing on the SHRTTRM record and the SGBSTDN record is *Null* or is one that permits registration, the process checks the study path academic standing code value (SGRSTSP\_ASTD\_CODE) for the study path. The combined academic standings are also checked in the same manner. If the overall academic standing prevents registration, the student cannot register for any study path, regardless of the academic standing codes on the study path.

You can restrict registration when the enrollment status code for the student on the study path prevents registration. Registration eligibility can be set up by study path so that each study path can be pursued independently. The **Active and Allow Registration** checkbox on STVSTSP is used to permit registration (when checked) for a study path status code on the SFRENSP record for a student's study path. When the **Active and Allow Registration** checkbox is unchecked for a study path status code, the study path is displayed in the list of available study paths for the **Study Path** field in the Key Block of SFAREGS.

However, the Enroll column displayed on the left in the list of valid values for the field shows a value of *N*, which means this study path exists but does not permit registration. The status that prevents registration is also displayed in the list of valid values, as is the academic standing or combined standing that prevents registration. If the study path exists but the only curriculum records associated with it are not current or active, that information will also be displayed, and that study path will not allow registration.

## Block Scheduling

Block registration is allowed for a study path if the study path record contains a block code and the **Study Path** field in the Key Block is set to the study path for which block registration is to be performed. When block registration is performed for a study path, the study path defaults into each course record that is processed by the block registration. This allows study paths to carry their own block codes to be used during registration. Overall block registration cannot be used if a study path value is entered in the Key Block. If no

study path is entered into the Key Block, then overall block processing can be performed as usual from the main Enrollment Information block.

## Study Path Window

The Study Path window on SFAREGS can be used to view and update student data for each study path for the term. This window is displayed when the **Enable Study Paths** indicator is checked on SOACTRL. If a student has no study paths, the Study Path tab for the window will be disabled. Each study path has a sequence number that cannot be changed. This window and the Study Path tab used to access it are not displayed when study paths are not used (i.e., the **Enable Study Paths** indicator is unchecked on SOACTRL). You can set up tab level security on GURATAB to hide the Study Paths tab/window if this functionality is not implemented.

When study paths are used, the study path can be inactivated using the study path status code. This allows you to inactivate a student within the study path, but allows the student to remain active for the general student record. The study path can be used to maintain separate standings for academic standing, progress evaluation, and combined academic standing. Other student data that is related to the study path can also be maintained in the window. While reviewing the study path information, you can also easily review the curriculum records for the student in the Curriculum window. When a student has at least one curriculum record that has a study path sequence number other than 99, the Study Path window is available, and the data in the window can be updated.

### Note

You can copy a study path record to a new term if the registration term in use is greater than the start term for the study path. This allows you to update study path data for the registration term but retain the study path information from the previous term. ■

The Study Path Status block in the Study Path window is used to record the academic standing information on a study path for a student. This allows each study path to have a different academic standing (STVASTD), progress evaluation (STVPREV), and combined academic standing (STVCAST) for the term on the general student record. These standings can be defined and updated manually.

Study path information is also available on the following forms in Registration.

- You can view study paths that have been applied to courses in registration on the Student Course/Fee Assessment Query Form (SFAREGF) using the **Study Path** field in the Term Registration Summary block.
- You can view study paths that have been applied to courses in registration on the Student Registration History and Extension Form (SFARHST) using the **Study Path** field in the main data block.
- You can view study paths that have been applied to courses in registration on the Student Course Registration Audit Form (SFASTCA) using the **Study Path** field in the main data block. This allows you to see registration changes for a CRN and determine whether a study path was used for a course.

- You can view study paths when querying on the Registration Query Form (SFAREGQ) using the **Study Path** field in the main data block.
- You can view study paths on the Student Registration Permit-Override Form (SFASRPO) using the **Study Path** field in the Student Schedule block.

## Use Study Paths with Fee Assessment

This section discusses using study paths in fee assessment processing and posting charges related to study paths in Banner Accounts Receivable.

Two fee assessment rule types are used with study paths. These rules can be used in addition to the basic rule types. The audit history data also includes study path information. An indicator is used to determine whether study path data is stored with a charge, when the charge is generated from section fees. Two Banner views are used with learner curriculum record sequence numbers associated with study paths. The account detail in Banner Student Self-Service displays charges by term with study paths. Study path information is also displayed in Banner Accounts Receivable for Banner Student for account detail, billing, customer service inquiry, and payment detail query.

### Study Path Rule Types

Two rule types on the Registration Fee Assessment Rules Form (SFARGFE) are used with study paths. The *STUDYPATH* (study path) and *STUDYPATH\_ATTR* (study path with course attribute) rule types can be used to assess charges by study path. This allows course liable hours to be grouped by study path for a course and student. The study path sequence number, charge, and detail code can be posted to the student's account for billing.

The following occurs in the Student Curriculum block of SFARGFE when either the *STUDYPATH* or *STUDYPATH\_ATTR* rule type is selected in the Key Block.

- The **Residence** and **Session** fields are displayed.
- The **Curricula** field is hidden. You cannot enter the curriculum priority.
- The Student Curriculum tab label changes to read Study Path.
- The Student Curriculum Rules block label changes to read Study Path Rules.

When the basic rule types for *STUDENT*, *CAMPUS*, *ATTR*, or *LEVEL* are selected, the **Curricula** field is displayed, and the **Residence** and **Session** fields are hidden. The tab label reads Student Curriculum, and the block label reads Student Curriculum Rules.

When the *STUDYPATH* rule type is used, you must enter at least one curriculum value in the Study Path Rules block before a rule can be saved. When the *STUDYPATH\_ATTR* rule type is used, you must enter at least one curriculum value in the Study Path Rules block, as well as a course attribute in the Registration Charges and Fees block before a rule can be saved.

## Study Paths in Audit History

The following data on the Registration Fee Assessment Audit History Form (SFAFAUD) is used with study paths:

- The **Rule Type** field displays the *STUDYPATH* or *STUDYPATH\_ATTR* rule type from SFARGFE when either of those rule types is used.
- The study path sequence number used for the assessment is displayed in the **Value** field when either the *STUDYPATH* or *STUDYPATH\_ATTR* rule type is used.
- The **Value 2** field displays the course attribute code for the study path when the *STUDYPATH\_ATTR* rule type is used.
- The **Study Path Name** field displays the study path name that was used to calculate the charge when either the *STUDYPATH* or *STUDYPATH\_ATTR* rule type is used. This is populated by the `sb_studypath_name` API.

## Study Path Charges for Section Fees

An indicator on the Term Control Form (SOATERM) is used to control whether study path data is stored with a charge, when the charge is generated from section fees. The **Section Fees by Study Path** checkbox is located in the Registration Fee Assessment section of the Controls block in the main window. This field is associated with the `SOBTERM_SECTIONFEE_IND` column on the `SOBTERM` table.

When a CRN has section fees in SSADETL, and the course in registration has an associated study path, and the **Section Fees by Study Path** checkbox is checked (set to *Y*), the following processing occurs. The fee assessment process stores the study path sequence number in the `SFRFAUD` table and displays it on the SFAFAUD form. The process posts the study path sequence number to the `TBRACCD` table with the section fee charge and displays it on the TSAAREV form with the section fee charge.

When the no study path exists for the course in registration and the **Section Fees by Study Path** checkbox is unchecked (set to *N*), no study path information is populated in the `SFRFAUD` or `TBRACCD` tables.

## Fee Assessment Processing with Study Paths

Fee assessment uses the *STUDYPATH* and *STUDYPATH\_ATTR* rule types on SFARGFE for fee assessment processing. These two rule types work with the basic rule types, so a student can add and drop courses with or without study paths. When a percentage refund is in effect, a penalty is charged during assessment.

The *STUDYPATH* and *STUDYPATH\_ATTR* rule types can be used with all types of fee assessment including:

- flat fee assessment with overload
- flat fee assessment with no overload
- per credit processing
- refund by total processing
- refund by course processing

The process examines the registration status and date to determine whether penalty assessments are used to calculate fee assessment based upon a changed registration record.

- refund by overall enrollment status processing

Refund by overall enrollment status looks at the overall enrollment status, not the individual study path enrollment status.

- section fees processing

Section fees are stored on the TBRACCD record for the student. SFKFEES processes section fees from SSADETL by study path, when a study path is associated with a course in registration, and the **Section Fees by Study Path** checkbox is checked (set to Y).

- swapping processing

An even swap of dropped and added courses does not incur a penalty. When a student has more added courses than dropped courses, no penalty is applied. When a student has more dropped courses than added courses, a penalty is applied for the net difference.

Using the *STUDYPATH* and *STUDYPATH\_ATTR* rule types with fee assessment produces the following results:

- Course liable hours are grouped by study path sequence number (and course attribute) for a student's charges.
- Liable hours are assessed according to the curriculum/study path the courses are applied to.
- Liable hours are subtalled by study path sequence number for a single study path entry into the SFRFAUD table.
- The study path sequence number and the SORLCUR sequence number are stored on the SFRFAUD table.
- Charges and fees are stored in the TBRACCD table by detail code and study path sequence number.

### Refund by Total and Clearing Accounts

When refund by total is used with clearing accounts, the assessed penalty is charged to the clearing account detail code specified on SFARFND. The study path data is not posted to

the clearing account that is charged for the penalty. The penalty is not pro-rated across multiple study paths when the refunded charges come from multiple study paths.

When refund by total is used without clearing accounts, the assessment is pro-rated, and the penalty is applied to the refunded detail codes using the percentage calculations that are in effect.

## Study Path Learner Curriculum Record Sequence Numbers

Two Banner views are used with SORLCUR sequence numbers associated with study paths:

- The Student Study Path Name for Fee Assessment Audit View (SOVFSPN) is used to search on and select a given SORLCUR sequence number that is attached to a study path.
- The Registration Fee Assessment Audit History View (SFVFAUD) is used to select the registration fee assessment audit data on SFRFAUD. It uses the SORLCUR sequence number associated with the study path and the course attribute for the study path rule.

The `f_learner_study_path_name` function in the `sb_study_path_name` API contains an `LCUR_SEQNO` parameter. The function uses the SORLCUR sequence number if it exists.

- When the `LCUR_SEQNO` parameter is *Null*, the SOVSPNM view is used to retrieve the study path name from the primary curriculum.
- When the `LCUR_SEQNO` parameter is *Not Null*, the SOVFSPN view is used to retrieve the study path name based on the `LCUR_SEQNO` value. The study path name returned from the function is displayed on the SFAFAUD form.

Messages are displayed for SORLCUR records.

- When you attempt to delete an SORLCUR record that was used for fee assessment, a warning message is displayed. *Warning: This curriculum record was used for fee assessment. Do you want to continue? Yes, Cancel.* You must select *Yes* to continue.
- When you attempt to inactivate the last SORLCUR record on a study path, a warning message is displayed. *Warning: This may affect fee assessment. Yes, Cancel.* You must select *Yes* to continue.
- When you attempt to delete the last SORLCUR record on a study path, a warning message is displayed. *Warning: This will affect fee assessment. Yes, Cancel.* You must select *Yes* to continue.

## Fee Assessment Examples

Here are some examples of fee assessment rules using study paths (`STUDYPATH`) and study paths with course attributes (`STUDYPATH_ATTR`).

## Example for STUDYPATH rule

A student is admitted with two curriculum records. Study paths 1 and 2 are created.

Learner Curriculum	Level	Campus	College	Degree	Major	Study Path
1	GR	M	BU	MBA	ACCT	1
2	GR	M	BU	MA	MARK	2

Fee assessment rules exist for the *STUDYPATH* rule type for students with a level of *GR*. Rate codes exist for the student.

#	Rule Type	Detail Code	Hourly Rate	Min Chrg	Max Chrg	Liab Hrs From	Liab Hrs To	Flat Chrg Hrs	Flat Chrg Amt	Stud Curric (Lvl)	Study Path Major
1	STUDYPATH	T102	125.00	0.00	999999.00	0.01	99.99			GR	ACCT
2	STUDYPATH	T102	175.00	0.00	999999.00	0.01	99.99			GR	MARK

The student registers for courses that are applied to two different study paths where the fee assessment rules use per credit charges.

### Student Enrollment

The student's enrollment is as follows.

Course	Course Registration Status	Credit Hours	Billing Hours	Study Path
10001	RE	8.0	8.0	1
10002	RE	4.0	4.0	1
10004	RE	3.0	3.0	2

The rule type of *STUDYPATH* is applied:

- only to coursework that is assigned to a study path
- per study path, but is *not* applied as a total of all study path work which meets the student curriculum criteria

The student is charged:

- \$1500.00 from rule 1 (\$125.00 per credit) for 12 billing hours associated with study path 1
- \$525.00 from rule 2 (\$175.00 per credit) for 3 billing hours associated with study path 2

### ***Student Account Record***

The following data is applied to the student's account (TBRACCD and TSAAREV).

<b>Detail Code</b>	<b>Amount</b>	<b>Study Path</b>
T103	525.00	2
T102	1500.00	1

### ***Student Audit History Record***

The following data is stored in the student's fee assessment audit history (SFRFAUD and SFAFAUD).

<b>Detail Code</b>	<b>Rule Type</b>	<b>Amount</b>	<b>Student Liable Hours</b>	<b>Rule Liable Hours</b>	<b>Flat Fee</b>	<b>Overload Hours</b>	<b>Overload Fee</b>	<b>Study Path</b>
T103	STUDYPATH	525.00	15.00	3.00				2
	STUDYPATH	0.00						2

**Note:** Total of non-dropped hours for assessment is 3.00.

T102	STUDYPATH	1500.00	15.00	12.00				1
	STUDYPATH	0.00						1

**Note:** Total of non-dropped hours for assessment is 12.00.

0.00

**Note:** Total of non-dropped hours for assessment is 15.00.

### **Example for STUDYPATH\_ATTR rule**

The student is admitted with two curriculum records. Study paths are created.

<b>Learner Curriculum</b>	<b>Level</b>	<b>College</b>	<b>Degree</b>	<b>Program</b>	<b>Study Path</b>
1	UG	AS	BA	BA-HISTORY	1
2	UG	AS	BS	BSC-COMPUTER	2

The student has two study paths. The institution charges different fees for courses with attributes, depending on the program of study to which the courses are applied. No other rule types are in use.

Rules		Study Path Criteria					Liable Hours		
#	Detail Code	Per Credit	Min Chrg	Max Chrg	Course Attribute *	Level	Program	From	To
1	ATT1	70.00	0.00	99999.99	LIBA	UG	BA-HISTORY	0.01	99999.99
2	ATT1	60.00	0.00	99999.99	LIBA	UG	BSC-COMPUTER	0.01	99999.99
3	ATT2	80.00	0.00	99999.99	MSCI	UG	BA-HISTORY	0.01	99999.99
4	ATT2	85.00	0.00	99999.99	MSCI	UG	BSC-COMPUTER	0.01	99999.99

\* The course attribute code for the degree program comes from the Attribute Validation Form (STVATTR).

Code	Description
LIBA	Liberal Arts
MSCI	Math or Science

### Student Enrollment

The student's enrollment is as follows.

Course	Course Registration Status	Credit Hours	Billing Hours	Study Path	Course Attribute
10001	RE	8.0	8.0	1	MSCI
10002	RE	4.0	4.0	1	LIBA
10004	RE	3.0	3.0	2	MSCI

The rule type of *STUDYPATH\_ATTR* is applied:

- only to coursework that is assigned to a study path *and* an attribute code
- per study path and attribute combination, but is *not* applied as a total of all study path work which meets the student curriculum criteria

The student is charged:

- \$640.00 from rule 3 (\$80.00 per credit) for 8 billing hours associated with study path 1 and attribute *MSCI*
- \$280.00 from rule 1 (\$70.00 per credit) for 4 billing hours associated with study path 1 and attribute *LIBA*
- \$255.00 from rule 4 (\$85.00 per credit) for 3 billing hours associated with study path 2 and attribute *MSCI*

**Student Account Record**

The following data is applied to the student’s account (TBRACCD and TSAAREV).

Detail Code	Amount	Study Path
ATT1	640.00	1
ATT2	280.00	1
ATT2	255.00	2

**Student Audit History Record**

The following data is stored in the student’s fee assessment audit history (SFRFAUD and SFAFAUD).

Detail Code	Rule Type	Amount	Student Liabile Hours	Rule Liabile Hours	Flat Fee	Overload Hours	Overload Fee	Study Path	Value 2
ATT1	STUDYPATH_ATTR	640.00	15.00	8.00				1	MSCI
	STUDYPATH_ATTR	0.00						1	MSCI
<b>Note:</b> Total of non-dropped hours for assessment is 8.00.									
ATT2	STUDYPATH_ATTR	280.00	15.00	4.00				1	LIBA
	STUDYPATH_ATTR	0.00						1	LIBA
<b>Note:</b> Total of non-dropped hours for assessment is 4.00.									
ATT1	STUDYPATH_ATTR	255.00	20.00	3.00				2	MSCI
	STUDYPATH_ATTR	0.00						2	MSCI
<b>Note:</b> Total of non-dropped hours for assessment is 3.00.									
		0.00							
<b>Note:</b> Total of non-dropped hours for assessment is 15.00.									

**Self-Service Account Details for Study Paths**

The Account Detail for Term page (bwskoacc.P\_ViewAcctTerm) displays charges by term with study paths, when study paths are used, and the **Display Study Paths** checkbox is checked on the Student Billing Control Form (TSACTRL). Charges are grouped by study path under the subheading of the study path name. Charges are sorted in ascending order by study path sequence number for the term in the TBRACCD table. Charges are sorted in date order within the study path. When multiple study path sequence numbers exist, a subheading is created for each study path name, and the associated charges are listed.

General charges are displayed first in ascending order by date. When no study path information exists, all charges for the term are displayed as general charges without a study path subheading. Credits and payments are then listed, and the summary totals are

displayed. The naming rules created on SOACTRL determine whether the study path name is displayed.

## Banner Accounts Receivable and Study Paths

Study path information can be viewed on the following forms:

- Account Detail Review Form - Student (TSAAREV)
- Student Billing Control Form (TSACTRL)
- Student Account Detail Form (TSADETL)
- Customer Service Inquiry Form (TSICSRV)
- Student Payment Detail Query Form (TSIQACT)

### Account Details

The **Study Path** field on the Account Detail Review Form - Student (TSAAREV) and the Student Account Detail Form (TSADETL) displays the study path sequence number from the TBRACCD table for the study path used to create the charge from the fee assessment rule. The sequence number is for the current and active study path for the term, using the rules from SOACTRL.

The **Study Path** field is displayed when the **Display Study Paths** checkbox is checked on the Student Billing Control Form (TSACTRL). You can query on the study path sequence number to view the query balance by study path for the student. You can enter a study path when a new charge is entered. You cannot enter a study path for a payment transaction. You cannot change a study path on an existing transaction.

- Use List to see valid study path values for the student for the term when data is entered or queried. The Student Study Paths (SGVSTSP) window is displayed. It contains information on the term, the study path sequence number, the study path name, and the study path status. When no study paths are available for the term, the message *Term Code required for Study Path values* is displayed.
- Use Duplicate Item to view the study path name for the current and active curriculum record for the student for the term. It is displayed in the Study Path Name (TSAAREV) window. The study path name is determined using the field name components on SOACTRL. If no current and active curriculum record exists for the study path and term, the message *No Current and Active Curriculum exist for this Study Path and term* is displayed.

### Study Path Sequence Number

The **Display Study Paths** checkbox on the Student Billing Control Form (TSACTRL) is used to control the display of the study path sequence number in Banner Student Accounts Receivable and Banner Student Self-Service. When the indicator is checked, the **Study Path** field is displayed on the TSAAREV, TSADETL, and TSIQACT forms. It is also

displayed on the Account Detail for Term page (bwskoacc.P\_ViewAcctTerm). When this indicator is unchecked, the **Study Path** field is hidden.

## Customer Service Inquiry

The **Study Path** field on the Customer Service Inquiry Form (TSICSRV) displays the study path sequence number from the TBRACCD table for the study path used to create the charge from the fee assessment rule. The sequence number is for the current and active study path for the term, using the rules from SOACTRL.

The Study Path field is displayed when the **Display Study Paths** checkbox is checked on the Student Billing Control Form (TSACTRL). You can query on the study path sequence number to view the query balance by study path for the student. You cannot change the study path sequence number.

Charges grouped by detail code must also have the same study path sequence number. If you are using the summarize by effective date option (the **Sum by Effective Date** checkbox in the Key Block is checked), the charges must also have the same effective date.

## Payment Detail Query

The **Study Path** field on the Student Payment Detail Query Form (TSIQACT) displays the study path sequence number from the TBRACCD table for the study path used to create the charge from the fee assessment rule. The sequence number is for the current and active study path for the term, using the rules from SOACTRL. It is displayed for current term charges and future current term detail.

The Study Path field is displayed when the **Display Study Paths** checkbox is checked on the Student Billing Control Form (TSACTRL). You cannot change the study path sequence number.

## Set up Study Paths with Fee Assessment

Use the following steps to set up study path processing with fee assessment and Banner Accounts Receivable.

1. Set up study paths in Banner Student baseline and Banner Student Self-Service.
2. Create fee assessment rules on SFARGFE by *STUDYPATH* or *STUDYPATH\_ATTR* rule type.
3. Use the Student Curriculum Rules block on SFARGFE to set up curriculum rules for registration.
4. Check the **Section Fees by Study Path** checkbox on SOATERM to control whether study path data is stored with a charge, when the charge is generated from section fees.

5. Check the **Display Study Paths** checkbox the TSACTRL to display study path information on TSAAREV, TSADETL, and TSIQACT.

## Academic History

The existence of a registration record with a study path can designate that the roll to outcome is determined by study path and not by matching on curriculum data, as has been traditionally done. Degrees are created for students from the study paths in which they are registered based on settings in the Academic History Control Form (SHACTRL). The outcome record that is created contains the curriculum and courses for the study path for the degree being pursued. The **Study Path** field in the Learner Outcome Information block on SHADEGR is informational, so you know which study path generated the degree sequence. You cannot create a study path from the outcome record on SHADEGR. The **Study Path** field can also be viewed in the Institutional Courses block of SHADEGR and on the Course Maintenance Form (SHATCKN).

### Roll Courses by Study Path

SHACTRL allows you to roll courses by study paths, or you can continue to roll records in the usual way by matching on curriculum data. The use of indicators to match degree sequences by curriculum data is described below.

To roll by study paths, check the **Roll and Apply Courses by Study Path** indicator. The Grade Roll to Academic History (SHRROLL) then checks whether the courses being rolled have been assigned to a study path. If they are assigned to a study path, the existing logic to create a degree sequence and apply the courses only to that degree sequence is not used. The roll process also checks whether the study path has an active status and is eligible for registration (STVSTSP) and an active and current curriculum status (STVCACT).

When a study path has an inactive status and the roll process checks for how the record should be rolled to the outcome, no outcome record is created, and the learner curriculum record is not copied to an existing outcome record. When study paths exist, but the course the student is registered in does not have a study path, the roll process rolls the course to all degree sequence numbers. The **Apply to Learner Outcome** indicator on SHADEGR is only checked on those degree sequences that were not created from study paths.

Additionally, you can define when a new degree sequence is created based on a customized set of matching rules. A new degree sequence is created based on the rules and courses that do not have study paths rolled to all degrees or that are only rolled to specified degrees. The learner curriculum record is matched to the existing non-awarded outcome curriculum record to determine if a new outcome (degree) record should be created. The creation of the new outcome record is based on the customized rules for your institution. Indicators on SHACTRL are used to define the creation of non-study path outcome records and the elements that are rolled.

The following indicators can be selected in the Non Study Path Outcome Creation and Roll Options section of the main window:

- **Roll by Level**
- **Roll by Degree**
- **Roll by College**
- **Roll by Program**
- **Roll by Primary Major** (major 1 of the primary curriculum)

 **Note**

These indicators are delivered set to *Y*, except for the *Roll by Primary Major* checkbox, which is set to *N*. ■

The **Roll and Apply Courses by Study Path** indicator in the Enable Study Paths section of the main window can be selected when study paths are used. This checkbox determines whether the study path code is included in the match between the learner and outcome curriculum records for the outcome record creation. This checkbox is delivered set to *N*.

You can check the Non Study Path Outcome Creation indicators even when the **Roll and Apply Courses by Study Path** indicator is checked, in case the learner curriculum does not have an associated study path.

## Update Curriculum and Study Path Records

The following table illustrates how the curriculum and study path records are updated during processing. A study path is inserted into the curriculum record (SORLCUR\_KEY\_SEQNO), the learner curriculum record is copied to the new term, and the general student record is copied to the new term. When a student study path is updated and the term is less than the SGBSTDN term or the enrollment term, the student study path is copied to the new term.

Activity	Object/Process	Curriculum	Study Path	Impact
Insert new learner curriculum	SGASTDN, SFAREGS, (Curriculum window) SAAQUIK, application decision, Quick Start	Insert new learner curriculum, key sequence is 99, SOACURR is Y	Create student study path, learner curriculum gets new key sequence	No impact
Insert new learner curriculum	SGASTDN, SFAREGS, (Curriculum window) SAAQUIK, application decision, Quick Start	Insert new learner curriculum, key sequence is 99, curriculum not on SOACURR	Create student study path, learner curriculum gets new key sequence	No impact

Activity	Object/Process	Curriculum	Study Path	Impact
Insert new learner curriculum	SGASTDN, SFAREGS, (Curriculum window) SAAQUIK, application decision, Quick Start	Insert new learner curriculum, key sequence is 99, SOACURR is N	Student study path not created	No impact
Create new study path	SGASTDN, SFAREGS, (Curriculum window) SAAQUIK	Learner curriculum key sequence is 99, initiate study path insert	Insert student study path, update learner curriculum and key sequence	No impact
Change study path on learner curriculum	SGASTDN, SFAREGS (Curriculum window)	Copy learner curriculum, study path key sequence is not 99, <b>Update, Replace, Duplicate</b> buttons not available	Cannot remove learner curriculum from student study path	No impact
Replace study path on learner curriculum	SGASTDN, SFAREGS (Curriculum window)	Insert new learner curriculum with same priority as learner curriculum with student study path to replace that learner curriculum, make student study path different on the new learner curriculum	Student study path does not have current learner curriculum	Alert warning displayed that study path will be left with no learner curriculum
Copy learner curriculum in same term	SGASTDN, SFAREGS (Curriculum window)	<b>Update, Replace, Duplicate</b> buttons on learner curriculum	Student study path not affected	No impact
Copy learner curriculum in future term	SGASTDN, SFAREGS (Curriculum window)	<b>Update, Replace, Duplicate</b> buttons on learner curriculum	Student study path copied to new term	Available in future term
Inactivate learner curriculum	SGASTDN, SFAREGS (Curriculum window)	Duplicate learner curriculum and change status to inactive	Student study path not changed	Can register for student study path with no active learner curriculum

## Delete Study Path Records

Study path records cannot be deleted under the following circumstances.

- A study path record cannot be deleted on its own. It can only be deleted when the last curriculum record associated with the study path is deleted or when deletions are performed on the curriculum record.

Similarly, a study path record cannot be created or inserted on its own. It is only created when it is attached to an existing curriculum record.

- A study path record cannot be deleted when a degree record exists with the study path sequence number. At least one occurrence of the study path must remain.
- A study path record cannot be deleted when CRNs exist with the study path sequence number and term.
- A study path record cannot be deleted if it results in the deletion of the remaining current and active curriculum record for the learner.

## Delete Curriculum Records

Curriculum records and associated study path records cannot be deleted under the following circumstances.

- The curriculum record cannot be deleted when it is the last curriculum record for a study path for a term, and the deletion will result in the deletion of the study path for that term.
- The curriculum record cannot be deleted if that results in the deletion of the study path, and a non-awarded degree exists for the study path sequence number.

At least one occurrence of the study path must remain. In this case, you must first delete the degree record, and then the curriculum record can be deleted. (Awarded degrees are not affected by this.)

- The curriculum record cannot be deleted if that results in the deletion of the study path, and CRNs exist with the same study path sequence number and effective term.
- Similarly, the curriculum record cannot be deleted when it is the last curriculum record associated with a study path for a term in which a CRN is linked to the study path sequence number.
- The curriculum record cannot be deleted if that results in the deletion of the study path, and a graduation application exists for the student.
- The learner curriculum record (SGBSTDN) cannot be deleted when one of the current and active curricula has an associated graduation application.

- The learner curriculum record (SGBSTDN) cannot be deleted when that will result in the deletion of the study path, and the learner curriculum record is the last SGBSTDN record.
  - An error occurs when one of the learner curriculum records has an associated study path and is also attached to a degree, and no other occurrences of the study path sequence number exist.
  - SGASTDN does not allow the deletion of the learner curriculum record when registration records exist.
  - The General Student Purge Process (SGPSTDN) and the Learner Curriculum Purge Process (SOPLCPG) do not consider these issues when purging records. Both processes will delete the curriculum and study path records, even when a degree record exists. SGPSTDN does not delete general student records when registration records exist. SOPLCPG only deletes non-current, non-active curriculum records.

## Study Path Conversion Scripts

---

Two conversion scripts are delivered for use with this processing. Both scripts are run from SQL\*PLUS and are meant to be run once for the initial population of the study paths. These scripts are optional and are not automatically run as part of the upgrade.

### Note

Study paths are not created if the **Enable Study Paths** indicator on SOACTRL is unchecked.

Study paths are not created if the **Study Path** indicator on SOACURR is unchecked for the curriculum rule. ■

### susgrstsp\_applicant.sql (Admissions)

This script reads SARADAP and SGBSTDN records and creates study path records for each current/active curriculum record.

The script uses the following parameters:

1. Term - Application term to be used for the new study path.

Use either the Banner ID parameter or the Population Selection parameter. You cannot use both.

2. Banner ID
3. Population Selection - Application Code, Selection Identifier, Creator ID, User ID

The script performs the following tasks:

1. Reads application records for the application term.
2. Finds the maximum SGBSTDN term for the applicant.

The applicant is rejected if no SGBSTDN term exists, or if the SGBSTDN term does not equal the application term, or if the maximum SGBSTDN term is greater than the application term.

3. Rejects the applicant if study paths already exist on the learner curriculum record created by the application.
4. Creates the study path for the curriculum records that are associated with the application.
5. Copies the curriculum record and inserts the field of study record with the curriculum status code of *STUDYPATH* from *STVCSTS*.

The new curriculum record will have the study path sequence number in place of the the key sequence number.

## susgrstsp\_enroll.sql (Enrollment)

This script reads *SFBETRM* records and creates study path records for each current/active curriculum record. For students without an *SFBETRM* record, it assigns study paths to all students with an application for a specified term.

The parameters for Banner ID and Pop Selection are optional. If you leave these blank, all students with an application and learner curriculum record for the term will be selected.

The script uses the following parameters.

1. Term - Term for the new study path.
2. Enrollment Term - *SFBETRM* the person must have to be included in the conversion.

Use either the Banner ID parameter or the Population Selection parameter. You cannot use both.

3. Banner ID
4. Population Selection - Application Code, Selection Identifier, Creator ID, User ID

The script performs the following tasks:

1. Reads SFBETRM records for the entered enrollment term code.
2. Finds the maximum SGBSTDN term for the person.
3. Rejects the person if the maximum SGBSTDN record has a term that is greater than the new study path term, or if the person does not have an SGBSTDN record.
4. Determines if the SGBSTDN term is less than the study path term, and copies it to the new study path term.
5. Reads all the current and active curriculum records for the SGBSTDN term.
6. Creates one study path record for each current and active curriculum record that has not been rolled to history.
7. Creates one study path record for each current and active curriculum record that has been rolled to the same degree.
8. Copies the curriculum record and inserts the field of study record with the curriculum status code of *STUDYPATH* from STVCSTS.

The new curriculum record will have the study path sequence number in place of the the key sequence number.

- 8.1. If the curriculum record had been previously rolled to history, the new copy of the record will be rolled to the same degree, as long as it has not been awarded.
- 8.1. If the degree has been awarded, the new learner curriculum record is not rolled, and the degree is not updated with the study path sequence number.
- 8.2. The degree is updated with the study path sequence number. The study path is not updated on the courses.

## Banner Views Used with Study Path Processing

---

The following views are used with study path processing.

### Student Study Path Name View (SOVSPNM)

This view is used to display the study path name for the student and the study path. This view is used with SOACTRL to define the columns used in parsing the study path name on the form. The `sb_studypath_name.f_learner_study_path_name` function uses the

values from this view to return the parsed study path name. The study path name is displayed in the **SGVSTSP** list of values in the Curriculum window on **SGASTDN** and **SFAREGS**, the Study Path window on **SGASTDN** and **SFAREGS**, and on **SAAQUIK** and **SGASADD**.

The following columns are in this view:

```
SOVSPNM_PIDM
SOVSPNM_TERM_CODE
SOVSPNM_KEY_SEQNO
SOVSPNM_STSP_CODE
SOVSPNM_STSP_DESCRIPTION
SOVSPNM_LEVL_CODE
SOVSPNM_LEVL_DESCRIPTION
SOVSPNM_COLL_CODE
SOVSPNM_COLL_DESCRIPTION
SOVSPNM_DEGC_CODE
SOVSPNM_DEGC_DESCRIPTION
SOVSPNM_CAMP_CODE
SOVSPNM_CAMP_DESCRIPTION
SOVSPNM_PROGRAM
SOVSPNM_PROGRAM_NAME
SOVSPNM_MAJR_CODE_1
SOVSPNM_MAJR_1_DESCRIPTION
SOVSPNM_MAJR_CODE_2
SOVSPNM_MAJR_2_DESCRIPTION
```

## Student Study Path View (SGVSTSP)

This view is used to join the study path and the study path status. It also provides the study path name.

The following columns are in this view:

```
SGVSTSP_PIDM
SGVSTSP_TERM_CODE_EFF
SGVSTSP_KEY_SEQNO
SGVSTSP_STSP_CODE
SGVSTSP_ENROLL_IND
SGVSTSP_ACTIVITY_DATE
SGVSTSP_DATA_ORIGIN
SGVSTSP_USER_ID
SGVSTSP_NAME
SGVSTSP_FULL_PART_IND
SGVSTSP_SESS_CODE
SGVSTSP_RESD_CODE
SGVSTSP_ORSN_CODE
```

SGVSTSP\_PAC\_CODE

SOVFSPN\_MAJR\_2\_DESCRIPTION

## Use Study Paths in Self-Service

---

This section discusses using study paths in Banner Student Self-Service and Banner Faculty and Advisor Self-Service. Study paths can be optional or required for registration. You can allow students and faculty members to view or change study paths while adding or dropping courses. When study paths are enabled in Banner Student (the **Enable Study Paths** checkbox is checked on SOACTRL), study path information will be displayed in Self-Service.

When you allow study paths to be updated (the **Change Study Path** checkbox is checked on SOATERM), the student or faculty member can change the study path after registering for a course using the Change Class Options page in Self-Service. When study paths cannot be updated (the **Change Study Path** checkbox is unchecked on SOATERM), the study path information on the Change Class Options page is display only.

When study paths are required (the **Study Path Required** checkbox is checked on SOATERM), the student or faculty member must select one to continue processing. When study paths are not required (the **Study Path Required** checkbox is unchecked on SOATERM), the student or faculty member may select *None* and continue.

When study paths are enabled and a term is selected, when the user chooses to add or drop courses, the Select Study Paths pages are displayed. Once the study path is selected, the processing continues to the Add or Drop Classes page for registration.

## Set up Study Paths in Self-Service

---

Use these steps to set up study paths in Banner Student Self-Service and Banner Faculty and Advisor Self-Service.

1. Enable study paths on SOACTRL using the **Enable Study Paths** checkbox.
2. Check the **Study Path Required** checkbox on SOATERM to require study paths for registration.

When this indicator is unchecked, the use of study paths is optional. Students with study paths will still be prompted to selected a study path for registration.

3. Check the **Change Study Path** checkbox on SOATERM to allow students and faculty to change the study path on the Add or Drop Classes page.

# Web Pages Used with Study Paths

---

Study paths are used with the following pages in Banner Student Self-Service. Please refer to the *Banner Student Self-Service User Guide* for more information.

- **Select Study Paths** (bwckcoms.P\_StoreStudyPath) and (bwckcoms.P\_StoreMultiStudyPath)
- **Add or Drop Classes** (bwskfreg.P\_AddDrpCrse)
- **Change Class Options** (bwskfreg.P\_ChangeCrseOpt)
- **Look Up Classes** (bwckgens.p\_sel\_term\_date)
- **Look Up Classes Results** (bwskfcls.P\_GetCrse)
- **General Student Information** (bwskgstu.P\_StuInfo)
- **Registration History** (bwskhreg.p\_reg\_hist)
- **Registration Status** (bwskrsta.P\_RegsStatusDisp)

Study paths are used with the following pages in Banner Faculty and Advisor Self-Service. Please refer to the *Banner Faculty and Advisor Self-Service User Guide* for more information.

- **Select Study Paths** (bwckcoms.P\_StoreStudyPath) and (bwckcoms.P\_StoreMultiStudyPath)
- **Add or Drop Classes** (bwlkfrad.P\_FacAddDropCrse)
- **Change Class Options** (bwlkfrad.P\_FacChangeCrseOpt)
- **Look Up Classes** (bwckgens.p\_sel\_term\_date)
- **Look-Up Classes Results** (bwlkffcs.P\_FacGetCrse)
- **General Student Information** (bwlkgstu.P\_FacStuInfo)
- **Registration History** (bwskhreg.p\_reg\_hist)
